NOTICES.

All communications for the following issue should be received not later than 6 p.m. on Friday.

New Advertisements or changes in copy for the inside pages must be received not later than 6 p.m. on Friday. Advertisements for the cover must be received by noon on Thursday.

Advertisements of which proof is desired should reach us by the second post on Wednesday.

Money Orders, Cheques, etc., should be drawn in favour of THE RAILWAY TIMES, and should be crossed "National Bank."

Telegraphic Address: "Altimetry, London." Telephone No.: 2948 Gerrard.
Offices: 12 Norfolk Street, London, W.C.

THE RAILWAY HALF-YEAR.

In the present issue we publish our usual summaries of the British Railway Traffic Returns, completing the results for the six months ending June 30. These tables indicate a total increase for fifty-two companies of £1,300,217, with an addition to the mileage opened of only 5½ miles, as compared with 1910. So far as the analysis of the returns enables us to ascertain, £600,000 of the increase was obtained from passenger traffic, and the balance of about £700,000 from goods and mineral revenue. Generally speaking, the past half-year has been favourable for all classes of railway traffic. Trade has been, on the whole, of an improving character, and weather conditions have been favourable. The passenger traffic has reflected a somewhat increased spending capacity of the public, and has also benefited from the influx of visitors to this country in connection with the Coronation. On the other hand, we appear to have had more than our usual share of labour troubles during the half-year, and various interruptions to traffic have prevented it from attaining even larger dimensions, which might in more happy circumstances have been reached. Moreover, the Coronation festivities have lessened the number of working days in the half-year by two days so far as London is concerned, and by one day so far as the country generally is concerned. The rate of improvement on the average in receipts is about 2½ per cent., and, if proper allowance be made for the under-publication which we believe to exist, it is quite probable that the actual gain in aggregate receipts will reach about 3 per cent. The largest increase published by any leading railway is £220,000 in the case of the London and North Western Railway, but the Great Western Company's gross increase of £214,000 runs this gain very close indeed, and is indeed relatively a larger increase than in the case of the London and North Western. The North Eastern Company's increase practically amounts to £200,000, and this is relatively larger still, being at the rate of over 4 per cent. The Lancashire and Yorkshire has managed to add over £85,000 to its receipts as published, and the Great Central has a total gain of about £92,000, the increase in the latter case being about 4½ per cent. The Great Northern and the Great Eastern each have increased their gross revenue by about £60,000, these results being relatively satisfactory. Among the companies principally dealing with passenger traffic, the Brighton Company has done extremely well with a published gain of over £45,000, whilst the South Eastern and Chatham Companies have published a gross increase of £65,000, and the South Western has secured an increase of £52,500. The only companies engaged in general railway business which have encountered any decrease in receipts are the Furness and the Hull and Barnsley, the decreases in these cases amounting to £9,500 and £30,300 respectively. Among the purely London lines, the District again occupies a foremost position with a gain of £20,000, the Metropolitan increase of only about £12,000 being relatively poor. The London Electric Railways continue to earn more and more revenue, the aggregate gain for the past half-year having been £28,400. Among the other London tubes, the Central London decrease of £9,000 was disappointing,

but the City and South London has added nearly £4,000 to its receipts, and, in spite of its many difficulties, the Great Northern and City has advanced its revenue by about £1,000. This survey of the half year's results, so far as gross receipts are concerned, leaves very little to be desired from the shareholders' point of view. It is hoped that the position in regard to working expenses, and other factors in the situation, have not been unsatisfactory, but until the dividend results are declared this remains somewhat uncertain. As we have said before, under normal conditions dividends would probably recover to a satisfactory extent; but there are so many reasons for caution in distributing profits that some disappointment may be encountered. The anticipation of the Stock Exchange is that dividends on the average will be raised by about 1 per cent. per annum, as was the case last year.

EDUCATION AND TRAINING OF RAILWAY MEN.

With the assistance of the following gentlemen the Institution of Civil Engineers held an open session on June 28 and 29. The assistants (not one of whom came from overseas dominions) comprised—One president and four vice-presidents of the conference, with two secretaries, three chairmen, seven vice-chairmen and seven secretaries of sections, and a general committee of no less than 288 members—a multitude of counsellors indeed! Among these were 49 present and former members of Council and 12 clergymen, besides many other principals and heads of educational establishments. The great majority held honorary degrees, and many of them were learned doctors who, with wonderful unanimity, nearly all disagreed with one another, consequently, any parent seeking guidance was well filled with wisdom, but found it impossible to come to any decision. Another difficulty in the way of anxious enquirers was that the Sessions were held simultaneously—although the subjects brought forward naturally overlapped in the majority of the points enumerated and discussed. The meetings were held in the forenoon only; had they been taken in the afternoon also, everyone could have attended them all. The syllabus was said to be drawn up on the basis of the acquirements which, under the by-laws, a candidate should possess who desired to enter the portals of the Institution, but definite resolutions were not part of the programme and the only ones put forward were not discussed or enlarged upon in any way. The whole result was, therefore, disappointing, and the only practical and concrete methods of training that were described in detail were those on the Woolwich Arsenal and on the Midland Railway. Sir H. F. Donaldson, of Woolwich, has alone carried out in its entirety, the curriculum advised by Sir William White's committee some years ago, as adapted to the training of mechanical engineers at the Ordnance Factories. Prof. J. O. Arnold, in the course of his remarks, spoke from his personal knowledge of the Midland Railway and their locomotive shops, in which his own son was a privileged apprentice. The Midland Railway had adopted the principle that somebody should be responsible for looking after the well-being of these apprentices. They had appointed a very able, gentle man who was formerly at the Manchester University, and who was solely responsible for following the education, and quietly watching the private lives of their privileged apprentices—any lapse on their part being quickly dealt with. Mr. Henry Fowler, the chief mechanical engineer, gave these apprentices two months a week to attend the Birmingham Technical College. The examinations were very severe and, in addition to that, there was an annual examination held by the railway company of every pupil and every privileged apprentice on their employment, so that at any rate the Midland Railway were taking every possible step to produce a standard of man required. There was, however, a lamentable lack of correlation of knowledge between the

engineer and the metallurgist, said the professor. Metallurgists had been engaged in research, and many of their researches had thrown considerable doubt upon the accepted theories of the strength of materials. The Midland Railway authorities had adopted a scheme which had been in operation for two years, that in their fifth year pupils should be sent to the metallurgical department of the University College one day a week for one year. The papers and the discussions thereon dealt almost exclusively with the preparation required to become a mechanical or electrical engineer—and Sir Alexander Binnie spoke very strongly on the general absence of any attention to civil engineering training. The civil engineer is an important member of the executive staff of a railway, and it may well be added that to every servant of the company a certain knowledge of the profession would be a great advantage. On the other hand, an intelligent appreciation of all other duties should be obligatory on every one, whether in the engineers', locomotive, traffic, or accounts department—whereby much friction would be avoided, a friction which too often is detrimental to the well-being and orderly working of the undertaking. To take only a single instance. The traffic department requires certain facilities at a station, and they try to explain them to the engineer; this officer cannot grasp the essentials of the scheme to be adopted unless he has some knowledge of traffic working. When he submits the drawings to the traffic people they, on their side, will probably approve of such plans, whereas when these are actually executed the traffic officers may be grievously disappointed—all because they have not been taught how to prepare plans and drawings, and, consequently, how to understand them. The accountants, again, often make ridiculous mistakes for the want of the little general knowledge which, although attended by some danger, has advantages that more than counterbalance the risks. A well-known example is that of the careful accountant who enquired why there was such an enormous difference of price between "screened coal" and "coal screenings"—and who was told, rather unkindly by the engineer, that he evidently did not know the difference between a horse-chestnut and a chestnut horse.

RAILWAY EMPLOYMENT.

Elsewhere in this issue we publish a table, summarised from the particulars regularly published by the Board of Trade in the annual Returns of Accidents on Railways of the United Kingdom, showing the number of railway employees as at December 31st, 1901, 1904, 1907, and 1910, the latter figures being only recently available. From this it will be seen that the total for 1910 was 608,750, compared with previous returns, as follows:—

Year 1910	608,750	Year 1901	575,834
" 1907	621,341	" 1898	534,141
" 1904	581,004	" 1895	465,112

Thus for the first time in the recent history of railways there was a reduction in the number of railway employees. We feel, however, that to those who have been closely following the events in the railway world during the past half decade, this feature will occasion little surprise. There are a number of contributory causes. First and foremost is the fact that British railways have ceased to expand to anything like the same extent as formerly. This is brought out by the statistics of the mileage of railways open for traffic viz.:

	Miles.	Increase over previous period.
	Miles.	
1910	23,387	270
1907	23,108	474
1904	22,034	550
1901	22,078	410
1898	21,050	

Here we have the striking fact that in the last triennial period railway expansion proceeded at roughly one-half of

the rate of previous years—a feature that must inevitably have an effect on the demand for labour. Railways have very properly shown marked reluctance to embark upon expensive schemes involving capital expenditure. Moreover, in certain instances in which they have sought Parliamentary powers for extensions, the labour members—chiefly those who claim to speak for railway employees—have not hesitated to block procedure in order to extort concessions or to ventilate some one or other of their “grievances,” the effect being that railway companies have preferred to bear present ills rather than incur the risk of those they know not of in connection with the Parliamentary proceedings necessary to obtain additional powers. As we have said, this feature has had its effect on the number of men required, notably in relation to the permanent way. But this is apparent in other directions—like an initial train delay which causes resultant delays in distant parts of the country—it is well known that several of the larger companies have effected reductions at their large locomotive and carriage works—a feature largely allied to the last. From enquiries, we gather that it was in the new construction sections of the works that men were discharged; in other words, the policy of expansion had necessitated the employment of more men in building new rolling stock; given a change in this respect, thereby reducing the demand, the number of men required was obviously less, with the result that labourers were fewer by 3,498 and mechanics and artisans by 7,114, a total of 10,612. In addition to these features, it is no doubt the case that improved methods of working have had their effect on the figures in question. The reduction in the goods and mineral train mileage is largely responsible for the decline in the total of goods guards and brakemen, as also in that of drivers and firemen, the total train mileage for the year 1910, according to the preliminary Board of Trade figures, being 423,156,000, compared with 428,380,000 for the year 1907, a reduction of 5,224,000 miles. The outstanding grades in which increases are disclosed are those of carmen and checkers, which have respectively advanced 730 and 460, due doubtless to the increased merchandise business. There were also 1,487 more porters, while the total of 70,405 clerks represented a growth of 1,230. Incidentally, some indication of the enormous increase in the clerical work associated with railways may be gathered from the fact that, whereas in the year 1901 the number of clerks employed was 61,800, in 1910 the number was 70,405. Another grade in which the marked growth is apparent is that of inspectors, other than permanent way, last year's total of 8,603 being 519 more than for the year 1907, and no less than 2,902 in advance of that for the year 1901. In connection with the returns generally, it must not be overlooked that fluctuations inevitably occur from month to month, and there may be other causes than those we have indicated contributing to the changes noted. In connection, however, with the new form of railway accounts and statistics, scheduled to the Railway Accounts Bill, provision is made for the compilation of average annual statistics of employees, and, therefore, in future the information available will be of a more comprehensive character than hitherto.

DIVIDEND ANNOUNCEMENTS.

TORONTO RAILWAY.—A quarterly dividend at the rate of 7 per cent. per annum.

PATENT VICTORIA STONE COMPANY.—At 5 per cent. per annum (6d. per share) less income-tax, on the ordinary shares for the past half-year.

BARSI LIGHT RAILWAY.—The directors recommend an interim dividend of 3 per cent. (6s. per share) for the year to June 30.

CENTRAL PAHIA RAILWAY TRUST.—Subject to audit, the trustees have declared a dividend on the “B” certificates for the six months ended June 30, at the rate of 1½ per cent. per annum free of income-tax.

The turning of the mid point in the year has made its usual mark upon the Bank Return. The internal circulation of both coin and bank notes has expanded, the former by about £803,000, and the latter by £259,000, so that, in spite of £418,000 having been received on balance from abroad, the Reserve is lower to the extent of £744,000, thus making it some two and a quarter millions below the level that obtained at the corresponding date of last year. Public Deposits have fallen £5,044,000, in connection with which the payment of dividends on the funds must, of course, be remembered. This, together with a rise of £1,292,000 in Other Securities, has enabled the market to augment its resources by £5,354,000, the amount of the addition to Other Deposits. As the result of all changes, the proportion of the Reserve to the liabilities of the Bank has declined by nearly 1½ points to 45.3 per cent., which is rather more than a point below the level of this time last year. Money, for the moment, is plentiful enough, but everyone knows that it is a condition of things that cannot last long, and there is not much expectation that the Bank rate will be reduced below its present level this year. Indeed, such a reduction would be welcome in few quarters. Even among Stock Exchange speculators, who are generally ready to grasp at any straw, it is recognised that cheap money is now enjoyed for such short and uncertain intervals that it is unsafe to stake much upon it. As a bull point, the public have long ceased to attach importance to it, and their fits of buying and selling in recent years bear no assignable relation to the price which short loans will fetch in Lombard Street.

On the Stock Exchange at present many things are competing for attention, and immediate rates for money is one of the least importunate. Rather is the political situation, foreign and domestic, the main factor in determining its pose. The dormant volcano of Continental disturbance gave manifestations of activity last Saturday, which, had it first become known during business hours, might have given rise to a pretty good-sized panic. Fortunately, whether by accident or design, the fact that Germany had ordered a war vessel to a port in Morocco was not generally known until Sunday, and, with that day of rest for contemplation, the markets had time to come to sober conclusions before business opened on Monday. As it was, the incident led to a considerable amount of dealings in International securities, and the events of the week hang upon its sequelæ, modified, as far as Home securities are concerned, by the development of the shipping and other strikes which have been declared in various parts of the Kingdom.

Last Saturday, after an early fall, there occurred a rally in British Government stocks, based on the belief that the previous fall had been all due to the Birkbeck trouble, which was now over. The rise, however, was confined to the stocks yielding higher returns than Consols. Home Rails remained depressed by the general condition of unrest manifested by labour. Scotch lines were least affected. The feature of the American market was a rise in Erie shares, founded on hopes that the Canadian Pacific Railway wanted the line. When the markets opened on Monday the Moroccan news governed the situation. Paris, anxious to take in sail, was busy unloading securities in London, with such success that the spot exchange fell $1\frac{1}{2}$ points. Many changes of quotations were made in the list of foreign securities, all downwards. Spanish fours fell $1\frac{3}{4}$. American and Canadian Railways were weak all day, but Home Rails, after a bad opening, made some recovery, which was continued the next day, when the situation, both at home and abroad, was regarded with less apprehension. On Wednesday things were again as bad as ever. To Morocco was added Montenegro, and riots in Manchester, which, with strikes elsewhere, all tended to demoralise the markets. Sales from Berlin caused a heavy drop in Canadas, which were 3 lower on the day. The whole American market was flat. Eries lost their previous rise on denials from the Canadian Pacific of any designs on that railway. All changes in the foreign and Colonial sections were falls, Government stocks and railways, too. The following day a calm fell upon the markets soon after the opening of business. It began on the Continent, and led to a mild revival of inter-bourse securities, and then the American market rallied on good crop news, and both Canadian and Mexican Rails sympathised. But the reaction can hardly be said to have extended to Home Rails. Nor on Friday did any great change for the better ensue. Lancashire and Yorkshire rose $\frac{1}{2}$, Metropolitan $\frac{1}{2}$, and South Western Deferred $\frac{1}{4}$; but Brighton Deferred were lower and so were Metropolitan and little Chathams. The best signs were a continued firmness of international stocks, a quiet but far from voluminous flow of investment orders, and less inclination to conjecture about labour difficulties. On the strength of these some sections of the market began to brighten. Rubber shares and omnibuses in particular rose appreciably. The American section, which also recovered somewhat in tone, assisted the revival, and both Mexicans and Canadas improved. Consols, however, closed at the same low level at which they started.

Weekly Traffic Summary.

The traffic receipts for the week ended July 2, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,359,290, which was earned on 21,555 miles, being at the rate of £109 gs. 1d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,329,759, with 21,479 miles open, or £108 gs. 4d. per mile. There was thus an increase of £29,531 in the receipts, an increase of 76 in the mileage, and an increase of 19s. 9d. in the receipts per mile. Thirty-six of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £38,203 (or £1 13s. 4d. per mile) in the passenger receipts, and a decrease of £4,968 (or 7s. 8d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-six railways for twenty-six weeks in the passenger receipts has been £610,727, while the aggregate increase in the goods traffic was £761,874. The aggregate receipts of the fifty-two railways for twenty-six weeks (January 1 to July 2) amounted to £55,207,885, in comparison with £53,838,023 in the corresponding period of last year—an increase of £1,369,862.

Midland Railway Company's Generosity.—The Railway Clerks' Association, having drawn the attention of the directors of the Midland Railway Company to the fact that 42 per cent. of the deaths in the Midland Railway Superannuation Fund are due to consumption, as against a general average of 22.3 in the United Kingdom, the directors announce the completion of arrangements whereby clerks suffering from consumption will be granted six months' leave with full pay. In exceptional cases this may be extended. The directors have also decided to raise the salaries of clerks to the maximum scale fixed by the Railway Clerks' Association.

Willesden Junc. to Birmingham	107½	1	1 53	57.0	8.52 a.m.
Crewe and Holyhead	105½	2	2 3	51.5	2 a.m. U.
Wigan to Carlisle	105	3	2 2	51.0	12.10 a.m.
Birmingham to Rhyl	103½	1	2 15	46.1	2.50 p.m. Fri. days & Sats.

* D = Down journey, † U = Up journey.

The departure time of the North Wales Tourist Express is 5 mins. earlier, and the run to Rhyl is allowed one minute longer, while the division of the train for Llandudno and the Carnarvon branch respectively now takes place at Rhyl instead of at Colwyn Bay. The North Wales express seaside excursion, third-class, and Saturdays only, leaving London at 8.45 a.m. has been given a non-stop run from Willesden to Prestatyn, the outpost of Rhyl. This train runs to Llandudno in 5hr. 42min. Very cheap tickets are issued by the 8.45 a.m. and the 12.30 a.m. express excursion to the same destinations on Friday nights, the Llandudno fare being only 21s., and the ticket available for 3, 8, 10, 15 or 17 days. Improved facilities for visiting the English Lake District are a feature of the North Western time-table. A luncheon car express starts from Cambridge at 9.42 a.m., calls at Lord's Bridge, Sandy, and Bedford, leaves Bletchley at 11.7 a.m. and is due Windermere at 5.2 p.m. There is also an express excursion from Euston at 8 a.m. every Saturday, which gets to Windermere 200 miles, in 6hr. 10min., and to Blackpool 227 miles in 5hr. 8min. An additional through express service is given between Newcastle-on-Tyne and Manchester and Liverpool via Horrogate and Darlington—viz. Newcastle dep. 8.45 a.m., Manchester arrive 12.18 p.m., Manchester dep. 5.45 p.m., Newcastle arrive 9.45 p.m.

GREAT WESTERN RAILWAY: THIRTY ONE RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Paddington to Plymouth ..	225½	1	4 7	54.8	11.50 a.m.
Paddington and Exeter	175½	5	3 0	57.8	8.50 p.m. D. 4.45 p.m. U.
London to Paddington	142½	3	2 50	57.1	11 a.m. & 6.10 p.m.
Paddington and Newport	138	5	2 50	56.8	11.20 a.m. D.
Paddington and Worcester ..	130½	3	2 10	55.0	4.45 p.m. D.
Paddington to Bristol <i>via</i> Bath	118	2	2 0	59.2	10.45 a.m. 11.5 a.m.
Paddington and Bristol <i>via</i> Badminton	114½	1	2 0	58.8	12 p.m. & 1.45 p.m. D.
Paddington to Birmingham ..	112	4	2 0	55.2	2.55 & 4 p.m. 7.5 p.m.
Paddington and Bath	110	4	1 51	57.7	4.15 p.m. D.
Reading to London	110	1	1 57	54.7	2.10 p.m.

The Great Western Company have carried out some important accelerations to the London-Penzance service. The old 1 p.m. Penzance express from Paddington leaves at 1.5 p.m., and while preserving its two-hour run to Bristol *via* the Badminton route, now terminates at Bridgwater. A new train starts from London at 1.30 p.m. for Taunton, Ilfracombe, Exeter, Torquay, Plymouth, and Penzance, arriving at the latter at 9.25 p.m., or 15min. earlier than the old 1 p.m., so that the net gain is 45min. This train runs *via* Westbury, thus furnishing a new non-stop run from Reading to Taunton. Carriages are shipped at Westbury for Frome, Wells, and stations to Weymouth, and passengers for Wells who formerly left by the 12.40 p.m. will find the journey shortened by one hour. The 3.30 p.m. express to the West of England from London undergoes acceleration west of Plymouth, reaching Penzance at 10.40 p.m. instead of 11.32 p.m. The principal innovation, however, is a new express from Penzance at 1.15 p.m., due London *via* Westbury at 8.40 p.m. This furnishes a third break from Taunton to Paddington, and a second in 2hr. 30min., the remaining one, Taunton dep. 4.10 p.m., still taking 5min. longer. Formerly, the last day train from Penzance to London started at 12 noon, stopped at nearly all stations to Plymouth, and, travelling *via* Bristol, was not due London till 10.10 p.m. Therefore, the new service effects a saving of 2¼ hours, while as the original one still runs as from Plymouth, none of the existing facilities displaced.

The number of non-stop trains to Birmingham is the same as last year, but instead of a total of six two-hour trains "down" and "up," there are now nine, viz., five "down" and four "up." The latest addition is the 4.50 p.m. from Birmingham. All the "up" two-hour trains call at Leamington, and the 4 p.m. from Birmingham has a conditional stop at High Wycombe as well. Another fresh development arising from the Bicester route since we last wrote has been the provision of through trains between Victoria (South Eastern-Chatham) and Birmingham, etc., making non-stop runs between Addison Road and Leamington. Hitherto these have run in the morning and evening only, in connection with Continental night services, but the service is now augmented by a midday express from Victoria at 12.35 p.m., which is in direct connection with trains from the principal South Coast watering places.

There is a new dining car express in each direction between Birmingham and Bristol *via* Stratford-on-Avon and Cheltenham, the south-bound train having connections as far west as Plymouth, and the north-bound being really the second portion of the 1.15 p.m. train from Penzance, which is divided at Plymouth. The night service to and from Ireland *via* Fishguard and Rosslare runs on Sunday nights as on week-days, while the Great Southern and Western train off the Saturday night boat from Fishguard has been considerably accelerated west of Waterford.

MIDLAND RAILWAY: SIXTEEN RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
St. Pancras to Shupley	206½	1	4 3	51.0	11.50 a.m.
Leeds to St. Pancras	190½	1	3 35	54.7	3.40 p.m.
Rotherham to St. Pancras ..	103½	1	2 59	55.2	1.49 p.m.
St. Pancras and Nottingham	123½	9	2 12	50.1	6.3 a.m.†
St. Pancras and Trent	110½	3	2 7	50.5	11.50 a.m.
Leeds and Carlisle	113	3	2 12	51.3	12.38 a.m. D.
Shupley to Carlisle	102	1	1 57	52.3	11.50 a.m. (ex St. Pancras).

The Midland Company's summer arrangements are precisely the same as last year. The good run made by the West Riding express *via* Thornhill from Rotherham to London is one minute quicker. The 10.10 a.m. train from Manchester has discontinued its non-stop run from Chinley to St. Pancras, 100½ miles, and calls at Trent for the benefit of Nottingham passengers. One of the St. Pancras-Nottingham runs is performed by the 11.33 a.m. *ex* St. Pancras on Saturdays only, a cheap third-class Scotch express, and this train's next break—viz., from Nottingham to Ilkley, does not fall far short of 100 miles. The best run between Leeds and Carlisle is one minute quicker, but it is now made off the 8.15 p.m. Glasgow express instead of off the 7.10 p.m. Highland express from London.

GREAT NORTHERN RAILWAY: TWENTY-SIX RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Wakefield (Westgate) to King's Cross	175 $\frac{1}{4}$	1	3 5	57.0	2.20 p.m.
King's Cross and Doncaster	150	6	2 45	50.7	2.15 p.m. D
Retford to King's Cross ..	138 $\frac{1}{2}$	1	2 31	55.0	8.59 a.m.
York to Peterborough	111 $\frac{1}{4}$	1	2 13	50.4	3.45 a.m.
King's Cross and Grantham	105 $\frac{1}{2}$	16	1 50	57.5	5.50 p.m. U
Finsbury Park to Grantham	103	1	2 3	50.2	11.32 a.m.*

* Fridays and Saturdays.

The only important alteration carried out by the Great Northern Railway this summer is the inauguration of a through service with the South-Eastern-Chatham system *via* King's Cross and Herne Hill, to supersede the running of through Bournemouth coaches *via* King's Cross and Clapham Junction. The accelerated service between London and the West Riding reverts to last season's timings. The run from Retford to King's Cross is 2min. quicker.

GREAT CENTRAL RAILWAY: SIX RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Marylebone to Sheffield <i>via</i> Aylesbury	164 $\frac{1}{4}$	1	- 57	55.8	3.15 p.m.
Marylebone and Leicester <i>via</i> High Wycombe	107 $\frac{1}{2}$	3	1 54	50.5	6.20 p.m. D.
Leicester to Marylebone <i>via</i> Aylesbury	103	2	1 50	56.1	8.50 a.m.

The Great Central Railway has reinforced its main line service by a new breakfast car express leaving Sheffield at 7.20 a.m., Chesterfield at 7.45 a.m., Nottingham at 8.22 a.m., and Leicester at 8.50 a.m., thence to London without stop, as shown above. Of the three runs between Marylebone and Leicester *via* the new route, one is made on Fridays only by the 12.15 a.m. to Sheffield (arrive 3.43 a.m.), and another on Thursdays and Saturdays only by the 12.35 p.m. from Leicester (11.12 a.m. from Sheffield). These are new trains, and both accomplish the run in 2hr. Among other novel features of the time-table is an improved and accelerated service from Manchester, Leicester, and Sheffield to Grimsby and Cleethorpes and *vice versa*, giving non-stop runs for the 68 miles between Sheffield and Grimsby Town in 1hr. 27min.; while the through service to the Cambrian coast resorts (Manchester dep. 10.50 a.m.) *via* Chester, Wrexham, and Ellesmere, has been expedited by one hour.

LONDON AND SOUTH WESTERN RAILWAY: FOUR RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Waterloo and Bournemouth (Central)	108	3	2 0	54.0	4.10 p.m. D., 9.8 a.m. U.
Waterloo to Christchurch	104 $\frac{1}{4}$	1	2 10	48.1	2.10 p.m.

The accelerated Bournemouth runs, which formerly took 6 and 8min. longer respectively, are but the prelude to an all-round improvement of this train service. The time saved on the London side of Bournemouth extends to Weymouth and Swanage. There is no acceleration of the running time west of Bournemouth, as it is not possible to work the new 4-6-0 engines, which are responsible for the improved schedule, beyond this point, owing to the bridges not being strong enough. It may be recalled that in the summer of 1899 the South Western Company provided four Weymouth expresses, completing the journey of 143 miles in 3hr. 5min.—the present improved schedule—and performing the Waterloo-Bournemouth run in 2hr. 5min. A new luncheon car express leaves London at 12.40 p.m. for the Isle of Wight *via* Lymington and Swanage (arrive 3.50 p.m.). The latter portion runs from Brockenhurst *via* the Ringwood line, and provides an 18min. quicker journey than the old 12.20 p.m. relief train. A new express leaves London daily at 8.55 a.m. for Southampton

Town. Last season this train was merely the boat express for the tri-weekly daylight service to Havre and the Channel Islands.

GREAT EASTERN RAILWAY: EIGHT RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Liverpool St. & N. Walsham	130	2	2 38	49.3	1.30 p.m. D.
Liverpool St. and Yarmouth (South Town)	121 $\frac{1}{4}$	3	2 30	48.7	10.20 a.m. D. 1.35 p.m. U.
Liverpool St. to Lowestoft	117 $\frac{1}{4}$	1	2 36	45.2	10 a.m.
Liverpool St. to Trowse	114	1	2 17	49.9	9.50 a.m.
Liverpool St. to Beccles	109 $\frac{1}{4}$	1	2 23	45.8	1.53 p.m. (Sats.).

The many improvements in the service to the East Anglian coast resorts do not affect the Great Eastern table. The 12.35 p.m. restaurant car express for Yarmouth, Aldeburgh and Lowestoft is divided, the Lowestoft and Aldeburgh portion starting at 12.40 p.m., and making Saxmundham, 91 $\frac{1}{4}$ miles distant, its first call. In place of the 7.12 p.m., a new dining-car express starts from Liverpool Street at 7.35 p.m.—first stop Colchester—for Felixstowe, Yarmouth, and Lowestoft, thus accelerating the journey to all these places by 22 mins. The new 4.10 p.m. train makes a total of three non-stop runs to Felixstowe, 84 $\frac{1}{4}$ miles, which are performed in 1hr. 57min., 1hr. 55min., and 1hr. 58min. respectively. The new 6.37 p.m. dining-car train to Cambridge and Norwich has a connection with Yarmouth, while the last train for London now leaves Hunstanton at 6.32 p.m., instead of 4.36 p.m. Lastly, the London-Southend service has undergone great improvement, for it now comprises ten expresses daily, while breakfast, tea, and supper cars are added attractions. The time-table on Saturdays, however, is very different from that on other weekdays.

NORTH EASTERN RAILWAY: NINE RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Newcastle and Edinburgh..	124 $\frac{1}{2}$	9	2 18	54.1	11.14 a.m.

The run of the 9.50 a.m. East Coast express from King's Cross between Doncaster and Newcastle, 112 $\frac{1}{2}$ miles, has been withdrawn. The train calls at York at 1.36 p.m., in order to connect with the 1.48 p.m. through train to Whitby (arrive 3.30 p.m.). Last year this connection left London at 10 a.m., and was due Whitby at 4.26 p.m. A new express leaves Whitby at 8 a.m. for York, Leeds and London (arrive 1.40 p.m.).

CALEDONIAN RAILWAY: SEVEN RUNS.

Run	Distance Miles	No. of runs	Journey by Quickest Train	Speed Miles per Hour	Quickest Train
			H. M.		
Carlisle to Perth	150 $\frac{3}{4}$	2	3 3	49.4	1.40 a.m.
Carlisle and Stirling	117 $\frac{3}{4}$	2	2 21	50.1	2.13 a.m.
Carlisle & Glasgow (Central)	102 $\frac{1}{4}$	2	2 5	49.2	5.50 a.m.
Edinburgh to Carlisle	100 $\frac{1}{4}$	1	2 0	50.3	10 a.m.

The Caledonian time-table is the same as it was last year. The longest non-stop running on the North British Railway is still between Carlisle and Edinburgh, 98 $\frac{1}{4}$ miles—quickest time, 2hr. 11min. A note should, however, be made of the golfers' trains between Glasgow (Low Level) and Leven, on the St. Andrews Branch, which make non-stop runs to and fro—67 miles, in 1hr. 41min. The 5.35 p.m. restaurant car express from Aberdeen has been accelerated to arrive Edinburgh at 9.9 p.m., or half-an-hour earlier.

Seven-Mile Tunnel Under a Strait.—In addition to the new railway projected between Quebec and St. John, N.B., a scheme has been put forward for a tunnel under the Strait of Northumberland to connect New Brunswick and Prince Edward Island. The distance is about seven miles, and £7,000 is to be spent on survey work, the cost of the entire project being put at £3,500,000.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- July 12 (Wed.).—**Dominion Atlantic Railway** (Special), Threadneedle House, Bishopsgate, E.C., at 12.
- July 12 (Wed.).—**London and Greenwich Railway** (Half-yearly), 105, Winchester House, E.C., at 1.
- July 12 (Wed.).—**Paraguay Central Railway** (Debenture Holders), Salisbury House, London Wall, E.C., at 4. Followed by an Extraordinary Meeting.
- July 12 (Wed.).—**San Paulo and Minas Railway** (Annual), 14, Queen Victoria Street, E.C., at 12.
- July 14 (Fri.).—**North and South Western Junction Railway** (Half-yearly), Euston Station, N.W., at 12.
- July 17 (Mon.).—**Burry Port and Gwendreath Valley Railway** (Special), 5, Gray's Inn Square, at 12.
- July 25 (Tues.).—**City and South London Railway** (Half-yearly), 71, Finsbury Pavement, E.C., at 12.
- July 28 (Fri.).—**Great Eastern Railway** (Half-yearly), Great Eastern Hotel, E.C., at 12.
- July 31 (Mon.).—**Metropolitan Railway of Constantinople from Galata to Pera** (General), 25, Bucklersbury, E.C., at 2. Followed by an Extraordinary Meeting.
- Aug. 1 (Tues.).—**London and Blackwall Railway** (Half-yearly), 17, John Street, Crutched Friars, E.C., at 1.
- Aug. 4 (Fri.).—**London and South Western Railway** (Half-yearly), Waterloo Station, S.E., at 12.
- Aug. 10 (Thurs.).—**Midland Great Western Railway of Ireland** (Half-yearly), Broadstone Terminus, Dublin, at 1. Followed by a Special Meeting.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

THE PURCHASE OF CHELSEA POWER STATION.

On Monday extraordinary meetings were held, at Westminster, of the Underground Electric Railways Co. of London, Ltd., the Metropolitan District Railway Co., and the London Electric Railway Co., for the purpose of considering a resolution approving of the agreement for the sale by the Underground Co. to a Joint Committee of the other two companies of the electric generating station in Lots Road, Chelsea.

At the meeting of the Underground Electric Railways Co., Sir Edgar Speyer, who presided and moved the resolution, said that Parliamentary powers had been obtained for carrying out the transaction. The proposed price to be paid to their company was £2,200,000 of power house rent charge stock at par, or the net proceeds thereof. The purchase price to be paid to their company and the other terms of purchase were contained in the provisional agreement made on June 9, between their company and the Joint Committee. This agreement provided for the purchase by the Joint Committee from the company of the generating station undertaking and also the interest of the company and of all persons claiming through it in the depreciation fund. This latter fund had been built up by the contributions of the two railway companies and now amounted to a little over £170,000. It was originally proposed that the sale and lease should take effect as on July 1. It had, however, since been found desirable, owing to legal considerations, that the transfer should only take effect as at January 1, 1912. In the meantime their company would continue to derive revenue from the two railway companies in respect of current supplied to them under the existing agreements. The directors considered that the proposed sale of the power house undertaking was desirable in the interests of the company, as it converted this generating station undertaking into liquid assets, which enabled their company to redeem not only the £1,000,000 4 per cent. debentures having a first charge on the power house undertaking, but also over £1,000,000 4½ per cent. bonds of 1933, the interest on which, plus the income tax payable by the company, amounted to over 4½ per cent. per annum. Apart from the reduction of the bonded debt of the company, the proposed sale would result in a slight increase on revenue account. As the two railway companies would also materially benefit by the acquisition of the power house, their company, which had a preponderating holding in the stocks and shares of the two railway companies, would immediately derive the whole of the benefit which would accrue to them. The resolution was unanimously agreed to.

Lord George Hamilton, who presided at the meeting of the

Metropolitan District Railway Co., said that in the judgment of the directors it was desirable that the two railway companies should own and have absolute control of the generating station provided it could be acquired without placing any greater burden upon the revenues of the two railway companies than they were subject to under the existing power supply agreements. As to the financial result to the two railway companies of the proposed purchase, he said that the Joint Committee had been in negotiation with the Underground Company, and the purchase price provisionally agreed to be paid to that company for the generating station undertaking, including the depreciation fund, was £2,200,000 of the power house stock, to be created by the Joint Committee under the powers of the Act or the proceeds from the sale of such stock. This stock carried interest at 4 per cent. per annum, and if there were added to this the further stock which it would be necessary to create in order to defray the costs of the Act, stamp and other duties, and expenses of transfer, and also to provide £25,000 working capital for the two railway companies, the total amount approximated to £2,275,000. The annual dividend on this stock would be approximately £91,000, and this would be provided by the rent to be paid by the two railway companies under the proposed lease. When the Bill was before the Committee of the House of Commons the directors by their counsel gave the following pledge—viz., "That the terms of purchase and lease of the generating station shall be such that the revenue burden upon the two companies shall not be greater than it would have been had this Bill not been passed." In fixing the purchase price this undertaking had been scrupulously adhered to, for this annual dividend, or rent of approximately £91,000 per annum, would take the place of somewhat larger payments for interest charges and profit which the two railway companies had now to pay, and would, during the currency of the 99 years' power agreements, continue to pay to the Underground Company as part of the price of the electric current supplied by the Underground Company under their existing power contracts. If the scheme were carried into effect the revenue of the two railway companies would immediately benefit by the arrangement, and that this benefit would increase as the output of the electrical energy from the generating station increased both by the increasing requirements of the two railway companies for their own undertakings and also by the sale of electrical energy to other railway companies and to tramways. The rent payable under the lease, which would provide the dividend to be paid on the new power house stock, would rank as a working expense in like manner as, and in exactly the same position as, the payments now made by each of the two railway companies to the Underground Company for the electrical energy supplied to them by that company.

He moved resolutions carrying the proposals, and these were adopted.

At the meeting of the London Electric Railway Co., over which Lord George Hamilton also presided, the scheme was likewise approved.

Later in the week a prospectus inviting subscriptions for the new stock was published.

EGYPTIAN DELTA LIGHT RAILWAYS.

The report for the year ended March 31, 1911, states that the coaching traffic shows a considerable increase for the year, the number of passengers carried being 7,461,248, as compared with 7,132,000 carried during the year ended March 31, 1910. The gross receipts from this source were £170,211, as compared with £162,560 for the previous year. The goods traffic has also shown a satisfactory improvement, the quantity of goods lifted being 1,115,564 tons, as compared with 1,070,190 tons during the year 1910, an increase of 45,374 tons, the gross receipts from this source being £89,005, as compared with £76,236 in the previous year, an increase of £12,769, the principal improvement under this head being in the movement of cotton. Under working expenses, the total expenditure was £163,157, as compared with £154,315 for the previous year. The ratio of expenses to gross earning was 61.33 per cent., as compared with 62.70 per cent. for the previous year. The net earnings from all sources aggregated £102,861, which, with interest and dividends earned, amounting to £1,377, and £15,660 brought forward from 1910, gives a total of £119,898 to be dealt with. After providing for all fixed charges, interest on debentures, and for the debenture and share capital redemption sinking funds, etc., a balance of £55,886 remains. The board recommend the payment of a dividend of 3½ per cent. on the preference share capital for the year ended March 31, 1911, which will absorb £36,427 and leave a balance of £19,459 to be carried forward. The proposed improvement of the Cairo-Helwan section of the Helouan Railway system is receiving the consideration of the directors.

MASHONALAND RAILWAY COMPANY.

The report states that it has been decided to simplify the accounts by the publication of annual, instead of half-yearly, balance-sheets. Since the publication of the last report, the construction of the railway from Broken Hill to the Congo Border by the Rhodesia Katanga Junction Railway and Mineral Company, Ltd., has been completed, and the Compagnie du Chemin de Fer du Katanga has carried on the line from the border to Elizabethville. The whole section from Broken Hill to Elizabethville, a distance of 305 miles, was opened for traffic on December 9, 1910. A further extension of the line from Elizabethville to Kambove, a distance of about 200 miles, has been commenced by the Compagnie du Chemin de Fer du Bas Congo au Katanga, and will, it is anticipated, be completed within the next twelve months. A comparative statement of the traffic returns on the Beira-Salisbury section, for the two years 1908-1909 and 1909-1910, shows that the net revenue increased by £111,350, or 60.9 per cent., while the expenditure has only increased by £8,204, or 0.24 per cent. The growth of gross revenue is mainly attributable to the larger tonnage of general merchandise carried. A large increase has taken place in imported traffic, partly due to the progressive settlement of the country, but also to the more general use of Beira as the port of entry for Rhodesia. The working results of the Kalomo-Broken Hill Extension for the three years ended September 30, 1910, have been as follows:—Year ended September 30, 1908, gross revenue £11,972; expenditure, £22,759; loss, £10,787. Year ended September 30, 1909, gross revenue, £44,872; expenditure, £35,406; net revenue, £9,466. Year ended September 30, 1910, gross revenue, £69,531; expenditure, £38,768; net revenue, £30,763. The approximate figures for the first eight months of the present financial year are:—Gross revenue, £47,548; working expenditure, £23,350; net revenue, £23,998. During these eight months the carriage of construction materials has practically ceased, but this has been counter-balanced to a very large extent by the increase of general merchandise, consisting chiefly of mining machinery for the Katanga district. The returns of the Lomagunda and Eldorado branches for the same period have been as under:—Year ended September 30, 1908, gross revenue, £15,320; expenditure, £13,150; net revenue, £2,164. Year ended September 30, 1909, gross revenue, £16,491; expenditure, £13,890; net revenue, £2,601. Year ended September 30, 1910, gross revenue, £22,620; expenditure, £12,303; net revenue, £9,717. The approximate figures for the first eight months of the current financial year are:—Gross revenue, £13,316; expenditure, £9,803; net revenue, £3,513. The construction of the Mazoe Railway is in hand, and it is anticipated that the line will be completed and opened for traffic as far as the Jumbo Mine before the close of the year. In connection with the building of this line, it has been decided to widen the first 13 miles of the Lomagunda branch to standard gauge. The extension of the Mazoe Railway to the Shamva Mines has also been decided on, and the work will be proceeded with without delay. During the past year a contract has been given to the British Construction Company for the construction of a deep-water wharf at Beira, and the work is now in hand. In view of the further extension of the line to the north, the directors decided, during the past year, in consultation with the Rhodesia Railways, Ltd., that the headquarters of the railways should be moved from Umtali to a more central position. Bulawayo was selected as being the most important junction on the system, and the transfer was satisfactorily carried out in October last. On November 16, 1910, an agreement was entered into by this company with the British South Africa Company, the Rhodesia Railways Trust, Ltd., and the Rhodesia Railways, Ltd., whereby the British South Africa Company obtains the right for a period of ten years to transfer to the Rhodesia Railways Trust the debt due to itself from this company, and in exchange to take shares, at par, in the Rhodesia Railways Trust in satisfaction in whole or in part of the debt due to it by this company. The British South Africa Company also undertakes, inter alia:—(1) to continue to advance to this company for a like period such sums as may be needed to equip its existing system efficiently; (2) not to call in, during the same period, its existing or future advances, either under its guarantees or for capital expenditure, and to fix its charge for interest at 5 per cent. per annum. Arrangements have been come to with the Rhodesia Katanga Junction Railway and Mineral Company, Ltd., and the Compagnie du Chemin de Fer du Katanga, whereby this company works the line from Broken Hill to Sakania, eight miles north of the Congo border, for a period of one year from December 9, 1910, at cost.

RHODESIAN RAILWAYS.

The report for the twelve months ended September 30, 1910, states that it has been decided to revert to the former practice of publishing yearly instead of half-yearly accounts. Since the issue of the last report the railway from Broken Hill to the Congo border has been constructed by the Rhodesia Katanga Junction Railway and Mineral Company, Ltd., and the line has been continued from the border to Elizabethville by the Compagnie du Chemin de Fer du Katanga. The whole section from Broken Hill to Elizabethville, a distance of 305 miles, was opened for public traffic on December 9, 1910. A further extension of the main line from Elizabethville to Kambove mine, a distance of about 200 miles, has now been undertaken by the Compagnie du Chemin de Fer du Bas Congo au Katanga, and it is hoped that this section will be completed within the next twelve months. The transfer of the headquarters of the railways from Umtali to Bulawayo was effected in October last. The change will prove a convenience to the public, and will facilitate the administration of the railway system. The gross revenue for the year ended September 30, 1910, shows an increase of £142,597, all classes of revenue contributing to this result. The gross revenue for April was £81,102, which is the best on record, being about £12,000 more than the return for April, 1910, which, up to that date, was the highest month. This result is particularly satisfactory, as it is not in any way due to the carriage of construction materials. On November 19, 1910, an agreement was entered into by the company with the British South Africa Company, the Rhodesia Railways Trust, Ltd., and the Mashonaland Railway Company, Ltd., whereby the British South Africa Company obtained the right, for a period of ten years, to transfer, in whole or in part, to the Rhodesia Railways Trust, Ltd., the debt due to itself from this company, and in exchange to take shares in the Rhodesia Railways Trust, Ltd., at par, in satisfaction of the debt. The British South Africa Company also undertook, inter alia: (1) To continue to advance to this company for a like period such sums as may be needed to equip its existing system efficiently; (2) not to call in, during the above period of ten years, its existing or future advances, either under its guarantees or for capital expenditure, and to fix its charge for interest at 5 per cent. per annum. On February 15 last the British South Africa Company exercised this option, and the debt, amounting at that date to £570,024, was transferred to the Rhodesia Railways Trust, Ltd., which, for the same period of ten years, has agreed not to call in this debt.

SAN PAULO AND MINAS RAILWAY.

The report for the year ended March 31, 1911, states that since the last meeting of the shareholders steady progress has been made in the construction of the railway. Delay has arisen through exceptionally bad weather causing difficulties in the formation of the road-bed and the laying of the permanent way, together with a scarcity of labour, but the contractors expect to be in a position to hand over the line completed and ready for traffic in the course of the next few weeks. Under the date of May 24 last, Mr. J. Martin Stuart, the superintendent engineer, reports that "the condition of the permanent way is perfect; this also applies to all material used in same as supplied by the 'Société' here, such as rails and accessories, sleepers, girders for bridges, etc. All earthworks and works of art have been carried out in a most satisfactory manner and far superior to any other railway in the country of this gauge, and as good as, and in some cases better than, those of a metre-gauge line. The workshops and plant are exceedingly well-equipped and fitted up for so small a line." On May 15 last the line to Sao Sebastiao do Paraizo was publicly inaugurated. The principal authorities of the district were invited, and from accounts since received everything passed off satisfactorily. Portions of the line as constructed have been worked by the contractors. The receipts therefrom showed a falling off at the beginning of this year as compared with the previous year, mainly owing to the partial failure of last season's coffee crop. With an improvement in the coffee crop, it is believed that the traffic for the present year will show a substantial increase over that of last year. The whole of the rolling stock has now been erected and is ready for working.

BEIRAVIA DAMP COMPANY. The report of this company for the year ended May 27, 1911, shows that the results are sufficiently satisfactory to enable a dividend of 6 per cent. per annum, free of income tax, to be paid, including the interim dividend at the same rate paid in January last. £3,000 has been carried to the reserve fund, and £7,230 carried forward.

PARLIAMENTARY.

QUESTIONS IN THE HOUSE OF COMMONS.

Rail Contracts for India.

On Monday, Mr. Edgar Jones (Merthyr Tydvil—Liberal) asked the Under Secretary of State for India whether the firm of Guest, Keen, and Nettlefold supplied rails and sleepers for the Indian State railways or other purposes from their Dowlais works; and, if so, whether he would insist that the wages of the workmen employed shall be in accordance with the usual fair wages conditions demanded in the case of Government contracts.

Mr. Montague: The firm of Guest, Keen and Nettlefold supply Indian State railways with rails. All contracts entered into by the India Office contain the usual fair-wages clause, and no complaint has been received that it has not been observed by this firm.

Mr. Keir Hardie (Merthyr Tydvil—Labour) asked the Under Secretary of State for India if he would state what was the size of the order for rails and sleepers for the Indian State railways placed by the Government with the firm of Guest, Keen, and Nettlefold, Dowlais; whether he was aware that moulders engaged on the job were paid wages in some cases as low as 2s. 11d. per day, and were driven to strike because of an attempt on the part of the firm to alter without notice their conditions of employment, involving a reduction in their rates of pay, and that, as a consequence, the work was now being done by blackleg labour; and what action he proposes taking to secure the observance of the fair-wages clause of this contract?

Mr. Montague: Since January 1 last 19,616 tons of rails and fishplates have been ordered from Messrs. Guest, Keen and Nettlefold. No sleepers have been ordered and no moulders are engaged in executing the contract.

Mr. Keir Hardie put some supplementary questions but elicited nothing further, and he then said that, in view of the very unsatisfactory nature of the reply, he would, at the proper time, ask leave to move the adjournment of the House to discuss the matter. When questions to Ministers were over, Mr. Keir Hardie accordingly asked leave to move the adjournment in order to discuss what he described as the refusal of the India Office to enforce the terms of the fair-wages clause in respect to a contract now being executed by Guest, Keen and Nettlefold which had led to a strike of ten weeks' duration.

The Speaker suggested that the matter should be postponed till the House could arrive at the actual facts.

Mr. Keir Hardie accepted the suggestion.

On Thursday, Mr. Keir Hardie returned to the subject and put a number of questions, one of which elucidated a point previously obscure. It took the form of an inquiry whether the standards and rolls for turning out rails at Dowlais works were made by moulders.

Mr. Montague, in his replies, stated that the fair-wages resolution, as interpreted by the Government Departments concerned, did not extend to the manufacturer of plant or tools used only partly in fulfilling Government contracts. Mr. Keir Hardie had supplied him with the detailed information on which he based his allegations as to low wages paid, and enquiry would at once be made into the matter. Guest, Keen and Nettlefold made no sleepers for the use of the Government of India. No sleepers, iron or steel, had been supplied for Indian State railways by this or any other firm in the United Kingdom for many years, if they ever were at all.

Proposed Railway from Russia to India.

On Tuesday, the Earl of Ronaldshay (Hornsey—Unionist) asked the Foreign Secretary if a project for the construction of a railway from Russia to India *via* Persia had been submitted to him; and if so, what was the attitude of the Government towards it.

Sir E. Grey replied: The answer to the first part of the question is in the affirmative. His Majesty's Government would not oppose such a railway if they were satisfied that British and Indian interests were adequately protected. I am not at present in a position to give any particulars about the scheme.

PROGRESS OF RAILWAY BILLS.

Central London Railway.

This Bill, which has already passed through the House of Commons, was before a Committee of the House of Lords on Tuesday and Wednesday. It authorises the company to con-

struct a short extension from the present terminus at Wood Lane, Shepherd's Bush, to a junction with the Great Western Company's authorised railway from Ealing to Shepherd's Bush. The object is to institute through trains between Ealing and the Central London line. The electric equipment and the working is to be carried out by the promoters. The estimated cost of the proposed railway is £145,896. The only opposition came from the Metropolitan Railway Company, and it was advanced on the ground of competition. The promoters met the opposition by undertaking that, pending any application in the next session of Parliament by the Metropolitan Company for sanction for a junction and through running of trains between the Hammersmith and City line, and that from Ealing and Shepherd's Bush, the Great Western Company, while reserving the right to oppose that application, would do nothing in the construction of the line from Ealing to Shepherd's Bush which would prevent or prejudice the carrying out of such a proposal. The Committee then passed the Bill.

Midland Railway.

On the order for the second reading of this Bill in the House of Commons on Tuesday,

Mr. J. H. Thomas (Derby—Labour) moved the rejection of the measure on the contention that the Midland Railway Company had deprived their employees of the benefits secured to them by a recent arbitration. He said that the cases which had come under his attention were a burning grievance that sooner or later would cause the men to revolt. Only a few weeks ago there was a threatened strike at Derby, and he persuaded the men not to strike, but there was a limit to human endurance and in these cases that limit had been reached. If his present protest had no effect he would take an early opportunity of asking the House of Commons to say that no one railway company should be the means of destroying a great conciliation scheme between capital and labour.

Mr. Hudson (Newcastle-on-Tyne—Labour), in seconding, contended that in view of the number of cases in which overtime had been worked, there was no ground for the reductions that had been made. He also explained that, with regard to the conciliation board, this company had shown no fair and amicable spirit. Their attitude had been hostile.

Lord H. Cavendish-Bentinck (Nottingham, S.—Unionist) said that it was hardly worthy of a company presided over by a body of gentlemen to practice evasions of the arbitrator's award. He found it difficult to believe that the policy adopted was that of the directors generally. The company's method of engaging casual labour was unsatisfactory.

Mr. Hills (Durham—Unionist) said that the number of shunters in the company's goods yard at Leicester had been reduced because of a change made in the system of breaking and reforming goods trains. It was not true that the railway company created a bogus class of railway servants in order to defeat the arbitrator's award. The general manager paid the men shunters' wages and places were being found for them on other parts of the Midland system, there not being work for them at Leicester. The complaint in reference to the goods guards was that they had been reduced in number while those remaining worked overtime. As a matter of fact they had worked less overtime than in the past, and only while re-organisation was going on and during Whitsuntide. The matter was now before the Arbitration Board for settlement. The agent at Wolverhampton put draymen on short time, but that was disapproved of at headquarters and full wages were paid, four of the men being found places elsewhere. The directors were trying to work the Conciliation Boards in the way they should be worked, and he urged the House not to intervene. The directors were engaged in carrying out the awards of the Board. He appealed to the House to give the Bill a second reading. The Midland Company had tried to treat their men not only justly but generously. If any complaints from the men reached him he pledged himself that they should be investigated.

Mr. Tennant (Parliamentary Secretary to the Board of Trade) said that the company had stated to him that they had not only a rule but a tradition to endeavour to carry out any changes in the management of the line with the least possible hardship to the people affected. Overtime, he feared, it was not possible entirely to avoid on a great concern like this.

The amendment was negatived without a division, and the Bill was read a second time.

Alexandra (Newport and South Wales) Docks and Railway.

After a hearing of two days, this Bill was passed on Wednesday. Much of the opposition which led to such a prolonged hearing when the Bill was before a House of Commons Committee was not persisted in.

PROGRESS OF RAILWAY EMPLOYMENT, 1901-1910.

In the table below we have summarised the particulars regularly published by the Board of Trade in the annual returns of accidents on railways, showing the number of employees at December 31, 1901, 1904, 1907, and 1910. The last two columns give the increase and decrease in 1910 compared with the position in 1907:—

NATURE OF EMPLOYMENT.	No. of Persons Employ'd on Dec. 31 1901	No. of Persons Employ'd on Dec. 31 1904	No. of Persons Employ'd on Dec. 31 1907	No. of Persons Employ'd on Dec. 31 1910	1910 COMP'RD WITH 1907.	Increase	Decrease
1. BRAKESMEN (see GOODS GUARDS)							
2. CAPSTAN-MEN & CAPSTAN-LADS							
(1) Men	1,052	1319	1,543	1,421		122	
(2) Boys	204	190	285	140		145	
3. CARMEN & VANGUARDS							
(1) Men	16,819	16,317	17,672	18,382	710

THE SUMMER SERVICES.

GREAT NORTHERN THROUGH SERVICE TO KENT AND SUSSEX.

The summer services on the railways and pleasure shipping routes came into operation on many lines on Saturday last. A new through service has been arranged between the principal stations on the Great Northern and the south-east coast and inland resorts of the South-Eastern and Chatham. Passengers reach King's Cross Station by main line trains up to 2.15 p.m., and join the 2.45 p.m., thence to Hertford Hill, Farnbridge Wells, Bexhill, Hastings, Margate, Ramsgate, Dover, etc., thus avoiding the trouble and expense of crossing London. A corresponding train is run in the reverse direction connecting with the main line expresses from King's Cross at 1.40 p.m., 2.0 p.m., 2.15 p.m. and 2.20 p.m. These facilities take the place of the Bournemouth service from King's Cross, which was discontinued last October. Incidentally this and other improvements are made to constitute a discharge of the South Eastern and Chatham Company's promise to Margate that when it increased its attractions and adequately advertised them there would be correlative action by the company.

The Great Central issues an attractive A.B.C. programme of express excursions every Saturday from Marylebone to the Midlands, and the north-east and north-west coast resorts, as well as to the Chiltern Hills and Shakespeare's country. A feature is also made of Continental trips from Grimsby.

From last Monday, one South Western express train daily from Waterloo to Bournemouth is traversing the 108 miles in exactly two hours each way. This is a reduction of six minutes. The time is also reduced to Swanage and Weymouth to two hours fifty-eight minutes, and three hours five minutes respectively. Amongst other additions, new trains leave Waterloo, on week-days, at 7.10 and 8.55 a.m. (express) for Winchester, Southampton, etc., at 11.10 a.m. express to Exeter, North Devon and North Cornwall; at 12.40 p.m. express to Breckenhurst (New Forest), Southampton West, and Swanage; 8.15 p.m. to Dorchester, Weymouth, etc.; 9.10 a.m. to Peterfield, Midhurst, etc.; 11.10 p.m. to Godalming, etc.; and on Sundays at 8.50 a.m. to Portsmouth, via Meon Valley Line; 9.20 a.m. to Bournemouth, etc.; 10.15 a.m. to Swanage, Weymouth, etc.; 12.30 p.m. to Hfracombe and North Devon. On Sunday rights the 10.15 from Waterloo to Aldershot and Bordon will be accelerated. There are corresponding new trains in reverse direction, also numerous other important alterations and additions in the main line and suburban train services.

The London and North Western opened the North Wales tourist season on Saturday by again running their non-stop train from Euston to Rhyl, a distance of 209 miles, in 2.8 minutes. The train, which leaves Euston at 11.10 a.m., and is timed to reach Rhyl at 3.8 p.m., was on Saturday drawn by "Wolfhound," one of Mr. Bowen Cooke's latest type of passenger engines.

From its most important centres on the south-west coast and inland, as well as from London, the Great Western is running a number of new and fast trains. For the Scotch tourist season (July 17 to September 15), the 2.25 p.m. train from Plymouth, 3.21 from Torquay, 3.13 from Paignton, and 4.48 p.m. from Exeter to Bristol, will go through to Crwe, and will give services to Oban, Perth, Dundee, Aberdeen, Inverness, etc., except on Saturday nights. On Sunday last a new Sunday night service was inaugurated to and from Ireland, via Fishguard. A weekly express excursion train commenced running last Monday from Paddington to the centres on picturesque Dartmoor, the tickets embracing also meals and motor car tours.

The Nineteen East Coast resorts served by the Great Eastern afford an excellent selection of bracing and enjoyable holiday centres. The principal features of the summer travelling facilities are non-stop trains between London and Felixstowe and London and Yarmouth, and the running of the Norfolk Coast express vestibuled luncheon car trains between London, Cromer, Sheringham and Mundesley. Restaurant cars are also run on the principal trains between London and the East Coast, serving the important stations en route.

Additional facilities for enabling London business men to reside on the eastern seaboard are provided by the running of an express leaving Clacton-on-Sea at 7.3 a.m., arriving in London at 8.52 a.m., and by the running on week days of an express corridor tea train from Liverpool Street to Clacton-on-Sea at 5.6 p.m. Commencing on July 14, the train service between Liverpool Street and East Coast resorts will be augmented and accelerated, and additional corridor vestibuled breakfast, luncheon and dining car expresses will be put on. From this date the 7.12 p.m. dining car train from Liverpool Street to Ipswich will start at 7.35 p.m., be extended to

Yarmouth and Lowestoft, and be in connection at Ipswich with a train to Felixstowe.

Tourist fortnightly, Friday to Tuesday, and other cheap tickets for varying periods are issued to the East Coast resorts, in addition to which extra journey and residential season tickets for short periods at special low fares afford an opportunity to those who have families staying at the seaside to travel to and from London for business purposes.

The popular 3s. half-day excursion from London (Liverpool Street) to Clacton-on-Sea on Thursdays is being repeated from June to the end of September, the low fare operating from most of the suburban stations. During July and August this half-day excursion will run from Liverpool Street without stopping, and in addition a special fast half-day excursion will also be run to Clacton on Thursdays from St. Pancras, calling at Highgate Road to South Tottenham, inclusive, and at Stratford and Ilford.

Southend is given a considerably augmented service from Liverpool Street. Particular attention has been paid to the requirements of London business men, the journey by certain trains being accomplished in less than an hour. A midnight train also leaves Liverpool Street for Southend every week-day. A breakfast car is attached to the 8.16 a.m. train from Southend, a tea car run in the 5.3 p.m. train from Liverpool Street, and a supper car express leaves Liverpool Street at midnight on week days, arriving at Southend at 1 a.m.

A later evening train service to the Norfolk district has been inaugurated by the extension to Norwich of the 6.37 p.m. dining car train from Liverpool Street to Cambridge.

Attention is also drawn to the attractive rural districts near London, which embrace much forest scenery and which, by reason of an excellent service of trains, with season tickets at reasonable rates, are convenient for residential purposes. Reduced fares and season ticket rates have recently been put into operation.

Corridor, breakfast and dining car trains, vestibuled throughout, are running between London and Parkeston Quay, Harwich, in connection with the departure and arrival of the steamers to and from the Hook of Holland, Antwerp and Hamburg, and similar trains are running between York and Parkeston Quay. The latter service affords convenient facilities for passengers travelling to and from Scotland with through carriages to and from the Northern and Midland Counties. Through carriages are also run between the Hook of Holland, Bremen, Hamburg, Halle (for the Hartz Mountains), and Berlin. Illustrative and descriptive pamphlets concerning the East Coast may be obtained gratis from the Superintendent of the Line, Liverpool Street Station, E.C., and at the town offices.

The Caledonian Railway Company in conjunction with the Lancashire and Yorkshire Railway Company have opened a new route from Glasgow and Edinburgh to the Isle of Man, via Fleetwood. On the inauguration of the route a special party were received by members and officials of the Manx Government and the Douglas Corporation, and a programme of visits extending over a week was carried through. Passengers have the privilege of the alternative routes, and may travel via Fleetwood and return via Ardrossan or vice versa, or they may select the short sea passage both ways.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, July 5, compared with that for the previous week, shows the following changes:—

July 6, 1910.	BANKING DEPARTMENT.	June 28, 1911.	July 5 1911.	Increase.	Decrease.
£	<i>Liabilities.</i>	£	£	£	£
3,450,660	Test	3,175,224	3,400,847	225,623	—

GENERAL NEWS.

THE TRANSPORTATION OF 100,000 CHILDREN.

As the guests of the King and Queen one hundred thousand school children of the metropolis were on Friday, June 30, conveyed by railway to a Coronation fête at the Festival of Empire Exhibition at the Crystal Palace. The arrangements were carefully made weeks beforehand by a committee, of which the managers of the South Eastern and Chatham and the London, Brighton and South Coast Companies were members, and every detail worked out without a hitch, both as regards the local lines of the two companies named, who serve the Crystal Palace, and the trains from other railways which were run over their systems. Every railway in London, with the exception of the Great Central and the Tubes, ran special trains from their systems to Sydenham.

The area administered by the Education Department of the County Council was divided for the day into nine divisions, each of which had a badge not only of different colour, but distinctive in shape as follows:—Crystal Palace (High Level), (round); Sydenham Hill (octagonal); Crystal Palace (Low Level), (square); Penge (L.B. and S.C.R.), (diamond). Each division was sub-divided into train-loads, and this organisation was strictly adhered to, both on the journeys and in the Palace grounds. This enabled the children from each locality to be kept together. Their arrival and departure at the Palace stations were facilitated by the reiteration of the command, "Keep in fours." Railway officials and teachers were stationed a few paces apart alternatively down the platforms. As each train arrived the porters opened the doors, and the teachers assisted the children out of the carriages. Instantly ranks were formed, and, walking four abreast, the children marched rapidly out of the station. In all there were 92 special trains, the passage of which was assisted by the suspension of 326 passenger and 17 goods trains on the Brighton suburban lines, while the working of 109 other passenger and twelve other goods trains was altered. Nearly 50 special trains were used on the S.E. and C. system for 40,000 children, and on this line also the ordinary service was suspended.

The Earl of Bessborough, the chairman of the L.B. and S.C.R., was on the platform at the Lower Level station to witness the arrival of the first of the day's continuous succession of trains, and remained in the station most of the morning. With him were Mr. William Forbes, the general manager, and Mr. Finlay Scott, the superintendent of the line. Mr. H. F. Dent, general manager of the S.E. and C.R., and Mr. W. Thomson, superintendent of the line, were at the High Level station. This was the last day of Mr. Thomson's forty years' service, and he stated that for thirty years he had occupied superintending positions, but he "never remembered so big a bit of transport business, nor one so well carried out from beginning to end." No railway tickets were issued, the badge being a sufficient passport for the journey to and from the Crystal Palace. In addition to the badge, every boy wore a cap of the divisional colour, and each girl a coloured muslin scarf round her hat. Caps, scarves, and badges were provided out of the donation of £1,500 placed at the disposal of the County Council by the *Daily Telegraph*.

FAILURE OF AN APPLICATION AGAINST THE N.E.R.

Judgment was given on Monday by the Railway Commissioners in the application made by the Newcastle Grain and General Warehousing Company, Limited, against the North Eastern Railway Company for a rebate in respect of charges for the carriage of the applicants' goods. Reviewing the circumstances of the application, the Grain Company's traffic amounted to about 40,000 tons per annum, and as 95 per cent. of it was dealt with on their own premises, the applicants had asked for a rebate. They complained that they were charged rates similar to other traders who used the company's station in the neighbourhood. They also contended that the railway company was not entitled to make terminal charges, as the railway premises could not be described as a terminal station. Mr. Justice Lawrence referred to an agreement entered into between the parties in 1879, which allowed the Grain Company a rebate of 3d. per ton, and an agreement between the railway company and the Newcastle Corporation in 1802, by which the corporation gave up a toll to which they were entitled and the railway company gave up a charge of 6d. for goods carried on their quayside branch. The court did not think there was anything abrogating the earlier agreement, and the applicants were not entitled to the rebate asked for.

NORTH EASTERN EMPLOYEES' DEMANDS.

The General Railway Workers' Union, after unsuccessfully submitting their demands for a minimum wage for labourers, cleaners, strikers, boilermasters' assistants, and mechanics, and other skilled labour, to Mr. Vincent Raven, chief mechanical engineer, appealed to Mr. A. Kiye Butterworth, general manager. The latter granted an interview on Wednesday. The following official statement was issued—The general manager met a deputation representing artisans and labourers, who are members of the General Railway Workers' Union employed in the North Eastern Railway shops, but the deputation declined to put forward the case of the labourers and lower-paid men unless they were also allowed to represent the case of the skilled mechanics, with regard to whom the company are already in negotiation with another society.

PERMANENT WAY INSTITUTION.

The summer Convention of the Permanent Way Institution, which began last evening at Southampton, promises to be well attended. To-day (Saturday) the members will meet at 10 a.m. at the Floating Bridge, and will visit the shipbuilding works of Messrs. Thornycroft, at Woolston. The annual Summer general meeting will be held at 2.30 p.m., when the members will be officially welcomed to Southampton by the Mayor, Mr. E. Bance. The annual Summer dinner will be held at the South Western Hotel at 7.30.

On Monday the members will meet at the Dock Gates at 9.30 a.m., and will inspect the quays, pumping station, dry docks, etc. In the afternoon the White Star S.S. "Olympic" will be visited. On Tuesday a special train will leave the Dock Station at 8.45 for Eastleigh, where the members will make a tour of the new locomotive shops and wagon works of the London and South Western Railway, subsequently lunching at the Railway Institute. On Wednesday a visit will be made to Portsmouth, where the dockyards and certain battleships will be inspected. Thursday will be devoted to the New Forest. Various entertainments have been provided for the ladies accompanying the members, and, as usual, the members should derive much information as well as recreation from their week's meeting. As usual a very elaborate guidebook has been prepared of the places to be visited, etc.

MIDLAND RAILWAY CONCILIATION BOARD.

No 3 Sectional Conciliation Board of the Midland Railway Co. has referred to the Central Conciliation Board the proposals of the company and the applications of the men concerning goods, guards, pilot guards, under-guards, and goods-yard and sidings foremen. The following decisions have also been arrived at by both sides:—

Emergency-men.—That the conditions of service of goods guards as fixed by the Central Board or the arbitrator be made also applicable to emergency-men, but the under guards' wages will be the wages of emergency-men also.

Branch Men and Sidings Porters.—That these grades be classed with the goods shunters section, and receive goods shunters conditions of service and wages, as per schedule submitted and revised.

Goods Shunters, Train Receivers, Wagon Sorters, Wagon Distributors, Pointholders, Sidings Porters, Branchmen, and Horse Drivers.—On behalf of the whole of these grades a settlement was arrived at, resulting in the following concessions to the men concerned:—

Eight-hour day (summer months) to goods shunters at Westhouses and Blackwell, and at all sidings at Peterborough. Gross hours of sidings porters, etc., reduced from twelve to ten per day. One shilling per week advance to under goods shunters at nearly fifty stations, including Somers Town and St. Pancras. One shilling per week advance to sidings porters at twenty of busiest stations and sidings and minimum wage raised from 16s. to £1. One shilling per week advance to pointholders at not less than six of the busiest sidings. One shilling per week advance to horse drivers at Bingley, Kirkstall Woodlesford, Belper, Tewkesbury, Melton Mowbray, Loughborough, and Kettering. Minimum raised to 25s. (fixed rate) for Leicester train receivers; 18s. per week advance to train receiver at Wellingboro. (All the above advances to be upon the present maximum rates.) Signing on. Each man who signs on for his appointed day's duty will receive a day's pay. Rest: Rate and a half pay for unexpired portion of nine hours' rest. Overtime, Sunday, Christmas Day, and Good Friday: Rate and a quarter paid for work performed on these days.

The settlement is to come into operation on Aug. 1, 1911, and to remain in operation until six months after notice has been given by one side to the other to terminate it. No such notice to be given before June 30, 1914.

LANCASHIRE GOODS TRAFFIC DISLOCATED.

The outstanding dispute in connection with the summer strike is reported from Manchester, where a very grave situation has prevailed since Tuesday. Seven thousand railwaymen refused to work, and the roads were blocked, and came into frequent conflict with the police. Very violent measures were adopted to prevent the movement of goods by the railway lorries, the goods yards and sidings being closed. The railwaymen were joined by the seamen, and the strike spread to the Manchester Ship Canal. Both the L. & N.W.R. and the L. & Y. Railway Companies on Wednesday were compelled to stop merchandise, perishable or otherwise, for delivery. As a result, and on Thursday many factories and warehouses in Lancashire and Yorkshire had to suspend business, financial loss and great inconvenience being caused. Coalminers at two pits at Preston also came out on strike. On Thursday is the result of the conference between Mr. Askwith, of the Board of Trade, and representatives of the employers, railwaymen's unions, and other bodies, it was agreed that the pickets should allow vegetables, fruit and provisions to be delivered. The prospects of a settlement were on Thursday evening considered to be remote, as the men had said, in effect, "that others were 'out for spoil' and that they had followed suit." They added that they were "fed up" with the Conciliation Board. Three hundred police from London and 600 troops from York and Lichfield arrived at Salford on Wednesday in response to an application made by the Mayor.

A COMPLIMENT TO THE LONDON AND SOUTH WESTERN RAILWAY STAFF.

Through the kindness of Sir Charles J. Owens, general manager of the London and South Western Railway, we are enabled to publish the following letters. The general public are more prone to make complaints against railway companies' servants than to praise them, and the unsolicited testimonial contained in the letter of Mr. King-Stephens is thus all the more welcome. The employees of the company who are brought in daily contact with passengers will not merely be gratified but will, we are certain, still further increase their efforts for the comfort and convenience of passengers.

29, Essex Street, Strand, W.C.

May 22, 1911.

Dear Sir,—After being a season ticket holder for getting on for forty years, I have to return my ticket as I am not renewing it, having now come to live in town.

There is always something sad about ending what has been going on for a long time, but in this case there is an element of pleasure too. It is that I can say that during the whole time I have been a season ticket holder I have met with nothing but the greatest courtesy from every official of the Company from top to bottom, and I should like to, so far as it is possible to do so, convey through you my best thanks to everyone connected with the line.

I know you have a good many grumblers to deal with, but when you have a specially unreasonable one you might show him this letter, and it may suggest to him as just possible that any incivility he receives is not absolutely unconnected with himself.—Yours very faithfully,

(Signed) R. KING-STEPHENS.

Sir Chas. J. Owens

London and South Western Railway.

General Manager's Office, Waterloo Station, S.E.

May 23, 1911.

My dear Sir,—Please accept my very sincere thanks for your most kind letter of the 22nd instant.

It is very gratifying to me that after being a season ticket holder on our line for forty years, you should give such a hearty and generous recognition of the courtesy which has been extended to you by our staff.

I am quite satisfied that they always do their best in the interests of the travelling public, but it is indeed rare for anyone to recognise their services in so spontaneous and generous a manner as you have done.

I certainly shall take steps to see that the staff are made acquainted with your very kind expressions, and if you will allow me I will arrange that your letter, with your name and address, shall appear in the *South Western Gazette*.

Perhaps you will kindly send me a line saying that I have your permission to do this.—Yours faithfully,

(Signed) CHAS. J. OWENS.

R. King-Stephens, Esq.,

29, Essex Street, Strand, W.C.

CORRESPONDENCE.

GALWAY AS A TRANSATLANTIC PORT.

To the Editor of THE RAILWAY TIMES.

Dear Sir,—The English papers have not realised the vital importance to Ireland of a Transatlantic port, the want of which has been a serious drawback to the trade and commerce of this country, also the necessity in the interests of the Empire of having a national harbour on the west coast of Ireland, the geographical position of which would undoubtedly secure the shortest, most easily protected and quickest route to obtain in time of war the necessary food supply from one of the greatest granaries in the world, Canada, our own colony, thus lessening the danger so forcibly impressed upon the country in the debate now proceeding in the House of Commons on the Declaration of London. In addition, it would provide one of the finest harbours in Europe in a bay where the entire British fleet could anchor in safety, and the advantages of which were forcibly put by naval experts before committees of both Houses, and more particularly dealt with before a committee appointed in 1883-4 for the investigation of the harbour accommodation of the United Kingdom. The leader appearing in your issue of the 1st deals very fully with this particular subject, and in the hope you will give further reference to a matter of such importance, I send you a pamphlet and map submitted to the Colonial Premiers. I would particularly draw attention to the Parliamentary Committee's report of 1884, contained in the pamphlet, and also the resolutions passed by public bodies in Ireland in favour of this project, the unanimity of which, irrespective of politics or party, is striking evidence of the want felt in Ireland for a Transatlantic port.

You refer to the existing train ferries on Lake Michigan as affording a fair comparison of the difficulties to be contended with in the Irish and English Channels. In Ernest de Rodakowski's work on "The Channel Ferry," the following appears:—

"That lake, of an area of 22,450 square miles (nearly four times the size of Yorkshire), has a maximum length of 345 miles, a breadth of 84 miles, and a depth of 870 feet. Whilst waves seldom exceed 15 to 20 feet in height in the English Channel, those on Lake Michigan are computed as frequently reaching a height of 20 to 25 feet.

"The maximum velocity of the wind on Lake Michigan, taken at twelve different points, gives a mean of 49.4, while the maximum in the English Channel, taken at a similar number of points, gives a mean of 43.7. These velocities were measured in October, November, and December 1903 and 1904."

It will be thus seen that the waves are higher and the velocity of the wind greater on Lake Michigan than in the English Channel, and it is a well-established fact that winds on large lakes such as this are of a more treacherous and difficult nature for navigation than those on the Atlantic ocean.

There are four ferries on this lake, as follows:—Frankfort to Manitowic, 90 miles; Frankfort to Manitowoc, 80 miles; Frankfort to Menominee, 78 miles; Frankfort to Kewaunee, 60 miles.

It will be noted that three out of four of these ferries travel over a distance greater than between Kingstown and Holyhead.

Yours faithfully,

ROBERT WORTHINGTON.

49, Dame Street, Dublin. July 3, 1911.

[In reference to the above letter, it may be stated that the Premier of Newfoundland intends to visit Galway on Tuesday next, where he will be entertained by the Transatlantic Port Committee, the members of which include many of the most influential railway directors in Ireland, as well as many prominent citizens interested in the development of the country. The scheme is supported by the Corporation of Dublin, and by many other local authorities in Ireland, representing a gross valuation of over five millions sterling. We have in the past commended the scheme, and readers who desire to have detailed arguments and facts in their present form should obtain from Mr. Worthington, who is the promotor, a copy of the pamphlet to which he refers in his letter. The advantages are fully explained, and it is pointed out that Ireland would be within 3½ days' sail of Canada.]

The Investiture at Carnarvon.—In connection with the Investiture of the Prince of Wales on Thursday next at Carnarvon, many express trains will run to the town in the early morning, but after 10 a.m. the lines will be closed for passenger traffic.

PERSONAL.

Mr. R. W. Whalley has been elected a director of Parr's Bank. He will continue to act as general manager.

Mr. Alan Garrett Anderson was yesterday (Friday) elected a director of the Midland Railway, in the place of Lord Farrer.

Mr. J. Lightfoot has been appointed Secretary of the Delhi Umbella Kalka Railway Company, Ltd., *vice* Mr. E. C. Rutter resigned.

Mr. J. James Hewson, traffic manager of the Great Western Railway at Liverpool, is retiring owing to ill-health. Mr. Hewson has written many plays.

Mr. G. Wishart Smith, general manager of the Midland Railway of Western Australia, has been appointed sole Commissioner of the State Government Railways of Tasmania.

Mr. W. Dundas, on leaving the Metropolitan Railway Company's power station, where he was senior charge engineer, to take up the duties of charge engineer at the Stuart Street works of the Manchester Corporation, has been presented with a silver tea and coffee service.

Mr. Tom Holtham, engineer, of the Queen Alexandra Dock, who is leaving the Cardiff Railway Company's service to take up an appointment at Grimsby Docks, has been presented with a gold watch as a mark of the high esteem in which he is held by the staff and employees in the engineering departments.

The late Mr. J. W. Reeve, of Red Lodge, Bassett, Hants, civil engineer, one of the pioneers of railway construction in Tasmania and India, and connected with several large undertakings of the London and South Western Railway Company, left estate of the gross value of £139,372.

Mr. Chambers, stationmaster at Sheffield Midland Station, during the past six years, has retired from the Company's service, which he entered in 1864. He was for six years assistant traffic inspector for the London district. Later he was appointed to supervise the passenger trains of the whole system with a view to obtaining greater punctuality, and for twenty-two years he acted as station master and district cashier at Bristol.

Mr. William Thomson, M.V.O., has retired from his position as superintendent of the South Eastern and Chatham Railway after nearly fifty years of railway service. During a period of thirty years he has travelled with all the Royal trains over the South Eastern line between England and the Continent. At the recent departure of the German Emperor from London Mr. Thomson was personally thanked for services extending over a number of years. In addition to being a member of the Victorian Order, he is an Officer of the French Order of the Dragon, and holds the German Order of the Star of Prussia.

Sir Thomas Rees Price, the General Manager of the Central South African Railways, is mentioned among Welshmen of the Empire in the *South Wales Daily News*. He is a native of Merthyr Tydfil, and was trained for the railway service by the late Mr. J. Williams, the general manager of the Vale of Neath Railway. He subsequently served on the Great Western Railway, and in 1880 entered the service of the Cape Government as district traffic superintendent at Grahamstown. In 1892 he became traffic manager of the northern system and agent in the Transvaal and Orange Free State, and the following year chief traffic manager. In 1901 he became assistant general manager of the Cape Railways, and a year later was promoted to his present post.

RAILWAY NOTES.

New Canadian Pacific Steamships.—The Canadian Pacific Railway Co. have given an order to the Fairfield Shipbuilding and Engineering Co., Glasgow, for two new Empress steamers for the railway company's Atlantic service.

Season Ticket Charges from Croydon.—A deputation from Croydon Council are to wait upon the London Brighton and South Coast Railway Company with a view to securing a reduction in the charges made for season tickets.

Midland Railway Carriage and Wagon Co. has accepted the tender of Belliss and Morcom for the equipment of the power station at their new works, Washwood Heath, Birmingham, to the specifications of Messrs. D. and A. Home-Morton, consulting engineers.

A New Railway Bridge at Carmarthen.—The boat train from Fishguard on July 2 was the first train to run over the new drawbridge built by the Cleveland Iron and Steel Works Company, Darlington, over the River Towy, Carmarthen, for the Great Western Railway Company.

Leek and Manifold Light Railway.—Leek Urban Council has agreed to an application made by this company that the debenture stock, amounting to £12,000, should take priority over the loans by the Staffordshire County Council and the Treasury. The Council desire, however, that after £8,000 stock has been raised the remaining £4,000 shall not be raised without the consent of the various authorities. The line, it was considered, had benefited the district to a considerable extent.

Electric Railways in Cuba.—According to the Board of Trade Journal the Habanilla Waterfalls, north of Cienfuegos, are to be harnessed, and it is hoped to obtain the 30,000 h.p. which it is estimated will be required to work the 300 miles of railway, for which a United States concern has secured a concession. The concessionary company undertakes to supply electrical energy to the towns through which the railway will pass, and also to a number of sugar refineries.

Hartlepool and the North-Eastern Railway.—The Hartlepool Town Council have decided to appeal to the Board of Trade in respect to the train service. For some years the town has been served solely by autocars running to and from West Hartlepool at quarter-hour intervals, and thus affording connection with north and south trains. The Council have repeatedly pressed the North Eastern Railway Company to run, at all events, certain trains during the day direct into and from the town.

The Argentine Exhibition.—A report on the Argentine Centennial International Exhibition at Buenos Aires in 1910, issued by the Board of Trade in the form of a White-paper, states that in the railway and land transport exhibition the British awards numbered 229 out of a total of 928. They included 85 grand prizes, 15 diplomas of honour, 85 gold medals, 31 silver medals, 11 bronze medals, and two honourable mentions. Germany came next with 170 awards, and Italy third with 155.

The London and North Western Railway Company took over the management of the Manchester South Junction and Altrincham joint line from the Great Central Company, on Saturday last for a term of four years. So far as can be ascertained there will be further changes in the personnel of the staff, except those already announced, Mr. James Warburton having succeeded Mr. Atkins at Oxford Road Station, and Guard Airey having taken the place of the former at Brooklands. The question of electrification of the line is still pending and has not by any means been abandoned; the various interests involved however, have rendered the matter most difficult of achievement.

New Goods Station for Aberdeen.—The Caledonian Railway Co. on July 1, commenced the erection of a new goods station at Aberdeen, at an estimated cost of £35,000 for the buildings and between £50,000 and £60,000 for the complete scheme. The new buildings will accommodate 120 wagons, and will be adapted to deal with all classes of traffic, special facilities being provided for dealing with transfer traffic in the most expeditious manner. Symington and Company will carry out the mason's work, but they have sublet the joiner work to R. and J. Reid. The present chief offices in Guild Street, which are the old headquarters of the Aberdeen Railway Company and the Scottish North Eastern Railway Company will be remodelled and brought into conformity with the new structure.

Improvements at Northallerton Junction.—In addition to widening the main line between Northallerton and Eryholme Junction on the York and Darlington system, the North Eastern Railway Co. is carrying out improvements at Northallerton Junction. A new through down platform is being provided by the conversion of the present down platform into an island platform and widening it to a width of 57 feet, which will allow of ample space in front of the new buildings to be constructed upon it. The exchange of passengers' luggage will be made under cover and with much less delay than formerly, and it will be possible for trains destined for Newcastle and Stockton respectively to start simultaneously. On the up side the present platform will be roofed in for a distance of ninety yards, and screened seats will be provided. New refreshment-rooms and waiting-rooms, etc., are to be built, and the provision of a luggage subway and lifts between the two platforms will enable the present luggage level crossing to be abolished.

N.E.R. Employees and Non-Unionists.—In pursuance of the movement for the enrolment of non-unionist workmen of the North Eastern Railway Company as members of the men's organisation, a circular, in which the following statement is made, is reported to have been issued:—"We have definitely come to the conclusion that steps must be taken to ensure that everyone who reaps the fruits of our labours must bear a hand in the burden. Non-unionists can no longer be tolerated. One thing is clear—we must cease to regard non-unionists as fit fellow-workers, and must act accordingly."

Trouble on Italian Railways.—The General Confederation of Italian Railway Workers decided that on July 1 all Italian railway workers should proclaim "obstructionism," a form of protest which has already been used with the greatest success. It consists in the strict application of all rules, with the result that the running of trains becomes impossible.

Electricity in Locomotion.—Mr. A. G. Whyte has made a notable addition to the Cambridge manuals of science and literature in the shape of an account of the mechanism, achievements, and prospects of electric traction. The author has had exceptional opportunities for watching their growth, for giving a reliable account of their present position, and for forming an authoritative opinion on their future prospects. These opportunities he has taken full advantage of in the present little volume. This can be perused with ease at a sitting, and the general reader will gain as much knowledge of the subject as he would otherwise have to extract from many portly volumes.—"Electricity in Locomotion" (149 pp., 4 in. by 5 in. Price 1s. net), published by the Cambridge University Press.

London Office: Suffolk House, 5, Laurence Pountney Hill, Cannon Street, E.C.

VICTORITE TREAD

As used in

THEATRES,

SCHOOLS,

HOSPITALS;

ASYLUMS,

And other

PUBLIC BUILDINGS.

It is the most EFFECTIVE TREAD, and gives an
ABSOLUTELY SURE FOOTHOLD.

The great advantage of this TREAD is that the material, which prevents the possibility of slipping, is brought over the nosing of the step. It is here where many treads fail.

IS BRIGHT AND CLEAN IN APPEARANCE, OF GREAT
DURABILITY AND INEXPENSIVE.

Full particulars and prices on application.

Specialists in Architectural Stone Dressings,
Staircase Work, and Granolithic Paving (in situ).

THE PATENT VICTORIA STONE COMPANY, LTD.,

11, 12, 13, HAMILTON HOUSE, BISHOPSGATE, E.C.

Telegraphic Address: "Victoria Stone, London."

Telephone Nos.: 2866 London Wall—11489 Central (P.O.).

ESTABLISHED 1888. Works: [STRATFORD MARKET, ESSEX.
And GROBY, near LEICESTER.

TUDOR ACCUMULATORS

WITH

AUTOMATIC REVERSIBLE BOOSTERS.

Many large Plants at work in Electric Railway,
Tramway and Power Stations.

Complete Battery and Booster Plants

Designed to suit Special Conditions.

TUDOR ACCUMULATOR CO., LTD.,

119, Victoria St., LONDON, S.W.

Works: DUKINFIELD, near MANCHESTER.

DENNY, MOTT & DICKSON, LTD.,

IMPORTERS OF AND DEALERS IN ALL KINDS OF

TIMBER FOR ROLLING STOCK, SHIPBUILDING, ETC.

LIVERPOOL:
170, Regent Road.

GLASGOW:
87, Union Street.

NEWCASTLE:
Bank Chambers.

CARDIFF:
Steam Saw Mills.

PRESTON:
County Chambers.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40 to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,
12-18, TAYLOR STREET, LIVERPOOL.

Telephone: 1198 Royal.

Telegrams: "Brakeblock Liverpool."

WINN'S PATENT HIGH-SPEED BOLT SCREWING MACHINES WITH SINGLE OR MULTIPLE SPINDLES

London and South Western Railway Company.

NOTICE is hereby given that the next Half-Yearly General Meeting of the Proprietors will be held at Waterloo Station, London, on Friday, the 4th day of August, 1911, at Twelve o'clock noon, when a Report will be submitted by the Directors on the affairs of the Company, a Dividend will be declared and General Business transacted.

The Transfer Books of the Company will be closed from the 15th July until the end of the Meeting.

By order,
GODFREY KNIGHT,
Secretary.

Waterloo Station, London,
6th July, 1911.

Great Eastern Railway Company.

NOTICE is hereby given that the Transfer Books of the Company for the Ordinary Stock will be closed on the evening of Monday, the 24th day of July instant, and will be re-opened on Saturday, the 29th day of July instant.

By order,
P. LOMAS,
Secretary.

Liverpool Street Station,
London, 11th July, 1911.

North Staffordshire Railway.

NOTICE is hereby given that the One Hundred and Thirty-first Half-Yearly Ordinary Meeting of the Proprietors of the North Staffordshire Railway Company will be held at the Cannon Street Hotel, in the City of London, on Tuesday, the 8th day of August, 1911, at 2 o'clock in the afternoon, for the transaction of the ordinary business of the Company.

The last day for the Registration of Transfers will be the 25th day of July, 1911, when the books will be closed until after the Meeting.

TONMAN MOSLEY,
Chairman.
R. E. PEARCE,
Secretary.

Stoke-on-Trent,
8th July, 1911.

London, Tilbury and Southend Railway.

NOTICE is hereby given that the One Hundred and Tenth Half-yearly General Meeting of this Company will be held in the Board Room, 41, Trinity Square, Tower Hill, London, E.C., on Thursday, the 3rd day of August, 1911, at 12 o'clock noon.

The Transfer Books will be closed from the 17th instant to the 3rd proximo, inclusive.

ARTHUR L. STRIDE,
Chairman.
H. CECIL NEWTON,
Secretary.

41, Trinity Square,
Tower Hill, E.C.,
14th July, 1911.

South Eastern and Chatham Railway Companies Managing Committee.

NOTICE is hereby given by the South Eastern and Chatham Railway Companies Managing Committee that, in pursuance of the powers contained in Section 16 of the South Eastern and London Chatham and Dover Railways Act, 1909, a Joint General Meeting of the Proprietors of the South Eastern and London Chatham and Dover Railway Companies will be held in the Great Hall at the Cannon Street Hotel, in the City of London, on Friday, the 28th day of July, 1911, at Twelve o'clock Noon, to receive and deliberate upon the Report and Statement of Accounts of the Managing Committee for the Half-year ending 30th June, 1911, as provided in the said Act.

H. COSMO O. BONSOR,
Chairman.

CHILSTON,
Deputy-Chairman.

CHARLES SHEATH,
Secretary.

London Bridge Station, S.E.,
12th July, 1911.

South Eastern Railway Company.

NOTICE is hereby given that the One Hundred and Fiftieth Half-yearly General Meeting of the South Eastern Railway Company will be held in the Great Hall at the Cannon Street Hotel, in the City of London, on Friday, the 28th day of July, 1911, at Half-past Twelve o'clock p.m., or as soon thereafter as the Joint General Meeting of the Proprietors of the South Eastern and London Chatham and Dover Railway Companies, convened for Twelve o'clock noon on that date, shall be concluded, for the transaction of the General Business of the Company.

H. COSMO O. BONSOR,
Chairman.

CHARLES SHEATH,
Secretary.

London Bridge Station, S.E.,
12th July, 1911.

London Chatham and Dover Railway Company.

NOTICE is hereby given that the Half-yearly Ordinary General Meeting of the London Chatham and Dover Railway Company will be held in the Pillar Hall, at the Cannon Street Hotel, in the City of London, on Friday, the 28th day of July, 1911, at 12.45 p.m., or as soon thereafter as the Joint General Meeting of the Proprietors of the South Eastern and London Chatham and Dover Railway Companies, convened for Twelve o'clock noon on that date, shall be concluded, for the transaction of the General Business of the Company.

W. HART DYKE,
Chairman.

L. W. LIVESLEY,
Secretary.

Victoria Station,
Pimlico, S.W.,
12th July, 1911.

Metropolitan Railway Company.

NOTICE is hereby given that the next Ordinary Half-yearly General Meeting of the Company will be held at the Great Eastern Hotel (Bishopsgate entrance), Liverpool Street Station, in the City of London, at Twelve o'clock noon, on Wednesday, the 26th day of July, 1911, for the general purposes of the undertaking.

ABERCONWAY,
Chairman.
W. H. BROWN,
Secretary.

At the conclusion of the above meeting, the Ordinary Half-yearly General Meeting of the Surplus Lands Stockholders will be held for the transaction of the General Business relating to the Surplus Lands under the control of the Metropolitan Railway Surplus Lands Committee.

ALBERT G. KITCHING,
Chairman of Committee.

32, Westbourne Terrace, Paddington,
London, W.,
11th July, 1911.

Taff Vale Railway Company.

NOTICE is hereby given that the One Hundred and Fifty-first Half-yearly General Meeting of the Proprietors of this Company will be held at the Royal Hotel, College Green, in the City of Bristol, on Wednesday, the 9th day of August next, at Two o'clock in the afternoon. The Transfer Books will be closed from Wednesday, the 26th July, until after the holding of such Meeting.

Dated this 14th day of July, 1911.
ROBERT LOWE GRANT VASSALL,
Chairman.

EDWARD EDWARDS,
Secretary.

Great Western of Brazil Railway Company, Limited.

NOTICE is hereby given that the Permanent Six per Cent. Debenture Stock Transfer Books of the Company will be closed from the 17th to the 31st July, 1911 (both days inclusive), for the purpose of preparing Warrants for the interest payable the 1st August, 1911.

By order of the Board,
H. TATTAM,
Secretary.

Offices of the Company,
River Plate House,
Finsbury Circus,
London, E.C.

TENDER INVITED.

London—India Office.

THE Secretary of State for India in Council is prepared to receive Tenders from such persons as may be willing to supply Brass Boiler Tubes.

The conditions of contract may be obtained on application to the Director-General of Stores, India Office, Whitehall, S.W., and Tenders are to be delivered at that office by Two o'clock p.m. on Tuesday, the 18th July, 1911, after which time no Tender will be received.

W. G. BUTLER,
Director-General of Stores,
India Office, Whitehall,
12th July, 1911.

GREAT CENTRAL PROSPECTS.

For the past six half-years, the Great Central Railway has been steadily improving its net profits, thanks mainly to economy in working expenditure, and more recently to the expansion in gross earnings. The accounts published for the five half-years to December 31 last showed the following improvement in net revenue:—

PERIOD	Half year.	Increase in net revenue
Second half of 1908		114,000
First half of 1909		91,000
Second half of 1909		20,000
First half of 1910		30,000
Second half of 1910		22,000
		£153,000

Of course the accounts for the June half of the current year are not yet available, though the dividend announcement is due on the 21st inst. It is probable that the forthcoming accounts will, however, show improvement in the net profits of about £50,000, thus bringing the total amount during the past three years to a sum of about £200,000 of annual net profit. In addition to this advance in the net revenue of the Great Central from its own lines, there has been a considerable recovery in the net receipts derived from joint lines. The consequence is that the financial position of the undertaking is much stronger now than at any time since the London line was opened for traffic in 1899. It will be recalled that the provision of the large amount of capital for that extension, and the cost of working it after it was opened, created a very serious burden for the junior preference and ordinary stockholders. Not only were the ordinary dividends entirely wiped out, but a considerable number of junior preference issues suffered a default in their dividends. The steady recovery in the position is restoring the dividends on the preference, and at the present rate of progress all preference dividends will soon be paid. Last year the 1891 preference stock received 2 per cent. of its nominal dividend of 4 per cent., the deficiency amounting to a sum of only £44,000 per annum. This deficit, we may hope, is already removed by the further improvement in net profits during 1911, and with ordinary good fortune a fair proportion of the dividends on the 5 per cent. preference stock 1894 is to be expected for the whole of the present year. This stock, it will be remembered, has received no dividends at all, except such as were paid out of the capital, previous to the opening of the London extension. This very large reduction in the deficit on the preference stocks will of course revolutionise the prospects for the preferred and deferred ordinary issues. To some extent this has been recognised already by some recovery in the quotations, but investors who are in search of a low-priced stock with exceptionally good prospects can scarcely do better than purchase Great Central preferred ordinary quoted at 35. Not only is the undertaking showing steady progress, but there is special scope for improvement in the position of this company in connection with its working agreement with the Great Eastern and Great Northern

Railways, and under existing conditions the company is likely to maintain its progressive character for some time to come, quite apart from any special favourable developments.

WORN FLANGES ON ENGINE WHEELS.

Colonel von Donop's report to the Board of Trade on the derailment that occurred on May 11, at Kingstown, on the Dublin and South Eastern Railway, does not form pleasant reading. The earliest requirements of the Board of Trade definitely forbade facing points except on single lines and at double line junctions. Later, this was varied to read, "Facing points to be avoided as far as possible," and this clause remained in force until the requirements were last revised in February, 1905, when all embargo on facing points was withdrawn. The provision of plungers, detectors, and other safety appliances has made the use of facing points no more dangerous than the V of a crossing where one rail crosses another at a siding or other connection. But judging by the accident at Kingstown and two previous derailments elsewhere—at Dore and Potley, Midland Railway, on October 9, 1907, and at Cornbrook West Junction, Cheshire Lines, May 15, 1908—the worn tyre of an engine will nullify all such expensive equipment, and a source of danger is introduced against which there is no safeguard or antidote. The only way in which the evil can be met is not to allow worn tyres to be run, or, in other words, to remove them before they become a source of danger. In each of the above three cases the points were in good condition, but in the two earlier derailments other conditions, such as excessive speed, were present. At Kingstown, however, the speed was only about 18 miles an hour. The line approaches the points on a slight right-hand curve of about half a mile radius, and the connection through which the train should have run has a curvature of about 400ft. radius. There was nothing, then, abnormal here; the points had been inspected only ten minutes before by the ganger on his morning round, and he considered that they were in perfect order. Moreover, the permanent way generally was in good condition. On the other hand the flange of the leading left-hand wheel was very much worn; the side of the flange which would abut against the rail was almost vertical and was worn sharp. Colonel von Donop reported that with a flange in this condition there was an undoubted danger of the wheel mounting the switch at a facing point, and that there was a special liability of this occurring when, as in this case, the worn wheel was a leading one and was bearing against the outside rail of a curve before reaching the points. This is exactly what happened. The left-hand leading wheel was bearing against the outer rail of the curve, and the train should have gone into a road on the right, but in passing through the points the wheel mounted the left-hand switch of the points, ran a short distance along the top of it, and then fell between the switch and the stock rail, and so forced the switch inwards so that the succeeding wheels followed the stock rail, and the engine and four coaches were derailed. The engine-shed foreman was aware of the fact that the flange was worn, but he did not consider there was any danger. It is due to the Dublin and South Eastern Company to say that the two other accidents mentioned above both occurred to engines belonging to the Midland Company, and that in 1891 there was a mishap on the Caledonian in which a worn flange figured. It is true that there are only four such accidents in twenty years, during which period an incalculable number of miles have been run with safety, but no one can deny the fact that a little more care—a possible erring on the safe side—might have saved even these. The Stoa's Nest accident was an object lesson to many of our mechanical engineers as to the behaviour of carriage wheels. We hope, then, that this minor mishap at Kingstown will serve a similar useful purpose.

RAILWAY AGREEMENTS AND AMALGAMATIONS.

Although the policy of co-operation among our leading railways has already made great strides in the last few years, it is quite clear that there is plenty of scope for the extension of this policy on lines profitable alike to the public and to the proprietors. Working agreements have been arrived at during the last few years between the North Western, Midland and Lancashire and Yorkshire, between the Great Western and the South Western, between the Great Central, Great Eastern and Great Northern, between the three leading Scotch railways, and also between the North Western and the North London. Further agreements of a similar character have been under consideration, but have not been proceeded with for various reasons—among others doubt as to the attitude of the Government, of Parliament, and of the Board of Trade. Even existing arrangements already entered into between the companies referred to above are decidedly more limited in scope than they might be, for much the same reasons. It may be recalled that when the policy of co-operation was first introduced, less than three years ago, a good deal was heard of the prospect of injury to the public and trading interests, and the usual cry on such occasions of "Monopoly" was raised. Experience, however, has already proved that the public has more to gain than to lose from an intelligent restriction of competition within economical limits. If any doubts on this subject existed at all, they should have been removed by the report of the Committee on Railway Agreements and Amalgamations, which appeared a few months ago, and which we discussed at the time of its publication. That report in itself provided a remarkable stimulus to the policy of co-operation. Not only did it endorse the measure of co-operation already indulged in, but it seemed to encourage an extension of that policy. That, we believe, will be its effect, and railway proprietors may look forward with considerable interest to coming developments along these lines. The Midland and Tilbury Companies have already come to an arrangement which will involve an application to Parliament next year to sanction an amalgamation, on terms which, while liberal so far as the Tilbury shareholders are concerned, are not unduly onerous to the purchaser. The terms which the Midland were able to offer in connection with the Tilbury, however, suggest that various other of the smaller provincial railways possess great potentialities of a similar kind. Among railways which may possibly find a purchaser among their bigger neighbours are the North Stafford, the Highland, the Great North of Scotland, the North London, the Hull and Barnsley, and the Furness. A hint was given at the half-yearly meeting of the Great Eastern Railway early in the year that an extension of the working agreement between that company and the Great Central and Great Northern Railways was contemplated, and Lord Claud Hamilton then expressed a hope that further details might be announced at the meeting to be held at the end of this month. How far this new proposal may go we can only surmise in the absence of official details, but it is quite clear that the working agreement is capable of very wide extension, and it may even be possible completely to amalgamate the three undertakings. The advantages of the policy of working agreements and co-operation of various kinds have been so great that the policy cannot be too freely extended, subject of course to reasonable safeguards in the interests of the public. After the report of the Board of Trade Committee above referred to, we may hope that the rights and claims of shareholders will be respected, and it will be interesting to observe to what extent railway boards of directors have decided to take advantage of the improved conditions in this respect. They have a good opportunity and it is to be hoped they will seize it.

The return of the Bank of England this week offers the usual evidence of reflux of currency after the settlement of accounts which occurs at a half-year. The amount returned in coin from the provinces was £139,000. The note circulation contracted by £405,000, and £565,000 on balance came in from abroad. Thus the addition to the Reserve amounted to £1,109,000. The market repaid money to the Bank in large sums, as is seen in the decline of £7,265,000 recorded in Other Securities. Its resources, however, were not diminished on anything like the same scale, the decrease in Other Deposits being no more than £4,681,000. The disbursements of the Government, shown by the decline of £1,485,000 in Government securities, of course, assisted the situation, and the fact that Other Deposits remain at £47,909,000 suggests, in the light of recent experience, that money must needs be plentiful for the next few weeks at least. Short loans are accordingly cheap, and discounts show the usual tendency to follow suit. It may yet turn out that the Bank will adopt the policy of further reducing its official minimum rate of discount, but the question does not arouse the amount of interest that ordinarily attaches to it, because no one believes that the reduction could be of long duration, whilst most people are satisfied that any reduction during the summer would entail higher rates in the autumn than would otherwise prove needful. Operators on the Stock Exchange have for some time given less attention to seasonal changes in the Bank Rate than was formerly customary. The account which has just closed has not favoured holders of railway shares, whether in Home railways, American railways, or foreign railways, though,

on the whole, the first-mentioned, together with the Canadian lines, have least cause for complaint. A better tone made its appearance as soon as the end of this disappointing account came in sight. It was hoped that the series of shocks to which the market had been subjected must needs come to an end; and there is reason in this view, because the several shocks cannot be traced to any common cause, and their coincidence must have been fortuitous. The Moroccan embargo, the shipping and kindred strikes, and the crisis in our domestic legislature are separate obstacles to the development of business. Nothing but ill luck could have brought them upon us simultaneously. Nothing less than a coincidence of this kind, it is thought, could have blinded the public to the good things in store for Home rails in the shape of dividends to be declared for the half-year. This section was among the first to respond to a lessened apprehension of the evils referred to. Another feature of the new account that became conspicuous as the week advanced was the impression that liquidation in British Government stocks had ceased. The discount houses were thereupon declared to be buying, and a sharp advance from the lowest prices quickly ensued.

Last Saturday business was poor, and no great changes occurred in prices. The most noteworthy was an advance in Canadas of ¼. Home rails were idle. When the markets opened on Monday a further advance of 2½ was recorded in these, based on buying from Berlin. All American rails were higher on crop reports, and a better tone among international stocks gave support to other markets. Home rails made a rally. Metropolitan Consols rose ½, but no recovery occurred in British Government stocks, which, indeed, fell again the following day to 78½, making a new low record and exciting much remark. This figure, however, was not long maintained. On Wednesday, the carry-over being conducted smoothly with cheap money to assist, a general improvement became evident, which was not sensibly affected by a setback in Americans during the afternoon. The advance in Home rails included the whole active list, and amounted to a point or more in no less than ten instances. The heavies were specially favoured. Consols also rose, and the elasticity of Foreign Government stocks in responding to the diminution of political apprehension was an eloquent testimony to fundamental soundness of the financial position both at home and abroad. The next day like conditions were continued, and Americans advanced with the rest. British Government stocks were almost buoyant, and numerous rises were recorded in foreign railways. A certain amount of the money recently released in dividends on the funds was said to have been embarked in Home rails, which rose strongly.

On Friday no indications appeared of any weakening in the buoyant temper of the market. Home rails again advanced almost throughout the list. An exception was the Hull and Barnsley stock which suffered from fears that the new dock at Immingham may divert a good deal of traffic from that line to the Great Central. The fine weather attracted much favourable attention to the passenger lines in the south. Dover A rose ½ and Brighton A reached 108½. American and Canadian railways benefited by the crop reports, though in the case of the former the future is thought to be already much discounted, and operations on this side incline to caution. The disastrous fires in Ontario were taken at their true valuation, as of small importance as far as traffic is concerned, and were without influence upon prices in spite of the sensational character in which the news was presented.

The principal movements on the week are as follow:—

HUMBER COMMERCIAL RAILWAY AND DOCK.

In the RAILWAY TIMES of July 14, 1906, we published a historical article in regard to the important scheme of the Great Central Railway Company for the establishment of a deep-water dock at Immingham, on the Humber. An Act authorising the new works was passed by Parliament in 1903, and the first sod was cut by Lady Henderson on July 12, 1906. The speeches delivered on that occasion by Sir Alex. Henderson and others were reported in the article referred to. In our issue of January 8, 1910, appeared another article describing the progress of the work of construction down to that time. Though the new dock is some five miles further up the Humber than Grimsby Docks, it will be closely associated with the latter, and seems destined to help in forming a Greater Grimsby. At a time when Immingham Dock is on the point of completion, the claims for the new dock, as set forth in a local annual publication entitled, "The Port of Grimsby and Immingham," are of special interest. Alike to railway and shipping interests, the opening of the new dock will be a most important event, while the advantages arising to the Great Central Railway in particular should be enormous.

The advantages to the shipowner are thus set out:—

No delays whatever. The largest ships may sail full speed from sea to dock entrance, and enter dock at any hour of the day or night, and at any state of the tide.

Passenger vessels, express from the North Sea, draw up at Immingham Pier Station, and transfer passengers and mails to waiting trains, just as at any railway junction.

The dock is the deepest on the Humber, is right alongside the Humber's deep main channel, and nearest to the sea.

Pilotage and conservancy dues lower than at any other competitive dock on the Humber.

Unsurpassed facilities for export of coal.

Steamers can have bunkers filled without entering dock.

Return cargoes for incoming vessels readily secured, and embarked with special facility.

General expense to shipowners much less than at other ports; no tenders for passengers, no towage required. Transhipment direct from ship to rail, and rail to ship, by the most economical and facile methods.

Graving dock and repairing accommodation on the spot for the largest of ships.

The new dock accommodation has been undertaken to meet requirements of commerce, which are developing with great

affords another example of that policy of taking time by the forelock which has ever characterised the management of the Great Central Railway Company. Evidence was furnished several years back that underneath the surface of North Lincolnshire lie great stores, which only

West Jetty Coal Hoist, Immingham Docks—Capable of Shipping Coal at the Rate of 700 Tons per Hour.

Approach to West Jetty Coal Hoist—Showing Road for Full Wagons and Return Road for Empties.

rapidity, and also to supplement and improve upon the facilities already existing at Grimsby. The inception of the undertaking

needed capital and science for development. During recent years these have been applied in the district where attention was first directed to the eastward trend of the coal beds, with the result that a network of new collieries and new railways has spread with surprising swiftness along the border-line of South Yorkshire and North-East Notts, until now North Lincolnshire has been well penetrated, and sinkings have been made to within thirty miles of Immingham.

With abundance of coal right on the spot, the iron which has for ages rusted the sides of the Lincolnshire Wolds will at once become profitably workable, and the smelting industry, which has hitherto been confined to the comparatively small Frodingham district, must soon begin to feel the stimulus, and start into vigorous expansion. The success and growth of the Frodingham Works have already demonstrated the lucrative possibilities of the iron industry in this region. At the present time these works create both an export and import trade, as considerable quantities of Swedish and Spanish iron ore are imported for blending purposes. Mr. G. Dunston, M.Inst.M.E., has had a large share in the exploration of the new

eastern coalfield, which is estimated to contain 35,000,000,000 tons of available coal. It embraces extensions of the Flockton,

Parkgate, and Silkstone seams, large quantities of which are already exported from Grimsby to the Continent.

Various industries of growing usefulness, such as brick-making, engineering, iron-founding, cycle manufacturing, etc., have for some time been established along the Lincolnshire bank of the Humber west of Immingham, and to these the development of coal and iron is bound to give a great fillip, and the same cause must lead to the introduction of numerous

tide, and there is never less than 28 ft. on the dock sill. Moreover, for passengers and mails at Immingham, the acme of travelling facility is reached. Not only will the ship come express right away from the ocean, but its first slackening of speed will be to draw up at the pier railway station, where passengers may step ashore, enter a waiting train, and be speeding on their journey again with scarcely more trouble or loss of time than is involved in a change of trains at any railway

Coal Hoists at Immingham Dock.

manufacturing concerns which have hitherto failed to obtain a footing. The railway company have acquired ample land around the Immingham Docks especially for such purposes, and are ready to grant sites on reasonable terms. A number of such sites have already been secured, and works are in the course of erection upon them.

The Great Central Railway Company have made the dock replete with every requisite, convenience, and time-saving appliance that science could invent or special knowledge of dock and railway needs could suggest. The natural facilities

junction. The transfer of mails will, of course, proceed simultaneously with the transfer of passengers. A mail service is chiefly hoped for from Norway, but other Continental nations desiring the speediest transit to England and Wales, Ireland and Transatlantic countries, would do well to consider the possibilities of the route via Immingham.

Apart from the development of North Lincolnshire, the Great Central Railway Company can depend on immediate use for their new dock, as their system taps the busiest parts of Lancashire, Yorkshire, Derbyshire, and Nottinghamshire, right away

Map of Immingham Dock—Great Central Railway.

arise out of its situation, which is where the permanent deep channel of the Humber runs close to the shore, as deep as 70 ft., just off the dock entrance, and is continued in a straight line right out into the North Sea. The channel is wide as well as deep, and along it the largest vessels afloat can steam at full speed, from sea to dock, or from dock to sea, at any state of the

from Liverpool on the west coast, to Grimsby on the east, not to mention its through route to London and its direct links with other companies throughout England. Its established steamship services with the principal ports of the Continent and the western world also ensure that the special facilities of Immingham will be kept in beneficial use right from the start.

The whole area of land acquired by the Great Central Railway Company for their dock at Immingham and accessory purposes is about 1,000 acres, the length being between two and three miles, and the average width nearly one mile. The dock is designed, when fully completed, to have four arms, each 1,250 feet by 375 feet, and a central basin of 1,100 feet square, the whole to provide a total water space of about 71 acres; but it will open with a water area of about 55 acres, two of the projected arms being left for future completion as the need arises. It has an entrance lock of 840 feet long by 60 feet wide, bisected with an intermediate pair of gates, by which it can be divided into two locks of 320 feet and 520 feet respectively, with a depth of water on the sill at high water of spring tides of 48 feet, and at low water of 28 feet. The gates are amongst the largest in the world, the outer pair being each 50 feet 6 inches high; the middle pair each 54 feet 6 inches high, and the inner pair each 42 feet 6 inches high; the length in each case being 53 feet 3 inches.

The conveniences provided at Immingham also include a graving dock calculated to meet the requirements of the largest vessels, the dimensions of which dock are 750 feet long and 55 feet wide, with a minimum depth of water on the sill of 23 feet. Bordering on the graving dock will be extensive repairing shops fitted with every engineering appliance that experience has proved necessary or desirable or that ingenuity has devised.

The accommodation provided is bound to have a fostering effect on East-coast trade and to accelerate the current of it, which, however, can only be maintained by the co-operation of the traders of the Continent of Europe. The conspicuous advantages which Immingham will afford must prove irresistibly attractive to merchants and shipowners everywhere. The easy accessibility of the port at all times, added to its other exceptional facilities, will probably, in some cases, enable three voyages to be made where heretofore only two have been possible. Then an important consideration for the foreign shipping interest is the certainty of return cargoes being readily obtainable. Coal will always be available both for cargo and for bunkers, and at continually cheapening rates as the mines come nearer and nearer and the cost of carriage is reduced. A great increase in the quantities of manufactured iron and steel and of the products of textile and other industries available for export may be relied upon to follow rapidly, and to multiply the attractions for foreign trade.

From the outer gates jut out two diverging piers, in the form of the letter V, each constructed of Jarrah wood. The primary use of these is as guides to the dock entrance, but the western one has a coal-hoist from which a steam vessel's bunkers can be filled without it entering the dock, whilst the eastern one is fitted with the appurtenances of a railway station, at which an incoming vessel can draw up and deposit passengers and mails before entering the dock. The landing place being private property, no loafers will be allowed to pester passengers for the privilege of carrying their luggage, which will be transferred by the company's own porters.

Special provision is made for the coal export trade, the whole of one quay of the main basin being set apart for that purpose. Seven gigantic hoists are ranged on this quay, each 100 feet high and capable of raising and tipping a 20-ton wagon of coal, and of pouring coal into a vessel's hold at the rate of 700 tons per hour. If need be, besides, two of them can be made to discharge into separate holds at the same time, thus correspondingly increasing the rate of shipment. Each hoist is served by a group of eight gravity sidings, each siding holding 320 full wagons. In addition there are storage sidings, bringing up the total accommodation for coal which can be held ready for loading to 100,000 tons. Sidings for about 3,500 empty coal wagons are also provided, the whole coaling arrangements being on a specially devised plan, securing rapid and smooth working with a minimum of shunting operations.

Six acres of water space are set apart as a timber pond, and general facilities for the timber trade are provided on a large scale, as also for dealing with wood-pulp, pig iron and other special trades. For the general cargo trade, capacious covered sheds are provided and fitted with all necessary cranes and up-to-date appliances for rapidly dealing with every species of requirement. A considerable area of land, contiguous to the timber pond, is reserved for the storage of all classes of timber and for the erection of timber yards, sawmills, creosoting works, etc. The Company will receive the timber from ship, perform the piling and sorting, and deliver to rail, on receipt of forwarding orders from the merchants.

Both hydraulic and electric power is provided for the general purposes of the dock, the whole being generated, together with

Storage Sidings at Immingham Dock—Great Central Railway.

electricity for lighting, at a central station. Artesian wells provide the necessary water. The hydraulic power is by far the most extensively used. It is of the latest high-pressure type, and is furnished by four pairs of compound surface-condensing steam pumping engines, each delivering 700 gallons per minute at the accumulator pressure of 800 lbs. to the square inch. The

also railway lines for the interchange of goods and coal between the two docks; one of four miles to Ulceby, which is the direct connection from the Immingham Dock to the Company's main lines; and one of 6½ miles to Goxhill, called the Barton and Immingham Light Railway, which is also the direct route between Immingham and Hull via New Holland.

Inner Gates of Immingham Dock in Course of Erection.

hydraulic-pressure water is conveyed round the dock entrance lock in steel tubes, made by the Mannesmann solid drawn process. The return water system is also of similar tubing.

now manage an hotel, which has been patronised by thousands of visitors. The railways have taken over the catering in the dining cars running between Beira and the Falls.

RHODESIAN RAILWAY PROGRESS.

Some interesting particulars concerning Rhodesian railway policy have been given in an interview by Mr. C. Wibberley, whose resignation as general manager of the Rhodesian Railways we recently reported. The traffic over all sections of the railway has increased from £345,000 in 1902 to £970,000 in 1910. The tonnage has increased from 74,000 in 1902, to 480,000 in 1910, and passengers from 29,000 in 1902 to 254,000 in 1910. The mileage of the line under the Rhodesian administration was 374 in 1900, and to-day it is 1,743, apart from the distance of 150 miles from Sakania to Elisabethville. To meet the growing demands of the traffic additional rolling stock and locomotives have recently been provided. Four new and powerful engines were put under steam during March, 250 new wagons were imported and put into traffic during the past six months, and a further 350 are on order and are expected to be put into use during the next few months. With the opening of the bridge at Victoria Falls the company built and

Map of the Mouth of the Humber and District.

The Immingham Dock has three separate lines connecting it with Grimsby, and with the Great Central's main system—viz.: A line to Grimsby known as the Grimsby District Light Railway, about 5½ miles long; this provides a direct service of electric cars between the dock and the centre of Grimsby, and

New Services from Dover.—It is stated that in addition to the new fortnightly service to West Africa from Dover by the Woermann Line, a fortnightly service round Africa both by way of the Cape route and the Suez Canal will be inaugurated at the end of the year by the German East African Line.

THE PERMANENT WAY INSTITUTION AT SOUTHAMPTON.

The annual summer convention of this growing Institution has been held in and about Southampton from the 7th to the 13th inst. under exceptionally favourable conditions, and was well attended. At the council meeting on the first day the officers, all of whom are honorary, were able to submit most encouraging reports as to the financial status of the Institution, and as to the ever-increasing number of the members. All these were submitted to the general meeting on Friday afternoon by the President, Mr. J. W. Jacomb-Hood, the chief engineer of the London and South Western Railway. In the forenoon the members had visited the shipbuilding yard of Messrs. Thornycroft, at Woolston, while the ladies of the party had a delightful drive to Netley Abbey. At the general meeting the election of 100 new members was duly confirmed, the most notable among them being Sir Bradford Leslie, K.C.I.E. The members of all grades now number 1,300. After the Mayor of Southampton (Col. Banes) had welcomed the visitors in a few cordial words, the business of the meeting was got through in record time. It was decided to hold the next summer convention at Barrow-in-Furness, and the winter general meeting in London, as usual.

Gold, silver, and bronze medals were presented to Messrs. T. Lee (L. and S. Railway), H. Bassindale (G.C. Railway), and W. Workman (G.W. Railway) respectively. Thanks were voted to Sir Chas. Owens, Messrs. Thornycroft and their two assistants, the Council of the Hartley Institute for the loan of their building, Messrs. Williams, the manager, and Wentworth Shields, the engineer of the docks, the manager of the White Star Line, Messrs. Dugald Drummond and Warner, the Dean of Winchester, and the Mayor of that town and of Southampton. Mr. J. F. Clark, from the docks manager's office, then read a most exhaustive paper on the docks, which was listened to with the greatest interest throughout. We have fully described the expansion of the docks from time to time, but Mr. Clark mentioned many facts which did credit to his historical research. Parliament having authorised the provision of docks by the Act passed in 1836, the proprietors of the Southampton Dock Company held their first meeting at the "George and Vulcan" Tavern, in Lombard Street, on August 15 in that year. The foundation stone was laid on October 12, two years later, by Admiral Sir Lucius Curtis, P.G.M., with full masonic honours, and in the presence of 25,000 spectators. Four years later the "Outer Dock" admitted two P. and O. paddle steamers of 500 and 780 tons respectively. The second dry dock was completed in 1851. Graving docks were built in 1846, 1847, and 1854, two of them being subsequently lengthened. In 1845 the South Western Steam Navigation boats began running to the Channel Islands, and were taken over by the South Western Company in 1852. Paddle steamers began running to New York in 1847, and this service has been kept up ever since by an increasing number of steamships. The company now called the Union Castle commenced its sailings to the Cape in 1857. On the completion of the "Old Extension Quay," in 1876, on the River Itchen, with a depth of 20ft. at L.W.O.S.T., the advantages of the port were first realised, and since then the accommodation has developed *pari passu* with the length and depth of ocean-going craft. The Empress Dock was opened by Queen Victoria on July 25, 1890; this covers 18½ acres, and has a minimum depth of 26ft., and Southampton then became the only port in Great Britain where vessels of the largest size could be docked at any state of tide. This quality she has maintained up to now. The Southampton Dock Company started this work, but the South Western Railway Company paid for it, and eventually took over the whole undertaking in 1892. After this came the "Prince of Wales" extension on the River Itchen of 2,000ft., and the graving dock of the same name of 750ft. long, 87½ and 112ft. width at sill, and cope level respectively, and 32½ft. depth to blocks at H.W.O.S.T. Next came the South Quay, 430ft., the Test Quay 1,600ft. long, and the "Trafalgar" Graving Dock, now being enlarged to 897ft., with a 100ft. entrance and a sill depth of 35ft. at H.W. The coping stone at the South Western corner of the Ocean Quay was laid on October 2, 1898, the 60th anniversary of the first foundation stone being placed in position. The last addition is the new 16 acre dock, at present sufficiently advanced to admit the "Olympic," which was visited by the members on Monday last. There are now three coal barge docks capable of accommodating 20,000 tons of coal. The grain trade has been enormously developed by the railway company, and 2,300,000 bushels can now be stored—these can be discharged direct from hold to warehouse at the rate of 200 tons an hour. Here also is the largest cold storage build-

ing in Europe, 400ft. by 12 ft. by 50ft. in height, founded on 1,347 ferro-concrete piles, 43ft. long, with a storage capacity on five floors of 1,200,000 cubic feet, sufficient for 15,000 quarters of beef, 155,000 carcasses of sheep, leaving 500,000 cubic feet for miscellaneous goods. The depth of water at the quay is 32ft., and the largest vessels can be discharged direct into railway wagons or into the storage building. The old extension quay has been widened 5 ft. lately. Many sheds are provided, mostly one-storied, and generally speaking 300 to 400ft. long and 120 to 150ft. wide. The more recent or "tin" sheds are of steel and galvanised iron, the latest, however, being felt-covered, 700ft. long and 120ft. wide in two parts. The average quay width in front of the sheds is 55ft., the majority of them, such as the Admiralty transport shed, are railway stations with waiting rooms, refreshment rooms, etc., etc. Passengers have only to cross from one side to the other of these sheds to step from boat to train or *vice versa* from any part of the kingdom. Mr. Clark mentioned that during the South African war 419 transports left and 476 arrived with troops. The numbers which passed in and out of the docks consisted of 25,384 officers, 502,616 men, and 27,922 horses, besides women and children, baggage, stores, etc., all without a single serious accident. Twelve locomotives for dock service have been built by the railway company in their shops, and they can all act as fire engines. There is also a fire station and a powerful steam float. Most of the cranes are worked by hydraulic power, but Messrs. Stothert and Pitt's latest cranes are electric. The lighting of the area is done by about 780 arc lamps of nearly 1,000 c.p., and by "Jandus" regenerating arc lamps of 4,000 c.p. on lofty standards, with good reflectors. Dredging is going on both inside and outside the docks, and the approach channels are all well lighted. There is a telephone installation covering the whole yard, and, in fact, no detail is too small to be attended to, and the 238½ acres constituting the dock estate are a standing monument to the enterprise and skill of the railway company's officers, from the general manager downwards.

The following facts are a striking proof of this. Since the railway company took over the undertaking 1,000 more ships use the docks, the tonnage of which, gross and net, have more than trebled, as have also the tons of cargo, both outward and inward. The sea-borne coal has more than quadrupled, and rail-borne more than doubled, the passengers have more than trebled, besides 50,000 troops; this has also been the case with mails and parcels. The length of quays has increased by 50 per cent.; the cargo and passenger shed area have nearly, and the vault accommodation and timber storage area have more than doubled. The grain warehouse area is six times, the length of railway 2½ times, and the area of the dock estate more than one-third greater.

After Mr. Clark had finished his discourse the members dispersed to meet their wives and daughters, with whom they came together again to dinner at the Railway Hotel to the number of 80. Mr. Jacomb-Hood presided, and was supported by Mr. Robertson (past president), Dr. Richardson, Mr. Wentworth Shields, Mr. Ernest Benidict, and others. The latter gentleman served as captain in the Southampton Engineer Volunteer Corps, under Capt. Buchan, from 1877 to 1882, and the president was then his assistant on the Ryde Pier and Railway Works, and on the main line of the South Western Railway, till Mr. Benidict left for India. A most enjoyable evening was passed, and after resting on the Sunday the members worked through the programme given in our last issue; the enjoyment of the many excursions being much enhanced by the admirable descriptive booklet issued by the Institution.

The Algoma Eastern Railway Company. Ontario, have invited subscriptions for £313,600 of 5 per cent. first mortgage 50-year gold bonds, at £93 per cent., principal and interest unconditionally guaranteed by the Lake Superior Corporation. The railway is now in operation for a distance of 22 miles, and is the only line serving the nickel mines of the Canadian Copper Company and the Mond Nickel Company, at Creighton and Crean Hill. The line is now being extended to a point about 45 miles west of Sudbury, and thence south to Little Current, on Manitoulin Island. The cost of completing the line, involving the building of about 64 miles, is estimated at £538,378, and the work, it is expected, will be finished by July, 1912. Government subsidies and grants of land have been obtained. Part of the proceeds of the present issue will be utilised to pay for bonds of the Lake Superior Corporation, which have been cancelled, and the balance, together with the subsidies, will be sufficient to cover the expenditure required for the completion and equipment of the line.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- July 17 (Mon.).—**Burry Port and Gwendreath Valley Railway** (Special), 5, Gray's Inn Square, at 12.
- July 17 (Mon.).—**Costa Rica Railway** (Annual), Winchester House, E.C. at 12.
- July 19 (Wed.).—**Entre Rios Railways** (Extraordinary), River Plate House, Finsbury Circus, E.C., at 12.
- July 25 (Tues.).—**City and South London Railway** (Half-yearly), 71, Finsbury Pavement, E.C., at 12.
- July 26 (Wed.).—**Metropolitan Railway Company** (Half-yearly), Great Eastern Hotel, E.C., at 12.
- July 28 (Fri.).—**Great Eastern Railway** (Half-yearly), Great Eastern Hotel, E.C., at 12.
- July 28 (Fri.).—**South Eastern and Chatham Railway Companies Managing Committee** (Joint General), Cannon Street Hotel, E.C., at 12.

- Aug. 10 (Thurs.).—**Midland Great Western Railway of Ireland** (Half-yearly), Broadstone Terminus, Dublin, at 1.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

RHODESIA RAILWAYS, LTD.

The fourteenth ordinary general meeting was held on July 7, at 2, London Wall Buildings, E.C., Mr. Rochfort Maguire presiding.

The CHAIRMAN, in moving the adoption of the report (a summary of which appeared in last Saturday's RAILWAY TIMES), expressed satisfaction with the fact that the improvement in the financial position, which he was able to point out at the last meeting, had continued. For the first time since the debenture debt was at its present figure, the company had worked at a profit of £78,500, after allowing for depreciation and other charges, as compared with a loss of £41,449 in the previous year. This great improvement in the financial position was due to increased revenue from all the principal sources of traffic. The largest increase, £69,573, was in general goods traffic, which was particularly satisfactory, as that class of traffic showed clearly the progress that was being made in the commercial development of the country. There had been great activity in the building trade during the past year, for not only were new public offices required to deal with the increasing requirements of the community, but also private houses and business premises were built, upon a considerable scale. Passenger traffic also showed a good increase, £33,800, due to the increasing population of the country and the greater business activity. The increased receipts from the carriage of construction material, £23,436, was due to the extension of the line from Broken Hill to the Katanga district of the Belgian Congo. The latest returns, which were only approximate figures, showed that the gross revenue each month

revealed a substantial increase over the corresponding month of the previous year. In the aggregate for the seven months the gross revenue had increased by no less than £87,144 over the corresponding seven months of the previous year, and the net revenue had gone up by £70,713. This result had been achieved in spite of the carriage of construction materials having practically ceased during the last seven months. The increase which had taken place in the traffic had necessitated very large additions to the engines and rolling stock. Additional orders had been placed for a large number of trucks, as well as engines and passenger coaches, and as soon as these contracts had been completed the directors believed that the line would be adequately equipped in that respect for dealing with all the traffic that offered. As the result of an agreement between the British South Africa Company, the Rhodesia Railways Trust and the Mashonaland Railway Company, regarding the debt due by the company to the British South Africa Company for advances under its guarantee of debenture interest or for capital expenditure, the Rhodesia Railways Trust, which held practically the whole of the share capital of the company, had now stepped into the shoes of the British South Africa Company as the company's principal creditor, and had undertaken not to call in the debt for ten years. In regard to railway development in Rhodesia, the extension in the Congo State was referred to in the report. Coming thence to the extreme south of their railway system, the directors believed that the Union Government contemplated connecting Zeerust, in the Western Transvaal, with Ottoshoop, on the Transvaal border, a distance of 31 miles. Ottoshoop was the terminus of a small branch line, leaving their Vryburg-Bulawayo line at a point near Mafeking. This connection, if made, would reduce the distance between Bulawayo and Johannesburg from 924 to 682 miles—a saving of 242 miles, which would have the effect of largely stimulating traffic between those two centres.

The report was adopted.

MASHONALAND RAILWAY.

The eighth ordinary general meeting was held on July 7, at 2, London Wall Buildings, London, E.C., Mr. Rochfort Maguire in the chair.

The CHAIRMAN, who moved the adoption of the report (a summary of which appeared in the RAILWAY TIMES of last Saturday), said that the financial position of the company had so greatly improved that the directors thought it right to make a provision of £35,000 for depreciation of the railway and £27,820 for depreciation of rolling stock. With reference to the Beira-Salisbury section, the revenue and expenditure figures were given for the two years ended September 30, 1909, and September 30, 1910, which showed that the gross revenue for the latter year increased by £119,560 as compared with the earlier period, and of this amount £111,356 was increased net earnings. Such rapid progress had been made that the approximate net earnings for the year ended September 30 last were a little more than two and a half times as large as they were only two years ago. General goods accounted for by far the greater part of the increased revenue, and this was particularly satisfactory as indicating the more general use of Beira as the port of entry for Rhodesia. There was a very small decrease in revenue from the carriage of live stock and vehicles. This was due to an outbreak of east coast fever and the consequent restrictions upon the movement of cattle. The spread of the disease had been checked by the stringent regulations enforced by the authorities, but isolated cases might occur from time to time, so checking the expansion of this class of traffic. The latest monthly returns showed that the improvement which had taken place was continuing. They were now beginning to carry construction material for the extension of the line from Elizabethville to Kambove, so that a still further increase in their revenue might be expected. The results of the working of the Kalomo to Broken Hill section showed that on this line also progress was being made. The increased revenue during the year ended September 30, 1910, as compared with the previous year, was mainly due to the carriage of construction material. In connection with the Kalomo-Broken Hill section a very great proportion of the traffic was carried over the whole length of the Rhodesia Railway system, principally from Beira, but in part from Vryburg. Without it the construction material for the line from Broken Hill to Elizabethville, which had so materially assisted their traffic for the last two years, would not have been required, and it was, in fact, the link which coupled the development of the southern portion of the Congo State to Rhodesia. Thus, the figures of the Kalomo-Broken Hill section, satisfactory as

they were becoming, very inadequately represented their importance in the company's system. Regarding the figures relating to the Lomagunda and Eldorado branches, he regretted to say that the results were not quite so satisfactory. The year ended September 30, 1910, showed a good increase over the previous financial year, but the returns of the first eight months of the present financial year were not so good. The railway to the Mazoe had been begun, and the survey for its continuation to the Shamva mining district was to be commenced forthwith. The contract for the construction of the deep-water wharf at Beira had also been given out. They could not expect that their revenue would continue to expand without their expenditure showing to some extent a proportionate increase. The figures given showed, however, that during the year ended September 30, 1910, it cost them only about £8,000 more than the previous year to earn an extra £119,560 of revenue. This bore out amply what he had told them at previous meetings—namely, that they could carry a much larger traffic than they then had at practically the same cost. But the position was now changed. The railway was passing out of the pioneer stage, and the public were beginning to expect better accommodation and a more rapid service of passenger trains. This necessitated more powerful locomotives, and these in turn entailed expenditure upon the permanent way. He thought, therefore, that a considerable increase of expenditure was inevitable in the next few years.

The motion was adopted.

PARAGUAY CENTRAL RAILWAY.

A meeting of the holders of the five per cent. debenture stock was held on Wednesday last at the Salisbury Hotel, London, Mr. V. V. Branford presiding, to consider resolutions consenting to the creation and issue of six per cent. notes to an amount not exceeding £500,000 payable on August 1st, 1914, constituting both as to capital and interest a charge in priority to the charge created by the five per cent. debenture stock trust deed, on the following terms—viz., that such notes shall be issued only for the purpose of defraying the cost of constructing and equipping the proposed harbour at Villeta and the proposed branches of railway to Villeta and Villa Rica in the direction of the Iguazu Falls, and of the completion of the change of gauge and other works on the company's main line from Asuncion to Encarnacion; that the trustees be authorised to concur with the company in executing any trust deeds and other documents necessary or proper for giving effect to the foregoing resolutions; that each holder of the five per cent. debenture stock of the company should lodge his certificate with the company to be endorsed with a memorandum of the passing of the resolutions in question.

The SECRETARY (Mr. W. Lauber), having read the notice convening the meeting,

The CHAIRMAN said that there were represented at the meeting, in person and by proxy, over £800,000 stock belonging to over 250 different stockholders, so that the meeting had power to decide on the resolution to be proposed. It was with much satisfaction that he was able to announce that the change of gauge had been effected, that the extension to Encarnacion was completed and open for traffic, that in the past three months the new rolling stock had been in use on the standard gauge track, that the change of gauge had been completed almost without interruption to the traffic, and that the new locomotives and rolling stock, sent out in parts, had been put together and re-erected rapidly and without difficulty in the workshops at Sapucay. The last section of the extension was opened for traffic on July 1st, but, of course, the full benefit of the through route to Buenos Ayres would not be reaped until the train ferry was in operation, connecting the terminus of the North East Argentine with their own line at Encarnacion, the last link of which would shortly be completed. To-day the line formed part of a great trunk system which gave the vast central region of South America access to the ocean with a standard gauge completely equipped with new locomotives and rolling stock of the most modern type and make. The cost of this transformation could not be stated until the complete accounts arrived from Paraguay, but it was not anticipated that it would reach £50,000 beyond the resources in hand towards the expenditure. The Chairman also stated that the meeting was asked to authorise expenditure for two lateral extensions of the main line, one to run eastward in the direction of the Iguazu Falls, on the Brazilian frontier, which it was proposed should be built immediately, as it was believed that a remunerative traffic awaited such extension as soon as it reached the heavily-timbered regions, some forty kilometres from the nearest point on the main line; in fact, the extension was regarded as a step towards a new international connection. About two years ago a concession

was obtained by other persons from the Government of Paraguay for a trunk line right across the country from Asuncion towards the Brazilian frontier, which would have taken away a considerable portion of their traffic, but, owing to a fortunate chain of circumstances, the concession had recently lapsed, and it was then necessary, in order to protect the interests of the company, that an extension should be built eastwards, which should enable this company to tap the vast forests of Eastern Paraguay, and ultimately, as traffic warranted, join Paraguay to the Brazilian Railway. The Chairman further stated that the foregoing situation not only warranted, but compelled the directors to raise capital at once for the eastward extension. A short line was also proposed on the west to connect the main line with a proposed deep-water port on the river below Asuncion. It was therefore proposed to authorise the issue of £500,000 of three-year six per cent. notes to cover the cost of the two extensions, and to provide any balance of capital expenditure on change of gauge account. The proposal was that the interest on the notes should be payable out of capital except for the comparatively small sum to be expended on change of gauge account, the interest on which would naturally be chargeable to revenue. The scheme had received the approval of a large majority of the five per cent. debenture stockholders who had given to Mr. Heslop, Mr. Mendl and himself their proxies. The Chairman then moved the formal resolution, which was seconded by Mr. MENDEL.—The CHAIRMAN, having replied to criticisms of the debenture holders who opposed, the resolution was then put to the meeting and lost on a show of hands. A poll having been demanded, resulted as follows: For the resolution £810,152 against £5,537. The Chairman therefore declared the resolution passed and the other resolutions adopted.

An extraordinary general meeting of the company was afterwards held at which a resolution was adopted to extend the borrowing power of the company to an amount not exceeding £250,000.

The proceedings then terminated.

ENTRE RIOS RAILWAYS.

The directors have issued a circular to the stockholders, which says:—During the past six years a progressive policy has resulted in the mileage of the railway being increased from 472 miles in 1906 to 727 miles in 1911, whilst during the same period the gross receipts have increased from £422 per mile to £666 per mile, and the net receipts from £169 per mile to £393 per mile. The mileage of line added, the establishment of a deep water port at Ibicuy, and the installation of a train ferry from Ibicuy to Zarate with three ferry steamers, on the direct route to the capital of the Republic, has made it necessary to issue the whole of the debenture capital authorised by the company's articles of association. There has not yet been reasonable time for the full development of a large portion of this expenditure, yet, after meeting all working expenses and fixed charges, the net revenue available for distribution continues to increase in a satisfactory manner, and the directors are glad to report that from the accounts so far to hand they anticipate being able to recommend the payment of the full preference dividends for the current year, and a small dividend on the ordinary stock. New locomotives, additional rolling stock and the completion of the relaying with a heavier rail the principal lines, where there is now a fast and heavy traffic, are still required, and provision must also be made for such facilities for the ports, stations, workshops and ferry steamers as a rapidly increasing traffic demands. The railway is no longer an isolated provincial system, but now forms the most important link in the chain which connects the capital of Paraguay with that of the Argentine, and in order to be able to continue a policy which has proved successful and to enable the railway to hold its proper position in the province which it serves, the company must have the necessary capital at its command. It is proposed to extend the share capital of the company as follows:—

	Present amount.	Proposed amount.
	£	£
First preference stock ...	1,693,200	2,000,000
Second preference stock ...	734,040	1,000,000
Ordinary stock ...	1,583,140	2,000,000

and to increase the borrowing powers to an amount equal to the share capital of the company for the time being issued. There is no present intention on the part of the board to make any issue of capital except such as may be necessary for ordinary current requirements.

Meetings of the company, of the first preference stockholders, and of the second preference stockholders to authorise the increases of capital will be held on July 19.

CITY AND SOUTH LONDON RAILWAY.

The directors' report and accounts for the half-year ended June 30, 1911, states that the receipts from all sources amounted to £93,873, and the cost of working has been £42,738, leaving a profit of £51,135. Inclusive of the balance brought forward from December 31, 1910, the net revenue accounts show an aggregate total of £52,923. After making provision for the debenture interest, rent charge, and the transfer to the renewal fund of £1,500, and £800 for general purposes, a balance remains available for dividend of £36,049. The directors recommend that the full dividend of 5 per cent. per annum be paid on the preference stocks, 1891, 1896, 1901, and 1903, and that a dividend at the rate of 1½ per cent. per annum be paid upon the consolidated ordinary stock for the half-year, leaving a balance of £2,798 to be carried forward to the next account. The passengers carried, exclusive of season ticket holders, amounted to 12,413,822, as against 11,497,140 at the half-year ended June, 1910.

Prior to the Coronation period the traffic had shown a marked increase, which was further augmented during the processions and illuminations associated with this great event. The result of the half-year's working is that the directors are, in a position to recommend a dividend on the ordinary stock at the rate of 1½ per cent. per annum, carrying forward the balance of £2,798, as against 1½ per cent. per annum, and £1,634 for the corresponding half-year of 1910. The enormous number of passengers using the railway during the Coronation celebrations were carried without a single mishap or delay of any kind whatsoever. The high level subway connecting the public subways of the Central London Railway and the booking hall of the Bank station was opened by the Right Honourable the Lord Mayor in May last, and its utility and convenience have since been amply demonstrated by the free use of the passage made by large numbers of the public.

The directors deemed it prudent to avail themselves of an opportunity to dispose of the small unissued balance of preference stock, 1903, on favourable terms, enabling them to pay off the temporary loan. The board had to announce, with deep regret, the death of their esteemed colleague, Mr. Harvey Ranking. During his association with the company, Mr. Ranking displayed warm interest in its affairs and gave much time and attention to its welfare and advancement. The vacancy thus occasioned has been filled by the election of Mr. J. F. S. Gooday, formerly general manager of the Brighton and Great Eastern Railways, and now a director of both those companies.

We append a summary of the accounts as compared with the results for the corresponding period in 1910.

Revenue—		1910.	1911.
Traffic	£84,008	£88,195	
Transfer fees, rents, etc. ..	4,824	5,678	
Total	£88,832	£93,873	
Expenditure:—			
Traffic	£12,798	£12,969	
General (including rates and taxes)	6,555	6,809	
Repairs and maintenance ..	3,484	3,321	
Lift expenses	5,448	5,196	
Power	13,927	14,443	
Total	£42,212	£42,738	
Gross Surplus	£46,620	£51,135	
Balance from last account ..	712	1,788	
Deductions:—			
Interest on debentures	£13,637	£13,637	
Renewal fund	1,500	2,300	
Rent charges	287	287	
General interest	723	650	
Total Deductions	£16,147	£16,874	
Balance available for dividends ..	£31,185	£36,049	
Preference dividends (5)	£20,301	£20,301	
Ordinary dividend (1½%)	9,250	12,950	
Balance carried forward	1,634	2,798	
	£31,185	£36,049	

Close of the Manchester Strike.—Thanks to the efforts of Mr. Askwith, the Board of Trade's representative, the strike of Manchester dockers, carters, and railway goods yard employees was brought to a termination on Monday last.

COSTA RICA RAILWAY.

The report of the Costa Rica Railway Company, Limited, for the year ended June 30 last, covers the sixth year of the working of the company's railway by the Northern Railway Company. The rental dealt with in the accounts in terms of the working agreement is £144,600, to which must be added interest on investments and deposits £5,230, transfer and registration fees £73, together £149,903. From this must be deducted:—Interest on prior mortgage debentures to June 30, 1911, paid and accrued, £16,323; redemption of prior mortgage debentures, paid March 1, 1911, £6,400; interest on first mortgage debentures to June 30, 1911, £39,300; interest on second debentures to June 30, 1911, paid and accrued, £36,000; expenses of administration, £3,561; income-tax, £1,062; leaving a balance of £47,256. The directors now recommend a dividend of 1½ per cent. (against 1½ per cent. for the previous year) on the capital stock (which will absorb £31,500), and that the balance—namely, £15,756—be transferred to reserve, raising that fund to £115,854. The agent in Costa Rica reports that the Northern Railway Company continues to maintain this company's property in good condition, and to make substantial improvements thereon. The Government Railway from the capital to the Port of Punta Arenas, on the Pacific, is completed and open for traffic; this, in conjunction with this company's line, affords another railway interoceanic route in Central America.

London and Greenwich Railway.—The accounts of the company for the past half-year show, after providing £5,568 for interest on the preference stock, a balance of £12,332 available for dividend on the ordinary stock. The directors recommend that a dividend at the rate of £2 16s. 6d. per cent. per annum be declared, leaving a sum of £163 to be carried forward to the credit of the next account.

Egyptian Delta Light Railways.—At an ordinary meeting of this company held on July 6 in Winchester House, E.C., Sir William E. Garstin, who presided, said that they could record a decided improvement in their business. The revival of trade and confidence had been remarkable, but it could not be said that the country had regained the position that it held previous to the disastrous period of depression through which it had recently passed. Their prospects for the current year could be considered good. It was too early yet to forecast the cotton crop of 1911. The critical period had not yet arrived. All information, however, went to show that so far the prospects were satisfactory. Several of the other suburbs of Cairo were, they were forced to admit, better served than Helouan, and the residents of that town had represented both to the Government and to the company that their interests suffered in consequence. While in Egypt early in this year he had frequent discussions with the financial adviser on that subject. These discussions resulted in the formal consideration by the Government of Egypt and himself of the possible extension of their concession for that line in return for the expenditure by the company of a considerable capital sum upon improvements. No acceptable solution of that matter had yet been arrived at, and it consequently remained a question for further consideration by the board whether it would be to their best interests to improve this line to the utmost of their ability in return for an extension of time, or whether they should confine themselves to necessary renewals and minor improvements to be borne by revenue. The report was adopted.

San Paulo and Minas Railway.—The annual meeting was held on Wednesday, at 14, Queen Victoria Street, London, E.C., Mr. E. Shield presiding. The Chairman, in moving the adoption of the report (a summary of which appeared in last Saturday's RAILWAY TIMES), said that since last annual meeting, at which he stated that the contractors expected to have the line completed to San Sebastiao de Paraíso by the middle of the November following, much delay had arisen owing to exceptionally bad weather, which had caused the extension works to be suspended for several months. The railway had now actually reached San Sebastiao de Paraíso, and they hoped that shortly the company's engineer would be in a position to report the completion of the railway and its equipment in accordance with the terms of the contract, so that they could arrange for the taking over and the future working of the line. There was a certain diminution in some of the monthly traffic receipts, so far received, owing to the returns for coffee not being so large as had been anticipated. The receipts now, however, showed an upward tendency, and as more coffee was coming down the line, he trusted that matters would adjust themselves during the next few months.

Barsi Light Railway.—An interim report issued on Wednesday last states that the net revenue for the year ended June 30,

1911, according to information by cable, amounts approximately to £23,500. After providing the interest £5,000 on the £140,000 4 per cent. debenture stock, and adding the available balance from the previous year, there is a sum of about £22,200 to be dealt with. The directors have declared an interim dividend of 3 per cent. (six shillings per share) in respect of the past year, which will absorb £6,000. The Latur extension (36 miles) was opened throughout for traffic on May 1 last, well within the time stipulated in the contract with the Government of H.H. the Nizam of Hyderabad. The traffic receipts for the months of May and June, which amounted to about Rs.20,750 (equal to Rs.93.71 per mile per week), are very satisfactory, and will, after meeting the expenses of working the extension, go to reduce the amount charged to capital account for interest up to June 30, 1911, on the 4 per cent. "Latur extension" debentures in accordance with the contract.

PARLIAMENTARY.
QUESTIONS IN THE HOUSE OF COMMONS.

Railway from India to Ceylon.

Colonel Yate (Melton—Unionist) on Monday asked the Under Secretary of State for India, whether, in consideration of the fact that railway connection between India and Ceylon would probably be effected in the course of next year and that, as far as Ceylon was concerned, it was expected that the line would pay its way from the first, he would state whether there was an early prospect of the standard gauge, five feet six inches, of India being brought down to link up with the same gauge in Ceylon?

Mr. Montagu: No, sir. At present the metre gauge line of the South Indian Railway is being completed to Danishkoddi, on Rameswaram Island; from that point there will be a ferry connection with the Ceylon railway system at Manaar. There is no immediate intention of constructing a railway between Danishkoddi and Manaar.

PROGRESS OF RAILWAY BILLS.

North Eastern Railway.

In the House of Commons on Thursday evening, on the motion for the second reading of the North Eastern Railway Bill, which has already passed through the House of Lords.

Mr. Wardle (Stockport—Labour) moved the rejection of the measure on the ground that it cancelled all the rights and privileges which the citizens of Hull had enjoyed for many years in getting to the banks of the Humber, and instead of

the old path, proposed to put an overhead promenade on the right, which the people of Hull had enjoyed for a long time, had hitherto been safeguarded by Parliament in all the bills that had been promulgated in regard to docks and quays in Hull. The railway company, created by Act in 1865, with power to make a quay, but clauses were put in to protect the rights of the citizens, and allowing them to use the banks of the Humber. When the company erected this quay they found apparently that they could not make the best use of it because of placing cranes and rails close to the water. The Corporation started an action against the company, with a view to obtaining an injunction compelling them to reinstate the public right of way which had hitherto existed. Negotiations, however, took place between the parties, and by the casting vote of the Corporation the terms included in the present bill were accepted, and it was provided for the erection of a promenade over the docks. As a result, an agitation in opposition to the bill was at once commenced by the people of Hull.

Viscount Castlereagh (Maidstone—Unionist) said that if the claims made in reference to the rights of foot-way along the river side had been upheld, the quay would have been absolutely useless for the purpose for which it was intended. Having put a clause into the bill by agreement with the Corporation, it was impossible for the company to go back to its former position. The present motion was that the whole bill, involving the expenditure of a large sum of money for the purposes of industrial extension, should be rejected. What the opponents asked was simply that the people of Hull should have the right to wander about one of the busiest parts and hamper the business for which the quay was erected. The overhead footpath which was to be provided by the company at a cost of £5,000 would meet all the requirements of the people of Hull.

Mr. Tennant (Parliamentary Secretary to the Board of Trade) said he regarded the proposed arrangement for a new foot-way as an advantage to the public. The House had to consider whether owing to this quarrel it was desirable to throw out a bill that was going to do so many beneficial things as this bill was admittedly going to do. He could not advise the House to oppose the second reading.

After further discussion, the motion for the rejection of the bill was defeated by 107 votes against 62, and the bill was read a second time.

RAILWAYS (EIGHT HOURS) BILL.

In the House of Commons on Wednesday, Mr. Hudson (Newcastle-on-Tyne—Labour) presented a Bill to provide for the establishment of a working day of eight hours for certain grades employed on railways, and it was read a first time.

PROGRESS OF RAILWAY BILLS.

The following tables show the progress of Railway Bills to date, after the formal first reading stage:—

TABLE I.—BILLS ORIGINATING IN HOUSE OF LORDS.

NAME OF BILL.	PROGRESS IN HOUSE OF LORDS.			PROGRESS IN HOUSE OF COMMONS.			ROYAL ASSENT.

* Partly rejected.

GENERAL NEWS.

N.E.R. ACQUIRE A LIGHT RAILWAY.

It is understood that the North Eastern Railway Company have taken over the Brompton Light Railway, but some time is expected to elapse before a start can be made with the alterations required to give further facilities for dealing with the traffic. The general manager has informed the Brompton Council that the legal formalities must be completed before the alterations are commenced.

MOUNTAIN SITES FOR RAILWAY HOTELS.

Mr. H. R. Charlton, general advertising agent of the Grand Trunk Railway and Grand Trunk Pacific Railway, has left for the West on an extended tour. Mr. Charlton made the trip last year over the mountains and through the Yellowhead Pass to Fort George, and many points were suggested in his report for hotel sites. On the present expedition sites that are considered the most attractive will be surveyed, so that the building of these mountain hotels may be proceeded with as early as possible. The rails are now within 20 miles of where probably the first of the hotels will be located.

PROPOSED MID-SCOTLAND SHIP CANAL.

Lord Blythwood presided at the annual meeting of the Mid-Scotland Ship Canal Association in London on July 10. It was reported that the work of the association was steadily increasing, and that the association had decided to promote the direct route at sea level from Grangemouth to Yoker.

Mr. A. Kay stated that Mr. Stevenson, the engineer, who formerly advocated the Loch Lomond route, and Mr. C. P. Hogg, the engineer for the direct route, were now engaged on the direct route and working out the details of the plans for getting over the difficulties and closely estimating the cost. The engineers were considering whether the canal should be at the level of the Forth at high water or at a slightly lower level, which would involve deeper cutting. They were agreed that the canal should be along the bottom of the valley, except at Grangemouth, where it should be a mile to the north.

APPEAL AGAINST GLASGOW ASSESSMENTS.

In Glasgow Sheriff Appeal Court on Monday last Sheriff Gardner Millar, K.C., heard proof in appeals at the instance of the Caledonian and Glasgow and South Western Railway Companies against the Corporation of Glasgow and the city assessor in respect of the assessment imposed on them for cleansing certain lanes, etc. bounding with or having a right of access to the Central and St. Enoch Stations. The point at issue was what is a private street within the meaning of the Glasgow Police Act. It was contended for the appellants that the lanes for the cleansing of which they had been assessed were not private streets, with which the stations were "bounding," or to which they had a right of access, or assuming that they were private streets of the class mentioned that the assessment should not be put on the rental of the stations as a whole, but only on the rental of certain parts of them, such as arches which "bound with" the lanes. The decision has yet to be given.

G.N.R. OF IRELAND AND THE POST OFFICE.

In the Irish Court of King's Bench, on June 29, the Great Northern Railway Company were allowed to discontinue their claim against the Postmaster-General for over £9,000 in respect of alleged mail services in keeping ready under steam a special engine to convey the English mail to the North in the event of the late arrival of the mail in the morning from Kingstown at Amiens Street Station. The respondents contested the claim mainly on the ground of want of jurisdiction in the Court, and that such dispute should be determined by the Railway Commission, but a settlement had been arrived at as follows:—For each special run, Dublin to Belfast, £20 10s.; when a special is run in connection from Portadown to Derry, £18—in all, £47; these terms to apply till six months' notice be given to terminate by either party. The payment for providing an engine at Amiens Street Station as heretofore for running special trains to Belfast with mails to be £325 per annum. The present account to be settled on these terms, subject to six months' notice on either side.

RAILWAY ANNIVERSARIES.

This week the Leicester and Swannington Railway, owned by the Midland Railway Company, attained the 79th anniversary of its opening. The steam whistle had its origin owing to an engine on this line smashing a cart which was crossing the metals, the driver taking no notice of the horn blown by the engineman. Upon a report of the circumstances being made to George Stephenson, who constructed the line, he suggested that a whistle which steam could blow should be fitted on the engine, and he ordered one to be provided.

On Wednesday last the London Bridge and Haywards Heath section of the London, Brighton and South Coast Railway reached its seventieth anniversary. The extension to Brighton was completed in September, 1841.

The London and Greenwich Railway, of which the general meeting was held this week, was opened seventy-five years ago. It was the first line built on the elevated system, 900 arches being erected for the double purpose of placing the track above the low-lying districts of the Thames and letting the structures in order to earn revenue. The first section operated was from London Bridge to Deptford, and two years elapsed before the extension to Greenwich was ready for traffic.

A RAILWAY SOUVENIR OF THE CORONATION.

The South Eastern and Chatham Railway Companies, in conjunction with the "Illustrated Continental Express," have issued a Souvenir of the Coronation. It contains nearly one hundred pages, the majority being devoted to an account of the origin and progress of the two companies, their Channel services, and the British and Continental seaside resorts for which they cater. Its attractiveness is increased by numerous reproductions of engravings and photographs. It is claimed that the South Eastern Company was among the pioneers of cheap fares at a time when other companies despised the third-class passenger. This company also introduced the day ticket system. No portion of the publication exceeds in interest the account of the establishment of the Channel services. That of the South Eastern seems to date from 1846, from Folkestone to Calais. For a time the conveyance of the mails from Dover to Calais was undertaken by the Admiralty, with the idea of using the boats as training ships for reservists. During the year of the Great Exhibition the Admiralty completed the great stone pier for steamer traffic. The work of construction occupied thirty years. The pier has recently been extended in connection with the construction of the national harbour. It is to the South Eastern and Chatham that the introduction of the turbine steamer in the Channel is due. There are five such vessels now running to Calais and Boulogne, and two additions are about to be placed in commission. A chapter is devoted to the fine locomotives designed by Mr. H. Wainwright, one of whose designs had the honour of being the only British locomotive to receive honourable mention at the Franco-British Exhibition.

A DERAILMENT DUE TO A WORN WHEEL.

The Railway Department of the Board of Trade have issued the report of Colonel P. G. von Donop, R.E., on the circumstances under which a portion of a passenger train left the rails on May 11, near Kingstown Station, on the Dublin and South Eastern Railway. The engine was a four-wheel-coupled tank engine, fitted with a leading and trailing pair of wheels, the side play of the leading pair being 1½ in., and that of the rear pair 1½ in.; it was running chimney first.

In his conclusion Colonel von Donop states that "It would appear probable that it was at the facing points that the derailment originated. From the marks it appears probable that the left hand leading wheel mounted the switch rail at the points, ran a short distance along the top of it, and then along the groove between the switch rail and the stock rail, thereby forcing the former inwards away from the stock rail; just ahead of the heel of the switch rail the leading pair of wheels evidently left the rails altogether, and were derailed to the left of the line. The derailment of the leading end of the engine and the forcing inwards of the switch rail appear to have caused the derailment of the remaining wheels of the engine, and the four leading vehicles of the train followed in their track. Engine No. 27, to which this accident occurred, was built by the company in their own shops, and has been in regular running ever since it was first placed on the line three and a-half years ago. It has never been in the shed for regular repair since being taken into use, but it has had

its leading wheels changed twice, the present pair being fitted just a year ago. It is regularly stabled in the locomotive sheds at Bray.

"The condition of the leading pair of wheels of this engine was carefully examined immediately after the accident, and it was at once noted that the flange of the leading left hand wheel was very considerably worn; the side of the flange which would abut against the rail was almost vertical, and was worn sharp. With a flange in this condition there is an undoubted danger of the wheel mounting the switch at a facing point, and there is a special liability of this occurring when, as in this case, the worn wheel is a leading one, and it is bearing against the outside rail of a curve before reaching the points.

"The condition of this flange will, in my opinion, entirely account for this derailment, though it is quite possible that there may also have been some slight defect at the points, such as the switch rail not being very closely housed to the stock rail, which may have also contributed towards it. The engine, however, ought never to have been allowed to run with its flange in so worn a condition.

"Foreman Forde, who is employed as foreman in Bray Locomotive Yard, and who was, therefore, immediately in charge of this engine, states that he had himself examined this engine almost every day previous to the accident; he was aware that the flange of the left hand leading wheel was worn, and he states that four or five months ago he had asked that new wheels might be supplied for four or five of his engines. Three or four pairs of new wheels had accordingly been supplied to him, and had been fitted to other engines, but this engine had at the time of the accident not been fitted with a new pair. Forde was clearly thoroughly well acquainted with the condition of this wheel, and he states that he did not consider that it was sufficiently worn to be unsafe. Mr. Cronin, the locomotive superintendent of the Company, examined the wheels immediately after the accident, and he states that had he known that the wheels were in the condition in which they were he would not have allowed them to run. With this opinion I myself entirely concur, and I have no hesitation in attributing this accident to an error of judgment on the part of foreman Forde in allowing this engine to continue running on the line with its leading wheel in such a worn condition."

PERSONAL.

Mr. Julian Lauber has been appointed secretary of the Paraguay Central Railway Company in place of the late Mr. William Lauber.

Mr. Bertram Abel Smith, of Nottingham, and **Mr. Robert Hillington Knowles**, of Colston Bassett Hall, Notts, have joined the board of the Mansfield Railway Company.

Mr. J. H. Esthill, of York, chief canvasser of the North Eastern Railway Company, has been appointed commercial superintendent to the Port of London Authority.

Sir John S. Randles, of Bristowe Hill, Keswick, chairman of the Workington Iron and Steel Company, Limited, has been appointed a director of the Furness Railway Company, in place of Mr. Edward Wadham, who has resigned.

Mr. C. W. Bowerman, M.P., has been nominated for the secretaryship of the Parliamentary Committee of the Trades Union Congress, and **Mr. J. E. Williams** has been nominated to represent the railway servants on the committee.

Mr. A. W. Geaton, assistant electrical engineer, North British Railway Company, has been presented with a cutlery cabinet and tea kettle and stand by the staff and employees of the electrical department on the occasion of his marriage.

Mr. J. F. S. Gooday, formerly general manager of the London, Brighton and Great Eastern Railways, and now a director of both those companies, has been elected a director of the City and South London Railway Company, to fill the vacancy caused by the death of Mr. Harvey Ranking.

Mr. J. A. Charnley, who, as announced last week, has been appointed general manager of the Cheshire Lines Committee, eight years ago attended the Railway Congress held in the United States, as a representative of the Lancashire and Yorkshire Railway. He has also delivered courses of lectures on railway economics at Manchester University.

Caledonian Officers for Buenos Ayres.—**Mr. Richard Docherty**, assistant general superintendent; **Mr. John Liddell**, chief assistant to the general manager; and **Mr. John C. Sommerville**, of the general manager's staff of the Caledonian Railway, have resigned from the company's service, having accepted appointments under Mr. Calthrop, the late general manager of the Caledonian Railway, and now general manager of the Buenos Ayres and Pacific Railway Company. They leave for Buenos Ayres early in September.

A Royal Gift to Mr. W. Thomson. By the command of His Majesty, Mr. William Thomson, Superintendent of the L.S.E. and C.R., who recently retired from the post, was present at Euston Station on July 7, at the departure of the King and Queen for Ireland. Having been presented to King George by Colonel Sir Arlton Legge, Mr. Thomson received from His Majesty the gift of a handsome scarf-pin, with the initials "G. R." in diamonds. At the same time the King expressed his thanks to Mr. Thomson for the excellent arrangements which he had made for the late Queen Victoria, King Edward, and himself, as well as for other members of the Royal Family.

Mr. A. Blanden, who for eight years has been in charge of the important position of station superintendent at Victoria Station, Nottingham, has been promoted to the position of station superintendent at Manchester. Mr. Blanden, rendered vacant by the death of Mr. Mond, has been in the position of station superintendent at Nottingham, owing to his geniality and readiness to assist in every possible manner those who have business with the Great Central and Great Northern Railways. Before going to Nottingham Mr. Blanden had twenty-eight years' service with the Great Eastern Railway Company in the Norfolk and Suffolk districts.

Tasmanian Railways Appointment. Out of 48 applicants, Mr. George Wishart Smith, general manager of the Midland Railway Company, West Australia, has been selected to fill the position of Commissioner of the Tasmanian Government Railways. Mr. Smith submitted his application on the eve of his departure for London to view the Coronation celebrations. He is 41 years of age, and has had 23 years' railway experience in every department. He has occupied the position of general manager of the Midland Company for the past 12 years, and has high testimonials from West Australian Ministers of the Crown. The appointment is for four years, at a salary of £1,200 a year.

From Guard to Railway Commissioner.—**Mr. Charles Evans**, general traffic manager of the Queensland Railways, has been appointed Commissioner of Railways from June 1, 1911. The appointment is for three years at £1,750 a year. In his early days in the service Mr. Evans was a guard in the Southern division, from which position he was promoted to that of timetable clerk in the general traffic manager's office. His next step was to that of traffic superintendent in the Southern division, and later he went to Townsville as traffic manager of the northern line, which was small then as compared to present days. For a time he went to Maryborough in the same position, and was then transferred again to Townsville, until the promotion to the position of general traffic manager in May, 1908.

The Titles of the Coronation Peers. Several of the new peers' titles were officially announced on Tuesday. The Right Hon. A. Akers-Douglas, M.P., deputy-chairman of the London, Chatham and Dover Railway, becomes Baron Douglas of Bads, in the county of Middlethian, and Viscount Chilston of Boughton Malherbe, in the county of Kent. Sir Charles Benjamin Bright McLaren, chairman of the Metropolitan Railway, and a director of the Barry Railway, will be known as Lord Aberconway of Bodnant, in the county of Denbigh. The title of Sir W. T. Lewis, Bart., the managing director of the Cardiff Railway, will be Lord Merthyr of Senghennydd, in the county of Glamorgan. Mr. T. G. Ashton, who assumes the title Baron Ashton of Hyde, in the county of Chester, has for many years been chairman of Parliamentary Committees on Railway Bills, and has also presided over the Railway and Canal Traffic Committee.

RAILWAY NOTES.

Brazil Railway Company. Messrs. Speyer Brothers notify that the 4½ per cent. first mortgage 6-year bonds are now ready, and will be delivered against surrender of the fully-paid scrip certificates at their office, 7, Lothbury, London, E.C.

S.E. and C.R. Paris Office. In consequence of demolition, the South Eastern and Chatham Railway Company's office, which was situated for upwards of half a century at 30, Boulevard des Italiens, Paris, has been transferred to more spacious and commodious premises at 14, Rue de Quatre-Septembre, between the Place de l'Opéra and the Bourse.

France-British Electric Combination. Mr. J. Norton Griffiths, M.P., well-known in connection with South American railway construction, is the president of the London board of management of the Griffiths Electric Contractors, Ltd., which comprise a French and English combination for the purpose of undertaking, designing, constructing and operating large electrical works in all parts of the world.

The King and a Railway Dog.—Before the departure of King George from Euston to Ireland, on July 7, he noticed on the platform the dog named Brun, which carries on its back a collecting-box in aid of the L. and N.W. employees' widows and orphans fund. His Majesty patted the animal and placed a sovereign in the box.

A Light Railway Feeder for the G.E.R.—The first sod of a branch light railway to Thaxted, to connect with the Great Eastern Railway at Elsenham, is to be cut on Tuesday, July 25. The line is to be five miles in length, and its cost will be £33,000, towards which the Government has given £15,500. Sir Walter Gilbey, the Countess of Warwick, and Mr. W. Fuller Maitland have given land.

The King and Queen in Ireland.—On the occasion of the visit of their Majesties King George and Queen Mary to Dublin this week, Mr. F. Pim, chairman of the Dublin and South Eastern Railway, travelled in the Royal special train from and to Kingstown. The train consisted of a new engine which has been named the "Princess May," and five saloon coaches. Both the driver and the guard have already driven Royal trains in which travelled Queen Victoria and King Edward.

Railway Policy in Victoria.—Sir John Fuller, the Governor, in opening the Victoria State Parliament on July 5, stated that the Government believed that the circumstances of the State warranted a progressive railway construction policy. The State coal mine had become a highly productive national asset. Extensive harbour improvements had been authorised, including the erection of extensive and modern shipbuilding yards at Williamstown, a new pier at Port Melbourne, and the extension of the dry dock.

Communication between Blackpool and Southport.—A new through train has this month been put on from Liverpool to Blackpool, via Ormskirk and Meols—making use of the new line at Blowick and passing over the Southport, Liverpool, and Preston Junction line to the old West Lancashire line at Hesketh Park—thus avoiding St. Luke's and Chapel-street Stations. By this train passengers can travel from Hesketh Park, Southport, to South Shore, Blackpool, in 36 minutes. In the evening there is a return train from Blackpool.

Week-ends at Boulogne, Le Touquet, and other Resorts.—The South Eastern and Chatham Railway are extensively placarding an announcement that every Friday from July 14 to September 15 a special evening service (1st, 2nd and 3rd class) will leave Charing Cross at 5.5 p.m. and London Bridge at 5.12 p.m. for Boulogne, Le Touquet, and certain other seaside resorts in the North of France. The return week-end service will leave Boulogne at 8.50 a.m. every Monday morning from July 17, arriving at Cannon Street at noon and Charing Cross at 12.8 p.m.

The Great Northern Railway Co., on Monday and Tuesday, brought up a party of fifty journalists from Yorkshire and the North Midlands in order to demonstrate the ease with which north country people can visit the Festival of Empire at the Crystal Palace and the Coronation Exhibition at Shepherd's Bush. At the former place the visitors were received by Sir M. Beachcroft and at the latter by Sir John Cockburn. Before leaving, the party took an opportunity of publicly testifying their esteem for the services of Mr. H. J. Jewell, who personally conducted this and previous Great Northern excursions to London exhibitions.

An Ultimatum to the N.E.R.—At a meeting of the General Railway Workers' Union at York, on Monday last, to consider the result of the deputation that waited upon the general manager of the North Eastern Railway to put forward demands for a minimum wage for the workshop employees all over the system, a resolution was passed declaring the attitude of Mr. Vincent Raven, the chief engineer, to be an attempt to sectionalise the workers, and thus weaken the railwaymen's position, and instructing the secretary to acquaint Mr. Butterworth with the fact that unless the programme was discussed within fourteen days a ballot would be taken to ascertain whether they should withdraw their labour if the proposals were not granted.

Grand Trunk Railway Exhibit at the Festival of Empire.—Mr. S. W. Cummings, the director of the exhibit of the Grand Trunk Railway of Canada at the Festival of Empire at the Crystal Palace, has received a letter of thanks from the 15,000 children and teachers who were privileged to pass through the pavilion on the occasion of the visit of 100,000 children to the Palace as the guests of the King. The courtesy and kindly aid of the officials are referred to as ensuring complete success of the memorable day. Thanks are also awarded for the distribution of 19,000 maps and pamphlets among the homes and in the schools of the children.

Central London Railway Coronation Souvenir.—The Central London Railway Co. have issued as a souvenir of the recent

Coronation a very handsomely got-up book, entitled "Some London Views." The illustrations are in colour, and are pleasing and artistic in effect. They give street views and pictures of notable buildings and places which adjoin the railway. The letterpress, which is printed in gold, opens with a short description of the situation of the railway and the facilities which it affords, and then we have an account, topographical and historical, of the many noted places in London which are within easy distance of the stations on the railway. The visitor to London, and even the Londoner himself, could not have a more charming brief guide to the district dealt with than this beautiful book.

Brighton Company's Summer Arrangements.—In the tourist and excursion programme issued by the London, Brighton and South Coast Railway Company will be found announced cheap week-end tickets to be issued every Friday, Saturday, and Sunday to all places on the South Coast, from Hastings to Portsmouth inclusive, and to the Isle of Wight, also to Dieppe, the Parisian's favourite seaside resort on the Normandy coast. In connection with the Paris services, via the Newhaven, Dieppe and Rouen Royal mail route, tickets are issued for tours in France (including Normandy and Brittany, the Loire Valley and Pyrenees), Switzerland, Italy, Austria, Germany, Tyrol, Black Forest, etc., while cheap trips are announced to Turin Exhibition. Cheap day excursions are also run on Sundays and Mondays to Brighton, Hove, Worthing, Arundel, Littlehampton, Bognor, Midhurst, Portsmouth, and the Isle of Wight, also to Seaford, Eastbourne, Bexhill, St. Leonards, and Hastings on Mondays and on Sundays to Pulborough and Amberley. Cheap day return tickets are also issued every weekday and Sunday by certain ordinary trains to Brighton and other resorts. Special cheap 8 or 15 days return tickets are also issued on Fridays. Circular tour tickets, available for a month, are issued from London enabling the holder to travel to and along the whole of the South Coast between Hastings, Portsmouth, and the Isle of Wight.

Luxurious Travel on Great Central Railway.—The Great Central Railway Company have introduced in their London and Manchester service two entirely new trains, each of six coaches, the vehicles being 56 feet long by 8 feet wide, and mounted on two four-wheeled bogies of special type, which add considerably to the comfort of passengers by ensuring their easy riding with the absolute minimum of vibration. The carriages have been constructed in the company's own works at Dukinfield, and the ventilators so common on the roofs of carriages have given place to side louvre ventilators, which admit a good supply of air but keep out the dust. The lavatory appliances are most complete, the lighting is electrical, and controllable back lights are provided in each class of compartment. Each compartment is provided with bell communication with the attendant. Double parcel racks are provided in the first-class compartments and dining-cars, and folding flush elbow-rests conduce to changes of position on the part of the passenger during a long journey, whilst hassocks or footstools are also obtainable. In each side of the guard's van an ingenious train indicator, which is illuminated at night, has been introduced.

Programmes and Free Illustrated Guides at the Company's Stations and
Offices, or from Mr. Henry Holmes, Supt. of the Line, Waterloo Station, S.E.
CHAS. J. OWENS, General Manager.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING
RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40 to 60.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last 2½ times the life of the ordinary
cast iron Block, with equal braking effect, and
slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe
can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all
classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways
we now supply.

Our Representatives, with suitable samples for trial, are
at your command.

The National Rail & Tramway Appliances Co. Ltd.,

COMPANY NOTICES.

London, Tilbury and Southend Railway.

NOTICE is hereby given that the One Hundred and Tenth Half-yearly General Meeting of this Company will be held in the Board Room, 41, Trinity Square, Tower Hill, London, E.C., on Thursday, the 3rd day of August, 1911, at 12 o'clock noon.

The Transfer Books will be closed from the 17th instant to the 3rd proximo, inclusive.

ARTHUR L. STRIDE, Chairman.
H. CECIL NEWTON, Secretary.

41, Trinity Square,
Tower Hill, E.C.,
14th July, 1911.

North Staffordshire Railway.

NOTICE is hereby given that the One Hundred and Thirty-first Half-Yearly Ordinary Meeting of the Proprietors of the North Staffordshire Railway Company will be held at the Cannon Street Hotel, in the City of London, on Tuesday, the 8th day of August, 1911, at 2 o'clock in the afternoon, for the transaction of the ordinary business of the Company.

The last day for the Registration of Transfers will be the 25th day of July, 1911, when the books will be closed until after the Meeting.

TONMAN MOSLEY, Chairman.
R. E. PEARCE, Secretary.

Stoke-on-Trent,
8th July, 1911.

POSITION VACANT.

The Cardiff Railway Company.

THE Cardiff Railway Company are open to receive applications for the position of Assistant Mechanical Engineer, whose duty it will be to be responsible for the upkeep of the Hydraulic Pumping Engines, Hydraulic Coaling Cranes (30-ton), Hydraulic Coal Hoists (23-ton), as well as a number of smaller Import Cranes, Capstans, Dock Gate Machinery, Bridges, etc., at the Queen Alexandra Dock, Cardiff.

Preference will be given to one who has served his apprenticeship in engineering shops and passed afterwards through a drawing-office, and had charge of similar plant to that mentioned elsewhere. He must be accustomed to the control of men.

There is a timber bungalow near the works available as a residence, including coal, gas and water.

Applicants must send copies of three testimonials, giving full particulars of training and experience, also salary expected, to HENRY REE, Esq., M.Inst.C.E., Chief Engineer, Cardiff Railway Company, Cardiff.

Subscription to THE RAILWAY TIMES.

One Year—Twenty-five shillings.
Six Months—12s. 6d.

TENDERS INVITED.

Victorian State Railways.

THE Agent - General for Victoria, Australia, invites Tenders for the Supply and Delivery at any of the railway piers at Williamstown, Melbourne, fully inclusive of the Australian Customs, duties, etc., of the following Rails and/or Fishplates:—

Contract 21,745.—Approximately 1,647 Tons 100-lb. Steel Rails; approximately 151 Tons Steel Fishplates for 100-lb. Rails.

Contract 21,746.—Approximately 19,718 Tons 80-lb. Steel Rails; approximately 1,760 Tons Steel Fishplates for 80-lb. Rails.

Specification, conditions of contract, and form of Tender may be obtained at the office of the Agent-General for Victoria, Melbourne Place, Strand, London, W.C.

Tenders must be delivered to the Agent-General for Victoria at Melbourne Place, Strand, London, W.C., not later than 11 a.m. on Wednesday, August 9th, 1911.

A preliminary deposit of £50 must accompany each Tender in case of Contract 21,745, and £500 in connection with Contract 21,746.

The Government of Victoria does not bind itself to accept the lowest or any Tender.

JOHN COATES AND COMPANY, LTD.,

Consulting Engineers.

Suffolk House, London, E.C.

East Indian Railway.

THE East Indian Railway Company is prepared to receive Tenders for the Supply and Delivery of Wheels and Axles for Carriages and Wagons, as per specification to be seen at the Company's Offices.

Tenders are to be sent to the undersigned, marked "Tender for Wheels and Axles," not later than Twelve o'clock noon on Wednesday, the 26th day of July instant.

The Company reserves to itself the right to divide the order, also to decline any Tender without assigning a reason, and does not bind itself to accept the lowest or any Tender.

For each specification a fee of £1 1s. is charged, which cannot under any circumstances be returned.

By order,

C. W. YOUNG,

Secretary.

Nicholas Lane, London, E.C.,
13th July, 1911.

Great Northern Railway Company (Ireland).

TO WAGON BUILDERS.

THE Directors are prepared to receive Tenders for the Supply and Delivery of Nine Twenty-Ton All Steel Hopper Ballast Wagons.

The drawing and specification may be inspected at the Chief Engineer's Office, Amiens Street Terminus, Dublin, or copies of same and a Tender form will be sent on application to the undersigned on payment of £2, which will be refunded on the return of the drawing and specification, and receipt of a bona fide Tender.

Tenders made out on the forms supplied by the Company should be delivered under sealed cover, endorsed "Tender for Ballast Wagons," to the undersigned not later than 10 a.m. on Thursday, 3rd August, 1911.

The Directors do not bind themselves to accept the lowest or any Tender.

Secretary's Office. T. MORRISON,

Amiens Street Terminus,
Dublin, 17th July, 1911.

HOME RAILWAY DIVIDENDS.

The Home Railway Market has been too much occupied with political matters and enforced liquidation to pay very much regard to the dividend declarations of the last few days. The declarations themselves, however, have been of quite an encouraging character. The City and South London led off last week with an improvement of $\frac{1}{2}$ per cent. in its dividend, the rate of distribution being raised from $1\frac{1}{4}$ to $1\frac{3}{4}$ per cent., whilst the extra profit earned admitted of even a better rate. On Monday the Metropolitan dividend was declared at the rate of 2 per cent. per annum against $1\frac{1}{4}$ per cent. a year ago. In this instance the balance carried forward is reduced by about £2,000, and a similar sum has been carried to the electrical renewal fund. It may be observed, however, that the extra profit being divided among the ordinary shareholders is about £22,000, or considerably more than the total gain in the gross receipts, which amounted to £12,000 for last half-year. The Great Eastern and the Brighton dividends were announced on Wednesday, and in each case there was an advance in the distribution of $\frac{1}{2}$ per cent. per annum. The Great Eastern dividend will be at the rate of $2\frac{1}{4}$ per cent. per annum, as against $1\frac{3}{4}$ per cent. a year ago. The rate of payment for the past half-year will, in fact, be the highest for the June half of any year since 1899. The higher dividend implies that about £38,000 additional is being paid to the ordinary shareholders out of an addition to the gross receipts of £62,500, as published. The Brighton Company's Ordinary dividend is raised from 3 to $3\frac{1}{2}$ per cent. per annum, with an addition of about £3,000 to the balance carried forward. In this instance considerably more than half the gain in gross receipts is being distributed in higher dividends. On Thursday the Tilbury dividend was announced at the same rate as a year ago, namely, 4 per cent. per annum, but in this case it is probable that the Company deliberately refrained from paying a higher dividend because of its understanding with the Midland Company not to pay more than 6 per cent. for the year in view of the arrangement come to for the absorption of the smaller company. On the same day the South Eastern and Chatham dividends were announced. The South Eastern is paying $1\frac{1}{2}$ per cent. per annum on its ordinary stock, as against 1 per cent. a year ago, and the balance forward is increased by about £1,000. This dividend is the highest rate distributed by the South Eastern Company for the June period of any year since 1899. One peculiarity of the South Eastern Company's dividends is the extreme variation between the June and the December half-years, and it may be recalled that last year, whilst one per cent. only was distributed on the Ordinary stock for the first half-year, 6 per cent. was paid for the second half-year. The Chatham Company has been able to announce the payment of the full $4\frac{1}{2}$ per cent. on its Arbitration Preference Stock for the past six months. This will raise the dividend on that security to the full $4\frac{1}{2}$ per cent. for the financial year of the Company ending on June 30 last. A year ago the distribution for the June half-year was at the rate of only 3 per cent. per annum. This improvement of $1\frac{1}{2}$ per cent. is highly satisfactory. Indeed it is the first

time since the year ended June 30, 1900, that the Chatham Company has been able to pay the full dividend on this stock. The accounts of the South Eastern and Chatham Managing Committee also indicate that the whole of the increase in expenses last half-year, amounting to £31,700, is accounted for by special outlays on carriages and wagons and on harbour, canal, etc., expenses—practically in the nature of reserves. The Great Central dividend announced yesterday was quite satisfactory, being at the full rate of 4 per cent. per annum upon the 1889 Preference, with a balance forward of about £35,000. No distribution is being made upon the 1891 Preference, although, as a matter of fact, nearly the full dividend has been earned. A year ago the 1881 Preference stock received its full dividend, and £16,000 was carried forward, but the 1889 stock received nothing.

SUCCESSFUL RATING APPEALS.

As consistent advocates of a forward policy in the matter of revision of railway rating assessments we congratulate the Great Western and Metropolitan Railways on the success that has attended their appeals against the assessments of the joint line—the Hammersmith and City Railway—in the parishes of Kensington and Hammersmith. It appears that of a total length of 3 miles, 65 chains of the line is situated in the Borough of Kensington and 2 miles 3 chains in the Borough of Hammersmith. In connection with this year's quinquennial valuation of Metropolitan properties the overseers sought to secure a total rateable value in respect of the line and stations amounting to £17,205. There was no dispute between the parties in regard to the stations—the indirectly productive portion of the undertaking—but appeals were entered in respect of the line, which had been assessed at £1,950 in Kensington and £4,890 in Hammersmith, a total of £6,840. These appeals came on for hearing on the 5th, 6th and 14th instant, before Mr. R. Wallace, K.C., Chairman of the London Quarter Sessions, and resulted in judgment for the railway companies, the rateable values being reduced to £60 and £100 respectively, or a total reduction of assessment of no less than £6,680. The line in question was constructed by an independent company, and was transferred to the present joint owners by an agreement of 1867, under which interest was guaranteed to the extent of about £18,000 per annum. The traffic is almost exclusively confined to passengers, and, as the name denotes, this is largely in respect of the connection with the City by way of Westbourne Park and Bishop's Road, where the Metropolitan Railway is joined. In its early years the line enjoyed the position of being the only communication by railway between Hammersmith and the City; but recent developments have resulted in the provision of competing routes by the Central London, and Great Northern, Piccadilly and Brompton Railways, not to mention the effective competition of motor 'bus services. The effect was brought out in the proceedings at Quarter Sessions, when it was shown that the net receipts of the Hammersmith and City line in 1899, the year before the advent of the Central London, were £33,844, while in 1909 they had fallen to £6,167, this being due to diminished gross receipts concurrently with increased expenditure due to the electrification of the line in 1906. The result so far as rateable value was concerned was that, on the usual method of valuation, instead of there being a balance for assessment there was actually a loss. The companies held that, by the House of Lords' decision in the case of Great Central Railway *v.* Banbury Union, nominal sums only should be entered in the valuation lists in respect of the line of railway. The rating authorities, however, pleaded for competitive and contributory value in respect of the parent companies' systems. But the Chairman of Quarter Sessions decided that there was no "competitive" value, and that, while there was "contributory," such value

could not be taken into account in arriving at the assessment of the Hammersmith and City Railway. This decision is probably the most important that has been secured in connection with the rating of railways in the Metropolis, and demonstrates the wisdom of the railway companies taking every opportunity of contesting assessments. We understand that the Great Western Railway has given notice of appeal in respect of its property in the Borough of Paddington, and we trust that the result may be as satisfactory as in the case with which we have been dealing. Railway companies have for more than sixty years laboured under an injustice in the matter of assessment for local taxation. Successive Governments have promised to tackle the question, but, notwithstanding the recommendations of the Royal Commission on Local Taxation, no definite steps have been taken, and it is for the companies to secure all possible relief through the channels open to them—viz., the Law Courts.

Weekly Traffic Summary.

The traffic receipts for the week ended July 16, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,433,326, which was earned on 21,513 miles, being at the rate of £113 2s. 2d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,395,843, with 21,465 miles open, or £111 12s. 4d. per mile. There was thus an increase of £37,483 in the receipts, an increase of 48 in the mileage, and an increase of £1 9s. 10d. in the receipts per mile. Thirty-six of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £45,805 (or £2 1s. 1d. per mile) in the passenger receipts, and a decrease of £2,969 (or 5s. 3d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-six railways for two weeks in the passenger receipts has been £87,199, while the aggregate decrease in the goods traffic was £19,312. The aggregate receipts of the fifty-two railways for two weeks (July 2 to July 16) amounted to £4,767,054, in comparison with £4,711,327 in the corresponding period of last year—an increase of £55,727.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, July 19, compared with that for the previous week, shows the following changes:—

* FLUCTUATIONS IN THE BANK RATE, 1905 TO 1911.

The return of the Bank of England this week gives evidence of the contraction of the internal coin circulation by £140,000, but at the same time the active note circulation expanded by a small amount—£41,000—so that, with the arrival of £110,000 from abroad, the addition to the Reserve amounted to £210,000. Other items do not indicate very large movements of money. Public Deposits are only £53,000 up, but a decrease of £1,007,000 in Other Deposits, accompanied by a like change in Other Securities, was taken to be the reflection of certain operations connected with the arrangement of the affairs of the Birkbeck Bank. There was no alteration in Government Securities. As the result of all changes, the ratio of Reserve to the liabilities of the Bank rose a little more than one point. The tendency of the money market has been towards rather more demand for short accommodation, while discounts have appreciably hardened as the result of uncertainty in respect of what the future contains. The events of the week have given small satisfaction to anyone. The troubles in Morocco and Albania remained sufficiently in evidence to cause hesitation in Continental activity, while menace of labour difficulties, and a certain amount of uneasiness of feeling with regard to constitutional changes in this country, have discouraged enterprise in Home securities. Canadian stocks, which are free of all such influences, have been comparatively active and buoyant. Holders of Home rails have in various ways exhibited disappointment at the little appreciation evinced by the public of the growing earning capacity of British railways, and certainly the halting way in which the price of these stocks responds to the improvement in traffic receipts and dividends argues the presence of exceptional forces at work—forces that were not present during a period covered by the experience of the present generation, an experience upon which the considered judgment of those now concerned is necessarily based. Some of these forces have from time to time been pointed out in these columns, and attention has been directed to many aspects

in which the fundamental conditions underlying the market may be seen to have altered, but the weight to be attached to these several forces must remain a matter for the exercise of individual opinion. The greatest factor is, no doubt, the larger return that is now demanded and obtained for the use of loanable capital, a force which is sufficiently indicated by the low figures at which the index numbers for the debentures of English railways still remain. Most of the other forces have their origin from the altered political influences by which the legislation and administration of the country is directed. Just at present it is the fear of further labour complications which is most generally adduced as the reason why the attractions offered by Home rails are so little appreciated. The allying cause is probably deeper still. When the Life Saving Bill was promulgated, and at the time the Finance Bill, by which its provisions were outdone, was before the public, we ventured to point out that the holders of British railway securities would not escape the consequences of these arbitrary enactments or the spirit which informed them. It seems a far cry from Breweries to Railways, but a short examination of past records will show that the years which witnessed the largest additions to the capital embarked in railways were the years during which brewery stocks were most in vogue, and a comparison of share lists easily verifies the fact that a great number of the investors who have been so severely punished by the so-called temperance legislation of the present Government are still holders of the ordinary stocks of our railways. A great deal of the realisation which now retards the advance of the latter may therefore probably be ascribed to the very excusable apprehensions which possess the minds of such holders. It can only be hoped that time will prove them to be unjustified.

Last Saturday the chief feature of the market was the favour accorded to Grand Trunks. Numerous buying orders, for a Saturday afternoon, came to hand, and were duly executed at rising prices for all the stocks. Reports as to the condition of Canadian crops were most favourable, the weather so far having proved ideal. Canadian Pacific stock was also bought, but the price remained unaltered. In Home rails some declines occurred among the passenger stocks, but the heavies tended upward. On Monday, in spite of the excellent dividend announced for the Metropolitan line—2 per cent., against 1½ last year—the market in Home rails became irregular. Metropolitan Consols, after advancing to 50, fell to 48½, and closed at the lower figure. Canadas rose to 250 on rumours of a new issue of stock at 175. Trunks again advanced, but Mexicans were dull on reports of further disturbances in that Republic. The next day, while Mexicans fell again, and for the same reasons, Canadas were higher again, reaching 252. A vote of the Northumberland miners against the three-shift system led to lugubrious vaticinations of all kinds, and caused a relapse in Home rails. It will be remembered that the system resented by the men is the direct consequence of the recent legislation interfering with the liberty of employer and employee. Consols also declined with other Government stocks. On Wednesday the decline in British Government stocks continued, being assisted by some hardening in the rates for money and for discount. Home rails sagged under the influence of labour unrest, but finished above the worst. Mexican stocks were out of favour and declined further. Americans rose on good reports as to change of weather in the States, but Canadas occupied more attention than any other stock. A large business was done and a still higher record of price attained. Trunks, on the other hand, were rather lower through profit-taking. There was much dullness, not to say depression, in Foreign securities and international stocks at first, but a revival subsequently ensued on a better understanding of the condition of affairs in Morocco. The Brighton and Great Eastern dividend announcements, though fully answering to the expectations that had been formed of them in the market, did

nothing to relieve the apathy in Home rails. Indeed, the publication of the news seemed rather to precipitate selling, but, as has been stated, closing prices were above the worst. On Thursday, except for a few shares in the nitrate market, nearly every description of stock was depressed, and the fall in prices was general. The dividend statements were again well up to expectations, but the stocks did not benefit. Both Brighton Deferred and South Eastern Deferred fell, the former $1\frac{1}{4}$, the latter $2\frac{1}{2}$, in spite of the distribution being half as much again as last year. Great Northern Deferred also fell a point, and so did the Lancashire and Yorkshire stock. The American market was even more lugubrious, and, in spite of a large business done in Canadian Railways, both Canadian Pacifics and Grand Trunks suffered a decline. Among foreign rails there were also falls in value. Buenos Ayres Pacific were offered, and Mexicans closed at lower prices. Mining shares, oil shares and rubber shares were equally affected by the depression. Yesterday's movements were similar to those of Thursday. Consols fell. Home Rails were weak, and, despite additional dividend declarations, all of them equal to the best expectations, the whole of the active list with very few exceptions showed further declines at the close of the day. Great Central Pref. fell $1\frac{1}{2}$, Great Western, and Hull and Barnsley $\frac{1}{2}$, and many others $\frac{1}{4}$. Among the exceptions were Brighton Deferred, which rose $\frac{1}{4}$, and South Eastern Deferred, which was $\frac{3}{4}$ higher. Canadian Pacifics were a good market, and United States railways rallied somewhat. On the whole, however, markets although a trifle firmer in the afternoon were dull, and neither investors nor speculators showed much disposition to engage in fresh transactions.

The principal movements on the week are as follow:—

Name of Stock.	Rise.	Fall.	Name of Stock.	Rise.	Fall.

BRITISH AND IRISH RAILWAY DIVIDENDS.

The following table shows the dividends on the ordinary stock (unless otherwise stated) announced so far by the leading English and Irish companies for the half-year ending June 30. In the case of the Scottish companies the dividends are for the half-year ended July 31. For purposes of comparison the dividends for the corresponding half of the previous year are appended:—

Name of Company.	First Half, 1910.			First Half, 1911.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

The Eight Hours Day Agitation.—Mr. W. Hudson's Eight Hours Bill for railwaymen has been adopted by the Executive of the Amalgamated Society of Railway Servants. The Bill provides for the establishment of an eight hours working day for only certain grades. Although the Executive believe in an eight hours day for all workmen, they have decided to adopt Mr. Hudson's draft Bill as an instalment of a general Eight Hours Bill.

COSTA RICA RAILWAY.

The twenty-seventh ordinary general meeting of the proprietors was held on Monday, July 17, at Winchester House, Old Broad Street, E.C., the Rt. Hon. Lord St. Davids, chairman of the company, presiding.

The SECRETARY (Mr. A. J. Shepherd) read the notice convening the meeting and the auditors' certificate.

The CHAIRMAN then said: "Gentlemen, our will, I imagine, take the report and accounts as read. (Hear, hear.) You will have been pleased to see the statement in the report that our agent in Costa Rica tells us that the property has been well maintained, and that the Americans who are working it have been spending considerable sums on improvements. You will also, I am sure, be glad to hear from me that our relations with our American friends continue to be quite satisfactory. (Hear, hear.) Now, with reference to the accounts, we have this year an increase of £4,500 in the amount received for rent, and interest on investments and deposits at £5,220, showing an increase of £730. The gross income, therefore, is greater by £5,200. From our gross income we have to deduct £10,300 interest on prior mortgage debentures, which is £300 less than last year. On the other hand, we have redeemed £6,400 prior mortgage debentures, or £400 more, and our interest payments on the first and second debentures are the same. Last year we had an item of £1,000 which we gave as a donation to the earthquake fund; this year we have no extraordinary expenses, and consequently our deductions from gross income, namely, £102,600, are £900 less than last year, and the available balance is £47,200, or £6,100 more than last year. This enables us to pay a dividend of $1\frac{1}{4}$ per cent., or $\frac{1}{4}$ per cent. more, and to place to reserve £15,700, or £1,600 more than last year. If we turn to the balance-sheet we find that the reserve fund there stands at £100,000, which will be increased to £115,800 by the addition to be made to it from the past year's working. On investment suspense account, to which account we carry profits or losses on sales of investments, there is a credit of £2,240, or £835 more than in the previous year. The only other item which calls for special attention is on the other side, and is "the investments at net cost £103,988," which is £26,757 greater than the sum appearing in the previous balance-sheet. Then, with regard to our investments, we divide them under three heads. First, there are the old contract investments, which were made by the previous board, and with which we, the present directors, had nothing to do. They cost £8,135, and their value was £5,093, showing a depreciation of £3,042 on July 15. I may say that July 15, or last Saturday, was the day on which we valued the whole of the securities. Then the second category is trustee stocks, costing £90,322 and valued at £88,762. These trustee stocks are investments made by ourselves. They show a depreciation of £1,560, but, on the other hand, on the trustee stocks we have realised from time to time profits on sales amounting to £1,673—£1,673 realised profits against a depreciation of £1,560; so that you see on our trustee stocks we have had no loss at all, which I think you will agree with me is on trustee stocks a very unusual state of things. (Hear, hear.) Lastly, we have our general investments. Well, general investments we have only gone into within the last thirteen or fourteen months. They have cost us £65,531, and they are valued at £66,928. On these latter investments, therefore, there is an appreciation of £1,397. (Applause.) But we had on these general investments profits on sales in addition of £507—applause—and when you consider that on these general investments we have been getting a considerably higher rate of interest than on the trustee stocks, I think you will agree with me that up to date they have been of a satisfactory nature. (Hear, hear.) That is all, gentlemen, I need put before you to-day, and I have much pleasure in moving:—That the report of the directors and the statement of accounts to June 30, 1911, be and they are hereby received, approved and adopted, and that a dividend of $1\frac{1}{4}$ per cent., less income-tax, be paid on the capital stock of the company, and that the balance of net revenue—viz., £15,750, be transferred to the reserve fund." (Applause.)

Mr. H. ALLEN (vice-chairman) seconded the resolution, which was carried unanimously without discussion.

Mr. ALLEN said he had great pleasure in proposing: "That the retiring director, the Rt. Hon. Lord St. Davids, be and is hereby re-elected a director of the company." There was no need, he remarked, for him to enlarge upon the yeoman services to the company which Lord St. Davids had rendered, as they were as well known to the shareholders as to his colleagues on the board.

Mr. F. WITTING seconded the resolution, which was unanimously agreed to.

On the motion of Mr. W. RAWLINGS, seconded by Mr. BARNES, the auditors, Messrs. Herman Lescher, Stephens and Company, were re-appointed at a fee of 50 guineas.

Mr. C. D. BUCKLER proposed a vote of thanks to the chairman for his able and courteous conduct in presiding, and to the directors generally for their able administration of the company's affairs. He remarked that since the present directors came into office ten years ago there had been a cessation of the constant bickerings which characterised the administration of the previous board of directors. Under the present chairman the directors were working amicably with the people on the other side, the business was going on peaceably, and the securities had been largely enhanced in value. He felt also bound to congratulate the board on the rapidity with which they had published the report and accounts and had called the meeting of shareholders. Only seventeen days had elapsed since the close of the past financial year, and such celerity was not only marvellous, but almost unique.

Mr. OLIFF seconded the resolution, which was carried unanimously.

The CHAIRMAN briefly acknowledged the vote, and the proceedings then terminated.

BEIRA RAILWAY COMPANY.

IMPORTANT PROPOSALS.

The British South Africa Company have convened a meeting, to be held on August 3, of the holders of certificates of the Beira Railway Company, issued by the British South Africa Company, for the purpose of considering a resolution providing:—"That Clause 10 of the deed poll of April 19, 1892, under the common seal of the British South Africa Company, be rescinded, and replaced by the following clause:—

"10. The appropriated shares shall become distributable in either of the events following, that is to say: If an order shall be made or an effective resolution shall be passed for the winding-up of the Beira Railway Company or on arrival of the first day of July, 1912, before the commencement of the winding-up of the company whichever shall be the earlier."

In an explanatory circular, asking support for the resolution, the British South Africa Company make the following statement, which sets out all the circumstances:—

(1) The Beira Railway Company, Limited, was promoted in September, 1892, by the British South Africa Company, for the purpose of connecting Rhodesia with the sea at Beira by a railway over which it would have exclusive control. This railway lies wholly within the Portuguese Province of Mozambique and was constructed under a concession granted by the Mozambique Company to Mr. H. T. Van Laun. The whole of it has been built by the Beira Railway Company, with the exception of a short stretch of 35 miles between Beira and Fontesville, which has been constructed by the Beira Junction Railway Company, Limited, under an agreement with the Beira Company. The Beira Junction Company is controlled by the British South Africa Company.

(2) The Beira Railway Company has no share capital in the ordinary sense of the word. A cash valuation of the undertaking has not been made, but the proprietary interest in the concern has been divided into 600,000 parts, for convenience called shares, which are dealt in on the stock exchange at fluctuating prices. The funds of the company out of which the railway was built were wholly raised by issues of mortgage debentures, now represented by the £1,100,000 £4½ per cent. first mortgage debentures and £613,125 £6 income debenture stock of the Beira Railway Company.

(3) The British South Africa Company, in order to facilitate the building of the railway, and as part of the original arrangement under which funds were provided for the Beira Company, relinquished the beneficial interest in the Van Laun concession which it had previously acquired from Mr. Van Laun, but retained the control of the company, and consequently of the railway, by arrangements which preserved to it the voting power in respect of a clear majority of the share capital. The debenture-holders received in consideration of their subscriptions 250,000 shares, and in reference to these shares and to certain other shares in the hands of third parties the prospectus issued by the Beira Company in connection with the first issue of debentures states as follows:—

"10. Subscribers to the present issue will, in addition to their debentures, be given by the British South Africa Company an interest in the company to the extent of 20 shares for each £20 debentures subscribed. The shares, however, thus provided for the debentures subscribers will, with certain other shares constituting in all a majority (viz., 305,000 shares), be vested

in the British South Africa Company in trust for the debenture-holders and others, and certificates will be issued by the British South Africa Company whereby these shareholders will be entitled to the profits in respect of their interest in the railway company. The object of putting the shares in trust is to secure control in the voting power of the company. The minority (viz., 295,000 shares) belong to the Mozambique Company and other interests outside the British South Africa Company."

(4) This arrangement was effected by the execution by the British South Africa Company of the deed poll dated April 19, 1892, mentioned in the proposed resolution. Pursuant to this deed 305,000 shares in the Beira Railway Company are held by the British South Africa Company against certificates issued by it to represent the shares. Each certificate specifies the shares in respect of which it was issued and the distinguishing number of such shares.

(5) The deed declares that the beneficial title in the shares is represented by the certificates; that the British South Africa Company holds the 305,000 shares upon trust; that it may vote in respect of them as it thinks fit; and generally that it may take such steps and proceedings as it may from time to time think expedient with a view to protecting the rights of the persons interested in the shares.

(6) The deed provides also for meetings of certificate-holders, at which each certificate gives the right to as many votes as it represents shares. A meeting of the certificate-holders may by extraordinary resolution, with the approval of the British South Africa Company, sanction any modification of the rights of the certificate-holders, whether arising under the certificates or under the deed poll or otherwise, and assent to any modification of the provisions of the deed poll, which may be recommended by the British South Africa Company. An extraordinary resolution requires a majority consisting of not less than three-fourths of the persons voting. The above resolution is proposed under these provisions.

(7) The trust ends and the shares become distributable among the holders of the certificates at the expiration of twenty years from July 1, 1892, namely, on June 30, 1912.

(8) The railway from Beira to Rhodesia as originally built was of 24-inch gauge, which proved unsuitable to the country and the traffic, and it became necessary to widen it to 42 in.—the standard gauge of South Africa. The funds for this purpose were furnished by the Mashonaland Railway Company, Limited, a company controlled by the British South Africa Company, with which the Beira line connects at the Rhodesian frontier. As consideration the Beira and Beira Junction Railway Companies agreed to pay, with the consent of their debenture-holders, a non-cumulative prior lien rent-charge of £42,500 per annum, this payment to take priority of payment of all debenture interest payable by either of the railway companies. If the railway companies, or either of them, went into liquidation this rent-charge was to be capitalised for a sum of £850,000, to be apportioned between the two railway companies.

(9) The Beira Railway Company did not for some years after the widening was completed, except for certain short intervals, pay its way. The British South Africa Company from time to time advanced it on open account money to pay debenture interest that had not been earned, but it could not continue to do this indefinitely, and the debentures fell heavily into default. There were also years when the Mashonaland Railway Company did not receive its full prior lien rent-charge, which, as it was non-cumulative, resulted in total loss of the shortfall to that company.

(10) The British South Africa Company might as creditors upon open account have put the Beira Railway Company into liquidation, which would have capitalised the prior lien rent-charge, and, having regard to the then existing conditions, caused the total loss of the interests of the shareholders, and through them of the certificate-holders. This course was not adopted. These interests were protected, and the company is now in the fortunate position that its traffics are important and rapidly increasing, and that the debenture interest in arrear is almost paid off. This change of position is due to the rapidly-increasing prosperity of Rhodesia and to the policy of the British South Africa Company of making Beira the port of Rhodesia, which has been so often stated and so steadily acted upon.

(11) The British South Africa Company is prepared, and desires, to continue this policy. Whether it will be able to do so depends upon the action of the certificate-holders under the deed poll. It has been able to pursue it hitherto, because it has had the undivided control of the management of the whole railway. It would not continue it were the control

divided. If the 305,000 shares are to be distributed in 1912, and the control of the Beira Company passes out of its hands, the British South Africa Company will be obliged to abandon the idea of making Beira the principal port of Rhodesia, and will be reluctantly compelled to make arrangements for a different distribution of the traffics of the whole Rhodesian system.

(12) In that case a very decided limit would be placed upon the rate of development of the Beira Railway Company. The capital and influence of the British South Africa Company and its allied companies would no longer be at its disposal, and it would be cut off from that full participation in the development of Rhodesia which will be its portion if the certificate-holders are willing to continue in the future that confidence in the British South Africa Company which it may fairly be said has not been misplaced in the past.

BAKU RUSSIAN PETROLEUM CO. (1909) LTD.

The second ordinary general meeting of the shareholders was held on Tuesday, July 18, at River Plate House, Finsbury Circus, E.C., Mr. HERBERT ALLEN (chairman of the company) presiding.

The SECRETARY (Mr. J. W. Creasser) read the notice convening the meeting and the auditors' certificate.

The CHAIRMAN, in moving the adoption of the report and accounts, said that rarely, in the case of a complicated operation like the re-organisation of this company, had so much solid and essential work been done for so little expense. The whole operation of placing 1,400,000 shares at a time when no one wanted them—when there was no oil "boom" to help them—and of raising £350,000 was carried through from beginning to end at a cost of £9,116, or less than 1½d. per share. (Applause.) He felt sure that must be almost a record. But that was not the only respect in which he believed their experience was exceptional. It was, unfortunately, only too often the case that the first accounts of a reconstructed company displayed a remarkable dearth of cash, and suggested a reconstruction impending rather than one accomplished. Happily, that was not the position in this case. The financial position of the company was a strong one. The best part of their working capital, apart from that needed for the discharge of liabilities, was intact. Their available resources, apart from £73,013 of unexercised capital powers, amounted to £268,223. Leaving out secured loans and advances to Russia, they had £164,630 in cash assets. But they had not raised money merely to look at it, and it might be asked what was going to be done with it. They were going to discharge the remaining liabilities of the old company and further develop the properties. By far the greater part of the liabilities had now been disposed of, and they were in a position to choose their own time for dealing with the remainder.

Up to the present the Administration's control had not been detrimental to the undertaking; rather the reverse in many respects. The business had apparently been managed economically, and the work of development was not neglected. Mr. Barnett and he had visited the properties last autumn, and had gone very thoroughly into the general position of the undertaking, and, on the whole, they were satisfied with what the Administration was doing. He (the chairman) contemplated going out to Baku again this year. (Applause.) In 1909 the Administration had made a profit of Rs.403,933 on a very low production, but in that year the selling price of crude—21½ kopecs per pood—had given them a fair margin beyond expenses. Last year, however, they had encountered the worst time that Baku had known for many years. The average price realised for the company's oil was only 16½ to 17 kopecs per pood, and even that was fully one kopec above the average market price. The final result was a profit on the year of only Rs.136,122. Happily, however, there had been a great change for the better during the current year, and crude oil was now selling at the fairly remunerative figure of 22½ kopecs per pood, which should leave a profit margin of 7 or 8 kopecs per pood. If the board were successful in their efforts to secure from the Government a further reduction of the Bibi Eibat royalties, that would be an additional gain.

In the correspondence which came into the company's office they had many inquiries as to the new oilfields and so-called oilfields which were mentioned from time to time in the newspapers, and as to their possible effects on the Baku oil industry. Speaking in general terms, there were no new developments in prospect which were likely to materially affect Baku, at all events to its detriment. One of the most interesting was that of Tchelenken, about two hundred miles from Baku, on the

opposite shore to the Caspian Sea. With regard to Maikop, it could never compete with Baku, any more than Baku could compete with Maikop. Of the comparatively new oilfields outside Russia, by far the most important and most promising, from the English standpoint, seemed to be those of Rumania. Although his knowledge of Rumania was very limited by comparison with that possessed by Mr. Rutherford and Mr. Barnett, he had seen sufficient of that country to satisfy himself that it was an ideal one for the pursuit of the oil industry. Rumania had an excellent climate, a good supply of reliable labour, unusual facilities of transport to the sea coast, and was within easy access of headquarters in London. All these were important considerations, and he wished they all applied to Baku—especially its accessibility from London. Rumania, even more than Maikop, was far removed from the sphere of competition with Baku. Baku's position was unique; it neither competed with nor was it subjected to the competition of any other existing field with the exception of Grosny. Grosny and Baku had always been competitors, and always would be to a limited extent. No other industry seemed to give tangible results so slowly as oil production, and unfortunately in none other did they appear to be expected so quickly. People would not realise the need there was for patience in this particular industry. In their case the capital expended so far was principally that which was raised to free the concern of its liabilities; the money which was intended for boring work and the winning of oil was for the greater part still in hand. There was a certain class of shareholder who always had his eye on the market, and to whom the policy of "slow and sure" did not appeal, but the policy pursued by this board, whatever the ultimate results, was the only one that could possibly lead to permanent success, however trying it might be to their patience. The company was formed with certain well-defined objects, and every one of those objects appeared at the present time to be in a fair way of attainment. (Applause.) Last year the company's properties gave a total production of 6½ million poods, and a net production, after allowing for royalties and fuel, of 5½ millions. A production like that was of little value to a company of this magnitude. During the present year the manager anticipated getting the production up to about 230,000 poods per week, or, say, 12 million poods a year. After deducting royalties and fuel that should give them about nine million poods net. Assuming that they had no further improvement on the present selling price of 22½ kopecs per pood, and taking the cost of production at 14½ kopecs, they should have a margin of 8 kopecs, which, on 9,000,000 poods, would equal Rs.720,000, or, roundly, £75,000 profit. Beyond this an entirely new and more extensive drilling programme was about to be embarked upon, and should be finished towards the end of next year. That was what they were looking to to realise the anticipations upon which the old company was reconstructed—an eventual net production of 12½ million poods a year, which, with oil at reasonable prices, should give them a satisfactory dividend. (Applause.) When the shareholders in this company saw crude oil at 15½ kopecs, which was the average market price in 1910, they might know they were in for a very bad time. But at 22½ kopecs oil production should be a remunerative industry; it then became only a question of quantity produced. What this company wanted was a lower production on the whole field, a bigger production on their own properties, and higher prices. Present indications pointed to better prices, and so far as this company was concerned, to a better production, but it was obvious that the concern could not expect to reap the benefits of the reorganisation until the money it provided had been called up and applied to reproductive work. So far they had been principally engaged in straightening out the financial position of the undertaking. The best work was yet to be done, and the board hoped to make a speedy start on it. At the next annual meeting, which would probably be the last over which he should have the pleasure of presiding, he hoped the company would be well advanced on the road to success. (Applause.)

Mr. W. WATSON RUTHERFORD, M.P. (deputy-chairman), seconded the resolution. He remarked that some of the shareholders would doubtless remember that on previous occasions he had criticised the position of the old company from the body of the hall, but when the scheme of reconstruction was carried through he, having been to some extent responsible for it as a member of the committee, felt that it would be absurd and impossible to continue in opposition. The chairman had dealt with the whole position and details very fully, therefore he would only make a few supplementary remarks. He was one of those silly persons to whom the chairman had referred as having paid a premium for their shares when they could previously have obtained them at par, but he had not sold any

of them because he had confidence in the future of the undertaking. He felt bound to say that the shareholders were greatly indebted to the chairman for the patience and ability he had shown in his negotiations with the creditors of the old company in Russia. (Hear, hear.) The directors were at work in getting rid of the liabilities of the old concern, and in getting possession of the property and making a good undertaking of it. Some of them would probably have rushed in like a bull at a gate and paid the Russian creditors whatever they demanded, but Mr. Allen had patiently waited and proposed reasonable and excellent terms, and he believed the result would be more favourable than was originally suggested. When the board obtained possession of the property he believed the company would possess one of the most valuable petroleum undertakings of its size to be found anywhere. Boring was now taking place, and excellent results were looked for. They had a unanimous board, who worked together in the best interests of the undertaking, and if they were allowed to remain in office he believed that in good time they would be able to lay before the shareholders very satisfactory results. (Applause.)

In reply to questions by shareholders,

The CHAIRMAN said that any profits made by the Administration were presumably applied in reduction of the old company's liabilities in Russia. They had obligations to deal with quite apart from those which were being dealt with by the London board. With regard to the question of official recognition, the board, at the end of last week, had cabled out to their legal agent in St. Petersburg, asking him to let them know what his views on the subject were, and his reply was that the statements which had appeared in the press with regard to the recognition of the Maikop properties were rather premature, and that he thought this company would get their certificate of recognition in six or eight weeks' time. As to oil production, the present low figures were rather disappointing, because the manager anticipated that in May or June they would have a better production than 100,000 poods per week. No explanations had been given of the cause of the delay in boring operations, but what the manager anticipated in June he now anticipated later in the year, and summing up the whole position, his opinion was that before the end of the year the production would be about 230,000 poods per week.

The resolution was then put, and carried unanimously.

On the motion of the CHAIRMAN, seconded by Mr. R. BARBER, the retiring directors, Mr. W. W. Rutherford, M.P., and Mr. R. Barnett, were unanimously re-elected; and on the proposition of Mr. CAMPBELL, seconded by Mr. HIBBERT, the auditors, Messrs. Turquand, Young and Co., were re-appointed.

A hearty vote of thanks to the chairman and directors for their past services terminated the proceedings.

METROPOLITAN RAILWAY.

The directors' report for the half-year was issued on Thursday. The directors state that the passenger traffic of the railway maintains a steady development, notwithstanding keen competition. During the half-year further improvements have been made in the train services on the various sections of the line, and more non-stop trains have been introduced during the busy hours of the morning and evening. The result has been a considerable increase in the issue of season tickets. The parcels and goods traffic continues to show a satisfactory expansion. The Bill promoted by the company in the present session of Parliament is expected to receive the Royal Assent at an early date. The directors propose to avail themselves without delay of the provisions of this Bill empowering the issue of stock certificates to bearer where such certificates are desired by stockholders. Clauses for the protection of this company have been inserted in Bills promoted by the London Electric and Central London Railway Companies. The London County Council included in their Bill of this session a scheme for constructing a tramway from Cricklewood to the Marble Arch, which was opposed by this company, and ultimately struck out of the Bill. The installation of automatic signalling between Willesden Green and Neasden has now been completed. The replacement of the existing electrical plant at Neasden by machines of larger capacity and improved economy is proceeding satisfactorily. The work of widening the tunnel and approach to Baker Street (East) Station from the north is being rapidly pushed forward. Additional contracts for carrying out further portions of the scheme for the improvement of Baker Street Station have been let, and the works are proceeding. Arrangements for the electrification of the East London Railway are engaging the special attention of the lessee companies, and the work is expected to be put in hand shortly. Its completion will permit of this company's train service over that railway to New Cross being resumed. The directors record with deep

regret the death, on May 18 last, of their esteemed colleague, Sir William Birt, and desire to place on record their high appreciation of his valuable services to the company since his election to the board in 1902. The vacancy on the board has been filled by the election of the Hon. Francis McLaren, M.P.

Our usual analysis of the accounts for the half-year ended June 30 follows:—

CAPITAL.	
Total expenditure	£15,263,058
Total receipts (allocated as follows):—	15,107,626
Ordinary stock	£5,732,062
Preference stocks	6,017,335
Debenture stock	4,850,273
Terminable debenture stock	50,000
Less nominal additions to capital, discounts, etc.	1,542,044

Balance at debit of capital account £155,432
The estimate of expenditure for the current half-year is £63,000; and in future half-years, £160,000—together, £223,000. The capital powers and other available assets amount to £865,940.

REVENUE.

The revenue account for the half-year ending June 30 shows the following results:—

	1911.	1910.
Coaching receipts	£327,717	£320,844
Goods, minerals, etc.	34,710	32,575
Miscellaneous	38,309	38,069
Total receipts	£400,736	£391,488
Total expenses	†195,667	*194,020
Net receipts	£205,069	£197,468

* £208,663, less £12,996 for working trains of other companies.
† £212,511, less £18,491 for working trains of other companies.

The net revenue and the manner of its appropriation are shown hereunder:—

Balance from last half-year	£9,499	£5,927
Net earnings as above	205,069	197,468
Sundry credits	—	541
Dividends on shares in other companies	1,517	1,517
City Lines and Extensions	15,855	15,192
Rent of leased lines	32,000	32,000
Proportion of net revenue of Metropolitan and Great Central joint line	6,980	4,638
Total	£270,920	£257,283
Prior charges	£99,192	£100,903
Electrical renewal and depreciation fund	5,000	10,000
Preference dividends	105,303	104,511
Dividend on ordinary stock	*57,321	†35,825
Balance to next half-year	4,104	6,044

Total £270,920 .. £257,283
* At the rate of 2 per cent. per annum. † At the rate of 1½ per annum.

The report of the Surplus Lands Committee states that the rental accrued during the half-year amounted to £40,976, and the outgoings to £3,179, leaving, with the balance brought from last half-year, £39,845 available for dividend. This will admit of a dividend at the rate of £3 per cent. per annum upon the surplus lands stock, carrying forward a balance of £232.

The total receipts show an increase for the past half-year of £9,248, the expenditure an increase of £1,647, and the net earnings an increase of £7,601. The ratio of expenses to receipts is 48.82 per cent. (as against 49.56 per cent.).

	1911.	1910.
Half-year ended June 30.		
Passengers—(total)	39,164,371	39,001,315
Mileage—Lines owned	69½	69½
„ Lines partly owned	1½	1½
„ Lines wholly or jointly leased or rented	6½	6½
„ Foreign lines worked over	4½	4½
Total lines operated	82	82
Train mileage—Passenger (steam)	195,268	186,495
„ Elec. pass. trains	1,759,409	1,661,955
„ Goods	114,420	110,434
Total	2,069,097	1,958,884

Wagon Makers' Strike.—Three hundred and fifty wagon makers, employed at the London and North Western Railway Works, at Earlestown, struck work yesterday. Their demands include a higher rate for piecework. The works are very busy.

LONDON, BRIGHTON AND SOUTH COAST RAILWAY.

The accounts for the half-year ended June 30, 1911, were issued on Thursday. Our usual analysis is appended.

CAPITAL.

Total expenditure	£32,713,942
Total receipts—allocated as follows:—	31,104,362
Undivided ordinary stock ..	£2,787,500
Preferred ordinary stock ..	3,705,050
Deferred ordinary stock ..	3,705,050
Preference and guaranteed stocks	11,528,175
Debenture stocks	7,175,841
Sundries	2,202,746

Balance at debit of capital account £1,549,580

The estimate of further expenditure on capital account is £178,988 during the current half-year, and £320,695 in subsequent half-years—total, £505,683. There is a debit to capital of £242,720.

The capital expenditure during the past half-year was £449,715, of which £215,320 was on lines open for traffic, £206,472 was on working stock, machinery and tools, and £27,916 was on steamboats and dredgers.

REVENUE.

The receipts for the half-year ending June 30 were as follows:—

	1911.	1910.
Passengers—First-class	£104,571	£93,755
„ Second-class	124,200	120,533
„ Third-class	610,810	584,436
„ Annual and season tickets	170,937	168,085
Parcels, horses, etc.	120,206	117,204
Mails	9,550	9,477
Merchandise (less cartage expenses)	247,110	244,501
Live stock	6,239	6,178
Minerals	196,525	102,749
Transfer fees	419	300
Rental of property—less repairs and sundries	63,583	61,059
Working steamboats (less reserves for depreciation and insurance)	Dr. 3,644	Dr. 2,034
Mileage of trains over East London Railway	2,553	2,524

Total receipts £1,602,068 .. £1,607,947

The expenditure during the same period was as follows:—

Maintenance of way, works, etc.	£153,370	£148,842
Locomotive power	316,417	303,184
Carriage and wagon repairs ..	82,640	82,001
Traffic expenses	288,074	280,333
General charges	39,931	37,796
Law charges	2,909	3,580
Parliamentary expenses	437	1,178
Compensation—Passengers	4,461	11,578
„ Goods	3,057	3,392
Injuries to company's workmen (less £3,291 recoverable under compensation policy, 1911) ..	887	3,776
Rates and taxes	105,474	103,910
Government duty	15,784	15,575
Demurrage and mileage of rolling stock	2,493	1,790
Newhaven Harbour working charges, less harbour dues, etc.	5,677	7,526
S.E.R. for use of joint lines	2,000	2,000
Tolls payable, less tolls receivable	4,888	1,104

Total expenditure £1,029,135 .. £1,008,465

The net revenue and the manner of its disposal are shown hereunder:—

Balance from previous account ..	£38,203	£36,861
Net earnings	632,933	599,482
Interest account	1,099	Dr. 5,585
Total	£672,235	£630,758
Prior charges	£175,986	£103,175
Contribution to general insurance fund	1,100	1,150
Preference dividends	288,204	288,079
Dividend on ordinary stock	48,781a	43,190b
„ preferred ordinary stock	111,152c	109,689d
Deferred ordinary stock (in reserve)	18,525	—
Balance to next half-year	28,487	25,469

Total £672,235 .. £630,758

a. At the rate of 3½ per cent. per annum. b. At the rate of 3 per cent. per annum. c. At the rate of 6 per cent. per annum. d. At the rate of 6 per cent. per annum.

The gross receipts for the past half-year show an increase of £54,121, the expenditure an increase of £20,670, and the net receipts an increase of £33,450. The ratio of expenses to receipts is 61.91 per cent., in comparison with 62.71 per cent.

TRAFFIC, &c.

	Half-year ended June 30, 1911.	1910.
Passengers

Goods	954,430	959,022
Total	6,205,048	5,910,025

The report states:—“The capital expenditure during the past half-year amounted to £449,715, the principal items being the cost of equipping the London and Crystal Palace railways for electric traction, of providing electric rolling stock, and constructing additional repair shops and sidings at Peckham Rye and Norwood Junction. The service of electric trams between Victoria and the Crystal Palace was brought into operation in the month of May and has worked satisfactorily. Expenditure has been incurred also upon the widening of the Bognor branch railway, upon the railway between Sutton and Chesham, and upon the purchase of additional rolling stock. The increase of gross revenue arises almost entirely from passenger traffic, which has advanced not only in numbers but in money, and the electrical services have contributed materially towards this result. The increase of working expenses is attributable mainly to additional expenditure on the repair and renewal of engines, the higher price and greater consumption of coal and special traffic charges consequent upon the extension of electrical working to the Crystal Palace.”

SOUTH EASTERN RAILWAY.

The accounts for the half-year ended June 30, 1911, were issued on Thursday. Our usual analysis is appended:—

CAPITAL.

Total expenditure	£33,977,792
Total receipts (allocated as follows):—	32,619,989
Undivided ordinary stock ..	£1,743,120
Preferred ordinary stock	4,153,050
Deferred ordinary stock	4,153,050
Other ordinary stock	59
Preference and guaranteed stocks	13,771,685
Debenture stocks	8,664,441
Sundries	134,581

Balance to debit of capital account £457,800

Estimated further expenditure—In the current half-year, £52,000; in subsequent half-years, £51,000; total, £103,000. Capital powers and other available assets, £1,204,290.

The capital expenditure for the past half-year amounted to £41,351—viz., £2,372 on lines open for traffic, £38,820 on S.E. & C.R. Managing Committee, and £153 on subscriptions to other railways.

REVENUE.

The revenue account for the half-year ending June 30 shows the receipts to have been as follows:—

	1911.	1910.
Proportion of balance of the Managing Committee's revenue account ..	£430,021a	£404,970b
Proportion of Eastbourne traffic ..	15,008	15,030
Rent and hotel accounts, etc. ..	91,209	92,547
Transfer fees	506	383

Total £530,804 .. £512,930

a Being 59 per cent. of £728,850. b Being 59 per cent. of £866,390.

For the same periods the expenditure on revenue account was as follows:—

Directors' remuneration	£2,000	£2,000
Auditors' remuneration	100	100
Salaries and office expenses	2,093	3,093
Law charges	167	210
Rent account—Repairs and rents payable	17,068	17,439

Total £22,235 .. £22,851

The net revenue and the manner of its disposal are shown hereunder:—

	1911.	1910.
Balance from last half-year ..	£10,861	£8,697
Net earnings	514,656	490,085
Sundry credits	88,248	87,881
Total	£613,765	£586,663
Prior charges	£250,414	£249,472
Preference dividends	266,525	266,525
Dividend on undivided ordinary stock ..	13,073a	9,146c
" preferred ordinary stock ..	62,290b	41,100d
Balance to next half-year	21,457	20,420

Total £613,765 .. £586,663

a At the rate of 1½ per cent. per annum. b At the rate of 3 per cent. per annum.
c At the rate of 1 per cent. per annum. d At the rate of 2 per cent. per annum.

The report states:—"The directors have elected Mr. Vincent Walker Hill a director of the company, subject to confirmation by the proprietors in due course. Mr. Hill has also been appointed one of this company's representatives on the managing committee in the place of Sir Alfred Meller Watkin, Bart., who has retired in his favour."

GREAT EASTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued yesterday. Our usual analysis follows:—

CAPITAL ACCOUNT.

Total expenditure	£57,759,623
Total receipts (allocated as follows):— ..	56,320,486
Ordinary stock	£15,362,886
Preference and guaranteed stocks ..	20,826,335
Debenture stock	18,143,800
Loans	53,000
Mortgages redeemed	123,600
B. debenture stock redemption account	225,270
Premiums	1,585,595
Balance to debit of capital account	£1,439,137

The capital expenditure for the past half-year amounted to £27,547, of which £19,760 was on lines open for traffic, £1,890 on line in course of construction, £5,431 on docks, steamboats, etc., £766 on conversion of stock, etc., less a credit of £300, subscriptions from Great Northern and Great Eastern Joint Lines. Estimated further expenditure:—In the current half-year, £52,000; in subsequent half-years, £878,131; total, £930,131. Capital powers and other available assets, £930,131.

REVENUE.

The revenue account for the half-year ending June 30 gives the receipts under this head as follows:—

	1911.	1910.
Passengers—First-class	£76,850	£73,528
" Second-class	29,957	30,184
" Third-class	862,512	824,183
" Season-tickets	217,086	210,959
Parcels, borses, carriages, etc. ..	179,090	171,774
Mails	15,270	15,268
Merchandise (less cartage)	880,570	842,605
Live stock	50,120	52,598
Minerals	342,140	337,765
Carriage and wagon hire	Dr. 2,630	Dr. 227
Continental steamboats	133,52	133,895
Ipswich and Harwich boats	1,822	1,616
Lowestoft Harbour dues, etc. ..	6,563	6,469
Harwich pier dues	347	261
Fossdyke Navigation Tolls	608	723
Wisbech Tramways	2,235	2,079
Rents	78,548	73,702
Transfer fees	607	548
Total receipts	£2,875,816	£2,777,930

EXPENDITURE.

The expenditure on revenue account for the same period is shown hereunder:—

	1911.	1910.
Maintenance of way, etc.	£297,185	£277,506
Locomotive power	475,255	462,065
Carriage and wagon repairs	163,062	157,940
Traffic expenses	537,449	510,314
General charges	98,955	87,190
Law charges	6,048	7,180
Parliamentary expenses	1,677	772
Compensation—Passengers	712	251
" Employees	48	61
" Goods	7,590	6,957
Rates and taxes	158,463	158,016
Government duty	6,852	6,712
Continental steamboat expenses ..	122,779	118,712
Harwich Harbour, etc.	3,894	2,413

	1911.	1910.
Ipswich and Harwich boats	3,169	3,177
Lowestoft Harbour, working and repairs	8,787	8,953
Fossdyke, etc., navigation, repairs ..	306	269

Total expenditure £1,892,231 .. £1,808,488

The net revenue for the half-year, and the proposed appropriation of the balance available for dividend may be summarised as follows:—

	1911.	1910.
Balance brought forward	£100,681	£98,720
Net receipts	983,585	969,442
Sundry credits	6,481	6,538

Total £1,090,747 .. £1,074,700

Prior charges	£503,165	£503,273
Contingent fund	—	10,000
Insurance fund, Continental steam-boats	10,000	20,000
Preference and guaranteed dividends ..	386,804	386,804
Dividend on ordinary stock	*172,832	†134,425
Balance carried forward	17,946	20,198

Total £1,090,747 .. £1,074,700

*At the rate of 2½ per cent. per ann. †At the rate of 1½ per cent. per ann.

The gross revenue for the past half-year shows an increase of £97,886, the expenditure an increase of £83,743, and the net receipts an increase of £14,143, compared with the corresponding period of last year. The ratio of expenses to receipts is 65.79 per cent., as against 65.1 per cent.

TRAFFIC, ETC.

	1911.	1910.
Half-year ending June 30.		
Passengers—First-class	755,892	715,286
" Second-class	1,134,538	1,146,227
" Third-class	45,072,472	43,654,833
Total number carried	46,962,902	45,516,346
Mileage—Lines owned	1,044½	1,044½
" Joint lines	149½	149½
" Leased or rented	6	6
" Lines worked	115½	123
Total operated	1,315½	1,323½
Train mileage*—Passenger	6,724,184	6,488,716
" Goods	4,036,866	3,941,767
Total	10,761,050	10,430,483

*Including mileage run by other companies and empty carriage trains.

The report states:—"The reduction in the suburban passenger fares to which reference was made in the report for half-year ending June 30, 1910, has continued to give satisfactory results, and reductions on other parts of the line have been made during the past half-year. Consequent upon the rapid growth of the town of Southend, particularly in the neighbourhood of the company's stations, the directors decided upon considerable alterations in the passenger train service from May 1 last. A new and improved service, including restaurant cars on certain of the trains, has been brought into operation and promises to be successful. The festivities in connection with the Coronation necessitated a considerable temporary increase in the train service, but the early morning trains were not availed of to the extent anticipated. The traffic receipts as a whole were, however, quite satisfactory. The Royal Agricultural Society's show was held this year at Norwich from June 24 to 30, and visited by His Majesty the King. The heavy railway traffic, both passenger and goods, was worked with conspicuous success. The Continental traffic receipts show a decrease of £375, and there is an increase in the working expenses of £4,067. The service to North Germany, via the Hook of Holland, has been accelerated by about two hours from May 1 last. Through carriages have been provided between the Hook of Holland and Bremen and Hamburg and to an additional number of important towns in South Germany. The service to Antwerp has been improved by an earlier arrival of the boats and consequent earlier departure of the train for Brussels, and on the inwards journey a later departure of about half-an-hour from Brussels and Antwerp has been arranged, with an arrival in London at the same time as before. The National Insurance Bill introduced into Parliament by the Government will impose considerable expense upon railway companies and other employers of labour. The directors are carefully watching the progress of the measure. The agreements with the Treasury and the promoters in relation to the Elsenham and Thaxted Light Railway have been completed. The

ceremony of cutting the first sod will take place on July 25, and the work of construction will be proceeded with at once. The directors refer, with great regret, to the death, on May 18 last, of their esteemed colleague, Sir William Birt. They desire to place on record their appreciation of the valuable services rendered by him to the company for twelve years as a director, and of his strenuous and successful work for nineteen years previously as general manager. They recommend that the vacancy on the board be not filled, and that the number of directors be reduced to eleven.

SOUTH EASTERN AND CHATHAM RAILWAY COMPANIES' MANAGING COMMITTEE.

The revenue account for the half-year ended June 30 shows the receipts to have been as follows:—

	1911.	1910.
Passengers—First-class	£214,869	£208,801
“ Second-class	221,787	218,935
“ Third-class	713,657	682,789
“ Season-tickets	209,187	206,602
Parcels, horses, carriages, etc. ..	214,688	208,177
Mails	32,468	32,464
Merchandise	346,515	335,544
Live stock	9,114	8,251
Minerals	191,569	188,309
Tolls	6,444	6,137
Canal, harbours, and pier dues ..	3,541	3,421
Steamboats	149,551	139,951

Total receipts £2,313,390 .. £2,239,471

For the same period the expenditure on revenue account was as follows:—

	1911.	1910.
Maintenance of way, works, etc. ..	£247,301	£242,730
Locomotive power	357,756	305,212
Carriage and wagon repairs	132,082	108,027
Traffic expenses	426,489	427,250
General charges	63,691	61,324
Law charges	4,075	5,965
Parliamentary expenses	1,051	495
Compensation—Passengers and men ..	5,538	8,054
“ Goods	3,840	3,254
Rates and taxes	136,042	137,584
Government duty	26,500	25,281
Tolls	5,252	5,151
Canals, harbours, etc., expenses ..	13,164	3,859
Steamboat working expenses and depreciation	93,726	91,180

Total expenditure £1,517,107 .. £1,485,336

The net revenue and the manner of its disposal are shown hereunder:—

Net earnings	£796,283	£754,135
Interest on banker's balances	2,933	2,459
Net receipts from lines partly owned ..	7,039	5,871
Total	£806,255	£762,465
To interest on value of stores and cash balances transferred to Managing Committee at December 31, 1898 ..	£5,573	£5,574
To interest on capital expenditure by S.E. and L.C. and D. Ry. Co. in respect of lines, works, rolling stock, etc., brought into use after December 31, 1898	68,616	67,675
Interest on purchase money of land	—	4
Interest on steamboat renewal fund ..	1,491	1,097
Interest on Kent and East Sussex Railway capital	1,725	1,725
To balance divisible	*728,850	†086,390
Total	£806,255	£762,465

* S.E. 59 p.c. = £430,022, L.C. and D. 41 p.c. = £298,828.
† S.E. 59 p.c. = £404,970, L.C. and D. 41 p.c. = £28,420.

The gross receipts for the past half-year show an increase of £73,919, the expenses an increase of £31,771, and the net revenue an increase of £42,148. The ratio of expenses to receipts is 65.57 per cent., as against 66.33 per cent. for the corresponding half of last year.

TRAFFIC, ETC.

	1911.	1910.
Half-year ending June 30.		
Passengers—First-class	820,414	811,063
“ Second-class	1,929,719	1,959,309
“ Third-class	25,877,477	24,694,932
Total number carried	28,627,610	27,465,304

	1911.	Total
Half-year ending June 30.		
Mileage—Lines owned	626½	626½
“ Partly owned	14½	14½
“ Leased or rented	3½	3½
“ Foreign lines worked	31	31
Total operated	675½	675½
Train mileage—Passenger	42,301	5,873,202
“ Motor	731	53,923
“ Goods	2,000	1,412,793
Total		7,339,888

The report states:—“The increase in the receipts for the half-year is satisfactory, being the largest amount ever received in the first half-year. In some of the suburban districts there are substantial increases, but there is still a decrease in the Metropolitan section. On other parts of the system, both to and from the Continent, there is a general and continuing growth of traffic. On the expenditure side of the account the carriage and wagon expenses show an increase of £24,055 owing to the amount usually allotted to engine renewals being applied again this half-year to the carriage account, and the extinction of the outstanding balance expended in anticipation of renewals. Harbour, canal and pier expenses show an increase of £9,305, the amount expended in dredging at Folkestone to provide for the reception of the Zealand Steamship Company's boats, and the better working of the committee's boat service. The committee consider it advisable to clear off this amount in the present accounts, instead of spreading it over future periods. Considerable progress has been made by the Dover Harbour Board during the last few months in providing the site for the new harbour station, and a contract for the foundations of the station has been let to Messrs. S. Pearson and Son. The Managing Committee have recently placed another turbine steamer—“Riviera”—on the service, and the vessel is already in much favour with the travelling public. A similar vessel, “Engadine,” is being constructed and nearing completion. During the half-year the Zealand Steamship Company have diverted their night services from Queenborough to Folkestone with satisfactory results. This alteration has resulted in an acceleration of the services to Germany, and it is hoped that it will also have the effect of attracting Continental visitors to Folkestone and other seaside resorts on the system. The terms of the contract with the General Post Office for the conveyance of the daily mails between England and France have been submitted to the decision of the Railway Commissioners, and under their award the Managing Committee will receive an annual payment of £30,000 for maintaining the daily mail service between Dover and Calais. The effect of this is that the Managing Committee will receive for this service an additional £7,000 per annum. Since the last meeting Mr. Vincent Walker Hill—who recently retired from the position of general manager to the Managing Committee—has joined the committee as a representative of the South Eastern Company, in the place of Sir Alfred Mellor Watkin, Bart., who retired in his favour.”

EAST LONDON RAILWAY.

The half-yearly report states that the coaching traffic for the six months ended April 30, 1911, amounts to £14,006, showing an increase, as compared with the corresponding period of 1909-10, of £1,109, and the goods traffic to £5,993, a decrease of £81. The gross receipts on revenue account for the year 1910 were £41,847 as compared with £39,724 in 1909. In order that the minimum guaranteed rent of £30,000 may be augmented, the annual gross receipts must yield £53,571. When this latter amount has been arrived at, the receipts, less 44 per cent. for working expenses, belong to the company, but this result has not been obtained since 1903. In the general goods traffic there has been a decrease of about 1,000 trucks, entirely due to smaller quantities of bricks passing to the south. The cattle traffic afforded a slight increase. With regard to coal there was a decrease of some 1,500 trucks, principally owing to traffic going by other routes. As the result of the electrification of adjoining sections of the Brighton Company's Railway, the services of trains between Liverpool-street and Croydon and of those on the Old Kent-road branch between Shoreditch and Peckham Rye were suspended on June 1. The discontinuance of these trains has been compensated by increasing the New Cross and Shoreditch services. The directors had hoped to be in a position to make a definite statement in the report as to the scheme of electrification which they have reason to believe will be adopted by the lessee companies.

Owing, however, to unavoidable delay, the lessees have been unable to arrive at a final decision on the scheme prior to the issue of the report. At the same time the directors anticipate that the chairman will be prepared to make a satisfactory statement on the subject at the half-yearly meeting.

Entre Rios Railways.—A special meeting of the Entre Rios Railways Company, Limited, was held on Wednesday, in River Plate House, Finsbury Circus, E.C., Colonel F. G. Oldham presiding, to consider resolutions for the increase of the capital of the company. The Chairman proposed three resolutions, the first of which was as follows: "That the capital of the company be increased from £4,010,449 to £5,000,000 by the creation of 61,348 additional 1st preference shares of £5 each, 265,951 additional 2nd preference shares of £1 each, and 83,372 additional ordinary shares of £5 each, ranking for dividend and in all other respects *pari passu* with the existing 1st preference stock, 2nd preference stock, and ordinary stock respectively of the company, and so that every five of such new 2nd preference shares shall confer one vote." The other two resolutions had relation to the conversion of shares into stock and the exercise of further borrowing powers. He pointed out that in the case of a company like their own it was impossible that they could ever look to the closing of the capital account. In the past six years a progressive policy had resulted in an increase of the mileage of the railway from 472 miles in 1906 to 727 in the current year, while in the same period the gross receipts had gone up from £422 to £666 per mile and the net receipts in the proportion of from £169 to £303 per mile. The directors could give the shareholders the gratifying information that they anticipated at the next general meeting of the company being able to pay the preference dividends in full, and also to make a small distribution upon the ordinary stock. As to the capital outlay, new locomotives, additional rolling stock, and the completion of the relaying with heavier rails of the principal lines where they had a fast and heavy traffic were still required, and provision had also to be made for various other facilities which the increasing traffic demanded. There was no present intention on the part of the directors to make any issue of capital beyond what might be needful for ordinary current requirements. He, however, forecasted that they would need in October next to incur some outlay upon additional locomotives and rolling stock. The resolutions were agreed to. Separate meetings of the 1st preference and 2nd preference stockholders followed, at each of which the holders approved of the proposal to increase their particular class of stock to the extent proposed.

STAMP DUTY ON NEW CAPITAL.

The Court of Appeal on Wednesday gave judgment in the case of the Attorney-General v. the Caledonian Railway Company upon the appeal of the defendants from a judgment of Mr. Justice Bray. This was an information by the Attorney-General against the Caledonian Railway Company for non-payment of £5,436 stamp duty on increased nominal share capital, under Section 113 of the Stamp Act, 1891. By the Caledonian Railway Company's private Act, 1890, a holder of the ordinary stock of the Caledonian Railway Company could require the company to convert the whole or any part of such stock into preferred converted ordinary stock and deferred converted ordinary stock and to issue to him amounts of preferred and deferred converted ordinary stock, each equal to the amount of ordinary stock so converted. By the Caledonian Railway Act, 1898, the Act of 1890 was made to apply to all the ordinary stock of the company issued under any past or future Act of Parliament. By the Caledonian Railway Act, 1899, the company was authorised to raise £906,000 additional capital by the issue at their option of new ordinary shares or stock. The railway company delivered the statement required by Section 113 of the Stamp Act, 1891, as to £906,000, but the Crown claimed that as this could, under the provisions of the company's private Acts, be converted into stock or shares of the nominal value of £1,812,000 the latter was the amount of nominal capital authorised, and that consequentially stamp duty was payable on that amount.

Mr. Justice Bray held that £1,812,000 was the increased amount of the nominal share capital authorised within the meaning of Section 113 of the Stamp Act, 1891, and that stamp duty was payable on that basis. The Caledonian Railway Company appealed from this decision.

The Court of Appeal—consisting of the Master of the Rolls, and Lords Justices Farwell and Kennedy—now held that the decision of Mr. Justice Bray was right and ought to be affirmed. The appeal was accordingly dismissed.

PARLIAMENTARY.

QUESTIONS IN THE HOUSE OF COMMONS.

From Europe to India.

On Tuesday the Earl of Ronaldshay (Hornsey—Unionist) asked the Secretary of State for Foreign Affairs, in view of the many varying schemes for railway communication from Europe and the Mediterranean to India which were now occupying the public attention, whether he would appoint a small committee of expert authorities, on somewhat the same lines as the Select Committee of the House of Commons on the Euphrates Valley Railway in 1871 and 1872, to consider and report upon the pros and cons. of the projects, with special reference to the British-Indian and Imperial interests involved at the present day.

Sir E. Grey: It would not be desirable to adopt the proposal of the noble lord. The subject involves commercial, strategical, and political considerations, and has been dealt with in consultation with the Government of India, the Committee of Defence, and the different Government Departments concerned, all of which have access to what must remain confidential information.

Export Rail Orders.

In reply to Mr. Keir Hardie (Merthyr Tydvil—Labour), Mr. Harcourt, Secretary for the Colonies, on Thursday said: Orders have recently been placed with the firm of Messrs. Guest, Keen and Nettlefold for 4,560 tons 60 lb. British standard specification Bessemer acid steel rails and angle fish-plates on behalf of the Federated Malay States Railway; a similar order for 430 tons has been placed on behalf of the Trinidad Railway, and an order has been placed on behalf of the Southern Nigeria Railway for 413 tons steel sleepers and keys. I am unable to state whether any orders have been placed with this firm on behalf of the Governments of the self-governing dominions.

PROGRESS OF RAILWAY BILLS.

Great Western Railway.

This Bill, which seeks to authorise the company to make certain new railways in Glamorganshire and Carmarthenshire and which has already passed through the House of Lords, was passed by a House of Commons Committee on July 13, with the exception of one proposal to make a short length of line in connection with a colliery tramway.

London, Tilbury and Southend Railway.

The London and Thames Haven Oil Wharves, Ltd., having withdrawn their opposition to this Bill, it is now unopposed, and as such was dealt with by the Unopposed Bills Committee of the House of Commons on Thursday.

Midland Railway.

This Bill, which has already passed through the House of Lords, and the main object of which is to construct new railways through Bradford, with the result of placing that town on the Midland Company's main line, came before a Committee of the House of Commons on Wednesday. There was practically no opposition, and the Committee passed the Bill without amendment.

FORTHCOMING DIVIDEND ANNOUNCEMENTS.

We give below the dates on which the principal railway companies may be expected to announce their dividends:—

COMPANY.	DATE.	
Lancashire and Yorkshire	Monday	July 24
London and South Western	Tuesday	" 25
Metropolitan District	Thursday	" 27

Caledonian	"	" 5
North British	Thursday	" 7

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

MID-KENT RAILWAY (BROMLEY TO ST. MARY CRAY).—At the rate of 4 per cent. per annum.

MONTREAL STREET RAILWAY.—A dividend of 2½ per cent. for the quarter ended June 30.

BROWN BAYLY'S STEEL WORKS.—An interim dividend of 10 per cent. per annum, free of income tax, for the half-year.

VALE OF GLAMORGAN RAILWAY (July 21).—At the usual rate of 4½ per cent. per annum, with £491 carried forward, as against £475 a year ago.

KING'S LYNN DOCKS AND RAILWAY announce a further dividend of 12s. 6d. per cent. on the consolidated 4 per cent. preference stock, carrying forward £47.

CLOAKHILL EXTENSION RAILWAY (July 19). At the rate of 2 per cent. per annum on the ordinary stock, placing £100 to general purposes fund, and carrying forward £101.

GREAT CENTRAL RAILWAY (July 21). Full dividend on the 4 per cent. preference stock 1889, carrying forward about £35,000. A year ago a dividend was paid on the 4 per cent. convertible preference stock 1881 and £10,600 was carried forward.

BALTIMORE AND OHIO RAILROAD.—A dividend of 2 per cent. on the preferred stock for the half-year ended June 30, also a dividend of 3 per cent. on the common stock from surplus earnings.

BRITISH COLUMBIA ELECTRIC RAILWAY.—At the rate of 5 per cent. per annum on the preferred ordinary stock for the half-year ended June 30, 1911, together with an additional dividend at the rate of 1 per cent. per annum for the same period.

LANCASHIRE AND YORKSHIRE WAGON COMPANY.—The net profit for the year ended June 30 was £10,106. A final dividend of 10s. and a bonus of 4s. per share are recommended, making 20s. per share (10 per cent.), free of income tax, for the year, and carrying forward £1,310.

CORK, Bandon and South Coast Railway (July 19).—At the rate of 3½ per cent. per annum, after providing £1,170 for locomotive and permanent way renewals, and placing £250 to reserve, carrying forward £2,402. For the first half of 1910 the dividend was at the rate of 3 per cent. per annum, £550 placed to locomotive renewals, and £250 to reserve fund, and £2,280 was carried forward.

LONDON CHATHAM AND DOVER RAILWAY (July 20).—At the rate of 2½ per cent. (i.e., £1 2s. 6d. per cent. per annum for the half-year) on the arbitration preference stock, making £4 10s. per cent. for the financial year ending June 30, carrying forward £2,577. At this date last year the arbitration preference stock received a dividend for the half-year at the rate of 1½ per cent. per annum (£3 15s. for the financial year), and £4,708 was carried forward.

DUBLIN AND SOUTH EASTERN RAILWAY (July 20).—At the rate of 1 per cent. per annum on consolidated ordinary stock and the full dividend on the consolidated preference stock will be paid, placing £3,000 to worked lines suspense account, £1,000 to general insurance reserve, and £1,000 for bridge renewals, and carrying forward about £7,128, as against £5,000 to reserve, and £6,226 forward. Since 1896 no first half-yearly dividend has been paid on the consolidated ordinary stock.

SOUTH EASTERN AND CHATHAM MANAGING COMMITTEE (July 20).—At a meeting of the South Eastern and Chatham Railway Companies' Managing Committee, held on Thursday, the accounts of the Committee for the half-year ended June 30 were submitted, showing, subject to final audit, a net revenue for the half-year of £728,850, divisible between the South Eastern and London, Chatham and Dover Railway Companies respectively in the proportions of 59 and 41 per cent. This compares with £686,390 divided as net revenue for the half-year ended June 30, 1910.

BARRY RAILWAY (July 21).—At the rate of 6 per cent. per annum. £628 is carried forward. A year ago the dividend was at the rate of 7 per cent. per annum, £10,000 was placed to reserve, and £18,807 was carried forward.

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901

2nd Half	—	4	4	3½	4	5	5	4	4½	4½	4

Annual Rate 2½ 1½ 1½ 1 1½ 1½ 1½ 1½ 1½ 1½ 1½

METROPOLITAN RAILWAY (July 17).—At the rate of 2 per cent. per annum, carrying forward £4,000. For the corresponding

half of last year the dividend was at the rate of 1½ per cent. per annum, and £6,044 was carried forward, after placing £10,000 to electrical renewal and depreciation fund. The surplus land stock will receive a distribution at the rate of 3 per cent. per annum, as compared with 2½ per cent. per annum carrying forward about £230, against £18,807, a year ago, carrying forward about £230, against £18,807. The following is a list of the dividends for some years past:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901

Annual Rate	3	3	3½	3	4	4	4	4	4	4	4

GENERAL NEWS.

A LONDON RAILWAY WITHOUT RATEABLE VALUE.

Appeals by the Great Western and Metropolitan Railway Companies against the Hammersmith and City Joint Line assessment in the parishes of Kensington and Hammersmith have been decided by Mr. R. Wallace, K.C., chairman of the London Quarter Sessions, who gave judgment in favour of the companies with costs, reducing the rateable value of the line of railway in Kensington from £1,950 to £60, and in Hammersmith from £4,890 to £100.

It was contended that as a result of the competition of the tube railways, tramways, and motor buses, the Hammersmith and City line has now, by the usual parochial method of valuation, no rateable value; but the rating authorities contended that it had a contributory value as a feeder to the Great Western and Metropolitan systems, and that this was sufficient to support the assessments appealed against.

The Court of Quarter Sessions declined to accept this view, but is prepared, if the rating authorities desire it, to state a case for the High Court.

CANADIAN NORTHERN RAILWAY DEVELOPMENT.

The tenders for the heavy mountain section of the British Columbia end of the Canadian Northern Railway have been awarded. There are 160 miles in this section, in the cañons of the Fraser and South Thompson Rivers. The line from Port Mann, on the Pacific Coast, to Hope, B.C., 80 miles, is under construction. The new contracts cover the construction of the gap between Hope and Kamloops. This section must be completed in two years. No tenders have yet been called for the construction of the section between the Yellow Head Pass and Kamloops, a distance of 250 miles. When this section is completed the transcontinental road will be finished. The road from Yellow Head Pass to Edmonton is now under construction.

Over 1,000 miles of track will be constructed in Saskatchewan this year. Last year Saskatchewan led all the Provinces with a total of 475 miles. The Canadian Northern Railway is constructing 330 miles, the Grand Trunk Pacific 340 miles, and the Canadian Pacific Railway 348 miles. The longest single stretch being constructed is 100 miles. About 1,300 miles of new grading will be done this year. The total construction for this year is almost one-half as great as in the preceding five years. At the end of the year there will be 4,752 miles of track in Saskatchewan.

AN UNSUCCESSFUL CLAIM BY A GOODS GUARD.

In an action brought at Manchester County Court by a goods guard named Bateson against the Lancashire and Yorkshire Railway Company for £2 8s., as two weeks' wages in lieu of notice, plaintiff stated that he failed to attach a tail lamp to the last of the trucks of a train which he had coupled up, as the person whom he relieved had not left the lamps on the engine according to custom. While he was on the engine the signal was given for the train to move, and as there was a press of traffic he did not go to the lamp-house, about six minutes' walk away, to get another lamp. In cross-examina-

tion he said there was no rule that he knew of that he should have ridden at the rear of the train instead of on the engine. He found afterwards that some malicious person had coupled a new steam crane on to the last truck and that although it had passed over one of the luggage turn-tables it had crashed through the second and had been smashed. He was not aware that if it had not crashed through the turn-table it might have broken through a wall and fallen into the street below.

Judge Mellor, K.C., said that in his opinion there had been wilful negligence on the part of the plaintiff. He knew it was his duty to go from one end of the train to the other to see that all was right. If he had done this and attached a tail lamp he would have seen that the crane had been interfered with. The result might be hard in a particular case, but he considered the railway company justified in their action and there must consequently be judgment for the defendants.

ROYAL TRAVELLING ARRANGEMENTS IN WALES.

The arrangements made by the directors and officers of the Cambrian Railways in connection with the visit of the King, the Queen, and the Prince of Wales to the Principality last week resulted in the very comfortable passage of the Royal party over their line. It is reported that the King and Queen were highly impressed by the very great loyalty manifested towards them by the Welsh people, and are likely to make an annual visit to Wales. The Prince of Wales was the first to reach Carnarvon from Dublin for the Investiture on July 13, leaving Holyhead by special train about an hour before his parents.

After the ceremony the party returned to Holyhead and spent the night on board the Royal yacht. On Friday their Majesties and the Prince journeyed in the Royal train to Bangor to open the University College of North Wales. Afterwards they proceeded in motor cars to Portmadoc to join the train for Machynlleth, where, among the persons presented to their Majesties were Mr. John Conacher, chairman of the Cambrian Railways, and Mr. A. Herbert, one of the directors. On Saturday the train proceeded to Aberystwyth for the opening, by the King, of the Welsh National Library, returning subsequently to Machynlleth, where Sunday was spent. The visit came to a close on Monday with the departure for Scotland, and among the assembly on the station platform were the directors and officials of the railways, several of whom had travelled with the Royal train on each of its journeys. On the run to Whitchurch *en route* to Edinburgh it was accompanied by Mr. J. Conacher (chairman of the Cambrian Railway Company), Mr. A. Herbert (director), Mr. C. L. Conacher (traffic manager), Mr. S. Williamson (secretary), Mr. G. C. Macdonald (the engineer), Mr. W. H. Williams, Mr. W. H. Gough, Mr. Frank Ree (general manager of the London and North Western Company, and Mr. Turnbull. Mr. H. Jones (locomotive superintendent) rode on one of the engines. At Whitchurch a stop was made to change the Cambrian for London and North Western engines, the company's latest engine, "Coronation," with the engine "King George V.," having being brought from Crewe for the run to Scotland.

AUGUST HOLIDAY TRAFFIC.

The Great Central Railway is to the fore with its announcement of an unrivalled selection of coast and country health and pleasure resorts on and between the north-east and north-west coasts, where the August holidays may be spent. Notably attractive places for day and half-day trips from Marylebone are the Chiltern Hills and Shakespeare's country. Full details are given in the A.B.C. programme obtainable at Marylebone Station, and at other places mentioned in our advertisement pages.

In a 24-page booklet, sent free, containing 70 illustrations, the London and South Western Railway Company designates itself "The Royal Road for Rest and Recreation." Two special holiday tours are (1) across the Channel *via* Southampton—by the new daylight service to Havre for Normandy, or turbine steamers to the Channel Islands, and to St. Malo (open sea passage reduced to 6½ hours) for Beautiful Brittany—and (2) the majestic heights of North Cornwall. There are cheap bookings to these parts every week from London (Waterloo, etc.) and to North Devon, Dartmoor, and East Devon; also to Swanage, Weymouth, Lyme Regis, Bournemouth, the New Forest, Isle of Wight, Southsea, Lee-on-the-Solent, etc. Additional excursions for the August bank holiday include 14-day tickets to Paris, *via* Havre and Rouen (39s. 3d., 30s. 3d., and 26s.) on August 3, 4, 5 and 7, and special trips on Sunday,

August 6 morning and midnight to Exeter, Plymouth, and North Devon, returning Monday night, at fares from 12s. to 12s. Holiday guide, etc., from Mr. Henry Holmes, superintendent of the line, Waterloo Station, S.E.

By the South Eastern and Chatham Railway excursion tickets will be issued from the chief London and country stations between August 2 and 7 to Boulogne, Calais, Paris, Amsterdam, Brussels, the Hague, etc., available for periods from one to fourteen days. Special tickets will be granted to Roubaix, for the exhibition. During the holidays the Continental services will be run as usual, including, until September 30, the new day service from London to Switzerland, avoiding all-night travelling, and reaching Bâle at 11.40 p.m. The train from Calais to Bâle is composed of first and second-class lavatory corridor carriages of the latest type and a restaurant car. For the bank holiday period commencing next Friday week there are extended week-end tickets to the coast and inland holiday centres in Kent and Sussex. Cheap day fares are available from Charing Cross, Victoria, Holborn, Ludgate Hill, Cannon Street, London Bridge and suburban stations. The Festival of Empire at the Crystal Palace is also catered for.

A strong bid for the traffic to Leigh-on-Sea, Westcliff, and Southend-on-Sea, and Thorp Bay among London's millions is being made by the London, Tilbury, and Southend Railway Company, who place emphasis on their direct route from Fenchurch Street. Through tickets are also announced from the West and Central districts of London served by the Metropolitan and District Railways. Particulars of train times and cheap fares are given in another column.

Greatly improved services to the West of England, the Midlands, South Wales, and Ireland are announced by the Great Western Railway Company in an effectively arranged page advertisement in this issue. As the announcement speaks for itself, there is no need to repeat any item here beyond the fact that the Welsh and Irish service from Paddington is available on Sundays as well as weekdays. Numerous other improvements may be gathered from the company's July time table.

REPORT ON THE WEDNESBURY COLLISION.

The report of Colonel H. A. Yorke to the Board of Trade, giving the result of his enquiry into the collision that occurred early on the morning of April 5 at Wednesbury, on the London and North Western Railway, has been issued. As the 3.40 a.m. goods train from Dudley to Bescot was entering Wednesbury Station, at a speed of about 15 or 20 miles an hour, it came into collision with twelve loaded wagons, which were standing on the down main line at the south end of the station. The engine was overturned, and the driver and fireman were thrown off and rather badly hurt.

The conclusion arrived at by Colonel Yorke is that the collision "was due to negligence on the part of Foreman-shunter Poxon and Signalman W. Fox. As soon as the wagons from off the Burton train had been placed upon the down main line it was Poxon's duty either to cause them to be shunted at once into the Great Western sidings, or failing that, to place a red light at the south end of them so as to face any train that might be approaching on the same line, and after that to go to the signal-box and inform the signalman of the position of the wagons, and also satisfy himself that the appliance provided in the box, to act as a reminder to the signalman that the down home signal should not be lowered, had been made use of, in accordance with Rule 55. But according to his own statement he did none of these things, but simply called out to the signalman that he was going to fetch the shunting-engine to remove the wagons. Poxon, however, said nothing to the driver of the shunting-engine about the wagons, because, as he states, the man was having his food, although he admits that if he had told the driver to move the wagons he would have done so and finished his meal afterwards. Poxon frankly accepted the responsibility for the accident so far as he was concerned.

"Signalman Fox was quite aware of the fact that the 12 wagons had been placed on the down main line by Poxon's instructions, and his duty was to have used the blocking back signal to Golds Hill, in accordance with the block telegraph regulation No. 13, and also to have made use of the link provided in the signal-box, to act as a reminder, by placing it over the lever of the down home signal and the adjacent lever, in the prescribed manner. He acknowledges that he did not use the link, giving as an excuse that he thought the shunting engine was coming to fetch the wagons at once, and he says that he has no recollection of blocking back. The regulation for entering the blocking back signal in the train register book

is dispensed with by Wagon No. 1 signal-box, so there is nothing there to show whether he did block back or not. But the signalman at Golds Hill, where the blocking back signals, whether given or received, are entered in the register book, says that he received no blocking back signal at all from Wednesbury between the hours of 2 and 4 a.m. on the date in question, and it is clear that Fox did not 'block back,' as he should have done. At 2.20 a.m. the 'clear' signal for the train from Dudley was sent to Fox from Golds Hill. He accepted the train at once and it was duly afterwards received the train and ran safely to Bescot. Fox lowered the down home signal for the train, but according to the evidence of fireman Souster, the distant signal was not lowered. Fox seems to have entirely forgotten to lower the signal for the wagons until he heard the noise of the collision.

"The only excuse that Fox has to offer is that, when the train and lowering the home signal, or it is possible that the wagons had been removed from the down line. But I do not think he can have given much attention to the matter, as this could not have been done without his knowledge, as he would have had to work the points, so as to enable the shunting engine to leave the siding, and subsequently the removal of the wagons being shunted into the siding. After the collision occurred Fox sent the 'obstruction danger' signal in all directions, and then became so distressed that he was unfit for further duty. Signalman Ball, who was on his way to No. 2 signal-box, on hearing of the occurrence went to No. 1 box. On asking Fox what was the matter, the latter replied, 'I forgot those wagons.' Finding that Fox was not in a condition to go on with his work, Ball took charge of the box. As a good deal of discussion has arisen of late in connection with Rule 55, I would point out that there was no reason why the provisions of this rule, so far as they are applicable to this case, should not have been carried out by Foreman-shunter Poxon."

PERSONAL.

Mr. B. A. Smith, of Nottingham, and Mr. R. M. Knowles, of Colston Bassett Hall, Notts, have joined the board of the Mansfield Railway Co.

Lord Aberconway (Sir Charles McLaren), introduced by Lord St. Davids and Lord Colebrooke, took the oath and his seat in the House of Lords on Monday last.

Death of a Canadian Pacific Director.—Mr. Robert Meighen, President of the Lake of the Woods Milling Company, and a director of the Canadian Pacific Railway, has died suddenly at Montreal.

Mr. William Thomson, M.V.O., who recently retired from the position of superintendent of the line on the South-Eastern and Chatham Railway, has received from the German Emperor the order of the Fourth Class of the Red Eagle.

Lord Kitchener has accepted the post of His Majesty's Agent and Consul General in Egypt. In announcing the appointment to the House of Commons on Tuesday, Sir E. Grey observed that it is a civil one, and that it was not only as a soldier that Lord Kitchener had shown great capacity.

Mr. Morgan B. Williams, owing to failing health and increasing age, has retired from the position of chairman of the Rhondda and Swansea Bay Railway after a continued connection with it for nearly 30 years. The present satisfactory condition of that undertaking may in no small measure be attributed to his active co-operation. Mr. George Deer, who has long acted as deputy chairman, has been appointed chairman, and Mr. Milbourne Williams, B.A., mining engineer, has been elected to the vacant seat on the board.

The Midland Railway and "England's Most Picturesque County."

—In publishing a thirty-two page booklet dealing with "The Peak of Derbyshire" the Midland Railway Co. has evidently aimed at presenting a production on a par with the sub-title of the volume given in the above heading. If such was the intention Sir W. Guy Granet, whose name is appended to the volume as general manager of the company, may be complimented upon the success achieved. The numerous excellent views are worthy of the delightful landscapes which are claimed to have been rendered celebrated by more writers, from Sir Walter Scott to John Ruskin, than any other district, while the letterpress is well written. For so great a combination of attractive places as are to be found in North Derbyshire the charges of 15s. and 10s. for a fortnight's travel must surely be unsurpassed. The one defect is the absence of information as to the fares from London. Guide compilers generally should remember that holiday seekers as a rule lack what should be commonplace knowledge.

RAILWAY NOTES.

Rolling Stock for Brazil.—The Brazilian Railway Company has placed an order with the Belgian Construction Works for 1,300 goods wagons, 55 passenger cars, and 18 sleeping and dining cars, at a cost amounting to 6,000,000f.

Railway Arrangements for an Irish Pilgrimage.—Twenty special trains at reduced fares have been arranged for on Sunday, July 30, from Dublin and other stations to Westport on the occasion of the annual Croaghpatrick pilgrimage.

Burry Port and Gwendraeth Valley Railway.—At a special meeting held at 5, Gray's Inn Square, London, on Monday—Sir Thomas Pilkington presiding—a resolution approving of a Light Railway Order for the re-construction and working of a further part of the company's undertaking, and providing for increasing the borrowing powers of the company and other purposes, was approved unanimously.

The Scottish Riviera.—While many English people have enjoyed a vacation in Scotland there are a greater number who entertain hopes of visiting Caledonia some day or other. Their desire would be quickened by a perusal of the artistic guide books issued by the Great North of Scotland Railway Co. The latest of these publications, by Mr. G. Davidson, the general manager, deals with the Moray Firth Coast, otherwise described as the Scottish Riviera.

The Mansfield Railway Construction Contract.—The directors of the Mansfield Railway Co. have accepted the tender of Baldry, Verburgh and Hutchinson, Ltd., for the construction of the new railway, which is to connect up the Great Central lines at Kirkby and Clipstone. There were fifteen tenders. A start will be made towards the end of August at Clipstone, Mansfield Colliery, and Kirkby, and the whole line is to be constructed in about two years and four months.

A Collision on the Caledonian Railway.—On Monday last a train ran into a dock already occupied by a number of empty carriages at Wemyss Bay Station. Fortunately speed was greatly reduced at the moment of impact, and no serious damage resulted. Six passengers were slightly injured. The first compartment of the composite van which formed the last vehicle was smashed, the centre carriage was buffer-locked, the one next to the engine was also damaged and the buffers of the engine were broken.

Berlin Railway Electrification.—It is now announced that the German Government will include a first instalment of the money for the electrification of the Berlin city railway in the Budget of 1912. The total cost is to amount to about 110 million marks, and the scheme embraces the railway circling the city and the east and west line which passes through the centre of the city. It is intended to use the present passenger cars and haul them by electric locomotives taking current from overhead wires.

Generous Bequest by the late Mr. F. W. Webb.—The late Mr. F. W. Webb, chief mechanical engineer to the London and North Western Railway Co., left nearly £40,000 to build and endow an orphanage for the benefit of children of deceased servants of the company. The institution is now nearing completion at Crewe, and the committee hope that Lord Stalbridge, the late chairman of the company, will be able to officiate at the opening ceremony in September. Accommodation has been provided for eighty boys and girls, but for a time only half of that number will be received.

A New G.E.R. Handbook.—An attractive publication, "On the East Coast," has been issued by the Great Eastern Company for free circulation, from the office of the superintendent of the line, Liverpool Street. The cover is a striking example of colour printing, but the frontispiece, "Still Calling to the East Coast," is rather highly coloured. It will prove more effective on the hoardings. Mr. Percy Lindley's letterpress is terse and fresh in treatment. Prominence is given to some less-known districts in East Anglia and the country between Cromer and Hunstanton and the Norfolk Broads.

Russian Control of Finnish Railways.—The Council of Ministers and the Finnish Senate have decided to refuse the application of an English syndicate to purchase the bankrupt St. Petersburg-Lyesterbank Railway, and a subsequent application for a concession to continue the line to Bjorko on the Finnish Gulf and there create a large commercial harbour. The Government consider the line of such strategic and commercial importance that they will take it over from the liquidator and carry out a scheme prolonging the line beyond Bjorko to Viborg, thus providing also an alternative route to Finland.

A Yorkshire Dale Railway Project.—It is stated that a scheme is on foot for the construction of a railway from Richmond Station to Reeth, in the Yorkshire dales, and that if the line

reaches Reeth there would be little difficulty in getting it to the top of the dale, where a connection can easily be made with the N.E.R. or the Midland. The chert industry is fast developing into an important one, and some valuable seams are being worked on the north side of Reeth. All this has at present to be taken down to Richmond railway station, ten miles, by a steam road engine. Lead, ironstone, and other minerals are known to abound in the hills, which cannot be worked owing to the heavy cartage to the nearest railway station.

State Railways in Uruguay.—Telegraphing on Monday last, the Monte Video correspondent of the *Times* says that a Bill has been presented by the Government for the building by the State of economic or light railways, of standard gauge, at an estimated cost of £2,308 per mile, against £3,125 and £3,435 previously allowed for the heavier guaranteed lines. It is proposed that there should be an issue of a 5 per cent. loan of £3,000,000 which would provide for the immediate building of 407 miles of line. The new railways, which will be leased to companies, are not intended to compete with but to assist the existing railways.

Bank Holiday Excursions.

TRAVEL IN COMFORT.

THE MIDLAND

Express services afford the most convenient and comfortable means of business or pleasure travel between the principal English Towns and the Holiday Resorts of England, Scotland, Isle of Man and North of Ireland.

The route is expeditious and the pleasantest to travel by. The trains traverse the best scenery, and the carriages are noted for their spaciousness, cleanliness, and comfort—considerations of first importance in the case of families and invalids.

The Restaurant Cars are celebrated for the good food supplied, and for the scrupulous cleanliness and care observed in its service, and the general comfort of passengers *en route* is carefully studied.

Inquiries addressed to any Midland Station Master or to the Company's Head Offices at Derby, will receive prompt attention.

EXCURSIONS TO OVER 500 PLACES.

Programmes Now Ready.

Apply to any Midland Station or Ticket Office; THOS. COOK & SON'S Offices; or to the
MIDLAND RAILWAY COMPANY, ST. PANCRAS.

DERBY.

W. GUY GRANET, General Manager.

AUGUST HOLIDAYS

SPEED, COMFORT and CHEAP FARES, the three essentials in holiday travel, are embodied in the **GREAT NORTHERN RAILWAY Co.'s August Holiday arrangements.**

EXPRESS EXCURSIONS BY CORRIDOR TRAINS will be run to over 500 stations, including bookings to Edinburgh, Glasgow, Aberdeen, Inverness, etc., for 7 or 17 days on Friday, August 4th, and to Harrogate, Ripon, Scarborough, Cromer, Leeds, Bradford, Newcastle, Manchester, Sheffield, Nottingham, Burnley, Rochdale, Blackburn, etc., for 3, 5 or 8 days on Saturday, August 5th.

WEEK-END TICKETS (Friday to Tuesday) will be available for return on Wednesday, August 9th, and **SATURDAY to MONDAY TICKETS** for return on Tuesday, August 8th, in addition to the ordinary dates for which they are valid.

EXCURSION & TOURIST PROGRAMMES, also **ILLUSTRATED HOLIDAY BOOKLETS**, can be had gratis, on application, at any G.N. Office, or of W. HILLS, Supt. of the Line, Dept. (R.T.), 3, York Road, King's Cross, N.

BY GREAT NORTHERN RAILWAY.

MAKERS OF
GALVANIZED SIGNAL PULLEYS, &
FITTINGS IN CAST & MALLEABLE IRON.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

COMPANY NOTICES.

Midland Railway Company.

NOTICE is hereby given that the next Half-yearly Ordinary Meeting of the Midland Railway Company will be held at the Station of the said Company at Derby, on Thursday, the 10th day of August, 1911, at Half-past One o'clock in the Afternoon, for the transaction of the General Business of the said Company.

ERNEST PAGET,
Chairman.
H. TYLSTON HODGSON,
Deputy-Chairman.
ALEXIS L. CHARLES,
Secretary.

Derby, July 25th, 1911.

Great Western Railway Company.

NOTICE is hereby given that the next Half-Yearly General Meeting of the Proprietors of this Company will be held, pursuant to Act of Parliament, in London, at Paddington Station, on Thursday, the 10th day of August next, at twelve o'clock noon for the election of a Director and for the general purposes of business.

In compliance with a By-law, 14 days' notice must be given in writing to the Secretary, of the name of any Proprietor to be nominated for election as a Director at the said Half-Yearly General Meeting.

CHURCHILL,
Chairman.
A. E. BOLTER,
Secretary.

Paddington Station,
24th July, 1911.

Great Northern Railway Company.

NOTICE is hereby given that the Half-Yearly Ordinary General Meeting of the Proprietors of the Company will be held on Thursday, the 10th August, 1911, at Twelve o'clock (noon) precisely, at the Company's King's Cross Station, London, to receive a Report from the Directors, and for other the general business of the Company.

And notice is hereby further given, that immediately after the conclusion of the above-named Meeting, a Special Meeting of the Proprietors of the Company will be held at the same place, when the following Order, for which application has been made by the Company to the Light Railway Commissioners, will be submitted for consideration and approval, viz.:-

An Order intitled "Order of the Light Railway Commissioners authorising the construction of a Light Railway from Kirkstead to Little Steeping in the Parts of Lindsey in the County of Lincoln."

The Books kept by the Company for the Registration of Transfers of Stock were closed on the 17th day of July, 1911, pursuant to notice previously given, and will remain closed until the 10th day of August, 1911, inclusive.

By Order,
E. BURROWS, Secretary.
Secretary's Office,
Great Northern Railway,

24th July, 1911.

POSITIONS VACANT.

Gold Coast Government Railways.

THREE TRAFFIC ASSISTANTS and **ONE STATION and JETTY MASTER** required for the Gold Coast Government Railways for two tours each of 12 months' residential service, with such extension as may be mutually agreed. Age between 25 and 40, preferably unmarried. Strict medical examination and vaccination if necessary.

Salary £250 a year, rising to £300 by annual increments of £10. Free single quarters provided at established stations. Free first-class passages out and home again on satisfactory termination of engagement. Half salary on voyage out, full salary from date of arrival in the Colony. Two months' leave on full pay after 12 months' tour, increased to four months if returning to the Colony, with full pay during voyage or voyages, and free passages.

Candidates for post of Traffic Assistant must be experienced in general indoor and outdoor traffic working on a British railway, as their duties will include travelling and district supervision. Candidates for the post of Station and Jetty Master should have experience in outside and inside station duties, including a knowledge of the movements of rolling-stock and trains working, the control of a terminal station, jetty and warehouses. They should be conversant with electric staff working and telegraphy, be acquainted with station accounts, and understand the invoicing of goods and the booking of passenger traffic.

Application by letter (no special form required), stating age, whether married or single, giving full particulars of experience, accompanied by copies of testimonials (not originals), with names and addresses of referees of whom enquiries can be made as to capabilities and character, should be sent at once to Messrs. Cooper and Sheldorf, the Consulting Engineers for the West African Government Railways, 1, Victoria Street, London, S.W.

Quote M/4721 on left-hand top corner of application.

This advertisement contains all the information available concerning the appointment.

TENDER INVITED.

Victorian State Railways.

THE Agent - General for Victoria, Australia, invites Tenders for the Supply and Delivery at any of the railway piers at Williamstown, Melbourne, fully inclusive of the Australian Customs, duties, etc., of the following Rails and/or Fishplates:-

Contract 21,745.—Approximately 1,647 Tons 100-lb. Steel Rails; approximately 151 Tons Steel Fishplates for 100-lb. Rails.

Contract 21,746.—Approximately 19,718 Tons 80-lb. Steel Rails; approximately 1,760 Tons Steel Fishplates for 80-lb. Rails.

Specification, conditions of contract, and form of Tender may be obtained at the office of the Agent-General for Victoria, Melbourne Place, Strand, London, W.C.

Tenders must be delivered to the Agent-General for Victoria at Melbourne Place, Strand, London, W.C., not later than 11 a.m. on Wednesday, August 9th, 1911.

A preliminary deposit of £50 must accompany each Tender in case of Contract 21,745, and £500 in connection with Contract 21,746.

The Government of Victoria does not bind itself to accept the lowest or any Tender.

FURTHER HOME RAILWAY RESULTS.

During the current week further Home Railway dividend declarations have been made, and on the whole they are quite satisfactory. The Lancashire and Yorkshire led off on Monday with a dividend at the rate of $4\frac{1}{2}$ per cent. per annum against only $3\frac{1}{2}$ per cent. a year ago. In addition a sum of £20,000 was carried to the reserve fund against nil a year ago, and the balance forward was raised. In short, the company earned $\frac{3}{4}$ per cent. more dividend although distributing only an extra $\frac{1}{2}$ per cent. The South Western declaration on Tuesday was received with disappointment in some quarters. But it appears to have been quite overlooked that the South Western pays just the 4 per cent. on its ordinary stock necessary to maintain the full dividend on the preferred ordinary and that in any event no interim payment is made upon the Deferred stock, which receives its dividend annually after the results to December 31 are ascertained. However, £10,000 more has been carried to reserve, etc., and an extra balance carried forward, so that some improvement has taken place, and the company will probably show a much better result at the close of the year. The Metropolitan District has realised the most hopeful anticipations by declaring the full rate of $4\frac{1}{2}$ per cent. on the First Preference stock for the first time for about 30 years. A sum of £10,000 is carried to electrical renewal fund, the same as a year ago, and the balance forward is raised to over £14,000, so that part of the dividend has actually been earned on the Second Preference. A year ago the rate paid on the First Preference was only 3 per cent. The London Electric Railway Company is also making good progress. A dividend at the rate of 1 per cent. per annum is being paid for the past half year, as against $\frac{3}{4}$ per cent. for the second half of 1910. A sum of £7,500 is being carried to renewals fund and the balance forward is raised by about £11,000. The ordinary stock of this company is at present all held by the Underground Electric Railways Company of London, and the Income Bond-holders of the latter company will benefit from the dividend referred to. The Midland dividend announced yesterday was quite good, being at the rate of $3\frac{1}{4}$ per cent. per annum upon the Deferred against $2\frac{1}{2}$ per cent., and the balance forward is raised by about £6,000. Further, a sum of £120,000 is carried to renewals reserves against £90,000 a year ago. The North Eastern Board at last seems to have realised that the shareholders are entitled to more liberal consideration, and yesterday's dividend announcement discloses an advance from $5\cdot10$ $5\frac{1}{2}$ per cent. in the dividend. In addition the balance forward is raised by over £20,000, and the sum of £50,000 is placed to reserve instead of £20,000 a year ago. The Great Northern dividend announcement also discloses a satisfactory improvement in profits. The full rate of 1 per cent. will be paid on the Preferred Ordinary and "B" stocks as usual, but no interim dividend is usually paid on the Deferred issue. Consequently, the improvement takes the shape of an increase in the balance carried forward of about £41,000, raising it to the exceptionally large amount of £121,000. This implies that an extra $\frac{1}{2}$ per cent. for the whole year on the Deferred stock has been earned in the past six months, and even if no improvement takes place this half-year the dividend for the year ought not

to be less than $2\frac{3}{4}$ per cent. The Taff Vale dividend is being maintained at 4 per cent., but the balance forward is reduced. The Hull and Barnsley was the only important line regarding which some reduction in the dividend was feared, on account of the reduction in its receipts. However, it has come off fairly well in the circumstances, for its dividend a year ago was exceptionally good. It is paying 2 per cent. per annum against 3 per cent., but the accompanying balance forward, etc., is increased.

INDISCIPLINE AND UNREST.

The small labour difficulties that recur, seemingly without end, on some railways may, we think, fairly be set down to a want of firmness on the part of the management and of the labour leaders. The main difficulty is, no doubt, the instability of the men's minds. It is well known that uneducated masses of people are easily swayed by emotions roused by the eloquence of plausible men whose principal aim in life is too often to taste the sweets of authority—not necessarily from sordid motives. On many minds the possession of authority has a stimulating—almost an intoxicating—effect, and like other exciting influences, both moral and material, it is apt to obscure or pervert the judgment of those exercising it. The working classes, in this country at any rate, cannot be said to be entirely uneducated, but such instruction as they receive does not develop in them habits of discipline or of obedience, nor does their training enable them to form correct opinions on the ultimate results of any general action on their part. In homely phrase, they are not taught to see an inch beyond their noses or that the greatest good to the greatest number is never attained by upsetting the whole order of things. Some small temporary advantage to themselves may thereby be secured, but at the cost of all those whose happiness or welfare depends upon a stable state of affairs in which everyone may be said to know where they are—and in which any desired and desirable improvement can generally be brought about most effectively by steady pressure and not by heavy blows. Workmen often, by blindly following their leaders, destroy a fabric which has been laboriously built up by years of patient perseverance on the part of specially-trained managers. The official recognition of these leaders by boards of directors, or by committees and other managing bodies only enhances the status of their so-called representatives in the eyes of the men; and, on the other hand, such recognition is apt to raise the suspicions of the working men. A blind belief in their leaders explains the disputes over comparatively trivial matters that are constantly occurring, for in the absence of disputes of any kind, the occupation of these leaders would be gone and the workmen would realise how comfortably they could get on with their employers without assistance. This, of course, would not suit the game of the union officials at all. The worst of it is that, as we have already said, when the union officials are successful in coming to a mutual understanding with the opposite party mistrust and suspicion arise on the part of the men. Just as want of discipline makes them object to carrying out the orders of their employers—so does the same want make them averse to following the advice—or dictates, as they would call them—even of their own chosen officials, when these have once become the subject of mistrust, however unfairly. The only remedy for this unsatisfactory though quite natural state of affairs, is firmness; firmness on the part of both the employers and of the union officials. If the employers decide after due deliberation that the men's demands cannot be met without imperilling the success and, in some cases, the safety of their business, they should stick to their guns without flinching; if they consider that any recognition of a Union would have the same effect they should firmly decline to have any further *pour-parlers* with the officials. But should the union

officials be consulted, and some joint agreement be reached, then the same officials should be in duty bound to secure the adherence of the men or to decline to act further as intermediaries. The want of firmness on both sides, together with the short-sightedness of the men—as a body—is the original cause of all the deplorably long-drawn disputes which have led to so much suffering to the misguided men—their families and dependents—who have been drawn into them. The half-educated man does not know what is good for him, and he should be taught to rely on those whose whole success in life depends on a good understanding with the men over whom they have authority. By putting his trust in those whose sole livelihood is obtained by fishing in troubled waters—the workman must, in the long run, inevitably come to grief.

EAST LONDON RAILWAY ELECTRIFICATION.

At the half-yearly meeting of the East London Railway Company, on Tuesday, Lord Claud Hamilton was at last able to make the gratifying announcement that arrangements have been made with the six leasing companies for the adoption of electric traction on the East London line. Where so many interests are concerned and where on many points they cannot, of course, be identical, the task of bringing about an agreement could not be an easy one, and Lord Claud Hamilton is to be congratulated on the success which has attended his efforts. As chairman also of the Great Eastern Railway Company he has been able to arrange for the company applying for powers in next session of Parliament for raising the £63,000 necessary for the electrification work. The East London Company will pay interest, but payment will be deferred until the sums receivable by it are largely increased. It is now a long time since proposals were first put forward for the use of electric traction on the East London line. The carrying out of such a scheme was contemplated at the time the plans were made for electrifying the Metropolitan District Railway. So many of the lines connecting with the East London Railway are now worked electrically that to continue the use of steam locomotives in its tunnels would be to perpetuate an absurd anachronism. The electric railways forming junctions with the East London are worked by the third-rail continuous current system, so that the same method will naturally be applied to the East London. As current will be obtained from the Lots Road power station in Chelsea, and as the Metropolitan Railway Company will run their electric rolling stock over the line, the work of conversion will be confined to the provision of an electric sub-station, the laying of high and low tension feeder cables, the putting down of third and fourth conductor rails, and the provision possibly of new track rails where required, and of automatic signals. This work need not take a long time, and as it is the desire to proceed with it at once, Lord Claud Hamilton was justified in the hope he expressed that before many months are over he will be able to congratulate the shareholders on the electrification being an accomplished fact. There can be no doubt that with the removal of smoke and with the more frequent and faster trains a great increase will take place in the traffic. As the annual interest at 4 per cent. on the new capital expenditure is only £2,600, it can be seen that any such increase of business as may be reasonably expected should place the various companies concerned in a much more favourable position financially as regards the East London Railway.

American Railroad Freights.—The United States Inter-State Commerce Commission have issued decisions confirming those of last year and materially reducing freight rates between the Atlantic coast and the Rocky Mountains region. Last year's judgments were not enforced till the result was known of attempts by the railroad companies to prove them inequitable and confiscatory. The Commissioners hold that the companies have failed in those attempts, so presumably the decisions will now become operative.

The return of the Bank of England shows that the position has been strengthened during the week. The contraction in the active note circulation amounted to £130,000, and there was nothing to set against the importation of £340,000 in gold save a small expansion in the circulation of coin not exceeding £86,000. The reserve was therefore £390,000 higher at £30,422,000, bringing it to practically the same level as obtained at the corresponding date of last year, when the amount was £30,497,000. The other items of the return show no very significant changes except for the fact that a fall of £806,000 is recorded in Other Securities, which is generally interpreted to mean further liquidation of Birkbeck assets in spite of the fact that rumour has so often had it that this liquidation was concluded. Public Deposits show a trilling decrease of £41,000, while Other Deposits are £377,000 down. The amount of the latter item, which is now nearly two and a half millions above the figure which held this time last year, fully explains the present cheapness of money in the open market. As the result of all changes, the proportion of the Reserve to the liabilities of the Bank has improved by more than a point to 54½ per cent. The situation is therefore good. Also there is evidence of many kinds tending to show that nothing is wanted save a cessation of political troubles, foreign and domestic, to inaugurate a magnificent expansion in trade and business of every kind. The week, however, has not offered any very hopeful prospect of these conditions being fulfilled, and business generally, and Stock Exchange business in particular, have been discouraged. Certain traders thought fit to apply to Lloyd's for policies of insurance against loss in case of war. As there were many applicants, the rates quoted

soon became formidable, as much as ten per cent. per annum being demanded to cover the remainder of this year. Such figures as these naturally impressed the Stock Exchange, creating an effect which again reacted upon Lloyd's, the members' sense of responsibility imputing to the other some special cause of the prospects. Thus the conclusion of the settlement was expected and a general decline of values. The settlement itself began with promise of better things, because the market had been much reduced, and there seemed to be a prospect of the remainder of the month being a period of marked expansion of business. The observations of the Chancellor of the Exchequer on the 21st, however, confirmed the opinion, which has been gathering weight since the end of June, that the embroglio on the Continent with regard to Morocco was really dangerous, and the heat which has since arisen in the sphere of domestic politics has naturally done nothing to allay apprehension.

Last Saturday was a day of little business, and what business did take place was, for the most part, done at lower prices in every department. Americans, which opened strong, fell away before closing time, but Canadian Railways, which participated in the opening strength, were less affected by the subsequent decline. Home rails were flat. On Monday they were worse than flat. The Leeds dividend, announced to be ½ per cent. above last year's, did not help. The stock fell ¾. Americans were irregular and Canadian and Mexican railways again improved. The next day was perhaps the worst. There were no rises whatever to relieve the monotony of declines. On Wednesday, after an opening at still lower prices, bargain hunters began to make themselves felt, and, with the help of a small but steady stream of investment orders, prices before the end began to improve in almost every department of the House. The traffic receipts of Home rails were good, and the decline here was at last stemmed. The recovery made further progress on the following day. Trunks and Americans were sold from Liverpool, but the market displayed welcome powers of absorption, and there was much evidence that a change of tone had commenced in earnest. There was, however, little confirmation of this view in the movements of the following day.

On Friday a number of dividends were announced on Home Rails, details of which are given elsewhere. It is sufficient to note in this place that all were good, and quite up to the expectations of the market, but in accordance with precedent for this half-year, the fact did nothing to help prices, which opened with irregularity and ended lower than they began. Two failures which occurred on the Stock Exchange had naturally a discouraging influence. One of the members was connected with the Miscellaneous market and Rubber shares, the other with the market in Brighton "A" and other Home Railway stocks. Consols fell to under 78. There were declines of 1 in Great Northern "A" and Brighton Deferred. Great Northern Deferred fell 1½. Great Central Preferred and South Eastern Deferred fell ½, and nearly all the other stocks in the active list were quoted lower by smaller fractions. Canada ended ½ up, but Trunks and Mexicans declined. The American market improved a little, and a stronger tone which was observable in International stock was accepted as an encouraging sign.

The principal movements on the week are as follow:—

BRITISH AND IRISH RAILWAY DIVIDENDS.

The following table shows the dividends on the ordinary stock (unless otherwise stated) announced so far by the leading English and Irish companies for the half-year ending June 30. In the case of the Scottish companies the dividends are for the half-year ended July 31. For purposes of comparison the dividends for the corresponding half of the previous year are appended:—

Weekly Traffic Summary.

The traffic receipts for the week ended July 23, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,410,170, which was earned on 21,514 miles, being at the rate of £112 os. 6d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,365,223, with 21,468 miles open, or £110 3s. 6d. per mile. There was thus an increase of £44,947 in the receipts, an increase of 46 in the mileage, and an increase of £1 17s. in the receipts per mile. Thirty-six of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £2,752 (or 2d. per mile) in the passenger receipts, and an increase of £50,262 (or £2 5s. 9d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-six railways for three weeks in the passenger receipts has been £89,951, while the aggregate increase in the goods traffic was £30,950. The aggregate receipts of the fifty-two railways for three weeks (July 2 to July 23) amounted to £7,177,224, in comparison with £7,076,550 in the corresponding period of last year—an increase of £100,674.

FORTHCOMING DIVIDEND ANNOUNCEMENTS.

We give below the dates on which the principal railway companies may be expected to announce their dividends:—

COMPANY.	DATE.
Great Western	Thursday August 3
London and North Western	 " 3
North London	 " 3
Furness	 " 10
Great North of Scotland	Tuesday .. 22
Highland	Wednesday .. 30
Glasgow and South Western	Tuesday September 5
Caledonian	 " 5
North British	Thursday .. 7

The Rt. Hon. Sir Walter Hely-Hutchinson, G.C.M.G., has been elected a director and chairman of the Leopoldina Railway Company in place of Mr. R. H. Benson, resigned.

REFERENCES FOR 1910.

(a) After placing £10,000 to reserve fund. (b) After placing £1,000 to way and works renewal fund. (c) After transferring £1,500 to renewal fund. (d) After placing £550 to locomotive renewals and reserve fund and £250 to reserve fund. (e) After placing £5,000 to reserve. (f) Interest paid on A, B, and C debenture stocks. (g) Full dividend on the consolidated preference stock. (h) Dividends paid on preference stock 1881. (i) After placing £30,000 to the contingent and marine insurance funds. (j) After placing £10,000 to reserve fund. (k) After placing £10,000 to electrical renewal and depreciation fund. (l) After transferring £10,000 to renewals reserve. (p) After placing £10,000 to displacement account and £3,500 to general reserve. (q) After placing £2,000 to steamboat depreciation fund. (r) After placing £1,500 to general renewal fund. (s) After placing £100,000 to general reserve. (t) Preference dividends only paid.

REFERENCES FOR 1911.

(a) After transferring £1,500 to renewal fund and £800 for general purposes. (b) After placing £1,170 to locomotive and permanent way renewals and £250 to reserve. (c) After placing £10,000 to marine insurance fund. (d) After placing £1,000 to rolling stock renewal account. (e) After setting aside £3,000 to worked lines suspense, £1,000 to general insurance reserve and £1,000 for bridge renewals. (f) After placing £25,676 to general reserve. (g) Dividend paid on 4 per cent. preference stock 1889. (h) After placing £20,000 to reserve. (i) After placing £10,000 to reserve and £10,000 to steamboat renewals. (j) After transferring £10,000 to reserve for renewals. (k) After making special allocations amounting to £120,000. (l) Equivalent to 10 per cent. on the old stock. (m) After placing £20,000 aside for special renewals. (n) After placing £50,000 to special reserve. (o) After setting £7,000 aside for renewals.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- July 31 (Mon.).—Metropolitan Railway of Constantinople from Galata to Pera (General). 25, Bucklersbury, E.C., at 2. Followed by an Extraordinary Meeting.
- Aug. 1 (Tues.).—London and Blackwall Railway (Half-yearly), 17, John Street, Crutched Friars, E.C., at 1.
- Aug. 1 (Tues.).—Whitechapel and Bow Railway (Half-yearly), 41, Trinity Square, Fower Hill, E.C., at 3.15.
- Aug. 2 (Wed.).—Alexandra (Newport and South Wales Docks and Railway) (Half-yearly), 14, St. Mary Axe, E.C., at 2.
- Aug. 2 (Wed.).—Great Northern and City Railway (Half-yearly), Westminster Palace Hotel, S.W., at 12.
- Aug. 2 (Wed.).—London, Brighton and South Coast Railway (Half-yearly), London Bridge, at 12.
- Aug. 2 (Wed.).—Somerset and Dorset Railway (Half-yearly), Waterloo Station, S.E., at 10.30.
- Aug. 3 (Thurs.).—Belfast and County Down Railway (Half-yearly), Queen's Quay, Belfast, at 11.30.
- Aug. 3 (Thurs.).—Central London Railway (Half-yearly), Holborn Restaurant, W.C., at 12.30.
- Aug. 3 (Thurs.).—London, Tilbury and Southend Railway, Board Room, 41, Trinity Square, Fower Hill, E.C., at 12.
- Aug. 3 (Thurs.).—Manchester Ship Canal (Half-yearly), Mount Street, Manchester, at 11.
- Aug. 4 (Fri.).—Barry Railway (Half-yearly), Barry Docks, at 2.30.
- Aug. 4 (Fri.).—Cavan and Leitrim Railway (Half-yearly), 19, Fleet Street, Dublin, at 2.
- Aug. 4 (Fri.).—Great Central Railway (Half-yearly), London Road Station, Manchester, at 12.
- Aug. 4 (Fri.).—London and South Western Railway (Half-yearly), Waterloo Station, S.E., at 12.
- Aug. 4 (Fri.).—Rhymney Railway (Half-yearly), Angel Hotel, Cardiff, at 12. Followed by an Extraordinary Meeting.
- Aug. 4 (Fri.).—Vale of Glamorgan Railway (Half-yearly), Barry Docks, at 2.20.
- Aug. 8 (Tues.).—North Staffordshire Railway (Half-yearly), Cannon Street Hotel, E.C., at 2.
- Aug. 9 (Wed.).—Edgware and Hampstead Railway (Half-yearly), Electric Railway House, Broadway, Westminster, at 12.
- Aug. 9 (Wed.).—Great Southern and Western Railway (Half-yearly), Kingsbridge Terminus, Dublin, at 2.
- Aug. 9 (Wed.).—Hull and Barnsley Railway (Half-yearly), Assembly Rooms, Kingston-upon-Hull, at 12.
- Aug. 9 (Wed.).—Port Talbot Railway and Docks (Half-yearly), Port Talbot, at 12.
- Aug. 9 (Wed.).—Taff Vale Railway (Half-yearly), Royal Hotel, Collage Green, Bristol, at 2.
- Aug. 10 (Thurs.).—Great Northern Railway (Half-yearly), King's Cross Station, N., at 12. Followed by a Special Meeting.
- Aug. 10 (Thurs.).—Great Western Railway (Half-yearly), Paddington Station, at 12.
- Aug. 10 (Thurs.).—London Electric Railways (Half-yearly), Westminster Palace Hotel, S.W., at 1.
- Aug. 10 (Thurs.).—Metropolitan District Railway (Half-yearly), Westminster Palace Hotel, S.W., at 12.
- Aug. 10 (Thurs.).—Midland Great Western Railway of Ireland (Half-yearly), Broadstone Terminus, Dublin, at 1.
- Aug. 10 (Thurs.).—Midland Railway (Half-yearly), Derby, at 1.30.
- Aug. 10 (Thurs.).—North London Railway (Half-yearly), Euston Station, N.W., at 1.
- Aug. 11 (Fri.).—Didcot, Newbury and Southampton Railway (Half-yearly), Westminster Palace Hotel, S.W., at 12.
- Aug. 11 (Fri.).—Isle of Wight Central Railway (Half-yearly), 11, Ironmonger Lane, E.C., at 12. Followed by an Extraordinary Meeting.
- Aug. 11 (Fri.).—London and North Western Railway (Half-yearly), Euston Station, at 12.
- Aug. 11 (Fri.).—Neath and Brecon Railway (Half-yearly), Charing Cross Hotel, W.C., at 2.30.
- Aug. 11 (Fri.).—North Eastern Railway (Half-yearly), Festival Concert Hall, York, at 12.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimitry, London.)

GREAT EASTERN RAILWAY.

The 65th half-yearly general meeting of the proprietors was held yesterday, July 28, in the Harrington Hall, Great Eastern Hotel, Liverpool Street Station, E.C., Lord Claud John Hamilton, M.P. (chairman of the company), presiding.

The Secretary (Mr. P. L. Lewis) having read the notice convening the meeting.

The Chairman said: Ladies and Gentlemen, we much regret that we again have to record the death of a valued colleague, the late Sir William Birt. I was associated with Sir William for no less a period than 38 years in connection with the affairs of this company, and I never came across a man who had a higher conception of duty, and who more wholeheartedly devoted himself to the interests of the company. We greatly deplore his loss. You were good enough, when Sir William Birt was made a director, in recognition of his great services, and subsequently, when the same distinction was conferred on Mr. Gooday, to say that we might raise the number of the directors of the company to 12 instead of 11, the number at which they had previously stood. We find that 11 directors are sufficient to carry on the work of the company, with all due regard to efficiency, and, therefore, we ask your permission again to reduce the number from 12 to 11. I am glad to say we have had a very good half-year. The gross receipts under all heads, with one exception, were eminently satisfactory. On the other hand, the working expenses showed a somewhat alarming increase, and they came out considerably in excess of what we had anticipated. I will deal with them, and the main causes of their increase, at a later period. I observe that in several journalistic criticisms of our report and accounts exception is taken to the fact that we did not place to the credit of two reserve funds the same amount as we did a year ago. It does not seem to occur to the gentlemen who write these criticisms that however commendable and necessary reserve funds may be, the moment they are adequate to the requirements of a company, and you still continue to add to them, you are then diverting from the pockets of the shareholders the money to which they are fairly entitled. A year ago we added £30,000 to the contingent and Continental Steamboat insurance funds, £10,000 to the former fund and £20,000 to the latter. They then stood at £87,980 and £103,888 respectively, but have now increased to £101,705 and £157,115 respectively. The contingent fund, therefore, has reached a figure to which no addition is necessary, and though we mean to build up the steamboat insurance fund to such a figure as will render it unnecessary to insure any of our boats in outside offices, we feel that in the lean half-year it is quite unnecessary for us to credit it with a larger sum than £10,000. You will find, if you refer to the general balance sheet, that the two sums standing to the credit of the steamboat insurance fund and the steamboat depreciation fund, together amount to the very substantial total of £301,948.

Now, if you will be good enough to turn to page 13, No. 9 account, I will deal with the traffic receipts. The passenger traffic shows, in the first class, 755,892 persons and £76,850 in receipts, making an increase of 40,600 passengers and £3,322. That, we consider, having regard to the falling off in some directions of the first class traffic, very satisfactory. The rate per passenger in the first class was 28.04d. against 28.067d. in the corresponding period of last year. The second class showed in number 1,134,538 persons and £29,957 in money, being a decrease of 11,689 persons and £227 in money. The rate per passenger was 6.34d. against 6.32d. last year. The third class showed, in numbers, 45,077,472 persons and in money £862,513, being an increase in persons of 1,417,639 and in money £38,330. The rate per passenger for the third class was 4.54d. against 4.53d. last year. The grand total of passengers was 40,962,022 and in money £69,6320, as against 45,510,346 persons and £927,805 in money in the corresponding period of last year, which shows an increase of 1,416,556 passengers and in money an increase of £41,125. The average rate per passenger in all three classes was 4.95d. against 4.89d. last year. The season tickets showed an increase of £6,727, and the parcels £7,315, making the total increase under the head of "passenger traffic" £55,460. Now, I should like to say a word or two in regard to the causes of that increase. In the first place we had the Coronation, we also had two exceptionally fine bank holidays, three exhibitions in London, one at Shepherd's Bush, one at Earl's Court and another at the Crystal Palace, and we had the Royal Agricultural Show at Norwich. As regards the Royal Agricultural Show, you will notice in the report it was conducted, as far as we are concerned, with very great success, and you will be glad to see that on that occasion the acting president of the Royal Society

that is chiefly due to the increase in our contribution to the various funds which you have been good enough to sanction for the benefit of the staff. Now, rates and taxes are always an interesting subject, not only to shareholders, but to individual householders, and they come out pretty even for the past half-year. I would like to give you the following information. The payment under the head of rates and taxes is approximately the same as the corresponding period of last year. This may be considered satisfactory, having regard to the fact that, owing to the increase of the cost of education and the additional expenses in connection with the repair of main roads, there is constantly an upward tendency in the poundage in local rates. The company has recently contested an assessment in an important district, with the result that they were successful in obtaining a substantial reduction, and, further, as a result of such action, they had been enabled to obtain substantial reductions in several unions in the area affected, and by this means have counteracted the increase which is constantly taking place in the local rates. The increase in local rates is a matter over which the company has no control, but the question of assessment at all times is engaging the constant attention of the directors. (Applause.)

Well, now, as regards the current half-year, we consider that the prospects of our autumn and seaside traffic are excellent. We have also got Army manoeuvres in our district commencing at the end of August, which we hope will result in a considerable increase to our traffic. As regards the harvest, the report which I received came to hand about 17 days ago, and, of course, owing to the exceptional drought, it is impossible to forecast how the harvest will turn out; but from what I can hear it will not be as regards wheat and some other things so bad as some people expected. The fact is our position is steadily and surely improving; our rolling stock is better than it has ever been, our road is now in a condition that would have surprised people ten years ago, and although it is not in all respects in some portions of our system in a condition to which we hope to get it in a few years' time, when I hope we shall be able to boast that we have a road inferior to none in the United Kingdom. (Applause.) Our steamers are first rate, in fact they are the best cross-Channel steamers in the Kingdom, and as our financial condition is so steadily progressing, we feel very confident as regards the future. I hope, therefore, you will feel the same confidence, and continue to afford us that same support which we so greatly value. (Applause.) I beg to move:—"That the directors' report, together with the statement of accounts now submitted, be received and adopted." (Loud applause.)

The Rt. Hon. Sir AILWYN EDWARD FELLOWES, K.C.V.O. (deputy-chairman), seconded the resolution.

Mr. W. R. LAWSON, whilst agreeing with the chairman that the goods traffic had improved, and that it was necessary to increase the salary of station masters and others, said he differed from his lordship in regard to the passenger traffic. He contended that the passenger traffic of this company, if not carried on at an actual loss, at any rate contributed very little to the shareholders' dividend, and too much attention was given to it instead of to the more profitable traffic—namely, the goods traffic. After quoting numerous figures in support of his contention, he remarked that nothing had been said about the bearing which the new Insurance Bill would have upon the Great Eastern staff. In abstract E of the report it was shown that the Company paid £28,000 in the half-year for superannuation and other funds. That was within £10,000 of what the shareholders received in increased dividend. The men not only got their salaries and wages, but £28,000 from various provident funds, and he would like to know what effect the Insurance Bill would have upon the Company.

A SHAREHOLDER said he could not understand the previous speaker's contention in regard to passenger and goods trains, for they could not put passengers in goods wagons.

Mr. CROFT thought the shareholders had never had a more satisfactory report placed before them than the present one. The prosperity seemed to have been extraordinary. He further remarked that the other day he was surprised to find that the large passenger traffic which passed through Cambridge station was all conducted upon one platform. He knew there were great difficulties to be encountered in surmounting that, but he thought the platform might be more adapted to modern requirements. One matter to which the Chairman referred on the last occasion he had not now noticed, and that was the establishment of a naval base at Harwich. He wished to know whether anything had been done in the direction indicated.

Mr. LONG asked whether the contribution to the super-

annuation fund of £28,000 was to be continued if the Government Insurance Bill became law.

Mr. AILWYN EDWARD FELLOWES, in reply, asked whether it was the intention of the Government to make provision for the whole of the staff, and if so, would it be a permanent provision?

The CHAIRMAN said it was a question which Mr. Lawson sometimes raised in connection with the staff. He generally appeared as an adverse critic of the Government, but his criticisms were always justified. He had spoken about the difference between the wages of the men in goods and passenger trains, but as a result of the Insurance Bill, it was estimated that the cost to the company of the Insurance Bill, as it stood at present, and special arrangements made with railway companies, would be £24,000, which was a figure he looked forward to with some apprehension. When the Bill was introduced the directors had to consider whether it would affect their relations with the staff in respect of the pension and superannuation funds, but those funds only related to pensions on retirement, whereas the Insurance Bill related to sickness. As to the staff generally, the Board had not been approached by any section of it in regard to their wishes concerning the Insurance Bill, and that being so he had asked the General Manager a few days ago to ascertain what were the wishes of the staff, because they would like to endeavour to give effect to them if they were of a proper character. He could not say at the present time what the desire was, but the fact remained that the Insurance Bill would cost the company about £24,000. With regard to the Cambridge platform, he admitted it was not a platform which he at all liked, but when people complained he always advised them to go to Oxford and look at the platform there. (Laughter.) That continuous and long platform had been kept up at the wishes of the inhabitants themselves. The board wished to have two platforms, but the people of Cambridge for some reason or other, probably because the town was on one side of the existing station—wished to have the one platform. It would have to be elongated and then it would be the longest platform in the Kingdom. After giving the goods and passenger earnings in detail in answer to Mr. Lawson's quotation, the Chairman proceeded to say that Mr. Lawson had asked a question about the Ipswich and Harwich boats. He (the chairman) did not think they ran at a loss, but they were dependent upon the weather. The full service did not run except in the second half of the year, and on the whole year he thought there should be a profit. As to the question of cottages and the rent which their servants had to pay, it was an exceedingly complicated one to which the directors had given great consideration and on which it was difficult to arrive at a proper conclusion, but the board found that the only practical way was to build cottages as fast as their means would admit, and to charge a reasonable rent conformable with the rents of the district. They did their best to treat their staff properly, only charging them reasonable rent according to their wages. As to the Naval base at Harwich, he might say that that was now an accomplished fact, and in order to encourage traffic there the board were improving the Harwich station.

The resolution was then put, and carried unanimously.

On the motion of the CHAIRMAN, seconded by Sir AILWYN EDWARD FELLOWES, Mr. John Kenneth Foster was unanimously re-elected a director of the company, and on the proposition of Sir A. E. FELLOWES, Lord Claud Hamilton was also re-elected as a member of the board.

Mr. F. HILL proposed the re-election of the retiring auditor, Mr. W. B. Peat. This was seconded by Mr. BAISES, and unanimously agreed to.

On the proposition of the CHAIRMAN, seconded by Sir A. E. FELLOWES, it was resolved that the number of directors be reduced to 11 from 12.

Mr. NEWMAN proposed a vote of thanks to Lord Claud Hamilton for his able and courteous conduct in presiding, and to the directors generally for their careful attention to the interests of the Company.

Mr. FISH seconded the resolution, and it was carried unanimously.

The CHAIRMAN briefly acknowledged the vote, and the proceedings then terminated.

Vale of Glamorgan Railway. The half-yearly report states that the amount available for distribution is £11,317, and the directors recommend a dividend at the rate of 4 1/16 per cent. per annum and that £400 be carried to the credit of the current half-year.

LONDON, CHATHAM AND DOVER RAILWAY.

The half-yearly ordinary general meeting of the proprietors was held yesterday, at the Cannon Street Hotel, Cannon Street, E.C., the Rt. Hon. Sir William Hart Dyke, Bart. (Chairman of the Company), presiding.

The Secretary (Mr. L. W. Livesey) having read the notice convening the meeting,

The Chairman said: I should like to address you for a short period, because, although some of you may have attended the combined meeting downstairs, yet I have noticed that many of you have arrived within the last ten minutes or a quarter-of-an-hour, and who may not have had the advantage of bearing what was said at the other meeting. Therefore, I know that you will forgive me if I go into one or two of the salient features—a very few—presented by the Managing Committee. The gross receipts, as you are aware from the report of the Managing Committee, amounted to a little over £73,000, while the increase in working expenditure has been but £31,000, leaving a net increase of £42,000. It is an interesting fact that there has been an increase, as the chairman downstairs has already told you, of every item of receipts—passenger traffic, parcels, merchandise, minerals and steamboats; and regarding passenger traffic, it is further interesting to note that there have been increases in the receipts from all classes—first, second, third, and season tickets. With regard to the expenditure, there has been an increase of £4,500 in maintenance of way, an item which no reasonable person, I think, is likely to criticise, and an increase of £24,000 in carriage and wagon repairs and renewals, showing an acceleration in the rate at which old and obsolete carriages have been replaced by more suitable ones. Of course, it is easy to understand that a large increase of traffic must make heavier demands upon our rolling stock. One other principal item of increased expenditure—it has already been alluded to—is a sum of £9,000 for dredging operations at Folkestone, which has been rendered necessary for the reception of the Zealand Steamship Company's boats, which now run between Flushing and Folkestone instead of Queenborough, as heretofore, a change which appears to be highly popular with the travelling public. Against these various items of increased expenditure there is a decrease of £7,400 under the head of locomotive power, about £2,000 less for compensation, and £1,500 less for rates and taxes—both very satisfactory items—the general result being, as before stated, that the working expenses of the committee show an increase of £31,000. With regard to the separate accounts of the Chatham Company, you will see by the report, ladies and gentlemen, that the Company commenced the half-year with £31,000 more brought in from the December or first half of the company's financial year, and that they have received from the Managing Committee £17,400 more as their proportion of the improved results. If we add the net receipts from separate properties and other small items there is, after paying all debenture interest and other fixed charges, a sum available for distribution of £153,943, as against £105,679 in the corresponding period of last year. This will enable the company to pay the full dividend of $4\frac{1}{2}$ per cent. on the arbitration preference stock for the financial year ending June, 1911, and carry forward £2,577 to the current half-year. This, ladies and gentlemen, is the best distribution the company has been able to make for the last eleven years, and as the result of steady uniform progress it may be considered satisfactory from every point of view. The result has certainly not been achieved by any neglect or sacrifice of maintenance. The improvement that has been made for the last four years is due to net profits fairly earned. Good as the result is, your Directors do not intend to rest content, but regard it as an encouragement to continue their efforts to conduct the business in every detail with the greatest regard for economy, consistent with efficiency, whilst making every possible alteration and improvement for popularising our system. During the half-year Capital Expenditure has been slightly over £26,000, being this Company's proportion of the joint expenditure of the Managing Committee of the two Companies. Most of the items in this amount have been small and varied in their character, with one exception, namely, some improvements at Rochester which had been undertaken with the object of effecting considerable reductions in working expenditure and improving our services. You will have been glad to hear, those of you who have been at the meeting downstairs, that the capital expenditure I referred to under that head just now will cease. The only other item of importance is a fairly large sum on re-constructing and improving bridges to enable them to bear the strain of the heavier loads of the present day. It will be noticed by reference to the half-yearly reports, that capital expenditure of both companies is gradually becoming less and less. The actual amount

expended by our Company for the financial year ending June last was considerably less than in any twelve months since the working union of the two companies. Now, ladies and gentlemen, you will have noticed the election of Lord Kitchener as a Director of your Company—(applause)—and whilst we were fortunate in securing the services of so distinguished and able an administrator, it must be obvious, I think, to you all that Lord Kitchener's acceptance of a very important position in Egypt will render it impossible for him to accept a place upon the Joint Managing Committee of the two companies. But, ladies and gentlemen, as Lord Kitchener has determined to make his home in the future in Kent, and as he will be in England several months in the ensuing years, we hope that it may be possible to retain him as a member of our board. (Applause.) I would like to say one or two words before I conclude, and ask you to adopt the report. We occupy, it is true, ladies and gentlemen, a far better position than we could have ventured to have predicted a few years ago. The expansion of our traffic, both home and foreign, has been most encouraging. With regard to our foreign traffic, you will have noted that we have already placed one new turbine steamer by way of an addition to our fleet, and that very shortly we propose to add another. In regard to our steamship service, I can assure you that we spare nothing to secure speed and the comfort of our passengers. After some years of disappointment and delay—for which, at all events, the two companies have been in no wise responsible—we have been able to make a serious commencement as regards the foundation of our new Marine Station at Dover, and we hope and trust that before long those foreigners who do us the honour of visiting our shores will thoroughly appreciate the change in the reception which we shall then afford them. We have been passing through an exceptional period of fine weather, and the stirring scenes of the Coronation have also been of some service to us, but I am sure you will expect us to continue our old policy of strengthening and improving our line, and more especially the condition of our rolling stock. Our chairman has already emphasised, in another place, the satisfactory feature in the Managing Committee's result—namely, that the increase is practically in all kinds of traffic, and has not been spasmodic in its character, and that the extra expense whilst securing this result has been entirely and solely in the direction of improving our property and making progress with renewals. It is noteworthy that once more there has been practically no increase in operating expenses as the result of a very considerable increase in traffic returns. Now, ladies and gentlemen, in asking you, with these few remarks, to adopt the report, I can assure you that we on this side of the table are not unmindful of past troubles in more strenuous times, nor are we, at the same time, blind to the possibility of difficulties in the future. Our Parliament is not always very sympathetic towards railways or railway systems, neither is it very zealous in the protection of railway shareholders. The Insurance Bill, as our chairman has reminded us, will be a heavy charge indeed upon our resources, but if it emerges from committee so amended as to prove a real boon to our employees, we must not, any of us, grudge the sacrifice we may have to make; and, ladies and gentlemen, as regards ourselves, I have only to assure you that we are on our part shall neither relax our energies nor our exertions to continue the improvement of your property. I beg, ladies and gentlemen, to move:—That the report of the directors, with the statement of accounts, be received and adopted, and that the dividend be paid on the 11th proximo as recommended therein."

The Rt. Hon. Viscount CHILSTON seconded the motion.

Mr. A. MANGE said he understood that the Board of the Managing Committee had decided to transfer the whole of the works carried on at Longhedge to Ashford, which he considered was an unwise policy, because it would mean that in the event of any breakdowns in the Metropolitan area they would have to send from Ashford to effect the repairs. This he could not regard as being economical. He understood from Mr. Benson that the matter had been fully decided upon, and that being so he would like to know the terms upon which this large property was to be handed over or to be leased to the Managing Committee. He would remind them that under the working agreement the South Eastern Company would receive as its proportion 59 per cent. of the freight receipts, and that the Chatham Company would only receive 41 per cent. What he wanted to know was, how the funds of this Company were going to be benefited by this transfer. It was a matter of great satisfaction to the proprietors to know that, since 1901, this Company's proportion of the working profit had increased by some £165,000, and it seemed to him that if the Managing

Committee continued their present economical policy, and continued to cut down unnecessary capital expenditure, the proprietors might look forward to the time when they would get a bite of the plum regarding which their late Chairman, Mr. Forbes, spoke in 1901-2. The report was one which was a matter for congratulation, and he could only hope that the Managing Committee and their chief officers would still pursue the same course, and that when they met next December their circumstances might be even more greatly improved.

Sir ROBERT PERKINS differed from the last speaker as to the wisdom of concentrating their works at Ashford, for he considered that they had abundant facilities in the Metropolitan area for attending to minor repairs. It was evident to every business man that by the transfer they would save in labour, and also in the conditions under which their men would work by concentrating their works at Ashford. He enquired as to whether the new station at Dover was being constructed largely upon the land owned by this company. Regarding Lord Kitchener's appointment as a director, he was sure that the directors were gratified to feel that they had such an illustrious gentleman on the board, and perhaps they were still more gratified to know that he had been appointed by the Government to fill an important position; but he ventured to say that it was Lord Kitchener's duty, not only to himself, but also to the proprietors, that he should not continue on the board, more especially as they knew that he could not devote his personal attention to this company's business. It was not in the interests of the proprietors that they should have a gentleman, no matter how distinguished he might be, as a mere figure-head upon the board, and, therefore, he hoped that Lord Kitchener would feel it to be his duty to vacate the office which he had held for so short a time. (Hear, hear.) Although he must congratulate Mr. Dent upon the improved position of the undertaking, there was still a great deal of room for reform. One was in regard to their real estate, freehold and leasehold. He was certain that they would have an enormous increase of revenue for rentals if the two companies would only adopt the up-to-date methods which had been adopted by the District Railway. In conclusion, he enquired as to what was the original estimate for the rebuilding of the Victoria station, and what was the cost over and above that estimate, and also what revenue were they obtaining by way of rents on that expenditure.

Mr. S. B. GOONWIX remarked that the amount of £9,000 odd which the Managing Committee had spent in bridging and extending the facilities at Folkestone was, in his opinion, capital expenditure, and ought not to have been taken out of revenue. Had that amount been dealt with as capital expenditure there would have been a dividend paid during the past half-year on the second preference stock. Any amount of money could be spent for the benefit of the ordinary shareholders, and in his opinion the figures had been dealt with in a way which was detrimental to the interests of the second preference stockholders.

The CHAIRMAN, in reply, said that the result of the removal of their works from Longhedge to Ashford was to centralise all the larger and important work of construction. It was very rare for railway companies like themselves to have two large working centres going on, but he might say that they had not decided upon the removal until they had gone thoroughly into the whole matter with their experts. The works at Battersea would be continued in future years for the purpose of carrying out minor work. The land on which they were building the new marine station at Dover was the property of the Harbour Board, for which this company paid a nominal rent of £10 a year. As regards Lord Kitchener's appointment, the position was a unique one, but he had always acknowledged that in difficulties of this kind they ought always to consider the great mass of their influential shareholders. He would ask the proprietors to allow the matter to remain as it was, at all events until the next half-yearly meeting, and in the meantime the Board would be able to come to a decision, in consultation with Lord Kitchener himself, in regard to the matter. Proprietors could rest assured, however, that neither Lord Kitchener nor the directors would continue this arrangement unless they found that it met with the general approval of the proprietors. There was no foundation for the statement that Lord Kitchener had resigned his seat on the Board. With regard to Victoria Station, the estimated cost was about £80,000, but that amount had been increased owing to the fact that they had encountered serious difficulties in connection with the foundations. The only increase was in that connection. Regarding Sir Robert's remarks concerning what had been done on the District Railway, and with other owners of property, he wished him to remember that property in South

London had been sold at a very low price, and as extensive as it was, the Directors were using all their efforts to improve the property. One or two instances he could mention from which they were looking forward to deriving a very considerable sum of money, but he was not allowed to mention them as he was sure. Just before he came to the meeting the report of the effect that there was under consideration by the Corporation of London a scheme to greatly improve the dock at H.B. Station. This matter they had been considering for some time. Negotiations were going on between the Corporation and the Corporation of London, and the Corporation of London was of a most satisfactory nature, and when completed, Sir Robert and the proprietors would find that they would get out a scheme which would pay for itself in a very short time. They had also before them proposals of a like nature in regard to H.B. Viaduct. As to the sum which had been spent on bridges and improvements at Folkestone, he did not think that the amount could properly or legally have been charged to capital expenditure. It was true that they had been spending considerable sums out of revenue for maintenance, with the result that the position of their property had never been so strong from a maintenance point of view that it was today, with the result that the second preference holders were in a far stronger position during the current half-year than they otherwise would have been. He could assure all the second preference holders that they would not be forgotten if they had the good fortune to have during the current half-year receipts as good as they had had in the past.

The resolution was then put to the meeting and carried unanimously.

On the motion of Mr. WHITWORTH ST. CROIX, a hearty vote of thanks was given to the chairman and directors for the zeal and ability with which they had administered the affairs of the company, and the CHAIRMAN having briefly acknowledged the compliment, the proceedings terminated.

The accounts for the half-year ended June 30, 1911, were issued a week ago. Our usual analysis is appended:

CAPITAL.	
Total expenditure	£39,155,819
Total receipts (allocated as follows)	30,045,252
Arbitration ordinary stock	411,250,282
Second preference stock	800,532
Arbitration preference stock	6,727,395
Shortlands railway guarantee	280,000
Sheerness rent-charge stock	124,085
Loans	240,140
Debenture stocks	10,122,242
Subscriptions by other companies	410,000
Balance at debit of capital account	£410,507

The capital expenditure during the half-year amounted to £31,229, of which £4,248 was on lines open for traffic, and £26,981 on the South Eastern and Chatham Railway Companies' Managing Committee. Estimated further expenditure—in the current half-year, £35,000; in subsequent half-years, £36,150; total, £71,150. Capital powers and other available assets, £344,046.

REVENUE.		1911.	1910.
Proportion of net revenue of South Eastern and London, Chatham and Dover Railways Managing Committee			
Rents of property	298,828	281,420	
Transfer fees	30,519	30,794	
.. .. .	531	370	
Total receipts	£320,878	£312,584	
The expenditure on revenue account for the same period was as follows:—			
Salaries and office expenses	£4,165	£4,044	
Directors' fees	1,750	1,750	
Auditors' fee	50	50	
Law Charges	17	19	
Total Expenditure	£5,982	£5,863	

The net revenue and the proposed appropriation of balance available for dividend are shown hereunder:—

Balance from previous half-year	£71,007	£30,137
Net earnings	323,896	300,721
Sundry credits	5,409	5,490
Total	£401,299	£336,354

Prior charges	£247,356	£245,675
Dividend on preference stock ..	151,366a	100,910b
Balance to next half-year ..	2,577	4,769

Total £401,299 .. £351,354

a At the rate of 4½ per cent. per annum. b At the rate of 3 per cent. per annum.

The report states:—Since the last general meeting the vacancy on the board caused by the death of Sir Edward Leigh Pemberton has been filled by the election of Field-Marshal Viscount Kitchener, of Broome Park, Canterbury.

SOUTH EASTERN AND CHATHAM RAILWAY.

MAIN LINE CURVES TO BE STRAIGHTENED.

Presiding at the combined meetings of the South-Eastern and Chatham Railways yesterday, Mr. H. Cosmo Bonsor said that shareholders would notice that the increase in the gross receipts was £74,000, and to that result every class of passenger and every department of goods, parcels, mails, and steamboats had contributed. Moreover, when they looked on the expenditure side the satisfactory nature of the report became even more apparent, because they would see, after deducting sums which had been spent on rolling stock, and maintenance of way and dredging at Folkestone, that that increase of £74,000 had been earned without any extra additional expense for operating the traffic. They had benefited during the half year by three different factors, namely, the Coronation festivities, the Crystal Palace show—and in connection with the Crystal Palace he might mention that they and the Brighton Company had received a most gratifying letter written by his Majesty's command, thanking them for the most excellent organisation by which the children were conveyed to and from the Crystal Palace on the occasion of the fête his Majesty gave them—and they had also benefited by the weather, which had been of a somewhat exceptional description through the whole of the year 1911. They would notice by the report that they had been informed of the decision of the Railway Commissioners as to the amount to be paid to them for carrying the marine mail between Dover and Calais. They had been awarded £30,000, as against £23,000, and although they did not regard that as an increase which set off the very large increase that had taken place in the services they rendered to the Post Office since the year 1893, when the Chatham Company had entered into the old contract, still, at any rate, it enabled them to get an increase in the future for carrying those mails. As to the Dover Harbour works, the land reclamation for the construction of the new station was making excellent progress, plans for the building were near completion, and they hoped that next summer would be the last during which the existing unsatisfactory conditions would obtain. Such works could not be carried out without capital, and they would want for the new station not less than £100,000. They were also contemplating the transfer of their works at Battersea to Ashford, which would cost about £80,000, but would effect economies which would more than provide for the interest on the cost. There was also in contemplation the straightening of some of the curves on the line, notably that at Tonbridge, which so materially delayed their through trains, but the whole of that amount they hoped to get without approaching Parliament and possibly without even a public issue of stock.

METROPOLITAN RAILWAY COMPANY.

The half-yearly meeting of the Metropolitan Railway Company was held at the Great Eastern Hotel on Wednesday last, and the attendance was small. The Chairman, Lord Aberconway, presided, and in the course of his remarks in moving the adoption of the report (of which an abstract was given in our last issue), said that the passenger traffic on their line, apart from the joint lines in which they were interested, showed an increase of £5,610, that from parcels an increase of £1,264, and from merchandise and minerals of £2,135. The loss on the Hammersmith and City line was about £2,343 less than in the corresponding period, and £5,000 were to be charged to the electrical renewal and depreciation fund, as against £10,000 in the corresponding period of last year. The proportion of the profit on the working of the Metropolitan and Great Central joint line north of Harrow showed an increase of £2,342. The residential district served by the line in question was rapidly developing, and there were signs, both on that line and on the Uxbridge extension, that a very considerable expansion of building operations would probably take place in the near future. Some new compartment stock trains had been

put into service for the purpose of through running to the City. Those trains being exceedingly comfortable had been very greatly appreciated. The percentage of expenditure to gross receipts during the half-year was 48.83, as compared with 49.56 in the corresponding half-year of 1910, and the percentage of expenditure to traffic receipts alone was 53.9, as against 54.9. During the six months that had passed they had had some extra traffic induced by the Coronation festivities, on the other hand a number of circumstances had militated against the increase in the passenger business. The exhibition at Shepherd's Bush, for instance, was attracting fewer visitors than last year, owing to the many counter attractions. The number of passengers carried during the half-year had been more by 562,420, the percentage of increase in the first class being from 7.18 to 7.19, and in third class from 90.05 to 90.59. The average fare per passenger had been 1.48d., as against 1.47d. The season-ticket traffic showed a very satisfactory increase. The work undertaken by the Westinghouse Company for the replacement of the generating plant at Neasden was proceeding satisfactorily. The first of the new machines had been running now for some time, and there was every reason to expect that at the official trial it would come up to the contract requirements. The chairman stated with regard to rolling stock, that they were having a centre door fixed in the electric cars in order to facilitate the ingress and egress of passengers, and so reduce the stopping time at stations. Lord Aberconway stated that he would take the small attendance as clear evidence that the shareholders were quite satisfied with the material progress of the company, as shown in the report. The affairs of the company were in a thoroughly sound and healthy condition, and as a proof of this he would point out that, whereas three years ago the profit available for distribution among ordinary shareholders was £18,000, to-day it amounted to £61,424. They had been fortunate, he added, in another direction also, and that was in connection with the local rates in the quinquennial valuation; here they had effected a reduction of £26,850 in rateable value, which would represent a saving of £10,000 per annum. The other figures quoted by the chairman have all been given in the report; this was adopted. In reply to a stock holder, Lord Aberconway remarked that he had thought for some time that the directorate was too limited in number for the work expected from them, and he certainly considered that the matter might very well be brought forward at the next meeting.

THE CITY AND SOUTH LONDON RAILWAY.

The fifty-fourth ordinary general meeting of the City and South London Railway Company was held on Tuesday last at the offices, 71, Finsbury Pavement. The Right Honourable C. B. Stuart Wortley, K.C., M.P., the chairman, presided. The report, of which an abstract was given in our issue of July 15, constituted a record half-year and the chairman, in moving its adoption, mentioned this fact, and that the company had carried more passengers than ever and more passengers per train. The chief fact that emerged from the accounts they were presenting was that, taking the great increase in gross receipts, less the small increase in expenses, and bringing into account the increased sum brought forward on December 31, 1910, as against 1909, and the diminished sum required for general interest, they had for distribution in dividends a sum increased by no less than £5,663. This would have enabled them, had they chosen to divide up to the hilt, to pay a dividend at the rate not merely of 1½ per cent. but even at the rate of 2 per cent., and still carry forward more by £113 than they did a year ago. Now, this £5,663 included an increase in gross receipts within the half-year of £5,040. Of this £5,040 a large proportion was attributable to a genuine increase of their ordinary passenger traffic, of the kind that railway managers and shareholders always regarded as the soundest and best indication of prosperity. As evidence of the growth of ordinary traffic he might point out that at the end of the last week before the Coronation they had recorded an increased passenger traffic of no less than £2,363. The two weeks which comprised the Coronation and all the sights and ceremonies that went before and after it brought them increases in traffics amounting to £1,400. They made, moreover, about £600 by letting spaces for the erection of stands for spectators of the Royal Procession. These two non-recurring items of profit just about corresponded in amount with the £1,850 that it would have cost to give the shareholders the dividend for the half-year of 2 per cent. The net substance, therefore, of their recommendations was that in the form partly of a large increase on the large carry-over of June, 1910, and partly in the form

of the £800 which they put aside for what they had called "general purposes," they proposed to keep in hand, for such purposes as the directors might hereafter determine, so much of their increased receipts as were undoubtedly to be attributed to special and exceptional causes. The directors had followed on the occasion of the Coronation the policy that they adopted in 1902 of marking the day by the concession of a day's holiday, or in lieu thereof a day's extra pay to all ranks and classes of the staff. All ranks worked with such goodwill together that the whole of this extraordinary number of sightseers were brought in and carried back on each of the three days without a single mishap or delay of any kind whatsoever. The new high level subway at the Bank station, connecting this company's station with those of the Central London and the Waterloo and City lines, had now been open for nearly three months. It afforded safe and convenient access between their own Bank station and those of the Central London and the Waterloo and City Companies. As to their having placed the remainder of their 1903 preference stock, the board felt sure that the shareholders would approve of the step. They might have to pay a fractionally higher rate of interest for the money thus realised, but to have got rid of the large corresponding debt to the bank, always demandable at short notice, meant assuredly a substantial and highly desirable improvement in their financial position. When he last addressed the shareholders he intimated that the speed of their trains was a matter which the pressure of competition was forcing upon their attention. The board were advised that, without incurring such expense as would involve an application to Parliament, it might be possible so to improve their existing locomotives as to reduce by five or six minutes the time taken in each journey from one end of their system to the other. They had sanctioned the expenditure needful for a practical experiment in this direction, and before many weeks had passed they would have realised, they hoped, some useful knowledge as to what more such improvements to their locomotives were practicable, safe and likely to improve their means of contending with their municipal competitors, who disregarded the speed limit and had the inexhaustible purse of the ratepayers to draw upon. The motion was seconded by Mr. C. S. Grenfell and adopted.

EAST LONDON RAILWAY.

The ninety-third half-yearly meeting was held on Tuesday, in Cannon Street Hotel, London; Lord Claud Hamilton, M.P., presiding.

The CHAIRMAN, in moving the adoption of the report and accounts (a summary of which appeared in last Saturday's RAILWAY TIMES), said that the principal point on which he had to speak was the question of the electrification of the railway. The company was, unfortunately, not on terms of perfect equality with the six lessee companies, and it was therefore most desirable that they should endeavour, by negotiations of a friendly character, and by persuasion, to get those six companies in line, and get them to take the same view of the question of the electrification of the East London as that which was held by the proprietors of that company. This was not an easy matter to do; but he thought they had at last succeeded in surmounting that very difficult task; for only on Monday the joint committee representing the six leasing companies passed a resolution which practically ensured the immediate electrification of the line. A close and searching consideration of the whole position had taken place, and it was agreed it was necessary that the line should be electrified. Then the question arose as to how the money for the purpose was to be obtained. The engineers estimated, even allowing for contingencies, that the cost would not exceed £65,000, and as it was considered undesirable that any attempt should be made to raise so small a sum outside, the committee were advised that one of the lessee companies should incorporate clauses in their next Bill in Parliament for the purpose of raising the money and ensuring due payment of interest. He was sorry to find that it was necessary that the Great Eastern Railway would have to have a Bill in the ensuing session of Parliament, and therefore he offered, on behalf of that company, subject to the approval of his colleagues, to have inserted clauses in that Bill, with a view to carrying out the proposals. He must, however, say that two of the lessee companies were not at all anxious, if left to themselves, for the electrification; but they were willing, having regard to the common interests of the four other companies, to agree to the proposal. It was believed that the extra working expenses incidental to the electrification of the line would amount to £3,000 a year, and the lessee companies had stated their willingness to bear this cost. The interest on £65,000 at 4 per cent. would amount to something like £2,600 a year, and the lessee companies had

suggested that the East London Railway Company should bear that cost, and that it should be a first charge upon the minimum rent of £30,000 a year. He (the chairman) said that this would not be practicable, as the £30,000 merely secured the interest on the "A" debentures, and a small fraction of interest on the "B" debentures. The directors of the lessee companies saw the force of this argument, and it was suggested that the East London Company should not be asked to pay that amount until it had received not only the £30,000 a year, but also the extra sum to which it was entitled until the gross receipts exceeded £53,000 a year. He thought that the question of electrification with a very considerable increase in traffic under a system of electrification would be an increase in a manner far in excess of their expectations. As they were not on terms of equality with the lessee companies, they were bound to agree to some kind of compromise if they wished to see their desire carried out, and he thought that the proposals agreed upon were fair. A special meeting of the shareholders of the East London line would be needful for the final settlement of details. The present proposal was that the Joint Managing Committee should purchase the necessary plant and installation, and that the work should be undertaken by the maintaining company, the South Eastern Railway. There would need to be a sub-station for power, for which tenders would be invited. The current necessary for the working of the electric train service would be supplied by the District Railway Company from its Lot's Road station, and the Metropolitan Railway Company considered that they could supply the necessary rolling stock, which would do away with any possible expense in connection with the providing of special stock for the East London Company. With regard to the traffic, it was probable that there would be four through Metropolitan trains per hour each way to New Cross, and eight local trains each way per hour between Shoreditch and the New Cross station, these being alternate with the South Eastern and Chatham and the London, Brighton and South Coast. He did not consider there would be any unnecessary delay in the carrying out of the work, considering that the temper of all the lessee companies was excellent. They had all endeavoured to meet him in a handsome manner, and he was sure that if any difficulty arose it would be easily surmounted.

Mr. W. MILLWOOD seconded the motion, and it was agreed to.

A special vote of thanks was awarded to the Chairman for the services he had rendered.

MERSEY RAILWAY.

CAPITAL.

The total expenditure to June 30, 1911, has been £3,604,568, while the receipts were £3,000,100—viz.: Ordinary stock, £1,412,263; 3 per cent. perpetual preference stock, £640,107; debenture stocks, £1,528,342; receipts from sale of steam rolling stock and motor buses, £19,397; leaving a credit balance of £4,541. The capital expenditure for the last half-year was £5,297, of which £5,000 was on lines open for traffic, etc., and £297 was on electric traction installation and working stock. Capital powers and other available assets, £1,823,179.

REVENUE.

The revenue account for the half-year ended June 30, 1911, shows gross receipts amounting to £55,797, compared with £54,653 during the first half of 1910, while the working expenses were £29,225 (against £32,190), leaving a net revenue of £26,572 (against £22,457). After adding general interest £105, dividends on £15,342 India 3½ per cent. 1931 stock (less income tax) £253, and deducting rent of land, etc., £2,126; Rock Ferry Extension, £2,355; general renewal fund, £1,000; and interest on Mersey Railway new first perpetual debenture stock, £13,388; there is a balance of £8,001 carried forward, to be applied towards payment of interest on the debenture stocks. The debit balance of £5,000 brought from last December account has been transferred to capital account.

TRAFFIC, ETC.

The number of passengers carried during the half-year ended June 30, 1911, was 6,027,753, as against 5,948,152 for the corresponding period of 1910, and the train mileage run was 326,063 miles (against 330,307 miles); length of line, 4½ miles in each half-year.

The report states:—Exclusive of the charges for pumping, ventilation and lifts, the working expenses were £29,426, equal to 47.36 per cent., as against £28,916, equal to 52.01 per cent. for the corresponding six months. These charges for pumping, ventilation, and hydraulic lifts for the past half-year amounted to £2,790, equal to 5.01 per cent., as compared with £3,280, or at the rate of 6 per cent. a year ago.

LONDON AND SOUTH WESTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Thursday. Our usual analysis is appended:—

CAPITAL.

Total expenditure	£52,206,651
Total receipts (allocated as follows)	51,225,350
Ordinary stock	*£14,419,353
Preference and guaranteed stocks	18,818,200
Debenture stock	14,039,087
Premiums	3,048,710

Balance to debit of capital account £981,301

* Under the powers of conversion authorised by the South Western Railway (Stock Conversion) Act, 1890, section 2, sub-section 13, this amount of £14,419,353 is now represented by:—Original ordinary stock, £7,194,323; preferred converted ordinary stock, £7,225,030; deferred converted ordinary stock, £7,225,030.

The expenditure for the half-year amounted to £321,367, of which £56,300 was on lines open for traffic, £99,437 on lines in course of construction, £22,010 on working stock, £146,773 on Southampton Docks, and £369 on subscriptions to other railways and contributions to joint lines, less a credit of £3,612 on steamboats. Estimated further expenditure—In the current half-year, £375,000; in subsequent half-years, £959,000; total, £1,334,000. Capital powers and other available assets, £2,034,307.

REVENUE.

The account for the half-year ended June 30 shows the receipts under this head to have been as follows:—

	1911.	1910.
Passengers—First-class	£143,289	£126,214
“ Second-class	147,782	148,905
“ Third-class	903,257	883,082
“ Season tickets	150,487	147,870
Parcels, horses, carriages, etc.	259,337	256,005
Mails	27,666	27,605
Merchandise (less cartage)	517,212	508,117
Live Stock	22,133	21,932
Minerals	242,314	233,328
Waterloo & City Railway receipts	15,030	15,002
Rents of houses, lands, etc.	55,470	55,157
Transfer fees	770	004
Steamboats	88,325	94,270
Dock receipts	152,280	151,321

Total receipts £2,725,970 .. £2,609,838

The expenditure on revenue account for the same period was as follows:—

	1911.	1910.
Maintenance of way, etc.	£303,356	£281,692
Locomotive power	404,705	449,249
Carriage and wagon repairs	120,199	117,239
Traffic expenses	439,589	438,030
General charges	70,172	68,224
Law charges	2,941	4,191
Parliamentary expenses	3,630	445
Compensation—Passengers	164	3,086
“ Goods	6,887	6,290
Rates and taxes	131,125	135,878
Government duty	18,012	17,113
Mileage and demurrage	4,951	3,655
Tolls and joint line expenses	9,307	8,142
Waterloo & City Railway expenses	7,847	7,049
Steamboats	102,944	106,558
“ Renewal & insurance fund	11,865	11,288
Dock expenses	100,339	101,610

Total expenditure £1,798,152 .. £1,760,345

The net revenue and the proposed appropriation of the available balance may be summarised as follows:—

	1911.	1910.
Balance from last half-year	£35,142	£32,852
Net earnings	927,818	909,493
Sundry credits	7,811	7,537
Total	£970,771	£949,882
Prior charges	£268,122	£273,915
Transferred to reserve	10,000	10,000
Reserved for steamboat renewals	10,000	—
Preference dividends	358,975	350,051
Dividend on original ord. stock	*143,886	*147,653
“ pref. conv. ord. stock	*144,501	*130,254
Balance to next half-year	35,587	32,009
Total	£970,771	£949,882

* At the rate of 4 per cent. per annum.

The gross receipts for the past half-year show an increase of £56,132, the expenses an increase of £37,807, and the net receipts an increase of £18,325. The ratio of expenses to gross receipts is 65.96 per cent., in comparison with 65.93 per cent.

TRAFFIC, ETC.

Half-year ended June 30.		1911.	1910.
Passengers—First-class	1,050,939 ..	991,068	
“ Second-class	1,298,065 ..	1,339,457	
“ Third-class	30,573,683 ..	29,705,356	
“ Total	£32,928,687 ..	£32,035,881	
Season tickets	59,452 ..	57,918	
Goods and minerals (tons) ..	3,476,859 ..	3,363,934	
Live stock (number)	404,892 ..	399,281	
Mileage Lines owned	858 $\frac{3}{4}$..	858 $\frac{1}{2}$	
“ Partly owned	23 $\frac{1}{2}$..	23 $\frac{1}{2}$	
“ Leased or rented	97 $\frac{1}{4}$..	97 $\frac{1}{2}$	
“ Foreign lines worked over ..	43 $\frac{1}{4}$..	43 $\frac{1}{4}$	
“ Total operated	£1,022 $\frac{3}{4}$..	£1,022 $\frac{3}{4}$	
Train mileage—Passenger	7,361,351 ..	7,340,834	
“ Goods	2,151,674 ..	2,153,435	
“ Rail motors	184,344 ..	214,287	
“ Waterloo and City Ry. electric trains ..	94,593 ..	93,957	
“ Total	£9,791,962 ..	£9,808,513	

The reports states:—“The Southampton Docks receipts have increased by £1,086 and the expenses have decreased by £1,285. Owing to a partial failure of the early potato crop in the Channel Islands and to a decline in the vegetable produce exported from France, the receipts from steamers have decreased by £5,952, while there has been a saving of £2,988 in expenses. Various engineering works have been carried out during the past half-year. The doubling of the line between St. Denys (Southampton) and Fareham has been completed, and good progress has been made with the widening of the railway between Studland Road (Hammer-smith) and Turnham Green. The rebuilding of Waterloo Station has now reached the old main line, and a portion of the main line traffic has already been transferred to the new South station where a commodious booking-hall, luggage-hall and cloak room have been provided. The construction of the 16-acre open dock at Southampton is so far advanced that the dock was able to be used last month by the new White Star liner “Olympic” of 45,000 tons, which left Southampton on June 14 on her first voyage to New York. The enlargement of the Trafalgar Dry Dock to accommodate this steamer and her sister ship the “Titanic,” now being built at Belfast, is well in hand. The company’s Bill has passed through both Houses of Parliament and awaits Royal Assent. The Bills and Provisional Orders promoted by other parties have had due attention and protection has been obtained in several instances.”

ALEXANDRA (NEWPORT AND SOUTH WALES) DOCKS AND RAILWAY.

The accounts for the half-year ended June 30, 1911, showed a gross revenue of £155,200 (against £135,080), an expenditure of £86,064 (against £78,717), and a profit of £69,226. This, together with £5,996 balance from last half-year, brought the total amount at the credit of the net revenue account to £75,222. This was disposed of as follows:—Rent charges, £6,489; interest, £5,210; interest on debenture stock, £10,230; dividend on the A and B preference stock at the rate of 4 $\frac{1}{2}$ per cent. per annum, £32,756; balance carried forward, £20,531. The length of railway owned was 9 $\frac{1}{2}$ miles, and foreign lines worked over 13 $\frac{1}{2}$ miles. The number of train miles run was 307,943 (against 276,043). The capital account showed a total expenditure of £3,216,802 whilst the receipts had been £2,855,446, as follows:—Consolidated first preference A stock, £557,720; consolidated second preference B stock, £621,618; consolidated ordinary stock, £1,155,851; 4 per cent. debenture stock, £520,257. It will be seen that the gross receipts were £20,210 more than those for the same period of 1910. The working expenses amounted to £86,064, or 55.42 per cent. of the gross receipts, against 58.27 per cent. in the corresponding period of 1910. The balance of the net revenue account is £53,288. This enables the directors to recommend the payment of the full dividends, for the six months to June 30, 1911, at the rate of 4 $\frac{1}{2}$ per cent. per annum on consolidated stock A first preference, and of 4 $\frac{1}{2}$ per cent. per annum on consolidated stock B second preference, absorbing £32,757, and leaving a balance of £20,531 to be carried forward to the end of the year. The capital expenditure on works in progress and at present unproductive amounts to £580,125.

LONDON, TILBURY AND SOUTHEND RAILWAY.

† The accounts for the half-year ended June 30, 1911, were issued on Thursday. Our usual analysis is given below:—

CAPITAL.

Total expenditure	£5,800,313
Total receipts (allocated as follows)	5,679,704
Ordinary stock	£2,111,840
Preference stocks	1,804,100
Debenture stocks	1,230,000
Premiums	523,824

Balance at debit of capital account £124,555

Estimated further expenditure—In the current half-year £110,000; in subsequent half-years, £51,000; total, £167,000. Capital powers and other available assets, £20,055.

The capital expenditure for the past half-year amounted to £30,649, of which £31,020 was on lines open for traffic, and £8,623 was on working stock.

REVENUE.

The receipts and expenditure on revenue account for the half-year ended June 30 were as follows:—

	1911.	1910.
Passengers, parcels, horses, mails, etc.	£228,244	£212,198
Goods, minerals, and cattle	72,285	66,072
Sundries	12,432	11,711

Total receipts £312,961

Total expenditure 207,150

Net receipts £105,805

The net revenue and the proposed appropriation of balance available for dividend may be summarised as follows:—

Balance from last half-year	£3,900	£4,013
Net earnings	105,805	102,398
Whitechapel and Bow Railway	2,953	2,209
Bankers' and general interest	757	1,203
Tottenham and Forest Gate Railway		93

Total £113,415

Prior charges £20,087

Preference dividends 30,082

Ordinary dividend *42,237

Balance to next half-year 5,490

Total £113,415

*At the rate of 4 per cent. per annum.

The gross receipts for the past half-year show an increase of £22,380, the expenditure an increase of £18,973, and the net receipts an increase of £3,407. The ratio of expenses to receipts is 66.19 per cent., as against 64.70 per cent.

TRAFFIC, ETC.

	1911.	1910.
Half-year ended June 30.		
Passengers carried (total number)	16,285,715	15,107,852
Season-tickets	25,150	22,738
Mileage—Lines owned	79½	79½
„ Lines partly owned	8	8
„ Foreign lines worked over	8½	8½
Total operated	96	96
Train mileage*—Passenger (steam)	880,615	815,409
„ Do. (electric)	234,969	218,653
„ Goods	153,642	149,314

Total 1,278,226

*Including mileage run by trains of other companies.

The Bill introduced into Parliament, which was approved by the proprietors on February 2 last, has passed through the House of Lords without material alteration, and now awaits consideration by the Committee on Unopposed Bills in the House of Commons. The Greater London Railway Bill, under which powers were sought to make a railway from the London and South Western Railway at Feltham, passing through outer London and connecting with the principal railways *en route*, and terminating at the Victoria and Albert and the Tilbury Docks respectively, was, after a prolonged investigation, passed in a modified form by a Select Committee of the House of Commons. The sections from Feltham to Northolt and from Ilford to Tilbury were rejected, and various conditions as regards construction and finance were imposed by the Committee. The Bill has been introduced into the House of Lords and is awaiting consideration by a Select Committee. At a special general meeting of the proprietors, held on June 26, a resolution was passed approving the terms provisionally arranged with the Midland Railway Company for the sale to that company of the undertaking of the London, Tilbury and Southend Railway as a going concern.

RHYMNEY RAILWAY.

Our analysis of the half-yearly accounts for June 30, 1911, is appended.

CAPITAL.

Total expenditure	£2,514,820
Total receipts (allocated as follows)	2,264,116
Ordinary stock	£801,145
Preference stock	621,000
Debenture stock	47,000
Premiums, etc.	185,971

Balance to debit of capital account £250,704

The capital expenditure during the half-year was £13,494, of which £10,324 was on lines open for traffic, and £3,080 on working stock. Estimated further expenditure in the current half-year, £25,000; in subsequent half-years, not stated. Capital powers and other available assets, £45,757.

REVENUE.

The revenue account shows receipts and expenditure as follows:—

	1911.	1910.
Passengers, parcels, etc.	£12,220	£38,224
Merchandise and live stock	14,970	15,009
Minerals	133,313	129,273
Mileage and demurrage	95	113
Miscellaneous	700	970

Total receipts £191,382

Total expenses 121,713

Net receipts £69,669

Balance from last half-year 7,283

Total £76,952

Prior charges £14,215

Preference dividends 10,802

Ordinary dividends *30,000

Balance to next half-year 9,875

Total £76,952

At the rate of 8 per cent. per annum. † At the rate of 9½ per cent. per annum.

The gross receipts for the past half-year show an increase of £7,733, the expenditure a decrease of £351, and the net receipts an increase of £8,087. The ratio of expenses to receipts is 63.60 per cent., as against 66.46 per cent.

TRAFFIC, ETC.

	1911.	1910.
Half-year ended June 30.		
Passengers carried (total number)	1,794,395	1,645,778
Mileage—Lines owned	30½	30½

*Exclusive of shunting.

On the termination of the business of the half-yearly meeting an extraordinary meeting will be held, to which resolutions will be submitted for the creation and issue of £210,000 of new stock.

British Empire Trust Co.—At the tenth ordinary general meeting, held in Liverpool Street Hotel, London, on Monday, Mr. F. Blundell-Brown, who presided, said that the company had again experienced a very satisfactory year's business, and the prospects for the future appeared as good as if not better than heretofore. They had earned during the year approximately 14 per cent. on the capital. The dividend could have been increased as far as the earnings were concerned, but the directors had always aimed at putting the company in a strong and unassailable position. With a reserve fund of £100,000 they thought they might fairly claim to have achieved this, and they anticipated that it would be possible to increase the dividends during the current year. The sums for which the company was acting as trustee had increased during the year from £25,643,178 to £33,663,002. In Canada all development records were being broken. The Canadian Northern Railway continued to expand, and the extensions into the rich prairie provinces, with Vancouver on the Pacific coast as the ultimate goal, were doing much to open up the country and add greatly to the value of all the Canadian Northern Railway securities. All the undertakings with which the British Empire Trust Company was associated were making satisfactory progress, and the directors viewed with confidence and satisfaction the outlook for the coming year. The report was unanimously adopted.

GREAT CENTRAL RAILWAY.

The half-yearly accounts to June 30, 1911, were issued last night. Our usual analysis is appended:—

CAPITAL.		
Total expenditure	£53,687,311	
Total receipts (allocated as follow)	52,774,937	
Preferred ordinary stock	£5,318,490	
Deferred ordinary stock	5,339,530	
Preference and guaranteed stocks	20,567,489	
Debenture stock	11,740,918	
Second debenture stock	9,758,060	
Deane and Dove share capital	44,450	
Balance to debit of capital account	£2,912,374	
Estimated further expenditure—in the current half-year		
£207,000; in subsequent half-years, £500,000; total, £707,000.		
Capital powers and other available assets, £4,910,641.		
The capital expenditure for the past half-year was £189,533, viz., £77,897 on lines open for traffic, £57,119 on working stock, £20,360 on subscriptions to other railways, and £34,157 on docks, steamboats, etc.		

REVENUE.

The receipts for the half-year were as follows:—

	1911.	1910.
Passengers—First-class	£20,384	£20,779
" Third-class	339,868	327,658
" Season-tickets	35,898	34,121
Parcels, horses, carriages, etc.	164,954	160,707
Mails	3,302	3,300
Merchandise (less collection and delivery)	772,917	725,968
Live stock	12,216	11,579
Minerals	734,741	696,454
Grimsby Dock dues and wharfage	37,090	36,650
Canal receipts	5,044	5,032
Mileage and demurrage	6,600	6,035
Rents receivable	60,178	60,017
Transfer fees	965	650
Sundry receipts	4,530	4,526
Steamship receipts	57,443	60,946
Total receipts	£2,256,130	£2,154,502

The expenditure on revenue account for the same period was as follows:—

	1911.	1910.
Maintenance of ways and stations	£182,713	£178,380
Locomotive power	456,956	421,732
Carriage and wagon repairs	130,005	120,444
Traffic expenses	444,681	431,043
General charges	54,776	53,413
Law charges	5,074	4,204
Parliamentary charges	862	476
Compensation—Passengers	6,135	6,427
" Goods	11,215	8,847
Rates and taxes	65,306	63,981
Government duty	1,758	1,777
Rents payable	25,069	25,174
Ferry-boat expenses	6,041	5,071
Maintenance of Grimsby Docks	17,320	17,446
Canal expenses	9,855	9,879
Steamship expenses	56,963	58,223
Total expenditure	£1,474,729	£1,407,417

The net revenue and the proposed appropriation of balance available for dividend may be summarised as follows:—

Balance from last half-year	£8,538	£7,577
Net earnings	781,401	747,084
Profit from joint lines and lines worked	141,327	123,009
Total	£931,266	£877,670
Prior charges	£538,624	£533,618
Preference dividends	*357,438	†327,438
Balance to next half-year	35,204	16,614

Total £931,266 .. £877,670

† Up to and including the 4 per cent. preference stock 1889.

† Up to and including the 5 per cent. convertible preference stock of 1881.

The gross receipts show an increase for the past half-year of £101,628, the expenditure an increase of £67,312 and the net receipts an increase of £34,316. The ratio of expenses to receipts is 65.37 per cent., as against 65.32 per cent.

TRAFFIC, ETC.

Total	790,165	839,172
-------------	---------	---------

* Exclusive of piloting, shunting, and assistant engine mileage.

The report states that the revenue receipts have been seriously affected by the continued strikes of the miners employed at various collieries in the district.

BELFAST AND COUNTY DOWN RAILWAY.

The accounts for the half-year ending June 30, 1911, show a gross revenue of £75,116 (as against £71,419), and a gross expenditure of £46,911 (as against £42,933). The expenditure in the last half-year includes £1,000 placed to credit of a rolling stock renewal account. The net revenue (including £6,460, balance from previous account, and £488 sundries), amounts to £35,153. Of this, prior charges will absorb £8,208, preference dividends £10,870, dividend on ordinary shares at the rate of 6 per cent. per annum, £12,686; balance carried forward, £3,389. Length of railway, 80 miles. The capital account shows a total expenditure of £1,529,241, whilst the receipts have been £1,460,701, as follows:—Ordinary stock, £422,860; preference 5 per cent. stock, £248,141; preference 4½ per cent. A stock, £50,000; preference 4 per cent. stock, £233,330; 3 per cent. baronial guaranteed shares,

£17,000; debenture stocks, £358,000; Treasury grant (Downpatrick, Killough and Ardglass Railway), £30,000; premiums, £100,704. The balance sheet shows that the reserve fund now amounts to £35,302; steamboat depreciation fund, £14,500; hotel renewal account, £7,417; ways and works renewal account, £11,500, and the rolling stock renewal account £1,000.

The report states:—"The reconstruction of the Belfast terminus is being proceeded with, the additional platform, the alterations to the existing platforms, and the permanent way connections being almost completed. The additional offices in the north wing are approaching completion, and the contractors have the new station roof in hand, the erection of which will be commenced in the autumn."

GREAT NORTHERN AND CITY RAILWAY.

The capital expenditure to June 30, 1911, was £2,315,158, while the receipts were £2,114,210, viz.:—Preferred ordinary shares, £780,000; deferred ordinary shares, £780,000; debenture stock, £504,210; contributions from Great Northern Railway, £50,000, leaving a debit balance of £200,942. The expenditure during the half-year amounted to £3,876, all of which was on lines open for traffic. The gross revenue for the six months ended June 30, 1911, was £41,845 against £30,993, while the working expenses were £20,158 (against £19,879), leaving a profit on working of £21,687 (against £19,784). The net revenue of £21,687 is insufficient to meet the fixed charges of the company, but the sum of £1,111, which has been provided from outside sources, has enabled the company to meet these charges. The length of line was $3\frac{1}{2}$ miles (against 3). The train mileage was 360,764 (against 343,006), and the number of car miles run 964,567 (against 909,790).

The report states:—"The number of passengers for the six months under review, including season ticket holders, was 6,323,045, as against 5,906,114 for the corresponding period last year. The number of local season tickets issued during the half-year was 2,524, as against 2,539 for the half-year ending June 30, 1910. The number of three-route season ticket holders using the company's line during the past half-year was 3,166, as against 2,728 for the corresponding half-year."

CENTRAL LONDON RAILWAY.

The accounts to June 30, 1911, show a gross revenue of £150,109 (against £158,339), and an expenditure of £84,208 (against £87,028), leaving a profit of £65,901 (against £70,711). Adding balance brought forward (£33,045) and general interest (£1,224), the total net revenue is £100,770 (against £105,197), and after deducting interest on debenture stock, £18,520; discount allowed on prepayments of $4\frac{1}{2}$ per cent. preference stock, £959; rearrangement of booking hall at Oxford Circus station, £237; reconstruction of station platforms, £700; replacement of excitation plant in power-house, £60; and compensation to retired officers, £3,317; there remains a balance of £76,878. Interest on $4\frac{1}{2}$ per cent. preference stock will absorb £1,222, dividend on undivided ordinary stock at the rate of 3 per cent. per annum (against 3 per cent.) £27,351, and on the preferred stock at the rate of 4 per cent. per annum £11,760, leaving a balance of £36,539, of which it is proposed to carry £5,883 to dividend suspense on account of deferred stock. Length of line worked, 6 miles 72.7 chains; train miles run, 860,877; number of passengers carried (including 2,285,200 workmen), 20,006,287 (against 20,664,806); ratio of expenses to receipts, 56.09 per cent. (against 55.34 per cent.). The capital account shows an expenditure of £51,463 during the half-year, making the total to date £4,132,944, while the receipts have been £4,250,904 viz., ordinary stock, £1,823,420; preferred stock, £588,200; deferred stock, £588,200; $4\frac{1}{2}$ per cent. preference stock (1902 and 1900), £303,588; debenture stock (4 per cent.), £926,000; premiums, etc., £30,316.

The report states:—"The decrease of 658,609 in the number of passengers carried during the half-year is attributable to the very large increase in motor omnibus competition along the entire line of route, and to the weather conditions, which have been extremely favourable to omnibus traffic, and also to the fact that the attendance at the Exhibition at Wood Lane—up to this time—has not been as great as in former years. Against this decrease in passenger traffic, it is satisfactory to record that a material saving has been effected in the working expenses. The high level subway at the Bank, connecting this railway with the City and South London line, was opened by the Lord Mayor on May 3 last, and has proved a great convenience to the public. The construction of the Liverpool Street Extension is progressing as rapidly as possible, and arrangements have been made with the contractors whereby the work will be expedited six months. The company's Bill,

under which through running to the Ealing Broadway station of the Great Western Railway will be secured, has passed through both Houses of Parliament and now awaits the Royal Assent. The Ozonair system of ventilation is being installed over the whole line, and will be completed during the course of the next few weeks. By this system some 80 million cubic feet of ozonised air will be pumped daily into the tunnels, which will thus render the atmosphere considerably pure. Season tickets were introduced on July 1, 1911, and are proving popular, and the carriage of parcels has also become a marked feature in the daily work of the company. Sir H. C. O'Leary, feeling the burden of increasing years, has declined re-election, but the company will still have the advantage of his advice and assistance as a member of the board. Mr. H. L. Parrish has been elected a director, and appointed chairman of the board. He has been associated with the railway as consulting engineer—from the beginning, and is acquainted with all the details, both from an engineering and commercial point of view, and, on account of the large number of engineering matters which have to be attended to in the operation of the railway, the directors consider his appointment to be of great importance. Changes have been made in the organisation, which will not only render the working arrangements more effective, but at the same time result in great economies in the working of the railway."

Cavan and Leitrim Railway.—The half-yearly report states that the receipts from all sources show a gross revenue of £6,488, an increase of £328. The working expenses have been £6,402, an increase of £735. The increase is principally due to the re-sleeping of the permanent way, and also to heavy repairs to the carriage and wagon stock.

CENTRAL LONDON RAILWAY AND LAND TAXES.

On Monday last the Court of Appeal gave judgment in the case of the Central London Railway Company v. the City of London Land Tax Commissioners. The question raised by the appeal, which was brought by the railway company, from a decision by Mr. Justice Swinfen Eady in the Chancery Division, was the liability of the company for land-tax, first, where their line lay under highways and the tax had been redeemed on lands abutting upon those highways; and, secondly, where it lay under any land the surface of which had been exonerated from the tax by redemption. The company contended that where the land tax had been redeemed in respect of lands abutting upon a highway, the exoneration extended to the middle line of the highway, and that so much of the railway as was constructed below the surface of lands so exonerated was not liable for tax *à contro usque ad cælum*. Defendants disputed the allegation that the boundary of the lands exonerated extended to the middle line of the highway; and they also contended that even if the tax had been redeemed in respect of the lands beneath which the railway had been constructed, yet that the railway and works were a new hereditament, and as no redemption of land tax had been effected in respect of such hereditament, the company were liable to pay land tax in respect thereof. Mr. Justice Swinfen Eady held that the plaintiffs were not liable to pay land tax in respect of so much of their railway and works as was situated under the lands which had been exonerated from the land tax before the construction of the railway; but that they were liable to pay the land tax in respect of so much of their railway and works as was situated under any lands not so exonerated, and that where the land tax had been redeemed in respect of lands or houses abutting on the public street or highway the exoneration did not extend to the middle line of the street or highway.

The Master of the Rolls now said that the question raised in the case was both a novel and important one. Appellants appealed from so much of the judgment of Mr. Justice Swinfen Eady as decided that the company were liable to pay the land tax in respect of so much of their railway and works as was situated under any lands not exonerated, and that where the land tax had been redeemed in respect of lands or houses abutting on the public street or highway the exoneration did not extend to the middle line of the street or highway. His lordship went through the decided cases upon the point, and on these held that Mr. Justice Swinfen Eady was wrong in deciding that the company were liable to pay the tax in such circumstances, and that the appeal should be allowed, with costs.

Lord Justice Farwell took the view that the decision of Mr. Justice Eady was right.

Lord Justice Kennedy agreed with the judgment of the Master of the Rolls, and by a majority of the court, therefore, the appeal was allowed, with costs.

PARLIAMENTARY.

QUESTIONS IN THE HOUSE OF COMMONS.

Hours of Guards on L.B. and S.C. Railway.

On Monday, Mr. James Thomas (Derby—Labour) asked the President of the Board of Trade whether his attention had been called to the fatal accident at New Wandsworth, London, Brighton, and South Coast Railway, wherein a guard, named H. Stratton, was killed, and also to the fact that at the inquest which was held it was stated that the deceased had been working about 15 hours, this being a general practice by this grade of men to work excessive hours and short periods alternately; and, having regard to the rider of the jury in this case in which they drew public attention to the excessive hours worked, what action he proposed to take?

Mr. Buxton: I have communicated with the railway company in regard to this case, and they inform me that Stratton had worked less than ten hours on each of the three preceding days, and that while on the day in question he was booked for an extra trip with a train of empties owing to exceptionally heavy traffic, he had intervals of rest, amounting to four hours, out of the 14 hours for which he was booked. They also state that it is not a general practice for their passenger guards to work long and short periods alternately. If the interval of rest was not continuous the booked period of duty was undoubtedly too long, and I am asking the company to take steps to prevent any recurrence.

PROGRESS OF RAILWAY BILLS.

North Eastern Railway.

Iron and Steel Institute.—The Iron and Steel Institute have now empowering the company to acquire a strip of land belonging to Hull Corporation at the east end of Victoria Dock, Hull. It was intended that the land should be used for the storage of sawn timber. Hull Corporation opposed on the ground that they wished to retain the land for such purposes as the future might reveal. On Thursday the Committee rejected the proposal, but passed the rest of the Bill.

Glasgow and South Western Railway.

This is an application under the Scotch Private Legislation Procedure Act for a Provisional Order for various powers. The hearing took place before a Parliamentary Commission sitting in Edinburgh on Wednesday. For the promoters it was stated that the first object was to authorise the construction of

two small portions of railway which had been necessitated by the recent authorisation of the Renfrew Dock. The next purpose was to authorise the acquisition of portions of land at various parts of the system for railway siding accommodation and for railway objects, and the third was to extend the time for acquiring lands under a previous statute. To the fourth purpose there was some opposition. It related to a proposal to abandon two small portions of railway known as Railways No. 7 and 8, authorised by the Glasgow and South Western Railway Company's Act to be constructed to Seamill and Portincross. The fifth purpose of the Order was to create debenture stock to be substituted for the shares of the Ayr and Maybole Junction Railway, which was formed in 1854, and which was vested in the Glasgow and South Western Railway Company in 1871. Although this undertaking was then vested in the Glasgow and South Western Company, the Ayr and Maybole Company did not then cease to exist, but continued to carry out certain financial matters then authorised. Now it was proposed to dissolve that company entirely and replace the shares held by the shareholders by debenture stock in the Glasgow and South Western Company. Another purpose of this Order was to authorise the promoting company and any joint committee on which they were represented to deal with lands which they had acquired in the course of their operations with somewhat wider powers than they possessed under the general statute of the Lands Clauses Act of 1845. The final purpose of the Order was to create additional capital for the Glasgow and South Western Railway to an extent not exceeding £50,000, and to authorise borrowings to the extent of £16,666. After a short hearing, the Commissioners passed the Order and adjusted the clauses.

The Iron and Steel Institute.—In accordance with previous announcement the Iron and Steel Institute have now issued particulars of their autumn meeting which will be held at Turin on Monday and Tuesday, October 2 and 3, 1911. A reply form is attached which has to be submitted not later than August 22, as the lists will be definitely closed on that date. The outward journey, as arranged, will include a night in Paris and another at Aix-les-Bains, reaching Turin on the Sunday evening. The Exhibition will still be open, and opportunities will be given for visiting it. An extensive tour in Italy has also been arranged lasting over a fortnight, including Savona, Genoa, Pisa, Rome (and the exhibition there), Naples, Pompeii, Terni, Florence and Milan; also for those who desire an excursion to the Island of Elba and to Piombino. As usual on these occasions everything possible has been done to relieve intending participants of all trouble and worry, leaving them entirely free to enjoy the very tempting programme.

PROGRESS OF RAILWAY BILLS.

The following tables show the progress of Railway Bills to date, after the formal first reading stage:—

* Partly rejected.

The date given in parentheses is that on which the actual factoring was made.

Preparations for moving, during the next three months, about a half-billion passengers--more than 50 per cent. of the number carried in the whole of last year--have been completed by the U.S. railways. About 200 railroads concur in the arrangements for handling the summer travel east of the Mississippi River. These facts are brought out in statistics compiled by the Pennsylvania Railroad in preparing for the summer, when approximately 90,000,000 passengers will be hauled on the lines of its system. A large majority of these will be excursionists. Special rates are named to 804 pleasure resorts this side of the Mississippi. The seashore, mountains and quiet country places are included in this number. In its efforts to stimulate travel, the Pennsylvania Railroad has prepared to take the seashore and mountains into every city and town on its lines. Every well-defined district on the lines east of Pittsburgh, including Buffalo, Baltimore, Washington, Philadelphia, and Pittsburgh, will this year have its special train excursion to the seashore, mountains, and Niagara Falls. In addition, arrangements have been perfected for a large number of special local excursions between various stations usually for but one or two days. An important feature of the arrangements for summer travel covers personally-conducted tours to Lake George, Niagara Falls, Thousand Islands, Yellow-stone Park, California, Gettysburg, and Washington, in addition to a number of other far-away points. These tours are made under the direction of the personally-conducted tourist system. Nearly all of the Pennsylvania's special excursions start on Thursday, a day when equipment is not needed for week-end travel, and the day when the average housewife in the small towns takes her leisure. Inquiry at the passenger department shows that every Thursday in the summer is taken up by excursions.

GENERAL NEWS.

RAILWAYS AND SETTLERS REQUIRED IN TASMANIA.

The Acting Premier of Tasmania recently visited Hamilton, in that colony, and heard a deputation on the question of the extension of the Derwent Valley railway line from its present terminus at Russell to the Ouse, via Ellendale. Hamilton municipality, one of the original nineteen rural municipalities established in 1863, though the largest municipality in the State, is the only municipality of the nineteen (save Spring Bay and Glamorgan, which have water carriage) that is not served with a railway. It was stated that at present nobody would take up land, as there was no outlet for produce. One speaker, who had come out from England with the intention of taking up land, stated that the country only needed to be better known and opened up by railway, and hundreds of people from the old country would come and settle on it, and bring their money with them. He thought it would be good policy for the Government to buy estates at their present values. The Acting Premier, in reply, stated that he was hopeful, if again elected to Parliament, to advocate closer settlement in Hamilton district and railway access to markets, and also to advocate a strong and bold scheme of closer settlement.

AUGUST TRAVELLING FACILITIES.

Few railway and steamboat announcements this season have equalled in attractiveness the illustrated advertisement of the Furness Railway, which appeared last week on page 3 of the cover of this journal. The sub-title of the page, "The Gateway to the English Lake District," to say nothing of the lake views, is sufficient in these torrid days to attract a multitude. A feature of the facilities offered is a weekly ticket available for an unlimited number of journeys.

A wide choice is offered by the London, Brighton and South Coast Railway for the Bank Holiday week and for longer vacations. One may enjoy the cooling breezes of the Sussex and Surrey Downs by day, and spend the evening amid the gaieties of London or a seaside pier. For a very moderate payment tourists may visit the whole string of coast resorts from Portsmouth to Hastings, and continue the journey over the equally extensive coast lines of the South Eastern and Chatham Railway. Remarkably low fares are asked for week-end and 14-day tickets to Boulogne, Calais, Paris, etc.

During the past few weeks there has been an exodus of London families to the many seaside resorts on the cool East Coast served by the Great Eastern Railway, while their Continental service has also been much in request. The 12.35 p.m. restaurant car express for Yarmouth, Lowestoft and Aldeburgh has been divided, the second portion for the two latter places leaving Liverpool Street at 12.40. Another innovation is an additional dining car express at 7.35 p.m. for Felixstowe, Yarmouth and Lowestoft. By all these trains the journey has been accelerated by twenty-two minutes.

It is impossible in a short paragraph to fully indicate the extensive excursion and tourist facilities offered by the Great Western Railway to the West of England, the Midlands, Wales, and Ireland. These territories embrace some of the most popular resorts in the Kingdom, and many improvements have been made in the train service of "The Holiday Line." For £4 17s. a week can be spent in Killaloe, this sum including rail and steam fares, meals at hotel, or steamers, and coach and rail trips.

The Great Central Railway Company have published a most varied choice of excursion arrangements to over 300 towns and holiday resorts in the Midlands, Yorkshire, Lancashire, and the North of England. Special trains will leave Marylebone on August 4, 5, 6 and 7, and these express trains are equipped with restaurant cars. For those who wish to spend a pleasant day or week-end nearer home suitable excursions are arranged to many picturesque and historical places in Middlesex, Herts, and Bucks, where special cheap fares are in operation for both the walker and cyclist. Continental travelling facilities are dealt with in an attractive booklet, "The Grimsby Route."

Norfolk, Lincolnshire and Yorkshire coasts resorts served by the Great Northern Railway have the advantage of cooling bracing breezes, which have made the East Coast so popular with holiday folk. The wide expanse of fine firm sands are also a great attraction, and provide an unlimited safe playground for children. A postcard to Mr. W. Hills, Great Northern Railway, 3, York Road, King's Cross, N., will result in some beautifully illustrated holiday booklets reaching the enquirer.

The London and North Western announce a very complete list of excursions until the end of September. Amongst the number are cheap bookings on Friday nights and Saturday mornings (Saturdays, August 5 and 12 excepted) to North Wales and the Cambrian line. Scotland has been well provided for by bookings every Friday night; and on Saturday mornings up to September 2 excursion tickets will be obtainable to Edinburgh and Glasgow by the 11.25 a.m. corridor express. The bookings to Dublin, Galway, Killarney, Cork, and other stations in the South of Ireland are in operation on Friday nights, and on Thursday nights to Belfast, Greenore, etc.

The Midland programme of excursions is enclosed in an attractive cover, with design representing poppies and corn. It gives holiday-makers a choice of upwards of 500 places, and may be obtained free on application to the Midland Railway, St. Pancras, or at the City booking offices of the company, and the offices of Cook and Son. The bookings are from St. Pancras Station, but facilities are also given from suburban stations, including Woolwich and Greenwich, to the Midland counties, Peak of Derbyshire, Yorkshire, Lancashire, Lake District, North of England, Scotland, Ireland, and the Isle of Man; and the tickets are available up to 17 days.

The South Eastern and Chatham Railway is to the fore with excursion and tourist tickets to the Kent coast and to the Continent. This week a new turbine steamer has been added to the company's Channel boats.

This summer the great resources of the South Western Railway have been taxed more than ever to meet the holiday traffic to the West of England. The services have been accelerated and the choice of resorts and scenery to be found in the programmes obtainable from the Superintendent of the Line, Waterloo Station, should meet every requirement.

THE GRAND TRUNK STEAMSHIP "PRINCE JOHN."

The Grand Trunk Pacific Coast Steamship Company, operated by the Grand Trunk Pacific Railway, has added another handsome ship to its fleet, designed to operate on the Prince Rupert-Queen Charlotte and Portland Canal route. This steamer will be named the "Prince John," the fourth "Prince" steamer of this line. The "Prince Rupert" and "Prince George" are the largest and finest vessels in the north coast trade from Seattle, Victoria and Vancouver, and the Prince Albert runs locally out of Prince Rupert.

The "Prince John" was constructed in Port Glasgow, Scotland, and is now somewhere off the coast of South America on her way to Vancouver, where she will arrive about the end of next month. The new steamer is 185 feet long, 30 feet beam, and 13 feet 3 inches moulded depth, built of steel and classed 100 A.L. with a star at Lloyds. She has seven watertight bulk-heads with double bottom, affording ample ballast and fresh water storage, large bunkers, two multitubular Scotch boilers, triple expansion engines, capable of a speed of 12 knots under full loaded conditions, on an extremely moderate fuel consumption. The vessel has been moulded to stand the heaviest weather, and is a remarkable sea-boat. In addition to a large and well-arranged steerage accommodation for 150, she has good first-class accommodation, a very neat and comfortable smoking room done in fumed oak with leather upholstery and buffet in connection. The dining saloon, seating 44, is done in mahogany with crimson upholstery and drapings, and is situated on the shelter deck, and attached to it is a large pantry and gallery, conveniently laid out and fitted with all modern equipment necessary to a first-class service. The dining room is reached by a mahogany stairway leading from the lounge on the shade deck into a well proportioned and airy vestibule, also mahogany panelled and decorated. The principal stateroom accommodation is situated on the shelter deck and consists of 18 berth staterooms of large size, well ventilated, all having outside windows. These rooms are furnished with folder lavatories, spring berths, hair mattresses and the standard linens of the company. Forward of this is a very neat semi-circular observation room, with large plate glass windows done in white and gold, furnished with wicker chairs. This room will be the most attractive feature of the steamer. Above this is the pilot house and the office quarters. On the after part of the lower deck there is ample promenading space for steerage passengers, and on the shade and upper decks there is shelter and lounge space for first-class passengers. The ship has a cargo capacity of 450 tons, in addition to her bunkers, and altogether it is expected that she will be a very convenient and comfortable ship, well adapted for the purpose for which she is intended. It is expected she will shortly arrive on the coast, and will as soon as possible thereafter be placed in commission on the Prince Rupert-Queen Charlotte Island route, relieving the "Prince Albert" for other purposes.

RAILWAY NOTES.

Harvests on the Grand Trunk Route.—Advice received from the Grand Trunk Pacific Railway indicates that some 10,000 extra hands will be required to handle this season's harvest. Some low round trip fares are being arranged over Grand Trunk and Grand Trunk Pacific from Canadian ports to points in Manitoba, Alberta and Saskatchewan for harvest hands from the British Isles.

The Length of Mineral Trains.—A Welsh journal asks what is the record number of coal trucks to be drawn by a single locomotive? A long train of some 50 empty trucks passed through the T.V.R. Station at Grangetown the other evening, and a veteran guard of the company was asked whether that was not an exceptional number. He replied that he had known trains of from 90 to 100 loaded trucks to be attached to one engine!

Scottish Tube Trade Amalgamation.—It is announced that a preliminary agreement has been signed under which eight out of the nine Scottish producers of steel and wrought iron tubes will be formed into one company to be called the Scottish Tube Company with a capital of about £600,000. The exception is Stewarts and Lloyds, but they will hold ordinary shares in the new undertaking and nominate a director. It is expected that much economy will be effected, while ruinous competition will be stopped.

The Association of Consulting Engineers.—Since the draft rules, drawn up by the provisional committee, were circulated in December last, a large number of meetings have been held to deal with points that have been raised by various engineers, and a number of important negotiations have been in progress. It was hoped that these negotiations would have been completed in time to call a general meeting to consider the rules and formally enrol members during the present month. Unfortunately, owing to the large number of interests to be considered, and the complexity of the matters involved, this has been found impossible, but the committee hope to be able to call the meeting after the holidays. Meantime, Mr. Dykes, the hon. secretary, requests that all letters should be sent to his new address, 11, Victoria Street, Westminster, S.W.

The Cape to Cairo Railway.—Work on the Kosli to El Obeid section of the Cape to Cairo Railway has now been stopped for the rainy season, the railroad being 150 miles west of the White Nile at a place called Um Ruaba. A recent improvement in the through route south is a new time-table of the White Nile mail boat service giving bi-monthly communication. Leaving Koste on 8th and 23rd of each month the boats reach Rejaf, Lado on 21st and 6th. Then comes a march of five days to Nimule, where the river is again navigable. The service is continued by the boats of the Uganda Government on 20th and 11th, the boats going through to Butiaba, on the Albert Nyanza. Thus for a distance of about 2,000 miles, or half way from the north to the southern extremity of the continent, there is now through communication.

Railway Carriage Heating.—The Westinghouse Brake Co., Ltd., 82, York Road, N., describe their steam heating apparatus for railway carriages in a useful pamphlet which shows the different parts composing it, and their application to compartment carriages, to dining and other saloons and to corridors. The distinguishing features of the various forms of this heating are that it is self-contained, requiring neither a separate inlet valve or steam trap. Its temperature is entirely controlled by the position of the handle, and can be adjusted to, and maintained at any degree desired up to 212 degrees Fahr. Being open to the atmosphere, the steam contained in it is at atmospheric pressure only. As it is drained direct to the atmosphere, no water of condensation can remain in it, and freezing is avoided. The whole apparatus is remarkable for its simplicity and reliability.

Economy in Railway Management.—The efforts of the Pennsylvania Railroad to economise in every possible way, are indicated by a general notice which has just been issued to the employees of the Schuylkill Division. This unique notice is as follows: "To Employees of Schuylkill Division. The necessity for a reduction of expenses at this time is very urgent. In addition to the exercise of the strictest economy in the use of material by all employees, the working time should be watched very carefully by trainmen and engineers in order to avoid overtime wherever possible. In fact every employee can assist in some way in accomplishing the desired reduction in expenses. As a practical illustration: If every one of the 1,400 employees on this division would save ten cents a day

for the Company in making no use of material saving of 84 cents a day, or in the month of April, of \$4,968.00, which would go toward paying the increase in the cost of wages which we are now enjoying. How easy it would be for each of them to do this in his own line of work. Remember the use of oil; firemen in the use of coal; each employee in the use of his money and his working time. Remember the use of bolts and spikes; shipped on by rail, then used on the road, and thus avoiding breakdowns in the road, or the expense of long freight so as to avoid damage; and the number of cars and ways which will occur to them in the handling of the material of their respective duties. Remember the old adage: 'Nobody's business is nobody's business.' And let every employee make it his personal business to put in his time for the Company. A. H. Moss, Superintendent."

PERSONAL.

Mr. W. L. Dunsden, divisional superintendent of the South Wales district of the Great Western Railway, who has recently been transferred to Wolverhampton, has been presented with an autograph album containing the names of 668 subscribers, a clock, silver inkstand, blotter, study table, and electric lamp, with a diamond ring for Mrs. Dunsden. The gifts were subscribed for by the engineering departments of the North and South Wales sections. Mr. Dunsden mentioned that since he had been in the district the traffic had almost doubled, and was continuously increasing.

The Interpretation of an Act of Parliament.—At Dudley County Court recently, his Honour Judge Ingham and a jury had before them a claim against the Great Western Railway Company for £50 by Joseph Wesson, farmer, Cradley Heath, for the loss of a horse. Mr. A. Ward (instructed by Mr. George Green) appeared for the plaintiff, and Mr. F. Tatham (instructed by Mr. Evers) for the defendants. The animal, it was sought to be shown, could not have got on the railway, but for the fact that one of the gates at the crossing was defective. It was self-closing only at certain angles, and if slammed would not be held by the catch, but would fly open again. Mr. Tatham stated that the company had carried the footpath over the line by means of a bridge, and that there was no legal right of way over the railway. The actual footpath was only left as an occupation road. Mr. Ward argued that the footpath over the line was not extinguished by the erection of the footbridge. The existence of the gates proved recognition of this fact by the defendants. His Honour said the Act of Parliament was like most Acts—no one knew what it meant until the House of Lords had decided it. He gave his opinion that the footway now passed over the bridge, and that the gate was not a gate within the meaning of the Act. He entered judgment for the defendants, with costs.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,

ENGLISH RAILWAY HALF-YEAR.

The announcements made last Thursday concerning the distributions of dividend recommended by the directors of the London and North Western and the Great Western Railways complete the list for the principal English lines. The announcement of the North London was made the same day, and that for the Furness is yet to come, but the facts, for a survey of the results as a whole, are sufficiently complete and when taken in relation to current quotations for the several stocks they furnish material for very serious consideration. Before, however, entering upon the discussion suggested by the general condition of things revealed, it will be well to deal with the figures that have been made public since we last went to press. The dividend proposed by the Board of the North Western Company is at the rate of 6 per cent. per annum, which compares with 5½ per cent. paid last year. The same sum—namely, £100,000—is to be placed to reserve and the amount carried forward is increased by £41,000. For the Great Western the dividend recommended is also in advance of last year's by ½ per cent., being 4½ per cent. in lieu of 4 per cent., and the amount carried forward is £120,400, instead of £96,600. In both cases the results achieved and the distributions proposed fairly respond to the expectations which had been formed of them on the market. Yet on the day the figures were made known the ordinary stocks of each closed lower, and by the same amount—viz., ¾. In the case of the North London line, in which no change in the dividend is proposed, the carry forward being increased by £1,600 to £7,960, a decline of 2 took place, which looks as if the market changes had some relation to results, but this view will not bear examination. The achievement of the North London was quite up to what could have been reasonably anticipated, and throughout the period over which the dividend announcements of home railways have been spread this season, there has been no indication of any correspondence between the facts and the changes of quotation in the stocks. This, of course, argues that buyers and sellers are being actuated by the state of their balances at the bank, rather than by their appreciations of dividend-paying investments, and that this is the case for the moment with what economists call the marginal buyers and sellers of Home rails, it is impossible to doubt. It does not follow that such a state of things will continue. The marginal buyers and sellers of the moment cease to control the position when their bargains are made, and the fixation of prices passes to others who may be reasonably expected to have less transitory ends to serve. The hard facts of the railway situation as revealed by the results of the half-year certainly warrant the attention of investors with permanent aims. The advance in dividends has been general and pronounced, and then the management—the directorates of our railways—have been subjected to very severe criticism from time to time, the gist of all of which has been that they have resisted innovation and disregarded economy in working. Less has been heard of this of late years, and compared to their manifest merit of straightforward, upright commercial direction, whatever

defects may be brought home to them amount to very little. Where else in the world do the managers of railways under control of private companies keep the same faith with their customers, their shareholders, and the public? The dividends recently announced it has been possible to predict within the smallest fraction of a per cent. We are so accustomed to unexceptional direction that it attracts no attention whatever, but if ever the inhabitants of the United States of America receive the same treatment little will be heard of the discontent that so often becomes strident there. If the experience of former years were any guide to movements of price in the near future it might be safely predicted that the price of Home rails would advance greatly and quickly under the persistent buying of purchasers having permanent investment as their object; but as has been pointed out in these columns before, experience in the past can no longer be taken as a guide without considerable qualification, because prices of these stocks are now subject to economic forces which were not present before or not active to the same degree as now. In the first place the value of loanable capital is higher than it has been any time these thirty years, and appears to be tending higher still. This factor may be gauged by the index number of the debentures of English railways which is given at intervals in these pages. The present number corresponds to a yield of $3\frac{2}{3}$ per cent., and a comparison of quotations over the past thirty years shows that the yield required from the ordinary stocks which might be expected to accompany this is as nearly as possible £4 8s. per cent. Recent announcements of dividend make the yield upon many of the ordinary stocks a good deal higher than this. The Great Western and London and North Western stock now yield about £4 16s. per cent., and with business improving at the present rate they may be expected at these prices to yield 5 per cent. very soon. There is, however, no doubt that the revenue of British railways does not inspire the same confidence it formerly did. People no longer believe that the companies will be permitted to earn what they can and do what they like with their own. There is not space to go into the causes for this change of belief, it must be sufficient for the present to note that it has begun and that it progresses. Many landowners hold British railway stocks and landowners have been severely punished by recent legislation. Many brewers and holders of brewery shares own British railway stock, and these, again, have been badly hit by the same means. These men hear a growing murmur of voices prophesying nationalisation of railways, and, taught by their experience of the legislative tendencies of the hour, begin to fear for the future of their holdings. Their support is naturally withdrawn from the stock market, even if they do not hasten to realise their stocks. An attitude like this is not adopted by a large and influential body of investors without spreading and affecting the views of others; until the opinion of the investing public is profoundly modified. In happier circumstances it would be safe to anticipate a quotation of 155 for London and North Western stock before the close of the year, and for Great Western 138 would be only a reasonable forecast. A general rise of 10 per cent. in the price of Home rails is fully indicated on the facts of the situation, apart from the change in the feeling of security which political considerations have introduced. As things are, however, it is impossible to look forward with much confidence, although after all, a small change in the general situation might lead to a sudden improvement in the outlook. The new factors are not of the kind that lend themselves to arithmetical treatment. The importance or weight to be attached to them must remain a matter of opinion upon which the man-in-the-street is as well qualified—or better qualified—to pronounce than the most able expert amongst us.

THE MEANING OF ELECTRIFICATION.

When, for any reason, a company is not anxious to undertake a certain change which is urged upon it, it is generally easy for the directors to find a number of excuses more or less foreign to the real explanation. Sometimes these excuses are given in perfect good faith, and are only accretions upon a central reason which is not made visible. Railway chairmen, for instance, will put forward many grounds for not taking immediate steps to electrify their lines, while the fundamental ground is simply that they are not sufficiently enterprising to face a revolution in their methods of working. Now that electric traction has proved so successful on suburban and inter urban lines of diverse character, most railway boards which have not made the experiment would prefer not to mention the subject until they are prepared to follow suit. At the recent meeting of the South Eastern and Chatham Railway Companies, Mr. Cosmo Bonsor did not deal with electrification in his speech, and he would probably not have referred to it at all had not Sir Robert Perks asked the direct question whether the directors "had been able to ascertain what the result of the electrification of the suburban lines of the Brighton Company had been, and whether they saw their way to recommend the proprietors to consider, at all events, the question of the electrification of the North Kent lines." Mr. Bonsor's reply deserves to be carefully considered. If it may be taken as expressing his full and final view of the meaning of electrification, it shows that the real lessons of electrical working have not yet penetrated to all the centres of the railway world. He said that he "should be sorry to ask the shareholders to find the capital for it (the electrification of the North Kent lines) unless it becomes necessary in the interests of the traffic to enlarge either Cannon Street or Charing Cross stations; then perhaps it would be wise to spend our money on the electrification of the North Kent lines rather than spend it on buying land and widening the stations at Cannon Street and Charing Cross." Mr. Bonsor then proceeded to explain to the shareholders how electric working (on the multiple unit system) increased the effective train accommodation at termini by abolishing shunting. His view, therefore, is that electrical working is merely an alternative to station enlargement. He proposes to wait until the traffic grows beyond the present terminal capacity before he asks the shareholders to provide money for "anything of that description." From this point of view, traffic is apparently regarded as a constant quantity or, at least, one which is permanently affected only by the growth of population in the districts served by the lines. But experience has shown again and again that a very marked increase in traffic has resulted from the improved service provided by electric trains. Much of that increase is new traffic, not simply traffic diverted from competing services. Mr. Bonsor himself emphasised this feature of the problem quite unconsciously. In answer to Sir Robert Perks he stated that the competitive effect of the electrification of the Brighton line on the South Eastern traffics had been "absolutely infinitesimal." Mr. Macrae, however, told the Brighton shareholders at the meeting on the 2nd inst., that electrification had more than recouped the traffic lost through tramway competition. It is clear, therefore, that the total volume of traffic has increased sensibly beyond the pre-electrification figure. Everything points to a further increase. Mr. Bonsor may, therefore, be encouraged to reconsider the electrification question, not from the narrow standpoint of terminal accommodation, but on the broad ground of increasing the volume of traffic over the whole of the system. Owing to the preponderating cost of permanent way, it is incumbent upon the railway manager to utilise his track to the maximum. That can only be done by means of electric working, which not only enables

a more frequent service to be maintained, but attracts the necessary additional traffic, especially when vigorous steps are taken, by advertisement and otherwise, to stimulate the travelling habit among the general public.

A GREATER LONDON FIASCO.

A specially striking example of the futility which sometimes attends the work of promoting private Bills in Parliament is given by the fate which overtook the Greater London Railway Bill on Thursday. An ambitious scheme, influentially supported and calculated to be of great benefit to a large section of traders, manufacturers, and the general public, but opposed by several railway companies and local authorities, it dragged a slow and troubled course through the House of Commons, and when almost in sight of the haven of the Royal Assent it was wrecked two days ago as the result of an inquiry before a Committee of the House of Lords. The difficulties with which the Bill had to contend and which it overcame are indicated by the intervals between its stages as these are shown in our table recording the progress of railway Bills. The scheme was one for constructing a railway from Feltham, on the west to Tilbury on the east, making a great semi-circle round the north of London, and having junctions with, so as to secure interchange of traffic between, the main lines of railways radiating out of London to the west, the north, and the east. Owing to the large number of interests concerned and to the opposition from railway companies who feared competition or interference with their traffic, and from some local authorities who for one reason or other objected, the Bill was before a House of Commons Committee for no fewer than 18 days. When the scheme emerged from that ordeal, it was shorn somewhat of its original dimensions, as sanction was refused to the western end of the line from Feltham to Northolt and to the eastern end from Ilford to Tilbury. Still, the greater part of the provisions were intact, and these proposed a line 32 miles in length. The promoters estimated a return of 4 or 5 per cent. on the considerable capital required, but the opponents maintained that the capital was underestimated. When the Bill came before a House of Lords Committee, there was not so much opposition, but still the hearing lasted seven days. The end came with suddenness on Thursday, and the scheme is no more for the present. It was the last of a series of attempts made at intervals over a long period of years to provide a connecting railway girdling round the northern outskirts of London. Whatever may be said on the merits of particular details of this Bill, it hardly seems capable of dispute that a railway of the sort would be not only of great advantage to the public both for passenger and goods traffic, but ought to be of advantage to the existing trunk railways by facilitating interchange of traffic. The troubles of cross-country communication either by road or railway are notorious, and an inspection of a map will show that such a railway ought to meet a want. It must also be borne in mind that every year that passes makes the provision of a Greater London railway more difficult because London is growing so rapidly that the value of land in its neighbourhood is bounding up. If any further attempts in the same direction are made it is quite probable that the promoters will be forced to go further afield, and propose that the radius of the half-circle should be much greater than that hitherto advanced. That would mean a longer railway, and more expense for construction, and though the land might be cheaper, the traffic per mile would be less. The prospects of seeing a Greater London railway are not rosy. Promoters will bear in mind, too, that heavy expense and arduous labour have been thrown away on the Greater London Railway Bill of the year 1911.

The figures of this week's Bank return show a handsome provision on the part of the public for the expenditure that is to take place during the forthcoming holiday. There have been so many extra holidays this year that it might have been supposed the appetite for leisure and amusement would be less keen, but this is evidently the kind of appetite that grows by what it feeds on. In any case, the disposition of the public to spend money bodes well for the passenger lines, since under modern conditions almost every kind of expenditure in holiday-making includes something spent on travelling. The amount of gold received on balance from abroad was £417,000, but no less than £1,418,000 was taken out in coin for internal uses, and the note circulation expanded by £1,045,000. The result has been to bring the Reserve down by £2,046,000 to £28,367,000, which is practically the same level which obtained at the corresponding date of last year. The alterations in other items of the Bank return include another decline, amounting to £1,720,000 in Other Securities, which is again attributed to operations consequent upon the settlement in the affairs of the Birkbeck Bank, though it is quite possible part of the movement may be ascribed to changes of investment in connection with the new arrangement by which the business of the Yorkshire Penny Bank is to be placed on a more solid basis. Public Deposits have declined £1,319,000, and Other Deposits are £2,465,000 lower, while Government Securities remain unaltered. The effect of all changes has been to leave the ratio of Reserve to the liabilities of the bank the same—namely, 54½ per cent.; so the position is much as it was before, but Other Deposits, being reduced to £44,000,000, has had its influence in hardening

rates for discount, if not for money, and the current rate for three months' bills is about $\frac{1}{4}$ per cent. higher than it was a week ago, and bids fair to advance further.

The Stock Exchange has not experienced very happy conditions since our last date of issue. On Saturday morning prices rebounded in a style calculated to rejoice the hearts of all holders of stock, particularly those of the speculative kind, but the movement did not last. Although still higher prices obtained on Monday, there was a marked falling off on ensuing days. As a matter of fact, a Saturday indication is rarely to be relied upon. The public—the *bonâ-fide* investor particularly—is disposed to fight shy of Saturday as a day for making purchases, not merely because it is a day on which attention is directed rather to finishing business already begun than to initiating new departures, but because they know it to be a day on which the market is often ill-attended, and, therefore, believe it to be one on which there is likely to be less opportunity of obtaining close quotations. For the same reason it is a day upon which prices are easier to move than one on which a full market is to be expected, and therefore a day often chosen by speculators for a demonstration in values. On this occasion the Morocco difficulty was thought to be disposed of—at all events for the time being—and the good dividends announced by British railways favoured the opinion that higher prices being inevitable they might be taken as made. But there were other factors in the situation, and, as already stated, the advance could not be sustained. The enormous issues of new capital have left numerous underwriters with big lines of stock to nurse, and some of these have thought it wise to take in sail where they can before entering upon the stagnant time which August often proves for business in stocks and shares, particularly on this occasion, when the many small clouds on the foreign and domestic horizon make any prognostication of the condition of things likely to prevail on the resumption of business doubtful. The London Dock strike accentuated this line of conduct, with the result that numerous profits in Home rails, which the possessors had been content to own in paper up to the present, were realised in a somewhat deflated condition.

There is little interest in following the movements of prices day by day, because they have been essentially insignificant—that is to say, without assignable relation to the facts in the several cases concerned, being, indeed, dictated in almost every instance by the needs or precautions of holders. Mexicans, also Canadian railway stocks, which shared in the general advance in the beginning, were also affected by the subsequent decline, but the former became conspicuous on Wednesday by virtue of the June statement, on which a rise ensued. On Thursday the announcement of dividends by the North Western and Great Western lines, in either case $\frac{1}{2}$ per cent. in excess of last year, did nothing to improve the quotation of Home rails. Indeed, the stocks of both these lines closed $\frac{3}{4}$ lower. The advance in Mexicans was also lost.

On Friday a general revival of Home railways and other British stocks took place. The movement was partly founded upon a natural reaction against the continued decline of the last few days and partly upon a genuine feeling of greater confidence in the forces making for peace on the continent of Europe. Consols rose $\frac{1}{8}$, Great Northern "A" $1\frac{1}{2}$, London and North Western $1\frac{1}{4}$, Metropolitan District, Great Western, Midland, and Brighton Deferred, each 1. Smaller rises occurred throughout the active list of Home rail stocks, but Canadian and Mexican Rails were lower, and in United States railways irregular movements prevailed, with a tendency downwards.

The principal movements of the week, so far as they relate to securities in which the readers of this journal are likely to be interested, are set forth in the following table:—

Weekly Traffic Summary.

The traffic receipts for the week ended July 30, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,544,213, which was earned on 21,514 miles, being at the rate of £118 5s. 2d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,895,292, with 21,468 miles open, or £134 17s. 3d. per mile. There was thus a decrease of £351,079 in the receipts, an increase of 46 in the mileage, and a decrease of £16 12s. 1d. in the receipts per mile. Thirty-six of the returns distinguish between the receipts from passenger and goods traffic, and these show a decrease of £287,965 (or £13 17s. 6d. per mile) in the passenger receipts, and a decrease of £48,020 (or £2 8s. 1d. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-six railways for four weeks in the passenger receipts has been £198,014, while the aggregate decrease in the goods traffic was £17,070. The aggregate receipts of the fifty-two railways for four weeks (July 2 to July 30) amounted to £9,721,437, in comparison with £9,971,842 in the corresponding period of last year—a decrease of £250,405. The figures this week compare with those previous to Bank Holiday week last year.

MEXICAN RAILWAY COMPANY.

The Mexican Railway Company, Limited, has issued the following estimated revenue statement for the month of June:—

	MONTH OF JUNE.			JANUARY 1 TO JUNE 30.		
	1911.	1910.	Inc. or Dec.	1911.	1910.	Inc. or Dec.
Gross receipts ..	\$684,600	\$719,500	— \$34,900	\$4,376,400	\$4,229,600	+\$146,800
Expenses ..	300,600	354,000	— 53,400	2,133,100	2,165,000	— 31,900
Net earnings ..	\$384,000	\$365,500	+\$18,500	\$2,243,300	\$2,064,600	+\$178,700

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Aug. 5 (Sat.)—**Mumbles Railway and Pier Co.** (Half-yearly), The Elms, Mumbles, at 11.
- Aug. 5 (Tues.)—**Cardiff Railway** (Half-yearly), 224, Queen Anne's Gate, S.W., at 1.
- Aug. 8 (Tues.)—**North Staffordshire Railway** (Half-yearly), Cannon Street Hotel, E.C., at 2.
- Aug. 9 (Wed.)—**Cork, Bandon and South Coast Railway** (Half-yearly), Imperial Hotel, Cork, at 12.
- Aug. 9 (Wed.)—**East and West Yorkshire Union Railways** (Half-yearly), Hotel Metropole, Leeds, at 12.30.
- Aug. 9 (Wed.)—**Edgware and Hampstead Railway** (Half-yearly), Electric Railway House, Broadway, Westminster, at 12.
- Aug. 9 (Wed.)—**Great Northern Railway (Ireland)** (Half-yearly), Belfast, at 12.30.
- Aug. 9 (Wed.)—**Great Southern and Western Railway** (Half-yearly), Kingsbridge Terminus, Dublin, at 2.
- Aug. 9 (Wed.)—**Hull and Barnsley Railway** (Half-yearly), Assembly Rooms, Kingston-upon-Hull, at 12.
- Aug. 9 (Wed.)—**Lancashire and Yorkshire Railway** (Half-yearly), Hunt's Bank, Manchester, at 12. Followed by a Special Meeting.
- Aug. 9 (Wed.)—**Port Talbot Railway and Docks** (Half-yearly), Port Talbot, at 12.
- Aug. 9 (Wed.)—**Taff Vale Railway** (Half-yearly), Royal Hotel, College Green, Bristol, at 2.
- Aug. 10 (Thurs.)—**Dublin and South Eastern Railway** (Half-yearly), Westland Row, Dublin, at 12.
- Aug. 10 (Thurs.)—**Great Northern Railway** (Half-yearly), King's Cross Station, N., at 12. Followed by a Special Meeting.
- Aug. 10 (Thurs.)—**Great Western Railway** (Half-yearly), Paddington Station, at 12.
- Aug. 10 (Thurs.)—**London Electric Railways** (Half-yearly), Westminster Palace Hotel, S.W., at 1.
- Aug. 10 (Thurs.)—**Metropolitan District Railway** (Half-yearly), Westminster Palace Hotel, S.W., at 12.
- Aug. 10 (Thurs.)—**Midland Great Western Railway of Ireland** (Half-yearly), Broadstone Terminus, Dublin, at 1.
- Aug. 10 (Thurs.)—**Midland Railway** (Half-yearly), Derby, at 1.30.
- Aug. 10 (Thurs.)—**North London Railway** (Half-yearly), Euston Station, N.W., at 1.
- Aug. 10 (Thurs.)—**Sheffield District Railway** (Half-yearly), 71, Finsbury Pavement, E.C., at 11.45.
- Aug. 10 (Thurs.)—**Stratford-upon-Avon and Midland Junction Railway** (Half-yearly), Great Eastern Hotel, E.C., at 12.45.
- Aug. 11 (Fri.)—**Cambrian Railways** (Half-yearly), Euston Hotel, N.W., at 12.30.
- Aug. 11 (Fri.)—**Didcot, Newbury and Southampton Railway** (Half-yearly), Westminster Palace Hotel, S.W., at 12.
- Aug. 11 (Fri.)—**Isle of Wight Central Railway** (Half-yearly), 11, Ironmonger Lane, E.C., at 12. Followed by an Extraordinary Meeting.
- Aug. 11 (Fri.)—**London and North Western Railway** (Half-yearly), Euston Station, at 12.
- Aug. 11 (Fri.)—**Neath and Brecon Railway** (Half-yearly), Claring Cross Hotel, W.C., at 2.30.
- Aug. 11 (Fri.)—**North Eastern Railway** (Half-yearly), Festival Concert Hall, York, at 12.
- Aug. 12 (Sat.)—**Rhondda and Swansea Bay Railway** (Half-yearly), Hotel Metropole, Wind Street, Swansea, at 12.30.
- Aug. 16 (Wed.)—**Metropolitan Railway of Constantinople from Galata to Pera** (Extraordinary), 25, Bucklersbury, E.C., at 2.
- Aug. 23 (Wed.)—**Furness Railway** (Half-yearly), Barrow-in-Furness, at 2.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

West and South Clare Railways.—The report for the half-year ended October 31 last states that the receipts for the half-year from the West and South Clare lines amounted to £12,669, a decrease of £1,490 compared with last year, and the expenses amounted to £12,484, a decrease of £635. The net revenue account shows a gain of £433 on West Clare, as against £217 in October, 1909, and a loss on South Clare of £248, as against £824.

LONDON, TILBURY AND SOUTHEEND RAILWAY.

The London, Tilbury and Southend Railway Company, Limited, is holding its annual meeting at the Grosvenor Hotel, London, W.C., on August 11, 1911, at 11.15. The Chairman, Mr. H. C. N. (Mr. Arthur L. Stride), will preside. The meeting will be held in the afternoon, and will be held in the evening, if necessary, for the purpose of convening the meeting.

The Chairman said: "I have the pleasure to meet you this evening, and the opportunity of addressing you on the subject of the accounts. I have even rather less to say than I have in the past, but I see what they mean. What they mean is that the passenger traffic is considerably increased, and in money we have an increase of £11,000, and in money we have an increase of £1,000,000, and in money we have an increase of £1,000,000. Over £3,000 is due to the residents at Southend and Westcliff. That traffic appears to be growing steadily now about £4,000 every half-year; where it is going to stop I do not quite know. I do not know that we want it to stop really. That which is also included in the passenger traffic—parcels, horses and carriages—brings the total increase for the half-year to £16,000. Merchandise, mineral and live stock traffic show an increase of £5,600, and putting those two together you see we have close upon £22,000 additional receipts. I turn for a moment to the abstracts on the other side of the accounts. No. 12, maintenance of way and works, shows a total increase of £2,000, the whole of which is materials simply, because we have done more relaying than we did in the corresponding half, and we are relaying with heavier rails. Repairs of stations, buildings and works account shows £250 more, repairs to roads, bridges, signals and works are £200 more, but there is an item in that account for reconstruction of stations, buildings and works which I will come back to. Locomotive power also shows an increase of £3,000 nearly. If I tell you that we ran 75,000 additional miles to earn the £21,000 odd increase, which I have already pointed out, our locomotive power has cost us less per mile than it did in the corresponding half of last year. Of course, the more business we have to do the more miles we have to run. With regard to repairs and renewals of carriages and wagons, that shows an increase of £1,600. That is due principally to carriages, because we have done more upholstering, and as far as the wagons are concerned, they get older every year, like ourselves, and they have to be renewed and repaired heavily. Traffic expenses show an increase of £3,800. As to salaries and wages, they represent £2,300 of it, and that is due to additional train services run and new stations opened. General charges are about the same as before, and electric traction is working out, as it did last time and the time before, still better, and still earning more money for the expenditure, which, as given on the other side, is lower per car mile. Going back for a moment to the revenue account, the law charges are much about the same as last year—they are less by £130. In Parliamentary charges there is an increase of £1,400, and there will be more, because you know we have been lighting, and fighting successfully, the Greater London Bill, and we also had our own Bill, which you authorised us to promote, and it gives me pleasure to say that we have settled clauses with the promoters of the Greater London scheme. (Hear, hear.) That was a scheme attacking directly the Tilbury Docks, for it was the promoting of a line to Tilbury Docks, making connection with all the other companies on the north side of London, and it would have seriously affected our future prospects if the line were made. We succeeded in the House of Commons in getting the Tilbury extension thrown out, but there was still a difficulty, as far as we are concerned, in regard to the line between East Ham and Barking on its way to the Albert Docks. It concerns the Great Eastern Company more than ourselves, but we have to do with certain matters in regard to the crossing of our line. We have sixteen lines of rails there, and it is a busy place, but at the last moment the engineers have come together, and they have agreed to a bridge which will not affect us financially, but which will cost the promoters a great deal of money; and so we have got rid of the opposition to the Greater London scheme. Compensation for personal injury is £200 less, but there is £500 more for damage and loss of goods, etc. We do our work as well as anybody can do it, but it is all in that "etc." Unfortunately there was a lot of cattle belonging to the Salvation Army between Benfleet and Pitsea, and a gate was found open. It was alleged, and rightly alleged I think, that one of the beasts lifted one of the gates off its hinges with its horns. I

think it had hankerings for someone on the other side of the line. (Laughter.) It was not proved in any way how the gate was opened, but we were bound to resist the claim. We lost it and had to pay. I think it satisfactory on the whole with regard to the increase in that item of damage and loss of goods. Well, now, I said I would refer to three matters in the abstracts. In regard to maintenance of way and works, we carried last year to the reconstruction of buildings, stations and works £10,000 and as we dislike to have the account on the wrong side of the balance-sheet we made up our minds to get rid of it, and we did so last half-year; but since that time we have had Thames Haven Pier to consider. It has been a great deal damaged, as I reported to you two meetings ago, by a ship which ran into it. We do not know whether the Midland will be allowed to take us over. That, of course, lies with Parliament in the next Session, and we should not be doing our duty if we did not act up to the time of the passing of the Bill just as if there were no Midland Company at all. This is sound policy. We carried £10,000 to the reconstruction of stations and buildings account, and in the same way in locomotive power, "B" account, we carry £3,000 instead of £1,000 in the corresponding half-year to the depreciation fund for locomotives, carriages and wagons. We have twelve new engines on order, six of which will take the place of six old ones, and we shall have to take out of revenue the cost of those original six. We have thirty-two new carriages on order, of which we have eight or ten delivered, and we have to provide for the depreciation of those; although in the first year of running there is no depreciation, but it is a mistake to begin too late to make provision when there are other expenses which we should have to meet. The other item I have to allude to is in regard to the profit on working of the Gravesend Ferry. We have £1,300 increase, and that is due to less repairs, but also to the fact—a very pleasant one—that we have had over £900 additional from the traffic of the Ferry, due, to a considerable extent, to the Coronation work. We had a large number of steamers which left Tilbury for Portsmouth for the Naval Review, and we carried more people in that way. That accounts for the £1,300 increase. Last year we put £500, and this year we put £1,000 aside for this Gravesend Ferry. As you probably know, we have two landings on the Gravesend side. There is one, the West Street Wharf, and a dummy barge is almost alongside which is worn out. It has been there thirty-six years, and I believe it was there before I became connected with the Company. That accounts for the £500 additional which we propose to spend there instead of the usual £500. That is all I have to say. Glancing at the report, it is purely formal, as I have told you. Paragraphs 9 and 10 are only questions of fact, and I beg, therefore, to move:—"That the report of the directors and statements of accounts for the half-year ending 30th June, 1911, which have been circulated amongst the proprietors, and are now presented, be received and adopted."

Mr. J. ROLLS HOARE (deputy-chairman) seconded the resolution.

Mr. BEECROFT asked whether the Midland Company would have the balance carried forward of £5,409 handed to them.

The CHAIRMAN: The balance we carry forward may be wanted in the current half-year. The whole deal with the Midland Company is that they take us over as a going concern.

Mr. BEECROFT further asked at what price the Midland Company would take over this Company's property.

The CHAIRMAN said the whole matter was explained at the special meeting which took place a short time ago, and a report of the proceedings was sent to the shareholders generally. This Company would receive, so far as the debentures and preference stocks were concerned, Midland stock in the same proportion to pay the same interest as at present. As to the ordinary stock, the shareholders would have transferred to them Midland preference stock which would give them 6 per cent.—a permanent income—with £80,000,000 of ordinary stock behind it. It meant that this Company stood to be shot at by competitors, being little people. The Great Eastern were now actively competing with this Company at Southend, and the shareholders' dividend would depend entirely upon what was earned, less that which they had to spend, but the dividend in the future, when the undertaking was sold to the Midland Company, would be a permanent 6 per cent. The very thought of it put up the ordinary stock 20 points from 127 to 147—and if the Midland Bill received the Royal Assent, he felt satisfied it would put up this Company's stock another 20 points. (Hear, hear.)

Mr. LEACH asked what was the actual factor which induced the directors to entertain the proposal of the Midland Company? Had the Midland Company a Bill in Parliament to construct a line down to Southend?

The CHAIRMAN said the actual factor which determined the directors to accept the offer was that the Midland board came along and made an offer. The Tilbury board had had four distinct offers since he had been connected with the Company from other people, principally from their friends at Liverpool Street, but such offers did not come up to what the Tilbury directors thought was the value of the line. The Midland Company came to the conclusion that if they could get hold of the Tilbury line, on terms, it would be advisable to do so, and they communicated with him at first informally, and asked whether the board were open to receive an offer. He said "yes," and the result he had already stated. What the Midland were going to do with the line when they got it he did not know. The large body of the shareholders had come to the conclusion that it was an excellent bargain, and one which they should take and be thankful for. (Hear, hear.)

Mr. LEACH: They had not any actual scheme or Bill?

The CHAIRMAN: No; not that I know of.

The resolution was then put, and carried unanimously.

The CHAIRMAN further moved:—"That the following dividends (less income tax) for the half-year ending June 30, 1911, be declared, namely:—Upon £1,204,100 consolidated preference stock, at the rate of £4 per cent. per annum; upon £600,000 preference stock 1904, at the rate of £4 per cent. per annum; upon £2,111,840 consolidated ordinary stock, at the rate of £4 per cent. per annum, and payable on and after August 4, 1911."

Mr. HOARE seconded the resolution, which was also agreed to *nem. con.*

The CHAIRMAN: That is the business of the meeting—a record meeting as to time, I think. (Hear, hear.)

Mr. BEECROFT proposed a vote of thanks to the chairman and directors for their able management of the Company's affairs, and to the staff generally for the zealous services during the past half-year.

Mr. C. JOSLIN seconded the resolution, which was carried unanimously.

The CHAIRMAN, in acknowledging the vote, expressed his thanks and that of the directors, and said he was especially glad that the staff had been recognised in the resolution.

The proceedings then terminated.

LONDON, BRIGHTON AND SOUTH COAST RAILWAY.

The ordinary general meeting of the proprietors of the London, Brighton and South Coast Railway Company was held on Wednesday at the London Bridge Terminus, Mr. C. C. Macrae presiding.

The CHAIRMAN, in moving the adoption of the report (a summary of which appeared in THE RAILWAY TIMES, of July 22), after expressing regret at the absence of the Earl of Bessborough through indisposition, said that on the last two or three occasions of their meeting the Chairman had opened his remarks with a reference to expanding business, and it was pleasant to be able to tell them that the advance still continued, and to present so favourable an account as the one before them. Their mainstay, the passenger traffic, had been distinctly good during the half-year. Although some part of this increase might be due to exceptional causes, such as the Coronation festivities and the Festival of Empire at the Crystal Palace, there was decided indication that a great deal of the additional business had come to stay. Goods traffic also showed an improvement, whilst there was nothing abnormal in expenditure, so that, on the whole, the result of the half-year's working was quite satisfactory.

First and third-class passengers had increased in numbers and had produced about £46,000 more. They had carried 2,385,461 more third-class passengers during the half-year than in the corresponding period of 1910, and they had now nearly regained the whole of the traffic they lost from the advent of electric trams in the suburban districts. (Applause.) Comparing June half-years, it was only in the years 1903 and 1904, when the present tramway competition was not fully developed, that the number of 27,000,000 passengers carried during this half-year was exceeded. From 1904 there was a gradual diminution in the numbers of their passengers until the opening of electrical services on the South London Railway at the end of 1909. Since then there had been a rapid increase, and they had not only regained the whole of the number lost on that section of the railway, but during the last six months they had carried more passengers over it than they did prior to the establishment of the electric trams. (Applause.) He thought this showed very conclusively that electric traction on a railway could more than hold its own in competition with electric trams, and that the policy of the board with regard to electrification had been justified. (Applause.) The electrical services between Victoria and the Crystal Palace had only been running since

May 12, but the result was equally satisfactory. At the end of this year, when they hoped similar services would be established between London Bridge and the Crystal Palace, they expected to attain even better results. It had not been practicable as yet to open these services, because the contractors for the supply of energy had not been in a position to give the quantity required. They were, however, pushing on as quickly as possible with the works necessary for this supply, and they would make use of it as soon as they could get it. The electrical services were also quite satisfactory from the revenue point of view, and the additional receipts derived from them represented nearly 30 per cent. of the total increase of passenger receipts. Goods traffic receipts had increased by £6,388, principally on traffic of the mineral class, that was to say, coal and building material and movement in these things was always a good sign. Turning to expenditure, the maintenance of way account showed a net increase of £4,528, and, broadly speaking, that might be attributed to alteration of permanent way, stations and other structures necessary to adapt those works to the purposes of electrical traction. The locomotive running account, which included electric train working, showed an increase of £9,761, of which the main item was fuel. There had been a greater consumption of coal due to additional mileage run, and the average price had been higher. They had run 183,000 more ordinary train miles and 42,000 more motor miles, which accounted for a considerable part of the increased consumption. Compensation had decreased in the aggregate, although the burden of the Workmen's Compensation Act was not lessened.

INCREASE IN RATES AND TAXES.

Rates and taxes showed an increase of £1,504. The estate agent had been very successful in reducing assessments, but the rating authorities were meeting that by increasing the poundage, and as an illustration of the effect of their action in one parish, notwithstanding the assessment had been reduced by nearly £4,000, the Company was paying £500 a year more in rates. There was no way of controlling this, and to add to the hardship of this particular case the Company paid more than half the rates in that parish. (Cries of "Shame.") The net result on the revenue account was that there was £54,121 increase of receipts, against £20,670 increase of expenditure, giving an additional sum of £33,451 on balance to be carried to the net revenue account. (Applause.) They brought in £1,341 more from the previous half-year's account, whilst interest on debenture and preferential capital had increased by reason of sales of stock during the half-year, and the balance available for dividend was increased by £28,717. This enabled the board to recommend an enhanced dividend of $\frac{1}{2}$ per cent., with a sum of £28,487 carried forward, as against £25,460 carried forward in June, 1910. (Applause.) The capital expenditure had been a little less than the estimate. It had been generally noted that the crowds expected to view the Coronation festivities were much less than had been anticipated, and it had been surmised that the many precautions which were taken by the authorities for the public safety were largely accountable for this fact. However that might be, the results, so far as they were concerned, were certainly disappointing. They made arrangements to run trains into London on Thursday and Friday in Coronation week from a very early hour in the morning, but they were very lightly loaded indeed. On the other hand, they did a large business in excursions run to the seaside on these days, and the Naval Review traffic was exceptionally heavy. (Laughter.) Perhaps it was right that he should make some reference to the National Insurance Bill now pending in Parliament, more particularly as he observed that the Chairman of the Great Eastern and the Chairman of the South Eastern Companies alluded to it at the recent general meetings of those companies. Quite shortly, they fully concurred with the tone of the observations of those gentlemen upon the subject, and, speaking for themselves, after as careful a study of the provisions of the Bill as it had been possible for them to make, they had no doubt that, should it pass into law in anything like its present shape, it would add a heavy burden to the expenses of the Company, whilst from the point of view of the staff it appeared very doubtful whether the benefits proposed by the Bill in case of sickness or disability would prove as advantageous to it or certainly to a large proportion of it as what was now done. They had commenced the half-year now current with increased traffic and with a substantial balance in hand, and it was to be hoped that the progress in the past half-year shown by the present account would be continued. (Applause.)

LORD COTESLOE seconded the motion.

In the course of a short discussion which ensued Mr. FRANCIS ROXBURGH called attention to the subject of rates and

taxes alluded to by the Chairman and mentioned by Lord Bessborough at the last meeting. He pointed out that for the year 1910 £241,107 was paid under this head of expenditure, while the total net profit earned and divisible amongst the ordinary shareholders was £540,179. Of this latter amount £32,035 had to be surrendered for income tax, thereby reducing it to £508,144, and increasing the sum at taxation to £273,142. The result then of the year's trading was that the State for imperial and local purposes took more than one-third of the profits and the luckless victims of unfair shareholders, less than two-thirds. As relief in assessments and poundage seemed a somewhat forlorn hope, he urged the Company to recourse to the same line of defence as that adopted by all commercial houses, when they found the cost of some material or some tax was more than their business would reasonably bear—namely, to increase their revenue by putting some moderate increment on the price of the commodity in which they dealt. When a particular trade was affected, he observed, all the principal firms in it, either by express agreement or tacit understanding, acted together. Inasmuch as rates and taxes pressed more heavily upon this Company than any other except the South Western, it was fitting, he thought, that the board of the Brighton Company should take the initiative, and therefore he invited the directors to approach the boards of some of the other railway companies with a view of transferring part at least of this heavy taxation on to the shoulders of those who ought to bear it, the consumers—in this case the travelling public. The task might be difficult, but nothing, he thought, could be regarded as impossible after the pacific destruction of the House of Lords.

The CHAIRMAN, in reply, stated that Mr. Roxburgh had called attention to a most legitimate grievance of railway shareholders, which had been the subject of remark at railway meetings for many years past. The absolute justice of the railway shareholders' complaint with regard to rating could not be denied. The fact was that they had no friend in Parliament or anywhere else, and the result was that in these matters they were powerless. He, however, was afraid that the remedy suggested by Mr. Roxburgh was wholly impracticable. He did not think they could hope to make up for the increased burden of rates by increasing the fares of passengers. The fixing of fares was a matter which required the nicest possible adjustment as to what the traffic would bear, and the raising of railway rates was not to be dreamed of. It was found that the most successful way of increasing the receipts was to lower rather than to raise their fares.

The resolution was agreed to, and the dividends recommended were declared.

A vote of thanks to the Chairman concluded the proceedings.

METROPOLITAN RAILWAY OF CONSTANTINOPLE FROM GALATA TO PERA, LTD.

A general meeting of the shareholders was held on Monday, July 31, at the offices, 25, Bucklersbury, E.C., Baron Emile Beaumont d'Erlanger (chairman of the company) presiding.

The SECRETARY (Mr. John Paterson), having read the notice convening the meeting,

The CHAIRMAN said:—Gentlemen, this is an ordinary meeting of the company, and I may mention that it has been called purely for form's sake, since it is to be immediately followed up by a meeting which has as a direct result the liquidation of the company. The reason for this, which I have already explained at a previous extraordinary general meeting, is because a scheme which has been placed before the shareholders has, after lengthy and prolonged negotiations, which were of a very difficult nature, been carried to a successful issue; that is to say, we have sold our concession to a Turkish company, and we have on the other hand sold the shares which we are receiving for the sale of our concession to a group of bankers, who buy the same for the sum of £125,000. If I went any further into this matter now I should have to trespass upon the grounds which properly have to be taken at the extraordinary general meeting, and, therefore, I will conclude my remarks and resume them immediately after the notice has been read calling the extraordinary general meeting. I formally move the adoption of the report.

Baron ADOLPH VON CRAMM: I beg to second that.

The resolution was put and carried unanimously without discussion.

EXTRAORDINARY GENERAL MEETING.

The SECRETARY having read the notice convening the meeting,

The CHAIRMAN said:—The proceedings of the ordinary general meeting having come to a termination, I now go on to the extraordinary general meeting, which has as its primary object the resolution that the company be wound up voluntarily. Of

course, in proposing this resolution, it is only meet that I should put before the shareholders, as chairman of this company, the result which will be obtained from the liquidation. Our principal asset has been, before the scheme was carried out, the concession in Constantinople for a railway between Galata and Pera. This concession we have been exploiting with more or less success for the last 36 years, and it was deemed advisable many months ago, soon after the revolution had taken place in Constantinople, to take steps by which the principal asset of this company should be sold with a view of liquidating this company. In order to sell this principal asset, we have, in accordance with the agreements entered into at the time of the renewal of the concession, to form a Turkish company, to hand over to that Turkish company the concession and the railway, and then having received the shares or principal part of our purchase money in shares, to sell these shares to an outside group. I may mention that we were prompted in seeking this liquidation by many important reasons, the principal one being that it behoved us, in order to carry out the successful operation of this concession, to spend a considerable amount of money upon its modernising, and also in compliance with certain conditions which had been imposed upon us at the time of the renewal of the concession, and that there was no desire on the part of the shareholders at present interested in the enterprise to put their hands into their pockets to carry out these large betterments. Therefore, in accordance with the resolutions which had been passed at the previous meeting, a Turkish company, with the consent of the Government, has been formed, and the property has been transferred to the Turkish company. By the result of the sales of the shares, this company will receive a sum of £125,000 in cash for the sale of the shares of the Turkish company, and there will result on balance a further payment of some £5,000, bringing up the total to £130,000. Then we have £2,800 in Constantinople, being in the working capital, and we have about £24,000 in our coffers in London, and this £27,000 added to the £130,000 before mentioned, will bring the cash at our disposal up to about £158,000 or £160,000. The net result of the operation will be that the shareholders of this company will receive from the liquidation a sum approximately £12 in cash, or 60 per cent. of the value of the shares, and will receive further shares of the Building Company of Constantinople—with which all the shareholders of this company are perfectly familiar—to the extent of some £70,000, which will add another 28 per cent. to the liquidation value of this company's assets; and, therefore, the result of the liquidation will be, that the shareholders will receive, partly in cash and partly in shares, approximately £18 for every £20 share. Owing to the low price at which for many years these shares have been quoted, I think the result attained may be considered as highly satisfactory, as a few years ago nobody expected to receive what will now be obtained in the liquidation of this company. I now beg formally to move, "That the company be wound up voluntarily."

Mr. LOUIS HOOPER LE BAILLY seconded the resolution, which was carried unanimously.

The CHAIRMAN: I now beg to move—"That John Paterson, of 1, Walbrook, in the City of London, chartered accountant, be and is hereby appointed liquidator for the purpose of such winding up."

Baron VON CRAMM seconded the proposition, which was also agreed to *nem. con.*

The CHAIRMAN: I now beg to move—"That the remuneration of the said liquidator is hereby fixed at the sum of £250."

Mr. LE BAILLY seconded the resolution, which was carried *nem. dis.*

The CHAIRMAN: It will be necessary to hold a second meeting on August 16th, in order to confirm the resolutions passed at this meeting.

The proceedings then terminated.

ALEXANDRA (NEWPORT AND SOUTH WALES) DOCKS AND RAILWAY.

The half-yearly general meeting was held on Wednesday, at the offices of the Company, No. 14, St. Mary Axe, Mr. E. Underdown, K.C. (deputy-chairman) presiding.

The SECRETARY (Mr. W. G. Flanders) read the notice convening the meeting.

The CHAIRMAN, in moving the adoption of the report and accounts, said that the gross receipts for the half-year amounted to £155,291 as against £135,080 in the corresponding period of 1910, an increase of £20,210. Added to this was a balance from the last half-year's accounts of £5,996, which made the total net receipts £175,222, as compared with £60,463 in 1910. After paying the interest on debentures and fixed charges, which amounted to £21,935, there was left a net balance of

receipts of £53,287. This enabled the directors to recommend the payment in full of the dividend for six months to June 30, at the rate of $4\frac{1}{2}$ per cent. on consolidated stock A. The working expenses amounted to £86,064, or 55.42 per cent. of the gross revenue, against 58.27 in the first half of 1910. The capital at present unproductive amounted to £580,125. The widening of the Mendalgrey Bank and the reorganisation of the sidings had been completed. There had been an increase in the tonnage dealt with to the extent of 432,083, or over 15½ per cent., and the great growth of the docks had been accounted for by the large amount of coal which had been shipped. In fact the total tonnage dealt with—viz., 3,247,266 tons during the half-year, constituted a record. The increase in passenger receipts was due partly to improved traffic on the motor car service. Locomotive power at the docks showed an increase of £982, the result of the increased tonnage, but the cost per ton handled was a little lower than in the corresponding period of 1910. General charges showed a decrease of £205. Law charges and Parliamentary expenses had decreased £1,089. The expenditure under this heading was chiefly due to the opposition which the Company had to offer to the Barry Railway Bill, the main object of which was to repeal the famous section 23 of the Barry Railway Act of 1907. Imports showed a very satisfactory increase. The progress of the new lock entrance works during the last six months had been exceptionally good. Contractors had been favoured with very fine weather. The delay consequent upon the flooding of the works, which occurred in December last, proved less serious than was contemplated at the time. The temporary dam renewed after that accident had stood well. Carriage and wagon repairs had increased £134, owing to the heavy repairs necessitated by a large number of wagons being utilised in the bar iron traffic which was naturally responsible for heavier wear and tear. Rates and taxes showed an increase of the poor rate, upon which the Company was charged the full assessment. There was, however, a decrease in the general district rate which was a commuted assessment. Compensation had increased £599 partly on account of the Workmen's Compensation Act. The average number of men employed upon the works during the past half-year had been 775, the average during May and June being 917 men. With reference to the Bill deposited seeking powers to construct a railway from Barsaleg East to Nine Elms Point with the object of possessing and working an independent competitive route to the Sirhowy Valley, it was a source of great satisfaction to be able to state that after a very strenuous fight in Parliament, the Bill was safely piloted through both Houses, passing its third reading in the House of Commons as recently as July 17. On the whole the accounts might be described as eminently satisfactory. The Chairman then moved, "That the report of the directors and statement of accounts to June 30, 1911, submitted to this meeting be, and the same are, hereby received and adopted." This was seconded by Sir H. M. Jackson, Bart., and carried unanimously. A resolution for payment of dividends at the stipulated rates having been carried, the proceedings terminated with a vote of thanks to the Chairman.

GREAT NORTHERN AND CITY RAILWAY.

The 26th half-yearly meeting was held on Wednesday in the Westminster Palace Hotel, London, the Earl of Lauderdale presiding.

The CHAIRMAN moved the adoption of the report and accounts, a summary of which appeared in our last issue. He said that the revenue amounted to £41,845, as against £39,663 for the corresponding half-year of 1910. The cost of working had been at the rate of 48.18 per cent. against 50.12 for the same period of last year and 51.09 for the half-year ended December 31 last. This was a marked improvement and was the lowest percentage they had obtained since the opening of the line in 1904. It reflected credit on the manner in which the general manager had reduced working expenses without in the least impairing the efficiency of the railway and its upkeep. The permanent way, rolling stock, etc., had in every respect been maintained to the highest level of their requirements. The net revenue amounted to £21,687, as against £19,784, being an increase of £1,903, and although this did not enable the board to meet the entire fixed charges, yet it reduced the deficiency from £3,163, at which it stood for the half-year ended June 30, 1910, to £1,110 for the last half-year. The number of passengers was 6,323,045, against 5,966,114. The number of season ticket holders was 5,090, against 5,207. The cost of fuel had gone up owing to the higher prices prevailing for coal, to the fact that the speed of the trains had been somewhat accelerated, and also that both their train and their car mileage were in excess of what they were during the corresponding period of the

previous year. The company seemed to be on the up grade. The recovery was naturally slow, but it was satisfactory to note that in the face of the keenest competition they were gradually, but he hoped surely, regaining the traffic they had lost. That they had this half-year to rely upon outside assistance for but a comparatively small sum of money was a satisfactory feature in the position, and should they be able, as the directors believed would be the case, to maintain the steady increase in the company's takings, the day should not be far distant when the railway would again be quite independent, and would not have to rely upon the kindness of its friends to preserve it from disaster.

Mr. CHARLES STEEL seconded the motion, and it was agreed to.

CENTRAL LONDON RAILWAY.

The 32nd ordinary general meeting was held in the Holborn Restaurant, London, W.C., on Thursday, Mr. H. F. Parshall presiding.

The CHAIRMAN, in moving the adoption of the report and accounts (a summary of which appeared in last Saturday's RAILWAY TIMES), dealt first with the capital account. He said that in April last an issue was made of £385,000 four and a half per cent. preference stock, under the Central London Railway Acts of 1902 and 1909, which was considerably over-subscribed. Practically the whole of that amount had been allotted to the shareholders of the company. During the last half-year £51,464 had been expended on capital account, of which £40,282 had been in connection with the Liverpool Street extension, £2,617 on the high level subway connection with the City and South London Railway at the Bank Station, and £779 on replacing wooden platforms with stone. With regard to the Liverpool Street extension, certain arrangements had been made with the contractors, so that the work would be completed six months ahead of the original contract time. It was anticipated that this extension would be opened for traffic next year. The high level subway at the Bank Station was opened in May last, and had proved to be a great convenience to the public, some 3,000 to 4,000 people making use of it daily.

OMNIBUS COMPETITION.

During the last half-year the railway had carried over twenty million passengers, showing a decrease of 658,600 passengers compared with the corresponding period of 1910. This decrease was undoubtedly due to the increased motor bus competition along the company's line of route, which had been greatly assisted by the extremely favourable weather which had prevailed. From observations made as to the number of motor buses passing their Lancaster Gate station going eastwards, they found there was a one-minute service of buses. Twelve months ago 162 buses passed this point in four hours, whereas the service had now been increased to 205 buses carrying an estimated number of 5,200 passengers, being an increase of 43 buses with an increase of 1,400 passengers. At certain times of the day as many as eight buses had passed their Oxford Circus station in one minute going Citywards, and in both directions, in one complete hour, 240 buses had passed the station, which was equal to four per minute, giving a seating capacity of 8,160, which was about one-half the full capacity of their railway.

WORKING EXPENSES.

It was satisfactory to note that under the new organisation, without in any way diminishing the efficiency, there had been a decrease in the working expenses of £3,420, which had been brought about by economies effected in all departments. The gross receipts amounted to £150,100, and after deducting working expenses there was a balance to net revenue account of £65,901. After providing for debenture interest and other payments, and including the amount brought forward from last year, there was a balance of £75,655. A dividend on the ordinary stock at the same rate as last year—namely, 3 per cent., would absorb £27,351, and the preferred would take £11,765, leaving a balance of £36,538. From this balance the directors proposed to carry forward to the dividend suspense account the sum of £5,882 on account of the deferred stock at the rate of 2 per cent., per annum, which would leave a net balance forward of £30,655. The Bill to secure through running to the Ealing station of the Great Western Railway had been passed by both Houses of Parliament. There was every reason to believe that this connection would bring a large amount of extra traffic to the line, there being large opportunities for development in the neighbourhoods of Ealing and Acton, and it was believed that plans were being made for building on the undeveloped land. He had been in close touch with the officials of the Great Western Railway Company, who thought that this extension was of the greatest value and im-

portant. During the Coronation festivities a local train service was worked on the line on the days 21st, 22nd and 23rd June—they carried 70,000 passengers, without a hitch of any kind. The Board of Trade had intimated that His Majesty the King had decided to grant Coronation medals to two members of the staff in appreciation of the splendid way in which the crowds were managed. (Applause.)

FOR LONDON: 11/11/11.

Regarding season tickets on the line the use of these was inaugurated, and there was no doubt that they had been highly appreciated by the public, with some very remarks to the company. They had now been working a sufficient length of time to enable the directors to say that the receipts per passenger mile from season tickets were greater than those for ordinary tickets. Improvements had been and were being effected at their various stations in order to make them more attractive to the travelling public. A system of ventilation was being installed throughout the line, and already favourable comments had been made as to the great improvement which had been effected in the atmosphere at the Bank Station, where the system had been in operation for some weeks. An arrangement had been entered into with Messrs. Selfridge and Co. for the sale of all kinds of tickets issued from their Bond Street Station, and the result had proved very satisfactory. During the month of June some 6,750 tickets had been sold by that firm, and apparently without in any way affecting the receipts of the Bond Street Station.

Viscount ST. ALDWYN seconded the resolution.

Mr. MYHER asked whether the company's engineers had considered the question as to whether the time had now come to instal fresh plant in their generating station. He thought considerable economies could be effected by substituting for the reciprocating engines a turbine plant.

The CHAIRMAN, in reply, said that the directors had given the subject their consideration, and had come to the conclusion that there was no justification whatever for scrapping their plant at Shepherd's Bush and installing turbines. They were using Allis Corliss engines of the very best type, and to-day they were running at less than 3 lbs. of coal per kilowatt hour, which was a very fine record for a power-house. There was no station in the Kingdom, and certainly there was none in the London area, which showed such good working results as did their Shepherd's Bush station.

The resolution was carried unanimously.

BEIRA RAILWAY.

A meeting of certificate holders of the Beira Railway Co., Ltd., was held on Thursday in Salisbury House, London, E.C.—Mr. Rochfort Maguire presiding—for the purpose of considering the following resolution:—"That Clause 10 of the deed poll of April 19, 1892, under the common seal of the British South Africa Company, be rescinded and replaced by the following clause: '10. The appropriated shares shall become distributable in either of the events following, that is to say: If an order shall be made or an effective resolution shall be passed for the winding-up of the Beira Railway Company or on arrival of the first day of July, 1942, before the commencement of the winding-up of the company whichever shall be the earlier.' And that the British South Africa Company be, and it is hereby authorised to modify the provisions of the said deed poll accordingly. And that the rights of the certificate-holders be modified accordingly."

The CHAIRMAN, in moving the adoption of the resolution, said that the capital of the Beira Railway Company was divided into 600,000 shares, of which the British South Africa Company were the holders of a majority of 350,000, and control of voting power was possessed by the Chartered Company as the trustees for the shareholders. If the resolution which was before the meeting was passed on that occasion they would go on as they were doing at present, while, on the other hand, if the resolution should be rejected, then the trust would come to an end on June 30 of next year. They asked the meeting to pass that special resolution extending the date until the year 1942. Each certificate holder would, if the resolution was rejected, receive registered shares, and the Chartered Company would lose the voting power which it now held as trustees, and, consequently, the control for the shareholders. The Chartered Company saw no reason why the present progress of the Beira Railway should not be continued upon expanding lines, but for that to take place it must be understood that the control must remain in the hands of the Chartered Company. That was essential to enable them to pursue their policy of making Beira the principal port of Rhodesia. In the event of the resolution being lost they would have no alternative but to divert some of their traffic to other railway routes. The prosperity of the

railway company in the future was very largely dependent upon the approval of the arrangement by that meeting.

Mr. HENRY BIRCHENOUGH seconded the motion, and it was unanimously agreed to.

A vote of thanks to the Chairman concluded the proceedings.

LONDON AND SOUTH WESTERN RAILWAY.

The half-yearly general meeting of the proprietors was held at Waterloo Station, yesterday, August 4, Mr. Hugh W. Drummond (chairman of the company) presiding.

The SECRETARY (Mr. Godfrey Knight) having read the notice convening the meeting,

The CHAIRMAN, in moving the adoption of the report and accounts, an analysis of which appeared in these columns last week, said:—Gentlemen, when last I had the honour of addressing you I ventured to predict that the past half-year would be a good one, and I am glad to say that the result has confirmed our expectations. I also ventured to outline the policy of the board that, whereas in bad times shareholders should receive the fullest possible consideration, in good times ample provision ought to be made to meet all possible requirements—(hear, hear)—and, acting on that principle, that is why the dividend which we recommend to you to-day is the same as that which you received in the corresponding period of last year. I hope that when I deal with the separate items of the accounts I shall have this policy endorsed by all those who have the true welfare of this company at heart. The capital expenditure in the half-year was £321,367, the principal outlay being £122,884 on the widening of lines, including £99,437 on the new lines and works at Hammersmith for the use of the Metropolitan District Railway, on which, I may tell you, interest is paid to this company from the actual date of expenditure. Then there is £15,393 on the Waterloo Station enlargement and new offices; £9,266 on the new locomotive and stores depôts, and cottages at Eastleigh; £22,010 on rolling stock and machinery; and £146,773 on the new 16-acre dock and other works at Southampton. I will now deal with the revenue receipts. The gross receipts of all kinds for the half-year amounted to £2,725,970, being an increase of £56,132, and this, gentlemen, is a record total for the June half-year, and is spread over all descriptions of traffic.

THE CORONATION TRAFFIC.

The traffic for Ascot and other race meetings was better by £5,200, and there were substantial increases in the longer distance passengers, including the Coronation and Naval Review traffic. Now, a word with regard to the Coronation traffic. I may say that it was not, in any way, up to our expectations. If you have read the papers you will have seen that eastbound steamers from America showed a decrease of no less than 4,800 passengers. To give you a further instance I may say that we provided a special train which, on a previous occasion, fully justified us in running it. Now, on this occasion there was not one single passenger who went by this special train at the starting stations, while at the suburban stations during the Coronation period, instead of the trains being overcrowded, the accommodation provided was not even fully occupied. I think the explanation is, that the public were frightened, perhaps, by the precautions that had been taken, and by the fact that people were told that the prices charged in London for accommodation would be exceedingly high. But there was one redeeming feature, and it was this, that everybody in London tried to get away from the city during that week, and there is no doubt that our traffic from London was exceptionally good. Then you must remember that Easter and Whitsuntide were later this year, while we had this extraordinarily fine weather. We are not so used to 85 degrees in the shade, and the result was that in consequence of the fine weather, traffics for Whitsuntide were remarkably good. The first-class receipts were £17,077 more, which represented the carrying of 65,871 more passengers. The second-class again showed a decrease of £1,122, the number carried being 41,392 less. On the other hand, the third-class showed an increase of £20,175, and an increase in numbers of 868,327. You will remember that I dealt very fully with the second-class traffic on the last occasion, but it is very satisfactory, I may say, to find that the second-class traffic is not as bad as it looks, because second-class season ticket receipts show an increase of £2,617, which, I hope, means that the second-class are struggling to maintain their position on this line. (Hear, hear.) The strawberry season was earlier and shorter than usual on account of the dry weather. The passenger train and motor car mileage is less by 15,426 miles, and the coaching traffic receipts are more by £42,018, making the earnings per train mile 4s. 3½d., against 4s. 2½d. at June, 1910, an increase of 1½d. per mile.

A record was made in the fact that the goods and mineral receipts for the week ending April 30 reached the figure of £35,700, which was the highest figure ever attained on this railway. Minerals show an increase of £8,986 in amount. The steamboat receipts amount to £5,952 less than last year owing to the short crops in France and the Channel Islands, which I have before mentioned. The Southampton Docks and Stonehouse quays revenue is £959 more, mainly due to dues on ships in connection with the Naval Review. The gross revenue, inclusive of docks and steamships, comes out at £56,132 more than in June, 1910. With regard to expenditure, Abstract "A," which shows an apparent increase of £21,000 really shows an increase of expenditure on maintenance of way and works of only £13,000.

THE NEW WATERLOO STATION.

We are, as you know, building a new Waterloo Station. The old South Station has already disappeared, and we are now commencing work on the Central Station and offices. By degrees the old station will go, and a new station will take its place. While the new station will properly be charged to capital, the value of the displaced station must naturally and properly be restored to capital by half-yearly appropriations from revenue. This, I am sure, you will agree, is a perfectly sound financial course to adopt, as otherwise you will have capital standing in the books without any visible assets to represent it. General charges are more by £1,948, including £747 more for telegraph maintenance. Our law and Parliamentary charges show an increase of £1,944. That is owing to the costs incurred in opposition to various Bills in Parliament of other Companies and the Metropolitan Water Board. This Company's Bill involved coming to an agreement with the Board of Trade, the War Office, the Admiralty, the London County Council, the Lambeth District Council, the South-Eastern Railway, and innumerable small landowners, and I am glad to say that the negotiations carried out by our general manager and solicitor were so successful that it passed both Houses of Parliament unopposed, and, therefore, we saved the large amount which would otherwise have been expended in fees to counsel, etc. The figures make up the total increase of £42,066 in the railway working expenses. With regard to the marine department, there is a decrease of £2,988 due to less chartering of vessels owing to the reduced traffic for conveyance and less general repairs to our steamers, and it also includes the service to Roscoff which is discontinued.

THE STEAMBOATS.

Then the amount reserved for steamboats depreciation and renewal is £10,000. With regard to our steamboats, I may say that we are going in for an up-to-date policy, and I think that the results show that we were wise in doing so. We have provided two new turbine steamers, and they have proved themselves to be most popular. They are installed with wireless telegraphy, and I think it does give confidence to passengers in knowing that they have means of communication with other vessels. To meet this expenditure we must, naturally, make proper provision. The total of our steamship insurance and renewal fund amounts to £311,000, being 50 per cent. of the capital expended on our steamers. We have also reserved from net revenue £10,000, being the same amount as that reserved in the corresponding period last year. The net result of these debits and credits is an increase of £16,683 in the amount available for dividends. After providing for dividend on the additional 3½ per cent. preference stock, £2,025, there is an increased amount available of £14,058. This admits of a dividend at the rate of 4 per cent. upon the ordinary stock for the half-year, and is more by £10,480, payable upon £524,000 additional stock, and the balance to be carried forward will be £35,587, as compared with £32,009 at June, 1910, being £3,578 more. So far, gentlemen, as regards the accounts. As you know, we, as a rule, look upon this as being in the nature of an interim report and accounts, so that we do not go so much into detail as we do when we are dealing with the whole year's working. There are, however, one or two matters, that I think I would like to bring to the notice of the proprietors. First of all, you may have noticed on Wednesday last that the week's working showed a decrease of no less than £18,700. Well, it is not very encouraging to meet our shareholders with the statement that our receipts have gone down by £18,000 odd, but you must recollect this, that the corresponding week last year contained the August Bank Holiday. I am very pleased to be able to tell you that the takings, so far as this week goes, show that there is a substantial increase as compared with the corresponding week of last year, and, therefore, I hope that when we publish the figures next week all that leeway will be more than made up. (Hear, hear.)

THE NATIONAL INSURANCE BILL.

There is one point which I would like to bring to your notice, and that is the National Insurance Bill. Now, while fully participating in the sympathy already expressed by other railway chairmen with the objects of this Bill, I do not think that the effect of it on the revenue of railway companies has been fully realised. Taking the most moderate view, you will be deprived of a sum equal to at least $\frac{1}{2}$ per cent. dividend on the ordinary capital of the company. Of course, the debenture-holder and the preference shareholder both escape. In his speech at Birmingham on June 10, the Chancellor of the Exchequer said, "The employer does not contribute; it is the industry that contributes." This may be, and probably will be, the result in many trades, but most certainly it will not be so in the case of railway companies, at any rate so far as the goods and mineral traffic is concerned. The railway industry in this country is in the practically unique position of not being able to adjust its charges in accordance with the increase and decrease of its burdens. If we attempted to raise our goods rates we could, and probably should, be called upon to justify each and every separate increase, and we could only call in the new burden of the Insurance Bill to the extent to which it affected the cost of carrying each separate and individual article of traffic. The Commissioners, by their previous decisions, would be bound to insist that the cost of insurance be spread over all classes of receipts. So far as this company is concerned, relief would most properly be found in the reduction, or abolition, of the Government duty on passengers—a tax on locomotion which is practically, in my opinion, out of date, and against which we have so often protested. But, failing in this or relief in some other way, the ordinary shareholder must recognise—and I want him to realise this—that if the Act as it is to-day comes into force, he is permanently deprived of $\frac{1}{2}$ per cent. dividend on his holding.

THE NEW SOUTHAMPTON DOCK.

I think it is a matter for congratulation to us all interested in this railway that, although the new 10-acre dock at Southampton is not yet completed, the White Star liner "Olympic" has been able to embark and disembark her passengers, and to arrive and leave her berth without any difficulty. The work of this new dock has been carried on with all possible despatch, and we hope before many months have passed to be able to welcome the sister ship, the "Titanic." One word now in regard to the Trafalgar Dry Dock. There have been great difficulties to overcome in connection with the enlargement of this dock, which those of you who are acquainted with Southampton can fully realise, but I hope that we have surmounted the chief of these, and that the work may continue to progress in a sure and satisfactory manner. There is the further interesting point, that during the last half-year the Cunard Company have taken over the steamers of the Thomson Line sailing from Southampton to Canada. The Houlder Line have also established a regular service of steamers calling at Southampton for the discharge of fresh meat from the River Plate, and nearly the whole of this traffic, of course, comes over our railway system as well. Now, we have, for the first time for some years, owing to the new dock nearing completion, berthing accommodation equal to the demands made upon us, the removal of the White Star Line into the new dock leaving their present berths vacant. I gather from the papers that there has been a certain amount of unrest at Southampton in regard to labour matters. This has now been overcome on a satisfactory basis, and I am very glad to say that it has been brought about without any very serious trouble or collision with those affected. You may remember that the late Mr. Whiteley left a large sum of money, which his executors are using in the establishment of a Garden City near our station at Walton. They have acquired there 250 acres of land, and they propose to provide building accommodation for about 700 people. We have good reason to believe that other extensions in this way are in contemplation on our system which must also bring grist to our mill. I have only one word more to say, and that is in regard to our staff. In dealing with the very heavy traffic with which they had to deal in the last half-year, especially during Ascot week and the Naval Review, they carried out everything without a hitch of any sort, and I think that our congratulations are due to the superintendent of the line and his staff, and the locomotive department for the way in which they carried out their very arduous duties. (Applause.)

Sir W. W. PORTAL, Bart., seconded the resolution.

Mr. W. R. LAWSON, whilst congratulating the chairman upon the successful results of the past half-year, expressed his disappointment that the dividend had not been increased. Referring to the National Insurance Bill, he thought it was

time that railway shareholders took some action to get it at least postponed until next year, as in its present form it would be, it passed, unjust to the classes of employers, especially railway companies. The latter were already doing more for the insuring and pensioning of their employees than any other class of employers; they were in this company paying about £40,800 a year in pensions, and the 14th per cent. which would be deducted from their dividend would be about £18,000 a year, so that the shareholders were being asked to give £58,800 a year for pensions and insurance. He suggested that railway boards should take joint action to get the Government to issue better certificates for the employers who wanted them.

Mr. SYMONS complained that the South Western had almost alone in not having increased the dividend, other companies paying in most cases $\frac{1}{2}$ per cent. more. The price of the stock, too, had declined more than most other companies' stocks. He thought it was time to stop extravagant expenditure, and asked how much more the directors proposed to expend upon the Waterloo Station.

Mr. BROWN remarked that considering the large increase in receipts from various sources during the past half-year, he was surprised that the dividend had not been increased; but since the chairman had explained the reasons why, he felt that he had no cause for complaint. Looking at the accounts, he thought it was a great encouragement that the traffic had increased by £60,000 in the half-year, and that the whole of that increase had been obtained without practically any additional expenditure.

Mr. B. MORTIMER asked whether the transfer of stocks on the American system would be legal?

The CHAIRMAN, in reply, said he was glad that Mr. Lawson had realised the importance of the National Insurance Bill. The board had had very little trouble with their men, for they were always met in a straightforward way and could always come before the directors to discuss their possible grievances. Bearer bonds would restrict the market to some extent, he thought, and it was a matter which would require Parliamentary sanction, but it would receive the careful consideration of the board. They were all disappointed at not receiving an increased dividend, but the first thing the directors had to consider was the railway, and his colleagues were unanimous with him that the surplus receipts should be put into the road and sufficient money expended to keep the system in an efficient condition. It should be remembered that they were in the transition state. In making the system up-to-date, they were simply carrying out the policy supported by the late Sir Chas. Scott, and believed it would be for the ultimate benefit of the undertaking. It was impossible at present to say how much more would have to be spent upon the Waterloo Station.

The resolution was then put and carried unanimously.

On the proposition of the CHAIRMAN, the dividends recommended in the report, including one at the rate of 4 per cent. per annum on the ordinary stock, were approved and declared.

On the motion of Mr. BROWN, seconded by Mr. LAWSON, a hearty vote of thanks was accorded to the chairman and directors for their past services.

The proceedings then terminated.

GREAT CENTRAL RAILWAY.

The ordinary half-yearly meeting of proprietors of the Great Central Railway was held on Friday, August 4, at London Road Station, Manchester. Sir Alexander Henderson presided.

The CHAIRMAN, in moving the adoption of the report and balance-sheet (which was given in THE RAILWAY TIMES of last week), said they had carried during the half-year 191,000 first-class passengers, an increase of 2,787 over the corresponding half-year, and 10,095,252 third class, an increase of 370,533; the receipts from those were £560,252, or £11,815 more than last year. Season-ticket holders showed increase during the half-year of 34,433; the increased receipts under that head were £17,777, making the total increase under the head of passengers £13,502. Referring to the other items set out in the account, the chairman said merchandise dealt with showed that the company had profited largely by the activity in practically all districts served by their system, the Manchester district showing particularly satisfactory results; the same could be said of Sheffield to a lesser extent. At Grimsby they had had largely increased business, the total increase being £51,000; minerals showed an improvement in amount of £38,287, the tonnage carried during the half-year being 10,310,000 tons, an increase in tonnage of 492,108. Steamship receipts showed a trifling falling off of £3,500; there was a marked falling off in the import trade from the Continent by Grimsby to the

United States, which was due, very considerably, to prohibitive measures adopted by Germany against the transit of emigrants by British liners; there was, however, an increase in revenue of £101,628 over the corresponding period. Train mileage showed an increase of 50,000 miles. The receipts upon total mileage were 55,95d. per train mile, against 53,81d., an increase of 2,14d., a figure which he thought the meeting would agree was very satisfactory. Taking the expenditure side of the account, he said locomotive power had cost considerably more, and increased wages had accounted for £10,081. Coal had cost £8,331 more, mainly due to increased mileage run. The total expenditure was £67,311 more than in the corresponding period last year. Satisfactory results were shown by the joint lines, the total increase being £18,318 over the corresponding period, with a balance of £8,500 brought forward from last half-year, there was a total sum available for payment of interest and dividend of £931,266, or £53,596 more than at the corresponding period. After payment of interest on preference shares there remained £392,642, or £48,591 more than last year, which was sufficient to pay the half-yearly charges in respect of preferences down to and including 1889 stock, and leaving a balance to be carried forward of £35,200 to next half-year. The company anticipated spending during the current half-year £207,000, a considerable portion in connection with relief works at Sheffield, where congestion had been very much felt during the recent period of active trade; £60,000 of that total was really only a book entry in relation to the purchase of premises at Marylebone Station, and the amount was thus reduced to £147,000. He was glad to say that the new dock at Immingham was nearing completion, and they fully anticipated being able to handle a large amount of minerals at the beginning of October. The dock was very fully equipped with hydraulic and electric-power plant, and the directors anticipated not only a large general business, but also great coal shipments in connection with the new fields which had been opened up in South Yorkshire and Derbyshire. Unless something unforeseen occurred, the directors were confident that it would not be long before the enterprise would justify its existence and the liability the company had taken. From reports received from district agents, there seemed every probability, if there was no disturbance of trade by strikes or labour disputes, that business would continue in a satisfactory state. The Lancashire district only would be affected by new season's cotton crop, and if this should prove to be abundant the prospects are distinctly hopeful. In Leicester a good season was anticipated, and in Sheffield the heavy trades were fairly employed. Their immediate prospects were bright, though there was one question to consider—that of labour. Their expenses during the past six months had increased by £67,000, and considerably more than half that was due to greater wages paid. They had to look forward in the current six months to a continuance of the increase under that head. Their men were, on the whole, well paid and he believed generally contented, but there was no blinking the fact that a spirit of unrest was abroad, and, recently, they had met with trouble in some departments. It seemed, therefore, a rather inopportune time to throw upon employers additional burdens. If the Insurance Bill was passed in its present form the railways would undoubtedly suffer considerably. In their own case, invalidity insurance would cost them some £20,000 a year. Railway companies were not in the position of most commercial employers, who could raise their charges to meet additional State burdens, and if for the benefit of the community as a whole burdens were thrust upon them, it seemed only fair that they should obtain relief in other directions. They would naturally regret if they were obliged to restrict the facilities they were now able to give to the public, but there might be no alternative.

Mr. W. P. VICCARS (deputy-chairman) seconded the resolution.

Mr. T. BARRINGHAM (Manchester) urged that the time had come when the Government should take a firm grip of the question of labour disputes, with a view to compulsory arbitration.

Mr. HORNETS (Wexford) presented a petition with nearly a thousand signatures against Sunday goods trains and Sunday passenger excursions.

Mr. BOUTFLOWER (Manchester) asked for information as to the proposed electrification of the Manchester South Junction and Altrincham Railway.

The CHAIRMAN, in reply to these and other questions, said their officials had found that wagons of ten tons capacity were the most economical for their traffic. Such things as half-filled wagons on their line did not exist, save where if one wagon could not take the goods they must go to partially fill another. With regard to the labour question, he purposely

avoided touching upon it except lightly. It was a very great difficulty with the company at the present time, and he did not think a discussion upon the situation would be very wise at that moment. (Hear, hear.) He might say, however, with regard to the suggestion that a Government arbitrator should be appointed, that he was very doubtful whether any good purpose would be served. Their railway works were now controlled by conciliation boards composed equally of members representing the company and the men, and he was bound to say, sitting as he did as chairman of the Central Conciliation Board on the directors' side, he had always met with courtesy and reasonableness on the part of their employees. They had made arrangements with them, both with regard to wages and hours of labour, which were in force until December, 1913, and if they broke their engagements—well, he did not know that there was anything they could do. It was a solemn binding arrangement entered into by both parties, after full consideration of the circumstances, and he was quite sure from what he had seen of the men who represented the workers on the Central Board that they would be as anxious to keep that bargain in its entirety as the employers were. With regard to Sunday labour, it was not to their advantage to run goods trains on that day unless absolutely necessary. As a matter of fact, they never started a goods train on Sunday except under most exceptional circumstances. Such trains frequently finished a journey on Sunday, but did not commence it. As to Sunday passenger traffic, they had to do very much what the public demanded, and if their company did not provide Sunday trains the Sunday League and other organisations who took a diametrically opposite view to his questioner would come down upon them with a heavy hand. With regard to the electrification of the Altrincham line, the matter was still under consideration, and he could say nothing definite about it.

Upon the motion of the CHAIRMAN, seconded by the DEPUTY-CHAIRMAN, the report and accounts were adopted. A resolution declaring the dividends recommended was also carried.

RHYMNEY RAILWAY.

The half-yearly meeting of the Rhymney Railway Company was held at Cardiff yesterday, when a dividend at the rate of 9 per cent. per annum was declared. The total receipts were £191,382, an increase of £7,733 over the corresponding period of last year, while the expenditure was £121,713 net, a decrease of £354. The chairman said that the extra holidays and labour troubles had disturbed their traffic. As to the Insurance Bill, it was difficult to say what effect it would have upon their undertaking, but supposing it went through in its present form, it would cost the company anything up to £1,000 a year, and it was difficult to see a corresponding benefit to the men.

Afterwards an extraordinary general meeting of the company was held, when the issue of £210,000 new stock was authorised. Of this £200,000 will be ordinary stock.

CORK, BANDON AND SOUTH COAST RAILWAY.

The half-yearly report states that the profit on the working amounts to £20,555, an increase of £1,489. Including miscellaneous receipts and balance of £3,546 from the previous half-year there remains a surplus of 15,156 after deducting interest on the debenture stock, other companies' shares of traffic, etc. There has been placed to renewal and reserve funds £870, and the directors recommend a dividend at the rate of 3½ per cent. per annum on the ordinary stock, leaving the balance of £2,402 to be carried forward. The Cork City Railway Company have continued to make satisfactory progress in the construction of the connecting line across the River Lee and the sidings on the South Quay. The bridge over the company's Cork yard has been completed.

PORT TALBOT RAILWAY AND DOCKS.

The accounts for the half-year ending June 30, 1911, show a gross revenue of £73,312 (against £65,673), and an expenditure of £28,650 (against £26,937), leaving a profit of £44,662 (against £38,736). Adding balance from last half-year (£1,719), the total net revenue was £46,381, of which prior charges absorbed £14,000; dividend on preference shares at the rate of 4 per cent. per annum £12,000, and dividend on ordinary shares at the rate of 6 per cent. per annum £18,900, leaving a balance of £1,481 to be carried forward. Length of line open for traffic, 36½ miles. The capital account shows a total expenditure of £1,777,300, whilst the receipts have been £1,688,573, as follows:—Ordinary shares, £630,000; preference shares, £600,000; loans and debentures, £458,573.

NORTH EASTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Thursday. Our usual analysis follows:

CAPITAL.	
Total expenditure	£83,251,300
Total receipts (allocated as follows)	79,791,517
Ordinary stock	£31,772,091
Preference guaranteed purchase stocks	23,550,312
Debenture stock	18,493,090
Loans	1,700
Premiums	5,870,324
West Hartlepool account	94,100
Balance to debit of capital account	£3,489,789

The expenditure during the half-year amounted to £250,760—viz., £158,790 on lines open for traffic, £4,970 on lines in course of construction, £53,000 on Hull Joint Dock (North-Eastern proportion), and £40,000 on working stock. Estimated further expenditure—in the current half-year, £464,000; in subsequent half-years, £923,000; total, £1,387,000. Capital powers and other available assets, £4,895,728.

REVENUE.	
	1911.
Passengers—First-class	£81,813
Third-class	901,831
Periodical tickets	136,030

Total	£1,955,580	£1,790,022
Prior charges	414,170	£407,971
General reserve fund	20,000	20,000
Reserve for contingencies	50,000	—
Preference dividends	491,570	491,952
Dividend on ordinary stock	*873,757	*794,217
Balance to next half-year	106,092	85,477

Total £1,955,580 .. £1,790,022
 *At the rate of 5½ per cent. per annum. †At the rate of 5 per cent. per annum.

The gross receipts for the past half-year show an increase of £218,433, the expenditure an increase of £69,266, and the net receipts an increase of £149,167. The ratio of expenses to receipts is 64.21 per cent., as against 65.64 per cent.

TRAFFIC, ETC.	
Half-year ended June 30.	1911.
Passengers—First-class	571,614
Third-class	27,498,696
Total	28,070,310
Season-tickets	49,920
Mileage—Lines owned	1,680
Partly owned	34
Leased or rented	20
Foreign lines worked over	264
Total operated	1,998

	1911.	1910.
Passengers	1,341,288	1,230,448
Goods	1,802,420	1,830,048

The report on the widening of the railway between Northfleet and the London and the remodelling of the goods station at Newport is approaching completion. At Hartlepool the dock gates at the new west entrance are about completed. As soon as this entrance is opened for traffic, the work of reconstructing the north wharves, the work of constructing new coal staiths at West Dunston, and the provision of appliances for bunkering coal at Middleton, have been commenced. The river embankments of the new dock at Hull are completed, and part of the quay and the ground has been ballasted. The company's Bill has passed the Committee stage in both Houses, and now awaits final reading. The directors record with profound regret the loss of Lord Airedale, who died suddenly in March last. Lord Airedale was elected a member of the board in 1885 on the retirement of his father, Mr. James Kitson, who had been a director of the company since its formation in 1854. A man of sound judgment and judicial mind, Lord Airedale gave ungrudgingly to the company the benefit of his great experience and business capacity, and his death is a heavy loss to the shareholders and to his colleagues on the board. To fill the vacancy thus caused the directors have elected the Honourable Roland Dudley Kitson. The directors regret to announce that owing to the pressure of other duties the Marquess of Londonderry, K.G., has felt it necessary to resign his position on the board; they have elected Viscount Castlereagh, M.P., to fill the vacancy so caused.

SOMERSET AND DORSET RAILWAY.

The accounts show that the traffic receipts for the half-year ended April 30 last, as received from the lessees, show a total gross income of £102,238, as against £99,577 for the corresponding period of last year. The fixed minimum rent of the line payable by the lessees to April 30 last, after deducting £176 for rent charges, has been applied in payment of interest on the debenture stocks and of dividend on the extension ordinary stock. The administration charges during the half-year amount to £143, but as the fixed minimum rent (after meeting charges referred to above) is not sufficient to cover them, the amount is included in the debit balance carried forward to the next account.

ISLE OF WIGHT CENTRAL RAILWAY.

CAPITAL.

The capital expenditure to June 30, 1911, has been £602,007, while the receipts were £502,270, viz.: Ordinary stock, £80,460; first preference stock (5 per cent.), £74,086; second preference stock (5 per cent.), £118,069; A debenture stock (3 per cent.), £110,955; B debenture stock (4½ per cent.), £70,000; C debenture stock (4 per cent.), £125,000; and miscellaneous receipts, £3,800; leaving a debit balance of £10,337. The capital expenditure during the half-year was nil.

REVENUE.

The revenue account shows the passenger receipts during the half-year ended June 30, 1911 to have been £10,244, as compared with £10,208 in the corresponding six months of 1910, while the receipts from goods traffic were £6,630 (against £6,113, and rents and miscellaneous receipts £760 (against £777, making a total of £17,634 (against £17,098). The working expenses amounted to £11,066 (against £12,050), and the profit on working was £5,083 (against £4,442). There was thus an increase in the receipts of £551, a decrease in the expenditure of £600, and an increase in the net revenue of £1,241. The balance of net revenue (£5,083 with the amount brought forward from last half-year (£3,211) enables the directors to pay the rent charges, the minimum guarantee to the Newport, Godshill and St. Lawrence Railway Company, and six months' interest on the A and B debenture stocks, and six months' arrears of interest to June 30, 1910, on the C debenture stock, carrying forward £586 (against £1,173).

TRAFFIC, ETC.

The number of passengers carried during the half-year was 282,060, as compared with 284,299 in the corresponding period of 1910. The weight of merchandise carried was 23,077 tons (against 24,425 tons), and minerals 58,649 tons (against 54,060 tons). The train mileage (including mileage of worked lines) was:—Passenger trains, 111,130 (against 111,554); goods trains, 43,250 (against 43,377); total train mileage 154,389 (against 154,931). The number of miles worked by engines was 42½ miles (company's own lines 18½ miles) in each half-year.

GREAT NORTHERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Wednesday. The usual summary follows:—

CAPITAL.	
Total expenditure	£52,814,707
Total receipts allocated as follows	52,182,700
Ordinary stock	44,951,207
A stock	904,430
B stock	904,430
Preference stock	21,000,428
Debenture stock	12,622,510
Premiums	739,755
Balance in debit of capital account	691,111
The expenditure on the half-year was £2,714,000 of which £1,200 was on lines open for traffic, £21,687 on new line, £17 on subscriptions to other railways, and £9,810 on work on stock. Estimated further expenditure—in the current half-year, £1,100,000; in subsequent half-years, £2,552,702; total £2,723,702. Capital powers and other available assets, £3,717,918.	

REVENUE.

The revenue account shows receipts for the half-year ended June 30 to have been as follows:	
Passengers—First class	676,042
Second class	5,275
Third class	61,684
Season ticket	12,049
Parcels, horses, carriages, etc.	295,225
Mails	22,007
Merchandise—collection and delivery	94,204
Live stock	22,444
Minerals	511,345
Mileage and demurrage on rolling stock	24,000
Rents of company's property	1,247
Transfer fees	700
Navigation receipts	2,021
Joint and several interest on N. proportion	44,510

Total receipts £12,531,880

The expenditure on revenue account during the same period was as follows:

Maintenance of way, etc.	£22,130
Locomotive power	5,064
Carriage and wagon repairs	152,871
Traffic expense	559,804
General charge	90,035
Law charges	451
Parliamentary expenses	872
Compensation—Personal injury	1,000
Workmen	88,418
Goods	11,524
Rates and taxes	96,491
Government duty	9,302
Navigation expense	4,070
Joint and several interest on N. proportion	270,201

Total expenditure £1,077,095

The net revenue for the half-year and the proposed appropriation of the balance may be summarised as follows:

Balance from previous half-year	£85,104
Net revenue	1,083,549
Surplus credit	3,028
For 1911	1,171,281
Prior charges	1,122,094
Special renewals	20,000
Preference dividend	449,455
Dividend on preferred and B stock	22,101,500
Balance to next half-year	120,927

Total £1,172,000

At the rate of 4 per cent. per annum.

At the rate of 6 per cent. per annum.

The gross receipts for the past half-year show an increase of £10,721, the expenses an increase of £58,271, and the net receipts an increase of £21,250. The ratio of expenses to receipts is 65.24 per cent., as against 95.03 per cent.

TRAFFIC, ETC.

Half-year ended June 30.	
Passengers—First class	366,802
Second class	204,500
Third class	17,431,050
Total	18,002,418

1911.		1910.	
Season-tickets	55,027	53,777	
Mileage—Lines owned	742	742	
Joint lines—G.N. p.p.tn.	128	128	
Branch lines worked	11	11	
Foreign lines worked	381	381	
Total	1,202	1,202	
Freight mileage—Passenger	5,115,380	5,014,273	
Goods	1,830,030	4,077,314	
Total	10,981,410	10,591,587	

The report states:—The proprietors are asked to sanction the expenditure of £15,000 for new wagons and sundry new works. On the conclusion of the general business a special meeting will be held for the purpose of submitting for consideration and approval a Light Railway Order, for which the company have applied, intitled:—Order of the Light Railway Commissioners authorising the construction of a light railway from Kirkstead to Little Steeping in the parts of Lindsey in the county of Lincoln. The Order authorises the construction of a light railway nearly 15 miles in length connecting the company's East Lincolnshire loop line with their East Lincolnshire railway and empowers the company to raise for that purpose £210,000 additional capital with the usual borrowing powers. The light railway will serve an agricultural district and shorten the distance between Lincoln and Skegness.

LONDON ELECTRIC RAILWAY.

The half-yearly report of this company, which is a consolidation of the Baker Street and Waterloo, the Charing Cross, Euston and Hampstead, and the Great Northern, Piccadilly and Brompton Railways, was issued on Wednesday. The accounts for the half-year ended June 30 are analysed below. The comparative figures for the corresponding half of last year are the figures of the Great Northern, Piccadilly and Brompton, Baker Street and Waterloo and the Charing Cross, Euston and Hampstead Railway consolidated.

CAPITAL.

For expenditure	£10,350,335
Total receipts allocated as follows	10,410,040
Ordinary stock	6,127,940
Preference stock	3,150,000
Debenture stock	1,132,100

Balance in credit of capital account £68,711

The expenditure during the half-year amounted to £47,222. Estimated further expenditure—in the current half-year, £20,000; in subsequent half-years, £350,000; total, £550,000. Capital powers and other available assets, £840,005.

REVENUE.

The revenue account for the half-year ended June 30 shows

	1911.	1910.
Total receipts	1,022,817	1,305,024
Total expenditure	174,010	107,220
Net receipts	848,807	1,197,804
Balance from last half-year	8,475	9,347
Rentals and interest	5,713	5,743
Total	859,345	1,212,894
Prior charges	695,430	494,504
Reserve for renewals	7,500	13,000
Dividend on 4 per cent. pref. stock	63,000	—
Do—ordinary stock 1 per cent.	40,000	—
Balance to next half-year	14,510	—
Total	1,227,086	—

The gross receipts for the past half-year show an increase of £27,103, the expenditure an increase of £7,600, and the net earnings an increase of £10,104. The ratio of expenditure to receipts is 41.53 per cent., as against 45.73 per cent.

TRAFFIC, ETC.

Half-year ended June 30.		1911.		1910.	
Passengers carried—Total	5,525,548,374	5,509,455,140			
Mileage—Lines owned	211	211			
Lines leased	1	1			
Total operated	22	22			
Freight mileage	2,728,001	2,888,431			
Car Mileage	9,284,870	8,507,356			

The report states that:—The London Electric Railway Act, 1911, the Bill for which was approved by the proprietors at a special meeting held on February 9 last, received Royal

Assent on June 2 last. The company proposes to proceed with the construction of the Charing Cross and Paddington extensions at an early date. The Metropolitan District Railway Act, 1911, the Bill for which was also approved at the special meeting, received Royal Assent on June 2 last. The powers conferred by this Act, whereby the Lots Road power house undertaking is to be purchased by a joint committee of the London Electric and Metropolitan District Railway Companies and leased to the two railway companies, were fully explained in the circular issued to the shareholders on June 10 last. It is proposed that the power house be transferred to the joint committee and leased to the two railway companies as from January 1, 1912.*

METROPOLITAN DISTRICT RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Tuesday. Our usual analysis is given below.

CAPITAL.

Total expenditure	£12,541,554
Total receipts (allocated as follows)	12,509,730
Ordinary stock	*£3,235,000
Preference and guaranteed stocks	5,915,005
Debenture stock	3,325,825

Balance at debit of capital account	£34,824
* Including £500,000 issued at 25 per cent., and £485,000 at 35 per cent.	

The expenditure during the half-year amounted to £88,669—viz., £47,731 on lines open for traffic, £39,518 on working stock, and £1,420 on City lines and extensions. Estimated further expenditure—In the current half-year, £90,000, in subsequent half-years, £78,000; total, £168,000. Capital powers and other available assets, £1,397,478.

REVENUE.

The revenue account for the half-year ended June 30 shows:

	1911.	1910.
Total receipts	£327,179	£300,040
Total expenditure	152,741	143,331
Net receipts	£174,429	£156,715
Balance from last half-year	2,020	942
Rentals and interest	49,030	45,390
Total	£225,479	£203,037
Prior charges	130,479	130,700
General interest	2,000	—
Reserved for renewals	10,000	10,000
Dividend on guaranteed stock	28,714 ^a	25,000 ^a
Four per-cent. guaranteed stock	6,250 ^b	6,250 ^b
First preference stock	33,750 ^c	22,500 ^d
Balance to next half-year	14,277	8,527

Total £225,479 .. £203,037

^a At the rate of 4 per cent. per annum. ^b At the rate of $\frac{3}{4}$ per cent. ^c At the rate of $\frac{4}{5}$ per cent. per annum. ^d At the rate of 3 per cent. per annum.

The gross receipts for the past half-year show an increase of £27,124, the expenditure an increase of £9,410, and the net earnings an increase of £17,714. The ratio of expenditure to receipts is 46.68 per cent., as against 47.76 per cent.

TRAFFIC, ETC.

Half-year ended June 30.	1911.	1910.
Passengers carried—Total	49,539,494	39,180,398
Mileage—Lines owned	24 ^a	24 ^a
„ Lines partly owned	3 ^a	3 ^a
„ Lines worked	1 ^a	1 ^a
„ Foreign lines worked over	26 $\frac{1}{2}$	26 $\frac{1}{2}$
„ Total operated	54 $\frac{3}{4}$	54 $\frac{3}{4}$
Train mileage	2,355,915	2,189,542
Car mileage	10,085,575	9,214,224

The report states:—“The company's passenger traffic continues to show satisfactory increases, and has justified the improved train service. Thirty-one new carriages have been put in service during the half-year; 20 carriages remain to be delivered by the builders, and an order has been placed for 14 additional carriages. The widening works between Studland Road and Acton Lane Junction will be completed by next autumn, and will afford additional facilities for further improvements in the train service. The increase in working expenses is due to the increased train service, extra expenses incurred during the Coronation period, including an extra day's pay to nearly the whole of the staff, and for extensive improvements to the rolling stock. The Metropolitan District Railway Act, 1911, the Bill for which was approved by the proprietors at a special meeting held on February 9 last, received Royal Assent on June 2, 1911.

It is proposed that the Lots Road power house undertaking be transferred to the joint committee and leased to the Metropolitan District and London Electric Railway Companies as from January 1, 1912.”

LANCASHIRE AND YORKSHIRE RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Tuesday. An analysis is appended.

CAPITAL.

Total expenditure	£2,520,472
Total receipts (allocated as follows)	2,504,712
Consolidated stock	18,824
Preference and guaranteed stocks	2,508,290
Debenture stock	1,673,000
Loans	100,000
Premiums	2,068,800
Sundries	220,418

Balance to debit of capital account £2,035,010

The expenditure on capital account during the half-year amounted to £153,468, of which £80,291 was on lines open for traffic, £48,768 on working stock, £14,499 on lines in course of construction, and £10,000 on subscriptions to other railways. Estimated further expenditure:—In the current half-year, £180,494; in subsequent half-years, £14,320,261; total, £4,509,755. Capital powers and other available assets, £3,780,665.

REVENUE.

	1911.	1910.

The gross receipts show a decrease for the past half-year of £25,694, the expenditure a decrease of £9,663, and the net receipts a decrease of £16,031. The ratio of expenses to receipts is 59.63 per cent., as against 58.06 per cent.

TRAFFIC, ETC.

Half-year ended June 30.	1911.	1910.
Passengers carried	258,895 ..	258,311
Season tickets	299 ..	228
Mileage—Lines owned	78 ..	76½
„ Lines worked	11½ ..	11½
„ Foreign lines run over	24 ..	2½

„ Total operated	113½ ..	111½
Train mileage—Passenger	213,784 ..	209,879
„ „ Goods	780,684 ..	828,816

„ Total 994,468 .. 1,038,695

The report states:—"The construction of the company's river pier has made rapid progress during the half-year. The second of the two coal conveyors has been brought into use, and both are working satisfactorily, making a valuable addition to the coaling facilities at the Alexandra Docks. A contract has been let for filling up with sand the company's land between the Alexandra Docks and the Hull Joint Dock. The work will probably be completed within a few months, and a large additional area will then be available for general dock purposes. Continued good progress has been made with the works of the Hull Joint Dock. The works of the first contract for the joint railway of the Hull and Barnsley and Great Central Companies have been advanced during the half-year, and steps are being taken for letting a contract for the construction of the remainder of the railway." The directors remark that the recent strike of seamen, accompanied by a cessation of work by all the men employed at the Alexandra Docks, severely affected the company's revenue. Work was partially resumed on July 2, the employers and employed, with the friendly intervention of the Board of Trade, having arranged terms of settlement.

CARDIFF RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Wednesday. Our usual analysis is appended:—

CAPITAL.	
Total expenditure	£6,656,018
Total receipts (allocated as follows)	6,017,317
Ordinary stock	£2,000,000
Preference shares	1,000,000
Preferred ordinary stock	500,000
Second preferred ordinary shares	200,000
Debenture stock	1,049,007
Premiums	67,350

Balance to debit of capital account £638,701

The expenditure on capital account during the half-year amounted to £24,009, of which £1,520 was on lines, etc., open for traffic and on working stock, £12,000 on the Queen Alexandra Dock, and £10,030 on new railways. Estimated further expenditure—in the current half-year, £20,000; in subsequent half-years, uncertain. Capital powers and other available assets, £791,098.

REVENUE.

The receipts on revenue account for the past half-year and for the corresponding half of the previous year are shown in the subjoined table:—

	1911.	1910.
Passengers, parcels, etc.	£11,027	—
Merchandise	10,775	10,880
Live stock	6	—
Minerals	13,050	15,010
Total traffic receipts	£25,458	£25,890
Dock dues and other receipts	£217,002	£210,952
Rents (less repairs, etc.)	8,027	8,440
Transfer receipts	10	9
Total receipts	£251,166	£245,303
Total expenditure	172,887	166,007
Net earnings	£78,279	£78,330
Balance from previous account	3,791	10,271
Interest on works in course of construction	3,285	9,932
Sum brought from contingency account	24,000	10,000
Total	£109,355	£114,539
Prior charges	36,213	36,603
Preferred dividends	20,000	20,000
Dividend on preferred ord. stock	10,000a	10,000a
Dividend on second pref. ord. stock	3,000b	3,000b
Dividend on ordinary shares	39,000c	39,000c
Balance to next half-year	1,142	5,870

Total £109,355 .. £114,539
a At the rate of 4 per cent. per annum. b At the rate of 3 per cent. per annum. c At the rate of 3 per cent. per annum.

The gross receipts for the past half-year show an increase of £5,863, the expenses an increase of £5,020, and the net receipts a decrease of £57. The ratio of expenses to receipts was 68.83 per cent., as against 68.06 per cent.

The length of the line authorised is 24 miles 3 furlongs, and the length of line constructed and in operation is 13 miles 6 furlongs. The number of train miles run in the past half-year was, passenger trains, 28,798; shunting and piloting at the docks, 324,166 (against 291,024).

The report states that the continued disputes in the colliery districts have prejudicially affected the trade of the Port of Cardiff. The company's new railway between Heath Junction and Rhyd-y-felin was opened for passenger and goods traffic on March 1 last.

DUBLIN AND SOUTH EASTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Wednesday. Our usual analysis is appended:—

CAPITAL.	
Total expenditure	£2,619,406
Total receipts (allocated as follows)	2,544,659
Ordinary stock	£1,100,800
Preference stocks	463,350
Debenture stock	953,227
Premiums, etc.	21,282
Balance to debit of capital account	£74,837
The expenditure during the half-year amounted to £583,	

of which £712,000, or 60 per cent. of the total, was on working stock. Estimated further expenditure.—In the current half-year, £1,710; in subsequent half-years, 100,000; in subsequent half-years, £275,193.

Subjoined is an abstract of the revenue account for the half-year.

Total	565	555
Train mileage—Passenger	1,214,004	1,184,060
„ Goods	586,618	544,013
Total	1,800,622	1,728,073

The report states :—“ The directors regret having to report that Mr. Henry Plews, the general manager, who has been for the past forty-four years in the service of the company, intends to retire in the course of the coming autumn. In recognition of his exceptional services it is proposed, subject to your approval, to offer him a seat on the board, as an additional director, from the date of his retirement. With this object a resolution will be submitted to you at the half-yearly meeting to temporarily increase the number of directors to thirteen, and to grant Mr. Plews a remuneration of £250 per annum. It is intended that this arrangement shall only remain in force during Mr. Plews' tenure of the office.”

GREAT SOUTHERN AND WESTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Tuesday. Our usual analysis is appended :—

CAPITAL.

Total expenditure	£14,390,029
Total receipts (allocated as follows)	14,168,031
Ordinary stock	£5,325,520
Preference stock	4,172,949
Geashill Extension stock	27,480
Debenture stock	3,974,834
Premiums	547,248
Baronial guaranteed shares	120,000
Balance to debit of capital account	£221,998

The expenditure on capital account during the half-year amounted to £11,484, all of which was on lines open for traffic. Estimated further expenditure—In the current half-year, £24,800; in subsequent half-years, £67,576; total, £92,376. Capital powers and other available assets, £734,219.

REVENUE.

The revenue account for the half-year ended June 30 shows the receipts to have been as under :—

	1911.	1910.
Passengers—First-class	£24,476	£25,094
„ Second-class	21,262	22,515
„ Third-class	197,882	190,050

Season-tickets	1,720	1,584
Mileage—Lines owned	962½	962½
„ Leased, rented or worked	157	157
„ Foreign lines worked over	8	8
Total operated	1,127½	1,127½
Train mileage—Passenger	1,869,760	1,864,617
„ Goods	1,089,336	1,054,247
Total	2,959,096	2,918,864

The report states :—“ The directors regret to announce the retirement, on pension, owing to ill-health, of Mr. Robert Coey, who for many years has held the position of locomotive engineer at Inchicore Works with zeal and ability. The vacancy has been filled by the appointment of Mr. R. E. L. Maunsell, works manager. One hundred and fifty ten-ton open wagons are being built to meet the increased traffic requirements. In consequence of the large increase of the company's rolling stock due to amalgamations, and the gradual change in the design of carriages, the directors find that the existing accommodation at Inchicore has become inadequate. In order to enable work in connection with the building of carriages to be carried out in the most efficient and economical manner they have decided to enlarge the Inchicore Works.”

MIDLAND GREAT WESTERN RAILWAY OF IRELAND.

The half-yearly accounts to June 30, 1911, were issued on July 29. Our usual analysis is appended:—

CAPITAL.

Total expenditure	£7,178,594
Total receipts (allocated as follows)	7,149,773
Ordinary stock	£2,370,000
Preference and guaranteed stocks	1,823,792
Debenture stock	2,317,900
Parliamentary grants	440,000
Premiums	168,015

Balance at debit of capital account £28,731

The expenditure in the half-year was £4,704, of which £3,009 was on lines open for traffic, and £1,695 on working stock. Estimated further expenditure—in the current half-year, £6,550; in subsequent half-years, not ascertained. Capital powers and other available assets, £309,457.

REVENUE.

The revenue account for the half-year ended June 30 shows the receipts to have been as follows:—

	1911.	1910.
Passengers—First-class	£10,070	£10,074
„ Second-class	10,039	10,785
„ Third-class	95,185	95,102

Minerals	11,217	10,875
Royal Canal	2,801	2,522
Rents	4,054	4,882
Transfer fees	90	89

Total receipts £301,151 .. £292,777

The expenditure on revenue account for the same period is detailed below:—

	1911.	1910.
Maintenance of way, works, etc.	£43,840	£41,178
Locomotive power	62,081	60,770
Carriage and wagon repairs	10,049	12,084
Traffic expenses	40,440	44,494
General charges	7,680	7,885
Law charges	1,000	840
Mileage and demurrage	688	281
Compensation—Passengers and workmen	953	393
„ Merchandise, etc.	805	680
Rates and taxes	8,149	7,720
Royal Canal	3,831	4,050

Total £191,894 .. £181,209

The net revenue account and the proposed appropriation of the balance available for dividend may be summarised as follows:—

	1911.	1910.
Balance from previous account	£10,499	£10,227
Net earnings	100,257	111,508
Sundry credits	1,549	1,145
Total	£112,305	£122,880
Prior charges	£50,104	£59,007
Preference dividends	28,931	28,931
Dividend on ordinary stock	*35,550	*35,550
Balance to next half-year	6,660	5,392

Total £130,305 .. £128,880

At the rate of 3 per cent. per annum.

The gross receipts for the past half-year show an increase of £8,374, the expenses an increase of £10,625, and the net receipts a decrease of £2,251. The ratio of expenses to receipts is 63.72 per cent. (as against 61.91 per cent.).

TRAFFIC, ETC.

Half-year ended June 30.	1911.	1910.
Passengers—First-class	34,070	32,746
„ Second-class	68,250	67,439
„ Third-class	680,260	669,516
„ Total	782,580	769,701
Mileage—Lines owned	516 ¹ / ₂	516 ¹ / ₂
„ Leased or rented	21 ¹ / ₂	21 ¹ / ₂
„ Foreign lines worked over	60 ¹ / ₂	60 ¹ / ₂
„ Total operated	598 ¹ / ₂	598 ¹ / ₂
Train mileage—Passenger	783,976	781,774
„ Goods	492,372	441,950
„ Total	1,249,048	1,222,824

The directors expect that the proposal in regard to Galway as a trans-Atlantic port, which was submitted for approval at a special meeting held on November 3, 1910, has not been availed of, owing to no steamship company having yet been found to undertake the Atlantic service, but the matter has recently been brought prominently under public notice. The National Irish Bill, which materially affects railway companies and their employees, is receiving the attention of the directors, and it should be decided to apply it to Ireland they hope and expect to see it greatly amended and improved in its passage through Parliament. As mentioned in the last report with the object of developing the very attractive touring districts in Connaught and the West of Ireland, the directors have established a tourist motor coach service between Westport and Glenties, which besides accommodating tourists generally, will afford regular daily communication between the hotels at Recess and Mallaranny. The motor coaches commenced to run on June 1, and are proving themselves well suited for the tourist traffic, besides being of great local convenience.

TAFF VALE RAILWAY.

Our usual analysis of the half-yearly accounts to June 30, 1911, is appended:—

CAPITAL.

Total expenditure	£10,129,735
Total receipts (allocated as follows)	9,891,462
Ordinary stock (dividend limited to 6 per cent. per annum)	£5,192,500
Preference stock	3,095,951
Debenture stock	1,520,258
Premiums (less discounts, etc.)	47,953

Balance to debit of capital account £208,273

The capital expenditure for the past half-year was £17,965, all of which was on lines open for traffic. Estimated further expenditure—in the current half-year, £38,300; in subsequent half-years, uncertain. Capital powers and other available assets (less balance of capital account), £795,925.

REVENUE.

The accounts for the half-year ended June 30 may be summarised as follows:—

	1911.	1910.
Passengers, parcels, mails, etc.	£108,812	£110,220
Goods, minerals and live stock	320,155	320,557
Shipping receipts	18,447	19,395
Dock and harbour receipts	35,888	30,000
Miscellaneous	4,055	4,300

Total receipts £493,357 .. £496,541

Total expenditure 286,746 .. 282,047

Net receipts £206,611 .. £214,494

Balance from last half-year 27,867 .. 20,350

Interest 1,634 .. 859

Total £236,112 .. £244,709

Prior charges 51,321 .. 58,050

Preference dividends 61,530 .. 54,054

Dividend on ordinary stock *103,850 .. *103,850

Balance to next half-year 10,405 .. 28,155

Total £236,112 .. £244,709

At the rate of 4 per cent. per annum on the new stock, being equivalent to 10 per cent. per annum on the old stock.

The gross receipts for the past half year show a decrease of £3,184, the expenditure an increase of £4,699, and the net receipts a decrease of 7,883. The ratio of expenses to receipts is 58.12 per cent., as against 56.80 per cent.

TRAFFIC, ETC.

Half-year ended June 30.	1911.	1910.

Total	1,421,377,001	1,421,377,001

The report states: "The company's Bill in Parliament has passed both Houses and now awaits the Royal Assent. The principal work authorised is the railway from Low Moor to Bradford, and the construction of this railway will be commenced shortly. A provisional agreement has been entered into for the acquisition of the undertaking of the London, Tilbury and Southend Railway. A Bill to authorise the arrangement will be promoted in the next Session of Parliament, and will be submitted for the approval of the proprietors in due course. The directors have been enabled to make special allocations out of revenue of £30,000 for reconstructing bridges, £50,000 for alterations of signalling equipment, and £10,000 for carriage renewal. Lord Farrer, who had been a member of the board for fifteen years, resigned his directorship during the half-year. The board have appointed Mr. Alan Garrett Anderson a director in his place. It is necessary for the proprietors at this meeting to appoint five persons, each holding not less than £2,000 of preferred converted ordinary stock, and £2,000 of deferred converted ordinary stock of the company, to meet in January next, to select and recommend to the next half-yearly meeting a suitable person to be appointed in the place of the auditor then retiring by rotation."

GREAT WESTERN RAILWAY.

The half-yearly accounts to June 30, 1911, were issued yesterday. Our usual analysis is appended:

	1911.	1910.
Total expenditure	1,000,000,000	1,000,000,000
Total receipts—allocated as follows:		
Ordinary stock	1,000,000,000	1,000,000,000
Preference and guaranteed stocks	1,000,000,000	1,000,000,000
Loans	1,000,000,000	1,000,000,000
Debt and stock	1,000,000,000	1,000,000,000
Rent charges	1,000,000,000	1,000,000,000
Stratford Canal annuities	1,000,000,000	1,000,000,000
Premiums	1,000,000,000	1,000,000,000

Balance at credit of capital account £1,000,000,000

The receipts on capital account during the half-year amounted to £1,000,000,000. The expenditure during the half-year amounted to £1,000,000,000. Of this, £231,487 was on lines open for traffic, £95,620 on lines in course of construction, £10,500 on Fishguard and Rosslare Railways and Harbours, £17,000 on Cork City Railways, £453 on Plymouth docks, and £50,590 on steamboats, less credit Porthcawl Harbour £5,980. Estimated further expenditure. In the current half-year, £400,000; in subsequent half-years, £4,000,433; total, £5,000,433. Capital powers and other available assets, £5,000,433.

REVENUE.

The revenue account shows receipts for the half year to have been as follows:

	1911.	1910.
Passengers—First class	1,225,328	1,205,893
" " Second class	8,080	42,549
" " Third class	2,024,700	1,937,450
Season tickets	100,730	152,872
Parcels, horses, carriages, etc.	630,247	607,187
Mails	92,020	87,001
Merchandise—less collection and delivery	1,744,733	1,057,075

Total 25,518,028 .. 24,893,499

The report states that the construction of the Swansea district lines continues to make excellent progress, and a contract is about to be let for the loop line at Neath between those lines and the Rhondda and Swansea Bay Railway. The increasing business in South Wales has rendered it necessary to provide additional accommodation in the way of loop lines and refuge sidings on the main line at various places, more particularly in the neighbourhood of Port Talbot and Briton Ferry, for the purpose of facilitating the conduct of the traffic, and the works are in hand. At Newport works are being actively prosecuted for the removal to a site at Maesglas of the locomotive depot adjacent to the High Street station, as a necessary preliminary to the enlargement of that station. Good progress has been made during the half-year with the works in the vicinity of Birmingham, including the widening of the lines, the reconstruction and enlargement of Snow Hill station, and the provision of a goods depot at Moor Street station.

The works in connection with the provision of additional accommodation at Paddington station and the improvement of the access thereto, and the erection of a warehouse and other works at South Lambeth goods depot are proceeding satisfactorily. In connection with the scheme for improving the accommodation at Newton Abbot the goods depot has been removed to another site. This will admit of the works at the passenger station being proceeded with. A new cargo steamer being required for the traffic with the south of Ireland, a contract has been placed for the building of the vessel. The line constructed by the Lampeter, Aberayron and New Quay Light Railway Company between Lampeter and Aberayron was opened for traffic on May 12 last and is being worked

by this company in pursuance of the agreement approved by the proprietors. The Bill promoted by the company in the present session of Parliament for the construction of new lines between the Swansea District Lines and Gwaun-cae-Gurwen, which was approved by the proprietors in February last, has passed both Houses of Parliament and awaits the Royal Assent. Steps will be taken for an early commencement of the works. The Manchester and Milford Railway (Vesting) Bill, under which the undertaking of the Manchester and Milford Company became vested in this company, as from July 1, has received the Royal Assent. The Bill promoted by the London Electric Railway Company for the extension of their Baker Street and Waterloo line from Fallowfield Road to Paddington Station has been passed, and arrangements are being made by that company for the work to be taken in hand. The Central London Railway Company's Bill for the construction of a short extension of their line at Wood Lane to connect with this company's authorised Ealing and Shepherd's Bush Railway, so as to enable a through service of trains to be established between Ealing and the Central London Railway, awaits the Royal Assent. The lands for the Ealing and Shepherd's Bush line have been acquired and it is proposed to proceed with the works forthwith. A vote of the proprietors will be asked for expenditure for various purposes amounting to £535,000.

CAMBRIAN RAILWAYS.

CAPITAL.

June 30, 1911.—The total expenditure has been £1,515,680, while the receipts have been £1,532,953, as follows:—Coast ordinary stock, £682,982; inland ordinary stock, £738,495; preference stocks, £1,019,678; A debenture stock, £1,387,524; B debenture stock, £855,848; C debenture stock, £400,000; D debenture stock (4 per cent. non-cumulative), £507,595; capitalised value of land rent charges, £40,801. Balance to credit of capital account, £17,266. Estimated further expenditure:—In the current half-year, £8,500; in subsequent half-years, £9,484; total £17,984. Capital powers and other available assets £768,626.

REVENUE.

The account for the half-year ended June 30 may be summarised as follows:—

Passengers, parcels, etc.	..	..	1911.	..	1910.
Goods, minerals, etc.	..	..	£71,810	..	£71,376
Miscellaneous	..	..	97,331	..	66,208

Total 736,155 .. 729,448

The report states:—“The alterations at Pontdolgoch, Borth and Llanfihangel were completed and brought into use

during the half-year. A rail motor car has been constructed in the workshops, and is being used to test the suitability of vehicles of that description for the further development of traffic in certain districts. The directors have to record, with sincere regret, the death during the half-year of their valued colleague, Mr. Henry Francis Slattery, who had been a director of the company for over 32 years."

STRATFORD-ON-AVON AND MIDLAND JUNCTION RAILWAY.

The half-yearly accounts show a gross revenue from all sources of £20,782, as compared with £17,621. The working expenses have been £13,493, being at the rate of 64.93 per cent. upon the gross revenue. In the corresponding half-year the expenses were £12,677, being at the rate of 71.94 per cent. upon gross revenue. The net revenue was £7,289, against £4,944. After providing for interest on mortgage, loans, etc., the directors recommend a dividend on the consolidated ordinary stock at the rate of $1\frac{1}{2}$ per cent. per annum, leaving £597 to be carried forward. A year ago the dividend was at the rate of $1\frac{1}{2}$ per cent. per annum and £756 was carried forward.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, August 2, compared with that for the previous week, shows the following changes:—

* Partly rejected.

PARLIAMENTARY.

QUESTIONS IN THE HOUSE OF COMMONS.

Hours of N.B.R. Signalmen.

On Thursday, Mr. John Hope (Haddingtonshire—Liberal) asked the President of the Board of Trade whether he was aware that the signalmen on the North British Railway main line between Berwick and Edinburgh, on the section between Reston and Drem, were working on a 12-hours' shift for a wage of from 21s. to 23s. a week; and whether, in the interest of the safety of the travelling public, he would take steps to compel the North British Railway Company to reduce these hours of labour.

Mr. Tennant, Parliamentary Secretary to the Board of Trade, who replied, said: No complaint respecting the hours of labour of these signalmen has been made to the Board of Trade during recent years, but I will call for a return from the railway company showing the hours of work and the nature of the duties of the men at the signal cabins on the section of the line mentioned. When the return has been received the Board of Trade will consider whether any steps in the direction suggested are necessary.

PROGRESS OF RAILWAY BILLS.

North British Railway.

The North British Railway (Superannuation Fund, etc.) Order Confirmation Bill, which has already been passed by the House of Lords, was read a third time in the House of Commons on Monday.

Greater London Railway.

After a hearing lasting over several days a House of Lords Committee on Thursday rejected this Bill. It had already passed through all its stages in the House of Commons. Its proposal was to construct a semi-circular railway from the west, round the north, to the east of London, connecting up on the way a number of existing railways. There was much opposition to the scheme.

Forth Bridge Railway.—The accounts for the half-year ended June 30 shows gross receipts £73,522, and working expenses £7,273, leaving a balance of £66,249. After deducting prior charges, and paying the usual dividend at the rate of 4 per cent. per annum on the company's stock, there remains a balance of £3,252 due to the North British Railway Company.

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

PENNSYLVANIA RAILROAD.—A quarterly dividend at the rate of 75 cents per share, payable on August 31.

NATIONAL RAILWAYS OF MEXICO.—Dividend of 2 per cent. on the first preferred stock, payable on August 10.

MUMBLES RAILWAY AND PIKE.—At the rate of 7 per cent. per annum on the ordinary shares, carrying forward £278.

WEST SOMERSET RAILWAY.—At the rate of 2½ per cent. per annum on the ordinary stock, carrying forward £264.

WREXHAM AND ELLSMERE RAILWAY.—At the rate of 3½ per cent. per annum. A year ago the distribution was at the same rate.

BIRMINGHAM RAILWAY CARRIAGE AND WAGON COMPANY.—An interim dividend at the rate of 7½ per cent. per annum (7s. 6d. per share), free of income tax.

SWANSEA AND MUMBLES RAILWAYS.—An interim dividend at the rate of 8½ per cent. per annum (7s. per share), less income tax, on the ordinary shares for the half-year to June 30.

MARYPORT AND CARLISLE RAILWAY (July 31).—At the rate of 6½ per cent. per annum, carrying forward £1,207. A year ago the dividend was at the same rate, and £1,313 was carried forward.

FORCETT RAILWAY.—At the rate of 5 per cent. per annum, free of income tax, placing £500 to reserve, and carrying forward £366. A year ago the dividend was at the same rate and £508 was carried forward.

PORT TALBOT RAILWAYS AND DOCKS.—At the rate of 6 per cent. per annum, carrying forward £1,481. A year ago the dividend was at the rate of 4 per cent. per annum, and £1,238 was carried forward.

CARDIFF RAILWAY (July 20).—At the rate of 4 per cent. per annum on the old preference shares and the preferred ordinary stock, and 3 per cent. per annum on the second preferred ordinary and ordinary shares. A year ago the distribution was at the same rate.

OLDHAM, ASHTON-UNDER-LYNE, AND GUIDE BRIDGE JUNCTION RAILWAY.—The receipts for the half-year ended June 30 amounted to £12,000, and expenditure to £11,588, leaving a balance of £412; general interest £41, and amounts received under lease from the London and North Western Railway and the Great Central Railway Companies £1,300, making a total of £1,882. After deducting interest on debenture stock £932, a dividend at the rate of 4½ per cent. per annum is recommended.

SHEFFIELD DISTRICT RAILWAY.—The net revenue for the half-year ended June 30 shows a balance available for dividend of £4,578, which includes a balance of £872 brought forward from the previous half-year. The directors recommend the payment of the full dividend on the preference shares, also of a dividend at the rate of 1½ per cent. per annum on the ordinary shares, carrying forward £578 to the next account. A year ago the dividend on the ordinary shares was at the rate of 1 per cent. per annum and £440 was carried forward.

LONDON AND NORTH WESTERN RAILWAY (August 3).—At the rate of 6 per cent. per annum, placing £100,000 to reserve, carrying forward about £141,000. A year ago the dividend was at the rate of 5½ per cent. per annum, placing £100,000 to reserve and carrying forward £100,135. The following is a list of the dividends for some years past:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	6	5½	4½	4½	5½	5½	5	5	5	4½	4½
2nd Half	—	7½	7	6½	7½	7½	7½	6½	6½	7½	6½
Annual Rate	—	6½	5½	5½	6½	6½	6½	5½	5½	6	5½

GREAT WESTERN RAILWAY (August 3).—At the rate of 4½ per cent. per annum on the consolidated ordinary stock, carrying over a balance of £120,400. For the corresponding half of 1910 the dividend was at the rate of 4 per cent. per annum, with £90,902 carried forward. The following is a list of the dividends for some years past:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	4½	4	3½	3½	3½	3½	3½	4	3½	3½	2½
2nd Half	—	7½	7	7	7	7	7	7	7	7½	6½
Annual Rate	—	5½	5½	5½	5½	5½	5½	5½	5½	5½	4

NORTH EASTERN RAILWAY (August 3).—At the rate of 5 (against 5) per cent. per annum, placing £5,000 to reserve, and carrying forward about £7,090 (against £6,381, after placing £5,000 to reserve). The following is a list of the dividends for some years past:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	5	5	4	3½	4½	4½	5	6	6½	6½	6
2nd Half	—	5	4	3½	5½	5½	4½	5	6½	6½	6½
Annual Rate	—	5	4	3½	5	5	4½	5½	6½	6½	6½

BRITISH AND IRISH RAILWAY DIVIDENDS.

The following table shows the dividends on the ordinary stock (unless otherwise stated) announced so far by the leading English and Irish companies for the half-year ending June 30. In the case of the Scottish companies the dividends are for the half-year ended July 31. For purposes of comparison the dividends for the corresponding half of the previous year are appended:—

RAILWAY NOTES.

Road and Rail Map of Ireland.—The London and North Western Railway has issued a clearly printed and convenient road and rail map of Ireland. The map is a great improvement on the usual style of maps issued by the railway companies, and it should be serviceable to travellers in the Emerald Isle.

A New Canadian Electric Line.—The Alberta Electric Railway Company expects to start work at once upon the construction of the line between Medicine Hat and Banff, with Calgary as principal seat of operations. The first portion of the system, comprising 80 miles between Calgary and Banff, is expected to be ready for working at the end of next year.

The West Coast Illustrated Time Table.—The West Coast Companies have just issued something quite novel in the way of time tables. It is profusely and admirably illustrated, thereby forming a handsome souvenir of the Royal Mail Route. In its 87 pages, besides ordinary time tables and fares, will be found general travel notes dealing with the holiday resorts, sea angling, yachting on the Clyde, golfing, etc. Full particulars, with a map, are also given of a comprehensive series of Scottish tours, and a distinct feature of the book is the clever arrangement of maps of the West Coast route between Euston and Aberdeen on the margins of the pages of the book; there are six of these which will be found of the greatest use to all travellers on the London and North Western and Caledonian Railways.

Grand Trunk Pacific as a Tourist Route.—The Hon. Frank Oliver, Minister of Interior, who recently made a trip over the Grand Trunk Pacific Railway to the Rocky Mountains, and an inspection of Jasper Park, the new National Park, with an area of 5,000 square miles, expressed himself as highly pleased with the reserve, which embraces some of the finest of the magnificent scenery for which the Canadian Rockies are famous. Speaking of Jasper Park, Mr. Oliver stated that the scenery was of a grandeur and ruggedness similar to that of Banff, the only difference being that it was on a larger scale. The Valley of the Athabaska is very wide compared with the Bow River at Banff, and the mountains are higher and, from a tourist point of view, there is everything to attract. The railhead of the Grand Trunk Pacific has now reached the confines of the park.

The Great Central Railway have issued a timely guide to their Continental routes from Grimsby *via* Hamburg, Rotterdam, Antwerp, Esbjerg, Gothenburg, Christiania and Malmo. It is profusely illustrated with characteristic views of the chief Continental cities served, and an excellent map is attached to the pamphlet, the cover of which reproduces the striking poster bearing the legend, "Step on at Grimsby for the Continent." Besides much information a selection of cheap individual travel tours are to be found therein. The company have also issued a summer edition of their well-known A.B.C. excursion programme. Those not wishing to go far afield should study the circular routes by rail and motor through the Shakespeare country, whereby an opportunity is given of participating in the Stratford-on-Avon summer Festival, which lasts till the 10th inst. This is the time in which to refer to those useful handbooks on "Strolls and Cycling in Beechy Bucks." All these publications and every possible information can be obtained from the Publishing Department, 215, Marylebone Road, N.W.

Luxurious Travel. The Great Central Railway Company have introduced in their London and Manchester service two entirely new trains, each of 6 coaches, the vehicles being 56ft. long, 8 feet wide, and mounted on two four-wheeled bogies of special type, which add considerably to the comfort of passengers in ensuring their easy riding with an absolute minimum of vibration. The carriages have been constructed in the company's own works at Dukinfield. The old-fashioned ventilators, so common on the roofs of carriages, have given place to side louvre ventilators, which admit a good supply of air, but keep out the dust. The lavatory appliances are most complete, the lighting is electrical, and controllable back lights are provided in each class. Each compartment is supplied with bell communication whereby to call the attendant. Double parcel racks are provided in the first-class compartments and dining cars, and folding flush elbow rests allow of changes of position on the part of the passenger during a long journey, whilst hassocks or footstools are also obtainable. On each side of the guard's van an ingenious train indicator, which is illuminated at night, has been introduced.

The North Western Railway and Birkenhead.—The London and North Western Railway Company have issued a pamphlet containing an illustrated description of the facilities of the company

at Birkenhead, both in connection with land transit and shipment, which should prove of interest to all who have any connection with, or interest in, the port. The London and North Western Company have direct rail access to all the docks and to all warehouses and works on or adjoining the dock estate, which are connected by rail. They have also rail access into the works of Messrs. Cammell, Laird and Company and the Tranmere Bay Development Company. The minimum of trouble is given to the exporter, as export traffic need only be consigned "L. and N. W. Railway, Birkenhead," and the Company will deliver to any ship. Extensive warehouse and siding accommodation is provided for goods waiting shipment. The illustrations which are contained in the booklet give a very good idea of the accommodation at the disposal of the railway company. The book also calls attention to the facilities which the North Western Company have for passenger traffic in connection with the Woodside station, from and to which through carriages are run daily to the principal towns in England. The general lay-out of the docks and of the railway company's stations, warehouses, and lines are clearly set out on a map.

P & O "Durbar" Ship. A CRUISE IN SEPTEMBER.

The Directors of the Peninsular and Oriental Steam Navigation Company will despatch their "Durbar" Steamer, the new s.s. "MALOJA," 12,500 tons, 16,000 horse power, on a

Preliminary Yachting Trip

from London on 23rd September, returning 12th October, visiting LISBON, TENERIFFE, MADEIRA, and GIBRALTAR. The stays at these attractive places will approximate to two days in each case so as to give ample opportunity for seeing everything of interest.

FARES from 16 to 30 GUINEAS, according to position of cabin.

THE "MALOJA." The "Maloja" is, without doubt, the most luxurious and costly steamer yet placed at the service of the public as a cruising yacht, and is a sister ship of the "Medina."

These ships will be the largest of their class in the Eastern trade. Both are fitted with powerful wireless installations, bedstead cabins, electric laundries and other electrical devices, while the passenger accommodation is of the most sumptuous character.

There are numerous single berth cabins, and following the company's usual practice, it is intended on the "Maloja's" cruise in September to berth one passenger only in a two berth cabin, and not more than two passengers in the larger cabins, so that all may dine simultaneously and double sets of meals be avoided.

Deck chairs are provided without charge. Passengers have the free use of the numerous volumes in the ship's library. A fully qualified medical officer is carried; also musicians and an ample staff of stewards and stewardesses. Communication with the shore is maintained by the ship, and the routine of meals is continued on board while she is in port. The fares include everything (except wines, &c.) needed during the voyage.

Plans of the Ship and all particulars
on application

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING
RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary
cast iron Block, with equal braking effect, and
slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe
can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all
classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways
we now supply.

Our Representatives, with suitable samples for trial, are
at your command.

COMPANY NOTICE.**London and South Western Railway Company.**

RESOLUTIONS PASSED AT THE HALF-YEARLY
GENERAL MEETING ON FRIDAY,
4TH AUGUST, 1911.

THAT the Report of the Directors and
Statement of Accounts for the half-year ending
30th June, 1911, be received and adopted.

That the following dividends be declared, namely:—

At the rate of £4 per cent. per annum on the

Consolidated Guaranteed Stock.

At the rate of £4 per cent. per annum on the

Consolidated Preference Stock.

At the rate of £4 per cent. per annum on the

Perpetual Preference Stock, 1894.

At the rate of £3 10s. per cent. per annum on the

3½ per cent. Preference Stock.

At the rate of £4 per cent. per annum on the

Ordinary Stock, and that the amounts payable in

respect thereof be at the same rate on the Un-

converted Ordinary Stock and on the Preferred

Converted Ordinary Stock.

And that all such dividends be payable (sub-

ject to income tax) on the 12th August, 1911.

GODFREY KNIGHT,

Secretary.

TENDERS INVITED.**Baroda State Railways.**

TENDERS are invited for Girder Bridges,
6ft. to 40ft. span (about 95 tons).

Specification, form of Tender and set of five draw-
ings can be obtained from Messrs. Rendel and Robert-
son, 13, Dartmouth Street, Westminster, S.W., on
payment of one guinea (which will not be returned).

Tenders must be delivered at the same address
before noon of Tuesday, August 22nd.

The Great Indian Peninsula Railway Company.

THE Directors are prepared to receive
Tenders for the Supply of the following Stores,
namely:—

Paints, Drysalteries, etc.

Canvas, etc.

Station Bells, Bib Cocks, etc.

Steel Rails and Fish-plates.

Carriage Fittings.

Specifications and forms of Tender may be obtained
at this office on payment of the fee for the specifica-
tion, which payment will not be returned.

Tenders must be delivered in sealed envelopes,
addressed to the undersigned, marked "Tender for
Paints, Drysalteries, etc.," or as the case may be,
not later than 11 o'clock a.m. on Thursday, the 17th
instant.

The Directors do not bind themselves to accept the
lowest or any Tender.

J. I. BERRY,
Secretary.

Company's Offices,
48, Copthall Avenue, E.C.,
London, 10th August, 1911.

The Bengal and North Western Railway Company, Limited.

THE Directors are prepared to receive
Tenders for the Supply and Delivery of 90 Tons
Spring Steel, as per specification to be seen at the
Company's offices.

Tenders, addressed to the undersigned, and marked
"Tender for Spring Steel," or as the case may be,
are to be lodged not later than noon on Tuesday,
the 22nd day of August, 1911.

For each specification a fee of 10s. will be charged,
which cannot under any circumstances be returned.

The Directors do not bind themselves to accept the
lowest or any Tender.

By order of the Board.
ALEXANDER IZAT,
Managing Director.

237, Gresham House,
Old Broad Street, London, E.C.4,
9th August, 1911.

Dublin and South Eastern Railway Company.

THE Directors of this Company are
prepared to receive Tenders for the Re-con-
struction of Three Bridges carrying the railway over
the Ovoca and Aughrim Rivers, near Woodenbridge,
Co. Wicklow.

Plans and specification may be seen, and forms of
Tender and schedule of quantities obtained, at the
office of the Chief Engineer, No. 52, Westland Row,
Dublin, between the hours of 10 a.m. and 5 p.m.

Tenders, addressed to the undersigned, and marked
"Tender for Bridges," will be received on or before
10 a.m. on the 6th day of September, 1911.

The Directors do not bind themselves to accept the
lowest or any Tender.

M. F. KEOGH,
Secretary.

Westland Row Station, Dublin,
9th August, 1911.

POSITION VACANT.**Sudan Government Railways.**

THE Director, Sudan Government
Railways, requires a Carriage and Wagon Works
Manager.

Salary £E480 per annum (equivalent to about £495
sterling), rising by bi-annual increments of £E60 to
£E600 per annum. Age 25 to 35 years.

Candidates for the post should have served a pupil-
age in the locomotive, carriage, and wagon depart-
ment of a British railway. A thoroughly well-qualified
engineer is desired, one who can organise and con-
trol. He should have held some post of responsibility,
either in the locomotive or carriage and wagon depart-
ments of a railway, or in a private building firm.
Only thoroughly capable men need apply.

Twelve months' probationary contract, to be ex-
tended to 18 months if required by the railway. After
the satisfactory completion of which, and on the
completion of two years' service, the post will be-
come a permanent and pensionable one.

Application forms can be obtained by letter only
from Mr. A. L. WEBB, C.M.G., Queen Anne's
Chambers, Broadway, Westminster, London, S.W.

THE UNREST OF LABOUR.

It is almost hopeless to try and follow the progress of the strikes, especially those affecting railways. They are rapidly spreading, and it is difficult to understand the *raison d'être* of many of them. It is true that this hot weather is not conducive to an ardent desire for any kind of work. At the same time, it seems the height of cruelty to inflict unnecessary hardships on the great mass of the people, to whom a very slight increase in the price of their necessities makes all the difference between a bare living and absolute starvation. For, after all, it is the poor, whom we always have with us, on whom the burden falls first and quickly. The comparatively well-to-do, if they cannot have bread can make shift with "cake" for a time. Strikes are infectious, and every weak-kneed submission to any demand forms an encouragement to still greater and more arbitrary demands. The wonderful success of the Leeds tramway strike has encouraged the Glasgow men to go and do likewise. The unwise yielding of one railway company in the North is primarily responsible for much of the unrest that has followed. It is quite natural that, following their protagonists in Parliament, the men should say: "Why go through the farce, trouble, and delay of Conciliation Boards, Arbitrations and all that 'cackle,' when they can 'come to the horses' by just leaving off work, on a grand scale, for a day or two?" We have no wish to aggravate matters in any way: though it is rather difficult to see how they could be much worse—but surely every one would gain in the end if employers were to give notice that any one improperly leaving work would not be taken on again, that they (the employers) would keep their work going, and that for that purpose they considered it their duty to the public in general to continue to attempt to keep going somehow or other, independently of the strikers, if necessary. The employers should give notice to the Government of what protection was required for them and their employees—whether faithful old ones or new ones engaged for the occasion—and it would be the ordinary duty of the Government to afford such protection as would enable those to work who wished to do so, without injury to life, limb, or property. The statement lately made by Mr. Michael Brett, Secretary of the Shipping Federation, succinctly sums up the unparalleled condition into which we are drifting with but little help from those whose duty it is to see that the laws of the land are obeyed, and that a man may go to his daily work unmolested by any one who, from some cause or other, may be desirous of taking a holiday without regard to the interests of others. Said Mr. Brett:—

"Although we were prepared to carry out that agreement, and the men's representatives had signed it, the men struck. Then came the arbitration as arranged in the agreement. That was decided against us and we are prepared loyally to abide by the arbitrator's award. But, in spite of it all, the dockers and stevedores, who are the only men that the shipowners themselves employ, are still out because of the disputes of other workmen. No one knows what the stevedores' grievances are, or whether they have any, but we do know that in spite of the settlement we have made the men have not come back to work. It is too bad." It follows naturally that unless they resume soon other steps will have to be taken to get the work done. The

general public cannot be at the mercy of men who may want to strike every three months. Whatever arrangements are made to prevent a recurrence of these insensate actions will have to be so thorough as to make it practically impossible for famine to be staring in the face of many million people at the pleasure of a few irresponsible organisations who recognise no duties to the public and refuse to admit the right of non-members to work how and where they please.

BRITISH RAILWAYS IN 1910.

In May last the Board of Trade issued their preliminary statement of the more important particulars regarding the capital, traffic, receipts and working expenditure of the railway companies of the United Kingdom for the year 1910 (an abstract of which appeared in our issue of May 15), and now the complete returns are published. Naturally they do not convey any fresh information regarding the main totals, but everyone concerned in railway traffic and finance will find much to interest him in the voluminous statistical details with which the bluebook is mainly filled. A good general review of the figures with comparisons with previous years forms an introduction to the detail tables. As to paid-up capital, it appears that there was an increase as compared with the previous year of over four millions, the total amount being £1,318,500,000, of which £197,000,000, or 15 per cent., was due to nominal additions. The average rate of dividend on ordinary capital was 3.48 per cent., as compared with 3.15 per cent. in 1909. The gross traffic receipts of £114,200,000 are the highest on record. This state of prosperity extended to both passenger and goods traffic. The former standing at £52,700,000 shows an increase over 1909 of £1,500,000, or 2.9 per cent. while the goods receipts at £61,500,000 increased by £2,000,000 or 3.4 per cent. It is to be noted that first-class passenger receipts, which have been decreasing for several years, rose by no less than 4.2 per cent., or a greater proportionate increase than that shown by third-class receipts, which was 4 per cent. The falling off in second-class passengers continued, the diminution amounting to 11.5 per cent. Doubtless the decrease will continue as companies abandon or discourage the use of second-class carriages. On this occasion the decrease is mainly due to the abolition of second class on the Great Western Railway. Over all the number of passengers increased by over 41½ millions, or 3.3 per cent. The series of increases in third-class passengers, unbroken till 1909, have been resumed, the present increase being 44 millions, or 3.6 per cent., and an increase of 35½ millions over the highest number—that of 1908—previously recorded. Regarding goods traffic, minerals and general merchandise amounted to 514,400,000 tons, an increase of 14,500,000 tons, or 2.9 per cent. With all these increases, the passenger train mileage was raised by only 1.2 per cent., and the goods train mileage by 0.5 per cent. The receipts per train mile from goods (95.4d.) are the highest on record. In reference to the working expenses, the total of £76,570,000 is an increase of £1,530,000, or 2 per cent. The proportion of expenses to receipts is 61.8 per cent., a decrease of 0.6. Records since the year 1871 show that the proportion of net earnings to capital had a general tendency to decline, but the tendency has been checked in recent years, the average proportion during the five years 1906-10 being 3.45 per cent. against 3.38 per cent. during the five years 1901-05. These figures, gleaned from masses of others, show the totality of the improvement in British railways of which so much has been heard in detail. They are certainly encouraging, and specially so when taken in conjunction with the companies' half-yearly reports which have just been issued. The only spectre is the recrudescence of labour troubles.

THE FLUCTUATIONS IN QUOTATIONS.

Most of our readers will remember a time, since it is not very long passed, when a change in the quotation of the ordinary stock of one of our principal railways by ½ was quite an event, and if a rise or a fall of 1 took place in the course of a day's business it attracted general attention. Special inquiries were set on foot to ascertain the cause, and not a few of our leading newspapers were accustomed to devote an article to the discussion of supposed reasons for the change. Now, as we write, the alterations of price for the day comprise advances of from one to two points in no less than six of our home railway stocks included in the active list. And they are not likely to give rise to any particular comment. Indeed, the movement follows upon falls of about the same amount the day before or the day before that, and these did not excite much attention in spite of the fact that the interests of the public were considered to be engaged for a rise. These instances demonstrate the considerable alteration which has taken place of late years in the status of home railway stocks. The market for them is not only smaller, but it is supported by less capital, and prices are now at the mercy of men of less substance than was formerly the case. The sale or purchase of £5,000 of stock, which not long ago was regarded as a mere trifle in a day's business in the Railway market, is now an item to be taken note of, and quotations are altered by the acts of quite unsubstantial men, whose judgments upon passing events are as light as their purses. A similar change has taken place in the market for Government stocks, though in this it has not developed to the same extent. The consequences are nevertheless similar. Many writers have drawn attention to the difficulty the Government would be likely to experience, if for any reason it became necessary to place a large issue of Consols, on account of the fact that the market in these has become so much restricted. As was shown not many months ago, when the London and South Western issued a mere £200,000 of stock, if our railway companies endeavoured to raise capital on a scale at all comparable to that which was thought to be necessary for the progress of trade and population ten years ago, they would be likely to meet with the like difficulty and it really deserves to be considered whether the remedy so widely advocated in the case of Government stocks would not be applicable to those of our railways. Consols in small bonds to bearer are already an accepted policy, and it is possible our railway companies might find a wider and more stable public for their stocks if they were able to bring them more within reach of thrifty workers, willing to buy in small amounts for investment and not for speculation.

Index Numbers of Railway Debentures.

Our Index Numbers for the prices of best debentures of English Railways, based on the average yield obtained from these stocks, are repeated below, and the table is brought up-to-date. The rate of interest is assumed to be 3¼ per cent.

The Bank Return again shows a large increase in the internal circulation of gold and notes. The former expanded by £230,000, the latter by £1,025,000. At the same time £540,000 was received on balance from abroad. The reserve is therefore lower by £715,000. Public Deposits declined £319,000. Other Deposits declined £590,000. These movements have been accompanied by a decline of £648,000 in Other Securities, and Government Securities remain unchanged. In spite of the decline in Other Deposits the amount of this item is still above that of the corresponding date of last year by three and a-half millions, so that there is no immediate fear of any scarcity in money. Both loans and discounts, however, show a disposition to harden. The reason must be sought in the plentiful supply of finance bills, originating in the United States, which are coming forward for discount. Otherwise the indications point rather to ease. The Continental exchanges remain high, and gold comes freely to the bank with little or no competition. An explanation which has been hazarded for this is that money employed by France in Berlin is being transferred here in view of possible political complications, but the movement, if it exist, is not sufficiently pronounced to reveal itself. The strength of the Bank of England is seen in the high ratio of the Reserve to liabilities, which, in spite of a decline during the week, is still 54.10 per cent.

The week has been a short one and not very encouraging. The political crisis, which in outward display appears to stir the country so little, nevertheless serves to divert from other business the attention of those classes which bring the bulk of the business to the Stock Exchange. This, in conjunction with the quite extraordinary heat of the weather, would suffice to account for business being slack in

the house. But a day has been added to the existing spectacle of a strike of boats engaged in transport at the very place where London is expected to have the fullest consequences. Home Rails, comprising that quotations have been on the down side since they have moved at all. Home Rails have been so far from seeing that anything interfering with their business touches them closely, while of all important items engaged in the business they are the most laborious, and the most dependent upon an increase of the rates charged. Thus the general public nor the improved dividends nor the better prospects of much avail in stemming the declining tendency.

The rally which occurred on the previous day was seen no more when, after their three days' holiday, the markets reopened on Tuesday last. On the contrary, falls were general, and the recovery which took place at the close of last week was wiped out. London and North-Western, Great Western, and Midland deferred were the chief sufferers. Conditions were no better the following day. Home Rails were again lower, and United States railways, which had been irregular with a downward tendency the day before, fell heavily, selling having been precipitated by the death of Mr. John Gates. Canadian Railways became involved, and Canadas fell away 1½, Trunks ½. On Thursday worse ensued, for no obvious reason. Union Pacifics fell 4½, Chicago and Milwaukee 3, Erie 1st Pref. also 3. Canadian Pacifics were down 4½, Mexicans 1½. It was a bad day all round, and Home Rails in the beginning suffered as much as any, being depressed by the development of the strike in unsuspected directions, as, for example, at Paddington Station. Later in the day, however, a recovery made itself felt. Speculators who had oversold saw fit to repurchase, and prices in some cases ended rather better than they began.

On Friday the recovery in Home Securities developed further strength. This was ascribed to better prospects of settlement of the strike in London, but in point of fact any better news regarding the strike in progress was fully counter-balanced by reports of more strikes to come in different employments and parts of the country, which, by the evidence they afforded of the general condition of unrest among labourers of all kind, were rather calculated to depress still further the stocks of companies concerned. Home Rails particularly—for the reasons already stated. Quotations in Home Rails advanced because they had been put down too much by the sales of speculators for the fall, and for the same cause are likely to advance further next week. The decline in Americans ended as it began, with operations almost entirely confined to Wall Street, and without any particular reason for the fluctuation being revealed. Canadian Railways also advanced, but the change of tone, either here or in other departments of the market, did not suffice to remedy the previous declines.

The principal movements of the week, so far as they relate to securities in which the readers of this journal are likely to be interested, are set forth in the following table:—

Weekly Traffic Summary.

The traffic receipts for the week ended August 6, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,787,429, which was earned on 21,521 miles, being at the rate of £129 10s. 5d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,561,675, with 21,466 miles open, or £119 6s. 8d. per mile. There was thus an increase of £225,754 in the receipts, an increase of 54 in the mileage, and an increase of £10 3s. 9d. in the receipts per mile. Thirty-six of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £65,888 (or £2 19s. 1d. per mile) in the passenger receipts, and an increase of £150,677 (or £7 1s. 1d. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-six railways for five weeks in the passenger receipts has been £132,136, while the aggregate increase in the goods traffic was £133,607. The aggregate receipts of the fifty-two railways for five weeks (July 2 to August 6) amounted to £12,508,866, in comparison with £12,533,517 in the corresponding period of last year—a decrease of £24,651. The figures this week compare with those of Bank Holiday week last year.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, August 9, compared with that for the previous week, shows the following changes:—

Aug. 10, 1910.	BANKING DEPARTMENT.	Aug. 2, 1911.	Aug. 9, 1911.	Increase.	Decrease.

BRITISH AND IRISH RAILWAY DIVIDENDS.

The following table shows the dividends on the ordinary stock (unless otherwise stated) announced so far by the leading English and Irish companies for the half-year ending June 30. In the case of the Scottish companies the dividends are for the half-year ended July 31. For purposes of comparison the dividends for the corresponding half of the previous year are appended:—

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

GREAT WESTERN RAILWAY.

The 152nd half-yearly general meeting of the proprietors was held at Paddington Station, W., on Thursday, August 10th, Viscount CHURCHILL, G.C.V.O. (Chairman of the Company) presiding.

The SECRETARY (Mr. A. E. Bolter) having read the notice convening the meeting,

The CHAIRMAN said:—Ladies and Gentlemen, I think the most convenient way will be for me to pursue my usual course in moving the resolution

"That the report of the Directors circulated amongst the proprietors, and now presented to the meeting, be received and adopted."

and to go through the accounts and report. I will, therefore, ask you to be kind enough to turn to table 4 of the accounts. The receipts on capital account during the half-year amounted to £510,794, the expenditure on capital account for the six months was £364,033, and the details of this expenditure are set forth in page 7, table No. 5. I do not think it is necessary for me to go into those details. Then, if you will turn to table 9, page 9, you will find the revenue account. First class passengers show an increase in numbers of 38,072, which represents an increase in money of £19,435. The second class show a decrease in numbers of 415,702, and in money a decrease of £33,560: this, of course, is due to the gradual abolition of the second class. The third class show an increase in numbers of 943,681, and in money an increase of £87,319, making a total increase of passengers in numbers of 566,051, and in money of £73,185. This works out as follows:—The receipts per first class passenger are 5s. 1.543d. against 4s. 10.782d. The second class works out at 10.101d. against 1s. 4.233d., because, as I have already said, the second class is being done away with gradually. The third class works out at 10.319d. against 10.076d. in the corresponding period. The total receipt per passenger comes out at 11.252d. against 11.017d. Season tickets show an increase in numbers of 13,323, and in money an increase of £7,864. The total increase of all passenger receipts, including season ticket holders, is £81,049, a very satisfactory figure. (Hear, hear.) Parcels, horses and carriages show an increase of £23,060; mails, an increase of £4,068; merchandise, less cartage, an increase of £85,658; live stock, a decrease of £5,519; minerals, an increase of £44,386; dock and harbour dues, an increase of £1,399, showing a total gross increase in the traffic receipts amounting to £234,101, while the published weekly traffic return showed an increase of £214,000, there being only an under-estimate of £20,100 which, I think, is very good, considering the enormous figures dealt with. Canal traffic shows a decrease of £25, rents of property and cottages, an increase of £4,326, transfer fees, an increase of £129, making a total increase in the revenue over the corresponding period of £238,531.

EXPENDITURE.

Well, now, if you will look to the other side of the table, the expenditure, maintenance of way and works shows an increase of £22,101, and this mainly consists of an item of £10,730 for additional material used in relaying various portions of the permanent way. The number of miles of single line which had to be maintained in excess of those in the corresponding period amounts to 17, and 42 of these 47 miles are represented by the Ashendon and Aynho Railway. Locomotive power shows an increase of £25,130, and the additional train miles run during the period under review amounted to 621,559, as stated in the locomotive superintendent's statement which is appended to the report. The main item of the increased expenditure is for materials used in the repairs and renewals of engines—namely, £9,377. A sum of £11,812 was expended in repairing and renewing boilers over and above that so expended in the corresponding period of last year, against which there has been a reduction in the prices of material used for general repairs and for engines. Then we come to carriage and wagon repairs. These show an increase of £9,517. The additions which have been made to the stock during the period, both to stock of carriages and wagons, account naturally for the increased cost of repairs and renewals. Traffic expenses show an increase of £31,935, and the main item of this increase is under the head of salaries and wages, which accounts for £21,001, which is due in part to the employment of additional staff for dealing with the increased traffic, and also for manning the new lines which have come into operation, and partly for stations as well. There is an item of £3,681 representing additional expenditure in repairing and renewing sheets for covering goods in open wagons. General charges show an increase of £3,017, and the principal cause of this increase is in respect of the Railway Clearing House, the expenses representing the Company's proportion of the cost of dividing the receipts from additional through traffic, which, I am glad to say, we have had with other companies. Law charges show an increase of £59; Parliamentary expenses, an increase of £780; compensation for personal injury, an increase of £730; compensation for damage and loss of goods, an increase of £5,484. This increase is accounted for by additional payments made for damage and loss of goods and parcels, but, at the same time, I must point out that the traffic receipts from parcels and merchandise traffic have increased very considerably, and, therefore, the ratio of the amount paid is about the same as usual. Rates and taxes show a decrease of £2,650. (Hear, hear.) I see you appreciate that. It is several years since this item has shown a decrease. The reduction in the assessments has, in the half-year, more than counterbalanced the increase due to the additional poundage levied, by local authorities over which, as I have often told you here, we have no control. The policy we have been steadily pursuing of appealing against assessments has proved most satisfactory and is being very closely followed up by our officers, and we hope to continue in the same manner in the future. Government duty shows a decrease of £920. That is owing to the abolition of the second class. Mileage and demurrage of rolling stock show an increase of £13,558, and this large increase is due to the charges for the hire of a larger number of wagons than during the corresponding period owing to the additional goods traffic which, I am glad to say, we have had to carry, the Company's stock being, at the present time, insufficient to meet the increased demand. Steamboat charges show an increase of £9,007, there having been very heavy repairs to several vessels of the Company's fleet, involving an expenditure of £3,873 more than in the corresponding period, and an additional expenditure of £2,648 has been incurred by the extra cost of fuel, the price having considerably increased. Canal expenses show an increase of £1,290, making a total increase in the expenditure of £119,524. The percentage of expenses to the receipts is, I think you will agree, very satisfactory, as this half-year it works out at 65.260 against, for instance, 67.617 in the year 1908, and since that year it has been steadily decreasing. I need hardly say it is our endeavour to keep this down as low as possible. The total revenue receipts amount to £6,873,428, the total revenue expenditure amounts to £4,438,773, leaving a balance to revenue account of £2,434,655, to which we must add the balance from the last account amounting to £114,791. Dividends on shares held by the Company amount to £12,041, Bankers' and general interest £17,821, making the aggregate £2,579,311. After payment

of the interest on debenture capital, rent charges, chief rents, guaranteed stock dividend, and preference stock dividend, £1,646,689, a balance remains of £932,622, which is available for dividend on the ordinary stock. This will admit of the payment at the rate of $4\frac{1}{2}$ per cent. for the six months, which absorbs £812,196, carrying forward a balance of £120,426 to the next account, as compared with a dividend at the rate of 4 per cent. per annum for the corresponding period of last year when, as you will recollect, we carried forward a balance of £96,902. (Hear, hear.) I think you will agree with me that that is a very satisfactory working for the six months. Now, if you will kindly turn to page 11, table 15, train mileage, you will see that the passenger train miles show an increase of 201,039 miles; electric trains, an increase of 27,961 miles; rail motor service, an increase of 203,645 miles; and goods and mineral trains, an increase of 191,914 miles, being a total increase in the train mileage of 624,559 miles. The receipts per train mile for passengers show an increase of .628d., and goods of 1.370d., together representing .900d. The expenses per train mile show an increase of .244d.

VARIOUS WORKS.

Well, ladies and gentlemen, that is all, so far as the accounts are concerned, which I think I should draw your attention to. If you will be good enough to turn to the report, I think the most convenient course to adopt will be for me to go through it paragraph by paragraph. Paragraph 2 records the continued progress of the Swansea District lines, which we hope will be available for traffic during next year. It also refers to the construction of the loop line connecting the Swansea District lines and the Rhondda and Swansea Bay line at Neath. The effect of this will be, as I think I explained to you at our last meeting, that it will be possible for us to use a section of the Rhondda and Swansea Bay railway for express traffic, and thereby not only give us an alternative and slightly shorter route, but also avoid the very busy section of the line about Neath station. Paragraph 3 notifies that it has become necessary to provide additional relief works at various places in South Wales, more particularly in the neighbourhood of Port Talbot and Briton Ferry, for the purpose of facilitating the conduct of traffic. I am glad to tell you that there has been an enormous and increasing traffic in spite of the troubles which have been going on in South Wales, and it is essential that we should be in a position to conduct it in a satisfactory and expeditious manner. For this reason, after very careful consideration, the Directors have decided to provide these additional facilities for our South Wales traffic. This paragraph also mentions that we hope to deal very shortly with the enlargement of Newport station, which all of you in that district will know is very urgently needed, and the removal of the locomotive depot to another site has been a preliminary to taking this work in hand. Paragraph 4 refers to the extensive alterations and improvements in the vicinity of Birmingham. These will necessarily take some considerable time to complete, but I am glad to say that certain portions are approaching final shape, and we have now got some of the new work in use at Snow Hill station. Substantial progress has been also made with the construction of a goods depot at Moor Street station. The Paddington improvements, also, and those at South Lambeth, where we have the new goods depot being built, are proceeding very satisfactorily. The accommodation, as it is completed, is brought into use little by little, and is in very great demand. In fact, the traders in South London, and South of the Thames generally, are now finding what great advantages they are reaping from the South Lambeth depot, and they are anxiously awaiting its completion, because we are not able to deal yet with all the business there which they have to bring us. Its provision has, moreover, effected a great measure of relief here at Paddington which, as I pointed out, was one of the objects we had in view in undertaking the work. Paragraph 5 refers to the station improvements at Newton Abbot and St. David's station at Exeter. These are very representative stations on the Great Western system. In spite of the fact that they were laid out many years ago to accommodate the business of the day, and I am bound to say that in those days they left a reasonable margin for future development, the business has been so good, things have progressed so well, that that margin has not been sufficient, and a substantial extension of the accommodation is now a matter of absolute necessity. We are dealing with this and other similar cases as quickly as we can. Of course, they cannot be hurriedly undertaken, and

moreover, as you know, they cost a very considerable amount of money to put into effect. With regard to Newton Abbot, I think I have previously explained to you the improvements which we are effecting there, and the first step in that direction was the removal of the goods depot to another site. That has now been done, and we are, therefore, in a position to push forward the work at the new passenger station of Newton Abbot. Paragraph 6 refers to the placing of a contract for the construction of a new cargo steamer for the traffic with the South of Ireland. Paragraph 7 announces the opening of the new line between Lampeter and Aberayron. That line has been constructed by the Lampeter and Newquay Light Railway Company, and worked under agreement by the Great Western Company, an arrangement you approved some time ago. Paragraph 8 refers to the results of our application to Parliament this Session. The Company's Bill for the construction of a line in the neighbourhood of Swansea was approved by the proprietors at our last meeting, and it now only awaits the Royal Assent, when it is intended to push on with the construction works as quickly as we possibly can. Paragraph 9 refers to the powers which have been granted to the London Electric Railway Company for the extension of their Baker Street and Waterloo line from Edgware Road to Paddington station, and arrangements are being made to put the work in hand at once. This paragraph also announces that the Central London Company's Bill for the construction of a short extension of their line at Wood Lane to connect with the authorised Great Western line from Ealing to Shepherd's Bush only awaits the Royal Assent. The construction of the Ealing and Shepherd's Bush line has been held over pending this arrangement, and it will now be proceeded with at once. It is not in the least necessary for me to point out to you the enormous advantages that connections with the London Tubes will give to the suburban residents on the Great Western main line. (Hear, hear.) Paragraph 10 refers to the expenditure which you will be asked to vote. The items of it, you will notice, refer almost entirely to several matters which I have mentioned already in going through the report, and I do not think they call for further remarks from me. Well, ladies and gentlemen, so much for the report, and I do not feel that there is anything in it that calls for special remark from me, and I am sure on a hot day like this, the briefer my remarks are, the happier you will be, while it will also give you more time to ask me questions on any points if you wish to do so.

THE NATIONAL INSURANCE BILL.

There is, however, one point, I think, on which possibly you will expect me to say a word, and that is with reference to the National Insurance Bill. (Hear, hear.) Well, now, this Bill, as we know, is engaging a great deal of public attention. As the measure stands, it will undoubtedly, put upon the Company a very heavy charge—in fact, so far as we can tell, it will be something like £60,000 a year, and it will cause, and this I very greatly deprecate, an interference with the relations which have existed for so many years between ourselves and the staff, and which arrangement has, in the past, been for their welfare. From what I can learn I think there is certainly a strong feeling among many of the men that they would rather be left alone under the present arrangements than have to be dealt with in the manner which is proposed in the Bill. (Hear, hear.) However, there it is. You know the circumstances as well as I do. All I can say is that the Bill is being most carefully watched by the railway companies combined. We are watching and taking steps, so far as we are able, to insert any amendments which we consider necessary for the well-being of the railways. Beyond that we can only wait until we see in what form it is eventually passed by Parliament before we can suggest how the situation is to be met in connection with our existing benefit funds and other arrangements.

THE STRIKE OF CARMEN.

Well, now, with that explanation I do not think, in fact, I know, there is nothing on which it would have been necessary to trouble you, but unfortunately, a situation has been created during the past eight or nine hours which I think it is only right and proper I should say something to you about. No doubt, when you came to Paddington this morning you noticed a certain number of unusual visitors in the shape of Metropolitan police and others. Their presence is caused by the action of certain bodies that have picketed the station and caused considerable trouble among a section of our men. Well, the situation, so far as it affects us, and

why I say so far as it affects us is because I believe that the whole of this unrest in the labour world is part of a huge scheme, if I may say so, a political scheme more than in any way a private scheme as affecting any individual company. (Hear, hear.) So far as it affects the Great Western Railway, the position is this—the goods carmen at Paddington station and those engaged in London generally have struck work at the instigation of the Carmen's Union, and a number of men engaged in handling merchandise traffic, and who may generally be described as goods workers, have also refused to work, in sympathy with the carmen. The result is that business at the Paddington goods station is practically, at the present moment, at a standstill. About 100 tons of fish, an equal quantity of fresh meat, and a large consignment of fruit and vegetables, which should have been delivered in the markets in the early hours of this morning, remain in the trucks, and will, I am afraid, speedily deteriorate. (Cries of "Shame.") The General Manager says that he has just heard there is more coming up. I need hardly say that directly our officials realised what was taking place they despatched messages all over the country saying that we could not be responsible, and that goods were not to be sent, but there is a very large quantity of goods already on the way, and they will, I am afraid, suffer in consequence. I am glad to hear that since these details were given me about an hour ago some of the meat has been delivered, and we are doing all we can. We have communicated with the Home Office for protection, and we are doing all that is possible to deal with the goods which are waiting to be delivered. I must tell you that a number of parcels' carmen are willing to work and have attempted to do so, but they have been prevented by the pickets which have been placed outside the station and in the neighbouring streets. Some vans have been sent out in convoys driven by these men, but they have been turned back. All the carmen concerned, as well as the goods workers, who are also on strike, I must tell you are working under Conciliation Board conditions, and under an Arbitrator's award—and that is a great point—but the carmen have deliberately repudiated the Conciliation Board scheme and the decisions and awards obtained under it. Now, ladies and gentlemen, they did not even formulate their demands prior to striking. They left without a moment's notice—(cries of "Shame" and "Disgraceful")—in total disregard of the Conciliation arrangements under which they were working, although they now say that the printed demands of the leaflet, which has been circulated among all the master carmen of London, represent what they also demand, although the leaflet has never reached your officials and we know nothing about it. That leaflet was circulated by the Carmen's Union to our carmen, the Carmen's Union being, as the General Manager says, the Union which is doing all the mischief. The goods workers, although striking in sympathy with the carmen, have also, since striking, made demands for increased pay for ordinary work and overtime, and for other smaller concessions. We have very good reason to believe, knowing our men as we do, that had it not been for the picketing in the case of the carmen, a large number of them would have continued working. (Hear, hear.) Well, all I can say, as far as that is concerned, is that two considerations have to be put forward to the Home Secretary and the Government. We want to know, first, what steps the Government propose to take to secure that Conciliation Board settlements and conditions should be respected. (Cheers.) And, secondly, we want to know, is the so-called peaceful picketing to be allowed to be prosecuted without interference by the authorities to the extent of producing a condition of anarchy, with a risk of such a paralysis of the transport facilities of London which the railways afford, and upon which this city, as you know, depends for its daily supply of food, which, if it goes on, will bring about such a condition of affairs that famine prices will prevail and probably something even worse? I must tell you that at the present moment our operations at the Paddington goods shed are practically at a standstill. Now I have told you all we know of the situation, which only commenced in the middle of the night, about 12 o'clock, and started by a procession of some 300 men; I do not know whether they were dockmen or who they were, but they were not Great Western men. These men went to the station and marched along the platform and down the subway and out at one of the exits with a view, undoubtedly, to intimidating the men.

There were a few rail acts, which it is not necessary to refer to here, which have been perpetrated and which I think you can understand the intimidating the men who otherwise would be perfectly willing to go on with their daily work. As I have said, we are in communication with the authorities, and we can only hope that steps will be taken to put an end to a state of things such as that now existing. (Hear, hear.) I have already detained you longer than I intended, and I do not think it is necessary to say more, so I will conclude by repeating the resolution which I moved at the beginning of my remarks. Applause.

Mr. S. ERNEST PALMER (Deputy Chairman) seconded the resolution.

In the course of a discussion which ensued.

Mr. CAMAC said he was glad to know that the barrow of Fishguard, generally known as "The Gateway of Europe" was now being used for vessels on the Poston service in addition to the New York, Glasgow, Australian, Booth Line and other services, and had established beyond doubt the truth of the many advantages claimed for it as a port of call for ocean liners.

Mr. LOXDALE suggested that facilities should be given for connecting by railway the counties of Cardiganshire and Carmarthenshire.

Mr. COATH hoped the Board would resist the unjust demands of carmen and others, and suggested that a profit sharing scheme on the lines carried out by the late Sir George Livesey should be introduced with a view to preventing future strikes.

Mr. HEDGES, in connection with the Fishguard route, suggested that on the Irish side of the Channel the services should be accelerated in speed. He also suggested that the Directors should establish a provident society in connection with the Government National Insurance Bill, and concluded his remarks by again urging that shareholders should have free passes to enable them to attend the half-yearly meetings.

Mr. MELVIN hoped no time would be lost in finishing Moor Street station, Birmingham.

The CHAIRMAN, in reply, said it would be a big order to give the facilities required by Mr. Loxdale in regard to connecting Cardiganshire and Carmarthenshire, but the matter would receive the consideration of the officials. There was, however, an efficient motor car service throughout the district. In regard to the labour question, the Board intended to be firm and had called upon the Government to give the Company police protection and to insist upon the Conciliation Board's awards being carried out by the men. The profit sharing scheme had received, for many years, the attention of the Directors, but there were many things, both for and against the scheme. The acceleration of the railway service with the South of Ireland had been a matter of constant correspondence between himself and the Chairman of the Great Southern and Western of Ireland Railway Company. The National Insurance Bill was receiving attention. The Company had provident societies in existence and the Board would of course have these societies under consideration in connection with the Government scheme. As to free passes, if they were granted, so many shareholders would probably wish to attend the half-yearly meetings, that it would be necessary to have a ballot or engage the Albert Hall. (Laughter.) He, therefore, could not hold out any hope that Mr. Hedges' suggestion would be carried out. (Hear, hear.)

The resolution was then put and carried unanimously.

On the motion of the CHAIRMAN, seconded by Mr. PALMER, the dividends recommended in the report, including one at the rate of $4\frac{1}{2}$ per cent. per annum on the Consolidated Ordinary Stock, were agreed to; and on the proposition of the Chairman, the expenditure on various works referred to in the report was also approved.

Mr. H. W. BROUGHTON proposed the election, as a Director, or Mr. George Alfred Wills, of Bristol, in the place of the late Lord Winterstoke.

Mr. COATH seconded the proposition which was unanimously agreed to.

Mr. COATH proposed the election of the following gentlemen as members of the Audit Committee:—Captain H. H. Heywood-Lonsdale, The Lord Iveagh, K.P., The Earl of Jersey, Rowland G. Venables, Esq., and J. S. Wood, Esq.

Mr. CAMAC seconded the proposition and it was agreed to *nem. con.*

In reply to Mr. Hedges, the Chairman said the members of the Audit Committee attended practically quite regularly.

Mr. BROUGHTON proposed a vote of thanks to the Chairman.

for his able and courteous conduct in presiding, and to the Directors generally for their past services.

Mr. HENRIS seconded the resolution, which was carried with acclamation.

The CHAIRMAN briefly acknowledged the vote on behalf of himself and colleagues, and the proceedings then terminated.

LANCASHIRE AND YORKSHIRE RAILWAY.

The 150th half-yearly meeting of the shareholders was held on Wednesday, at the offices of the company, Hunt's Bank, Manchester, Sir George Armytage, Bart. (chairman of the board), presiding.

The SECRETARY (Mr. R. C. Irwin), having read the notice convening the meeting,

The CHAIRMAN moved the adoption of the report and accounts, an abstract of which appeared in last Saturday's RAILWAY TIMES. He congratulated the shareholders on the increase in dividend that the directors were able to propose—4½ per cent., as against 3½ for the corresponding period. This was the best they had done for 11 years. The amount of capital chargeable to revenue on June 30 last was £66,988,800, which was the same as last year. On new lines and works they had spent £24,400, including £10,000 contributed to the Deane Valley Railway Company. The remainder had been principally spent on the completion of the accommodation for steam trawlers at Fleetwood, and the Blowick curve, and the provision of additional lines for coal traffic at Fazakerley. They had also continued the electrification of their line to Town Green, and other smaller works had been carried out.

RECEIPTS.

On revenue account the gross receipts amounted to £2,008,503, an increase of £99,837 or 5.34 per cent., and this would no doubt have been greater but for the Coronation, which upset everything, people staying at home to celebrate the occasion locally and at the same time the mills were stopped and the railway's goods traffic in that week fell away considerably. In passengers there was an increase of £38,338, and in parcels, horses, mails, etc., an increase of £5,845, making a total increase in the passenger department of £44,213. In merchandise there was an increase of £28,522, while in mineral and coal there was an increase of £22,611. The receipts per train mile for passenger traffic showed an increase of 1.83d., and the goods an increase of 6.97d. The total number of passengers carried was 31,221,544, an increase of 1,137,423, or 3.78 per cent. In the first class there was an increase of 13,477, or 2.48 per cent., and in money an increase of £183, or 0.50 per cent. In the second class there was an increase of 70,940, or 4.38 per cent., and in money an increase of £2,040, or 3.72 per cent. In the third class there was an increase of 1,053,897, or 3.77 per cent., and in money an increase of £28,470, or 3.06 per cent. He might mention that one-half of the total increase in the number of passengers was in respect of the company's electrified lines. Their last extension to Town Green was already showing gratifying results. In the goods department the total tonnage was 13,211,330 tons, which was an increase of 305,28 tons, or 2.30 per cent. The gross increase was £99,837, as against the estimated published returns of £85,000.

WORKING EXPENSES.

The expenditure on revenue account had been £1,782,307, an increase of £25,013, or 1.48 per cent. This was satisfactory. No doubt they had been favoured with an abnormal amount of fine weather, yet, on the other hand, they had had labour troubles. The percentage of working expenses on traffic receipts was 60.41, as against 61.53, and on the total receipts 61.44, as against 61.53. In the maintenance of way there was an increase of £1,508. In the locomotive department there was an increase of £10,508, there being an increase in coal and coke of £700. In running wages there was an increase of £40,717, and an increase of £4,357 in wages for repairs and renewals. The increase was not out of proportion to the work done. There was one figure not seen in any previous account. The directors had put £20,000 to a reserve fund, in addition to carrying forward a larger balance. He thought they would all agree that this was a prudent course to take.

COTTON TRADE LABOUR TROUBLES.

Two months ago he had referred to the effect which the depression in the cotton trade had upon this company, but he was glad to see that the prospects during the present and subsequent months were encouraging, as there was every indication of the crop which would be shortly coming forward being a bumper one. A strike of seamen and dockers at Hull and Gravelly, which took place during the last week of the last month, had held the company's ships up in port for a consider-

able time, and the board could not say exactly what that had cost them yet, but it must be a considerable sum. This strike disorganised the company's work considerably, and matters could not be said to be settled yet at those ports, for some of the men were refusing to adhere to the agreement arrived at. With regard to the operating staff engaged on the railway, the Board of Trade conciliation scheme, to which all the railway companies were parties, was drawn up in 1908, and this company agreed with their men, without the assistance of an arbitrator, and certain improved conditions as to rates of pay and hours of service were put into operation, and this agreement remained in force until November, 1914. Until quite recently the scheme had worked well, and without any friction, but he was sorry to say that lately certain sections of the men had without notice (and let it be said contrary to the advice of their own representatives) thrown up their work and put the company to great inconvenience. In addition, they had had some trouble with the labourers at Newton Heath and their workmen at Horwich who were not in the conciliation scheme. These matters were not settled yet, but were receiving close attention by the company's officers.

THE INSURANCE BILL.

Regarding the National Insurance Bill and the effect it would have on the revenue of this company if it became law in its present form, he estimated that the company's contribution as employer would not be less than £20,000 a year, or in round numbers rather more than an eight per cent. per annum of the dividend on the ordinary stock. To take a concrete case they would find that the amount available this half-year to pay the ordinary shareholders the proposed dividend of 4½ per cent. was £399,050, or, say, £400,000. If they had to deduct £13,000 for half a year's contribution to the Insurance Fund it would only leave enough to pay 4½ instead of 4½ per cent. This proposed tax in the case of a railway company would fall entirely on the ordinary shareholder, and in the case he had quoted would be equivalent to 8d. in the pound. The shareholder already had to pay his income tax, one shilling and twopenny, and it was now proposed to burden him with a further national insurance tax of 8d. in the pound. He could hardly think this hardship on railway companies was fully realised. Other employers of labour could raise their prices to their customers to meet these extraordinary demands, but railway charges were limited by Act of Parliament, and it was difficult to find where any relief could be obtained. As regarded other parts of the Bill relating to societies in existence, and to be created, and the collection of the money, these and other matters, including the second part of the Bill relating to unemployment, were by the consent of all the companies being carefully watched by the Railway Companies' Association. He thought it behoved all the shareholders to consider this Bill very carefully, and to use all the influence they could with their Parliamentary representatives to prevent any unfair burden being placed on those who had no remedy. With the exception referred to everything had worked very satisfactorily, and he congratulated the shareholders on the improved result.

The report was adopted and the dividends declared.

At a special meeting afterwards held, the Light Railway Order authorising the construction of a light railway at Clayton-Moors, Lancashire, was approved.

TAFF VALE RAILWAY.

At the half-yearly meeting of the Taff Vale Railway Company, held at the Royal Hotel, College Green, Bristol, Mr. Weston-Stevens (the deputy chairman) presided in the absence of the chairman (Mr. R. L. Grant Vassall). In the course of his remarks, the Chairman said that Pontypridd Station had been completed, and that that item of capital expenditure would disappear. After quoting the main features of the report, of which an abstract was given in our last issue, the Chairman remarked that the company did their own insurance, and that although workmen's compensation claims were heavy, the directors saw no reason to abandon this course. Law charges were still too high, due to attacks made on them by other companies. Shareholders were now reaping the benefit of the far-sighted policy of the board. Their record of eleven half-yearly meetings with successive 4 per cent. dividends had not fallen to many railway companies. He admitted that the strike in South Wales and the unsettled labour conditions had adversely affected trade, but he believed things would settle down soon, and the company would resume its prosperity. Exports had declined a million tons, and costwise a quarter of a million. The Government Insurance Bill in its present form would affect the company to the extent of over £3,000 yearly. The report was adopted.

GREAT NORTHERN RAILWAY.

The half-yearly ordinary general meeting of proprietors in the Great Northern Railway Company was held yesterday at King's Cross Station, Lord Allerton (Chairman of the company) presiding.

The CHAIRMAN, in moving the adoption of the report (an analysis of which appeared in THE RAILWAY TIMES, of August 5), said that there had been no new issue of capital during the half-year, excepting some small amount for the savings bank depositors. In regard to the capital account, the net expenditure during the half-year was £82,714, about one-half of what was estimated. The sanction of the proprietors was asked for an expenditure of £95,000 principally for new open wagons in order to meet the requirements of the traffic. The total outlay on capital account for the present half-year was estimated at £171,000 in order to provide for the widening of the main line, the construction of an additional line at Finsbury Park, and an additional line between Corby and Essenden, one-half of which they expected would be available for traffic before the end of the year. There was also the construction of the Tickhill Light Railway, which was still going on. Coming to the revenue account, the total receipts for the half-year amounted to £3,031,341, being an increase of £79,521 over the previous figures. The total passenger traffic—ordinary combined with season tickets—showed an increase of 669,000 journeys. There had been a general increase compared with the corresponding period last year over the whole system, and no doubt they had benefited somewhat from the influx of visitors for the Coronation, although the local traffic from the latter did not come up to expectations. It was interesting to note that first-class passengers had increased over the whole line to the extent of 4 per cent. The parcels traffic showed an increase of £3,500, but there had been a loss in fish traffic to London of £2,700. The total coaching traffic showed an increase of £20,627, and the merchandise and live stock receipts a net increase of £25,335. The coal and coke traffic showed an increase of £10,000. The export traffic fell off to the extent of about £5,000, but the home traffic showed an increase of about £15,000. The total increase from merchandise, live stock and coal traffics was £35,359.

Turning to the expenditure side of the accounts, the total for maintenance of way, works and stations showed an increase of £10,038, while repairs and renewals to bridges and tunnels had been rather heavier than usual. The total expenditure in respect of locomotive power showed an increase of £24,162, principally owing to an increase in the running expenses, while the coal account showed an increase of about £10,000. Renewals showed an increase of about £1,500, which was partly due to the engines which had been built having been supplied with what was called super-heating apparatus. The traffic expenses showed an increase of £10,167, most of which was due to an increase in the wages bill, while there had also been some heavier expenditure in regard to renewals of hydraulic machinery. The total expenditure, including joint lines, had increased by £68,271, equal to 3 per cent. The percentage of working expenses to receipts was a trifle higher than in the corresponding period—namely, 65.24 as against 65.03. The balance of revenue carried to net revenue account showed an increase of £21,250, which, together with the increased balance brought forward from last year of £18,000, made a total increase of £41,000. After setting aside £20,000 for special renewals, the directors were enabled to meet in full the interest on the preference stocks and to declare a dividend at the rate of £3 per cent. per annum for the half-year on each £100 of original stock, and to provide 2 per cent. on the preferred converted ordinary, and 3 per cent. on the "B" stocks, carrying forward a balance of £120,927, or an increase of £40,962 as compared with the corresponding period of 1910. He hoped the proprietors would consider that the accounts, on the whole, were satisfactory. At the special meeting to follow the proprietors would be asked to approve of a Light Railway Commissioners' order for the working of a short line on the road to Skegness from Lincoln. This proposed line would shorten the distance from Lincoln to Skegness by a little over ten miles, but the directors estimated that there would be a saving in the journey of nearly an hour, if not more, which, while being an advantage to all the big manufacturing towns in Lancashire and Yorkshire—particularly the West Riding—they hoped would enable them to increase the traffic to Skegness. It was really quite astonishing the number of passengers they had been taking for next to nothing from London to Skegness. The latter, however, was becoming a popular place, and the directors thought that it was their duty, as well as being in the interest of the company, to try and encourage traffic by affording little better facilities. The cost of the proposed exten-

sion would be about £20,000, and when completed it would give a facilitated service to such towns as Gainsborough, Sheffield, Doncaster, Leeds and Bradford.

EFFECT OF THE NATIONAL INSURANCE BILL.

Dealing with the Insurance Bill now before Parliament, the Chairman stated that if it came into operation it would involve the company in an additional expenditure of nearly £30,000 a year, which would fall entirely upon the deferred shareholders. As he understood it, a fair estimate of the working of the Bill would be that the men in their employ would be called upon to make a payment in addition to what they now contributed, while they would not be quite as well off under the Bill as they were under the present arrangements. He thought that great industrial concerns like railways, who had over a period of years built up funds of different kinds for the benefit of their different classes of servants, were big enough to deal with this question of insurance more economically than could the Government, and he was not without hope that when the view was put before Parliament that societies either existing or created could be shown to offer advantages quite as favourable as those which would be obtained under the Bill, they should have the option of stating that they should be exempt from the operation of the Bill. He hoped that this view would commend itself to Parliament, and that the company might be spared the large additional expenditure which would otherwise be involved.

LABOUR DIFFICULTIES.

In regard to the disorder to traffic which existed in certain parts of London and other parts of the country, the Chairman said that he was very unwilling to say a single word which would tend to increase the bitterness of feeling which existed at present, although he must say that a great deal had been made of very little. This company was suffering from this cause in some parts of London, their men being unable to discharge their duties or to carry traffic. In Liverpool matters were equally serious, and it was very difficult, if not impossible, in a great many cases either to collect or deliver goods. We had been brought up to believe that the English race, in the past at all events, had been credited with a certain amount of common sense, but it must be obvious to all that the loss and suffering which was being inflicted by the disturbances had been very heavy upon innocent people. However, he still hoped that the common sense with which the race was credited would result in a speedy settlement and a return to normal conditions. This company in some districts were suffering great inconvenience, but the proprietors could rest assured that everything that could be done and everything that ought to be done would be done by the officers of the company to bring about a condition of peace.

Sir LESLEY C. PROBYN seconded the resolution.

The CHAIRMAN, in reply to questions, said that if the Insurance Bill became law and the railways were brought under its operation, it would involve either the reconstruction or the sweeping away of all the existing funds to which the company voluntarily contributed. No doubt the proprietors were aware that representations had already been made by their employees, pointing out that if the Bill were passed they would be under worse conditions than they were now, and that, therefore, they desired to be exempted from the Bill. Having regard to the fact that both employers and employees were of one mind, he thought that there ought not to be much difficulty in finding a way out.

The report and accounts were unanimously adopted, and the dividends as recommended were declared.

A special meeting was then held, when a resolution approving the order to authorise the construction of a light railway from Kirkstead to Little Steeping, in the parish of Lindsey in the county of Lincoln, and empowering the company to raise for that purpose £210,000 additional capital with the usual borrowing powers, was unanimously approved, and a vote of thanks to the chairman and directors concluded the proceedings.

STRATFORD AND MIDLAND JUNCTION RAILWAY.

At the half-yearly general meeting of the Stratford-on-Avon and Midland Junction Railway Company, held at the Great Eastern Hotel, London, on Thursday, Mr. HARRY WHILMOTT (chairman), who presided, said they were gradually improving their position not so much through increased traffic, but chiefly by decreased expenses. This is clearly shown in the report, of which an abstract was given in our last issue. The increased receipts came principally from the Northampton and Banbury line, which was amalgamated with them in July last year. The amalgamation had quite realised their expectations, the economy accruing being reflected in the working expenses.

LONDON AND NORTH WESTERN RAILWAY.

The half-yearly ordinary general meeting of the proprietors was held yesterday, at the Euston Station; Mr. Gilbert H. Claughton (chairman of the company) presiding.

The SECRETARY (Mr. Jas. Bishop), having read the notice convening the meeting.

The CHAIRMAN said: My lords, ladies and gentlemen; not for the first time have I the honour of occupying this chair at a half-yearly meeting, the previous occasion being eighteen months ago, when I asked your special indulgence; and again do I ask it on this, my first appearance as chairman of the company. (Applause.) Not that I am ashamed of the report, but that I fear I may do it injustice by my inefficient advocacy. It is, I believe, a good report. The board are able to place before you a statement of accounts which I venture to think every shareholder will consider eminently satisfactory. For the December half-year you remember the dividend was at the rate of $7\frac{3}{4}$ per cent., which Lord Stalbridge explained to you was the highest paid since 1899, and now, owing to the continued improvement in the trade of the country, and the economies which we have been able to maintain, owing partly to our arrangements with the Midland and Lancashire and Yorkshire Railway Companies, we are in a position, after again placing £100,000 to general reserve, of being able to recommend you to declare a dividend at the rate of 6 per cent., the highest that has been paid in the June, or, as it is sometimes called, the lean half-year, since 1900—(applause)—against $5\frac{1}{2}$ per cent. in the corresponding period—and to carry forward a balance of £141,000, against £100,000 last year. If you adopt this recommendation, the dividend paid in the last twelve months will be £6 17s. 6d. per cent., yet our stock stands in the market to-day at the extremely low figure of 141½, giving a yield of nearly 5 per cent. I will not attempt to say what the reason of this market price may be, but I think that the primary cause must be looked for outside and quite apart from the railway company's business. In the matter of the depreciation of first-class British investments we are indeed in good company. You will see that the receipts have increased by £265,746, whilst the working expenses have increased by £123,402. The percentage of working cost has been 64.3, against 64.86. I need hardly add before I pass to the details of the accounts that this result has not been attained by any parsimony in regard to the efficient upkeep of the company's property. I should like to say a word as to capital expenditure. In the past capital has been spent in widening the line, enlarging stations, and in other ways wherever your directors were satisfied that it could be advantageously spent; and as one who can take little credit for the policy which has been pursued in this respect for many years, I think I may say that in my opinion, and I am sure you will agree, it has been a very wise policy, as by providing additional accommodation wherever it was required the line was already well equipped in every way for dealing satisfactorily with the great increase of traffic which has come to us the last year or two, and we are now reaping the benefit of that foresight. Our capital expenditure during the last six months has been only £149,502—nearly the whole of which was on the Euston and Watford widening—and for the last twelve months the total capital expenditure has been £344,037 only, by far the lowest in the history of the company. The estimate for the current half-year is £282,000, again the greater part of it being in respect of the widening between Euston and Watford to which I have just referred. If you will now turn to the revenue account (No. 9), you will see on the credit side that there is an increase in first class passengers of £13,265 in money, but a decrease of 16,136 in numbers.

CONTINUED DECLINE IN SECOND CLASS.

The decrease in the second class traffic still continues. For the half-year it amounts to £8,655 in money and 163,698 in numbers. This is mainly attributable to the continued decline in second class travel by the public generally, and partially to the pursuance of the policy forecast by my predecessor in his speech at the half-yearly meeting two years ago, namely, the abolition of the intermediate class where it ceases to pay. In third class there is a very satisfactory increase in money of £84,315 and 951,614 in numbers.

Season tickets, parcels, and mails all exhibit satisfactory increases. In merchandise there is a large increase of £115,207, and I should like to mention that during the past twelve months the traffic both in merchandise and passengers has been the largest ever carried by the company. (Applause.) Live stock is down over £5,000, due to fewer cattle having been carried from Ireland and Scotland. Minerals show an increase of £25,000. Turning now to the debit side of the account, as you would naturally expect from the larger amount of traffic which has been dealt with, wages are up in practically

every department. To celebrate the Coronation the board granted the staff a day's holiday with pay during the festivities (as was done on the occasion of the Coronation of King Edward), those who could not be spared from their duties receiving a grant of an extra day's pay, and I am sure the shareholders will heartily endorse the directors' action. (Applause.) This accounts for £15,000 of the increase. The Coronation of their Majesties, and especially the Investiture of His Royal Highness the Prince of Wales at Carnarvon, entailed a vast amount of extra work throughout the line, and the staff generally are to be congratulated (I can personally testify, for I was on the spot) on the efficient way in which they carried out their arduous duties, particularly at Carnarvon itself, where, in addition to the difficulty caused by the impossibility of adequately increasing our accommodation, the staff had to work in almost tropical heat. His Majesty fully recognised this, and in a letter written by Lord Stamfordham to our general manager by command of the King, he says:—

Holyrood Palace,

July 17, 1911.

DEAR MR. REE.—

The King commands me to express to you his entire satisfaction with all the admirable railway arrangements made by your company during the past few days for Their Majesties' journeys to Ireland, Wales, and Edinburgh.

His Majesty wishes to thank you, Mr. Turnbull, the superintendent of the line, and all concerned. His Majesty especially realises the heavy demands which must have been made upon the large number of men employed in connection with the ceremony at Carnarvon, who were working under exceptional circumstances and during a period of unusually hot weather.

Believe me, yours very truly

STAMFORDHAM.

THE 5,000TH LOCOMOTIVE.

It may interest the shareholders to know that the building of the 5,000th locomotive at Crewe Works synchronised with the Coronation of His Majesty King George V. Maintenance of way is up, roundly, £10,000. This is in pursuance of the policy to which I have already referred of keeping everything connected with the railway in a thoroughly efficient state. The increases under the heads of repairs to stations and buildings and signals, sidings, and sundry works, shown in Abstract "A," indicate clearly the attention that has been given to these matters. In locomotive power there is an increase of nearly £20,000. This is due to the extra mileage run, consequent on the additional traffic carried, and to a substantial increase in the cost of material, due to the locomotives built during the half-year being of a more powerful and expensive type. We are not yet at what we believe to be perfection in this respect. In carriage and wagon repairs there is an increase of £25,000, which is largely attributable to extensive renewals being carried out in our wagon stock, whereby the tonnage capacity of the wagons is being substantially increased. Traffic expenses are £48,000 up, the increase being almost wholly in wages. Parliamentary expenses show an increase of £1,500, which is more than accounted for by the necessity for opposing the Greater London Railway Bill. This scheme, in a considerably mutilated form, and subject to various restrictions, passed through one House, but was rejected by the other. It was clearly shown that the line, if constructed, could never have obtained a revenue anything like sufficient to provide a return upon the money needed for its construction, and there was a satisfactory absence of any evidence that the companies who own the existing railways had failed in any way to deal adequately with the important dock traffic for which the projected line was supposed to provide new facilities. Compensation is up £4,500, due to some extent to an increase in claims for damage to goods. This item must, of course, fluctuate from time to time. Rates and taxes are slightly up. We have been successful in obtaining reductions in our assessments at various places, and but for the ever-increasing poundage, over which we as a company have no control (a stereotyped phrase), there would have been an appreciable reduction under this head. In steamboat expenses there is an increase of £6,500. This, of course, is again owing to the extra mileage run by the steamers in dealing with the increased business, which amounted to no less than 20 per cent. in the merchandise and 10 per cent. in the passengers carried by the steamers during the half-year. Additional expenditure has also been incurred in providing submarine signalling and wireless telegraphy in connection with our fleet, in order to employ every possible means for safeguarding our passengers. The earnings per passenger train mile, I am glad to say, have increased from 4s. 2.75d. to 4s. 3.69d.; and as regards the merchandise, although we carried nearly one million tons more traffic, we have a decrease of nearly 40,000 goods train miles

and an improvement in the train mile earnings from 10s. 4.87 l. to 10s. 9.44 l., the highest figure on record (applause)—a high testimony to those who are responsible for the organisation of this vast traffic.

NATIONAL INSURANCE.

With regard to the National Insurance Bill, no one can predict in what form it will emerge from its consideration by Parliament, but the one thing certain is that a large additional burden will be placed upon the employers of labour, and in the case of this company the Bill will probably entail an annual charge of between £60,000 and £70,000 net. This burden will fall with special severity upon railway companies, who cannot without extreme difficulty, restricted as they are by legislation, increase the price of the transport which they supply so as to make their contributions, as employers, a charge upon the industry, in accordance with the view expressed by the Chancellor of the Exchequer. That is to say that, although the traders who use our line may be able to put an additional burden on the price of the goods which they give us, we, the carriers, who are equally affected are virtually prohibited from doing so. We shall, however, have to consider this point with the other companies, when we know to what extent we are victimised. Efforts are being made not only by the railway companies, but through the organised action of the staff affected, to obtain such amendments as will secure the minimum amount of interference with the good work done by our existing funds and other means of providing for the needs of the staff in case of sickness, whether temporary or permanent, machinery which is, in our opinion, of the greatest value, and for which we would readily make great sacrifices. Each proprietor will have received with the report and accounts an appeal issued by myself on behalf of the board for subscriptions to the fund which, through the generosity of the proprietors, not forgetting those who have passed away, has been provided for assisting churches, chapels, recreation grounds, and other institutions for the benefit of the company's staff at various places in the vicinity of the railway. The balance is now getting low, and these most deserving objects not being within the corporate purposes of the company, the board have to rely on the individual generosity of the proprietors, who have, I am happy to acknowledge, responded liberally in the past, and I trust they will do so again to enable the board to continue to assist these deserving institutions. The company has a vast staff of 82,000 men, for whose moral welfare the board feel a very definite responsibility.

THE LABOUR QUESTION.

It is impossible merely to move that the report be adopted without taking the opportunity of asking you to thank the staff for their loyal co-operation in times of admitted difficulty during the recent seamen's strike. Amidst great temptation to throw in their lot with those who are less well affected—thereby not only endangering their own position, but stifling at the source their own and our chance of prosperity—they have by their splendid conduct given an object-lesson to the labour world at large.

A good illustration of this is afforded by resolutions passed by our carmen at Broad Street and Camden, which I will read:—"That this mass meeting of railway carmen of the London and North Western Railway at Camden, after hearing your delegate, Brother Brunson, speak on the present crisis, and after hearing the advice given by him, resume their work as usual, seeing that we are bound down by the present award not to strike, although our sympathy is with the London carmen, now on strike, knowing that their cause is a just one." The resolution passed by the mass meeting at Broad Street was upon the same lines. We thank them for this spirit, and we can assure them that our only object is to be fair and just in all our dealings.

We have recently made concessions, not by sentiment, but because it was our duty so to do, in the matter of Sunday work for the clerical staff, and if we had in any way differed with our friends in the interpretation of the award of our arbitrator on the subjects presented to him by the Conciliation Board, most glad were we to have had our attention drawn to the matter and clear up the misunderstanding. True, a partial strike, sympathetic in its origin with the action of men wholly outside the North Western has broken out in the goods department at Liverpool. But my information with regard to those men who have not thus voluntarily left the service leads me to doubt whether the trouble is likely to spread or be of a prolonged character. If, unfortunately, either eventually takes place you may be glad to know that all possibilities have been present in our minds. No prudent men could have read the signs of the times without formulating the policy which must unquestionably be adopted and amply providing for the same. But no efforts on our part can enable us to meet the public

necessities unless at the outset they are protected from intimidation and other alleged action by those whose duty it is to give such protection. Up to the present there has been, as you are well aware, complete failure in this respect. (Loud applause.) The Chairman then formally moved the adoption of the report and accounts.

The Hon. C. N. Lawlor seconded the resolution, which was carried unanimously without discussion.

The remainder of the business was of a formal character, and the proceedings terminated with a hearty vote of thanks to the chairman and directors for their past services.

[We understand that at the close of the meeting the chairman's colleagues presented him with a pair of white kid gloves, as a record had been established by the fact that no questions were asked or observations made by the shareholders.]

The half-yearly accounts to June 30 were published on Tuesday. Our usual analysis is appended.

CAPITAL.

Total expenditure	£120,058,471
Total receipts (allocated as follows)	116,191,775
Consolidated stock	£19,938,573
Guaranteed stock	11,779,120
Preference stocks	23,751,597
Debenture stock	20,737,362
Premiums	9,985,212
Balance at debit of capital account	£3,869,794

The receipts during the half-year amounted to £8,832, and the expenditure in the half-year was £149,502, of which £135,240 was on lines open for traffic, £9,522 on working stock, £101 on subscriptions to other companies, and £1,639 on leased lines. Estimated further expenditure—In the current half-year, £282,000, in subsequent half-years, £5,734,604; total, £6,036,604. Capital powers and other available assets amounted to £2,454,893.

REVENUE.

The revenue account for the half-year ended June 30 shows the receipts to have been as under.

	1911.	1910.
Passengers—First-class	£237,831	£224,595
" Second-class	211,574	220,230
" Third-class	1,658,995	1,574,589
" Season-tickets	249,553	240,709
Parcels, horses, carriages, etc.	947,873	925,597
Mails	111,910	108,300
Merchandise (less coll. and delivery)	2,933,004	2,518,397
Live stock	90,197	95,783
Minerals	1,778,284	1,752,951
Transfer fees	973	884
Rents of land and buildings	146,623	130,813

Total receipts £7,707,333 .. £7,501,587

The expenditure on revenue account was as follows:—

Maintenance of way, etc.	£630,124	£620,209
Locomotive power	1,252,492	1,232,799
Carriage and wagon repairs	424,271	398,570
Mileage of carriages, etc., of other companies	19,512	21,449
Traffic expenses	1,804,247	1,755,737
General charges	233,070	225,301
Law charges	13,317	13,357
Parliamentary expenses	3,000	1,500
Compensation for accidents, losses, etc.	83,300	78,804
Rates and taxes	280,935	280,841
Government duty	24,910	44,341
Preston and Wyre steamboats—proportion of joint expenses	17,204	16,595
Steamboat expenses	61,694	55,162
Depreciation and insurance of steamboats	17,500	17,500

Total expenditure £4,883,507 .. £4,700,105

The net revenue account and the proposed appropriation of the balance available are indicated below:—

	1911.	1910.
Balance from previous half year	£118,062	£118,517
Net earnings	2,883,700	2,741,422
Sundry credits	81,910	78,930
Total	£3,084,338	£2,938,869
Prior charges	£696,722	£609,821
General reserve	100,000	100,000
Prof. and guaranteed dividends	859,481	859,481
Dividend on ordinary stock	*1,286,665	†1,179,432
Balance to next half-year	141,470	100,135

Total £3,084,338 .. £2,938,869

At the rate of 6 per cent. per annum. * At the rate of 5½ per cent. per annum.

The gross receipts for the past half-year show an increase of £265,746, the expenses an increase of £123,402, and the net receipts an increase of £142,344. The ratio of expenses to receipts is 62.87 per cent., as against 63.45 per cent.

TRAFFIC, ETC.

Half-year ended June 30—

	1911.	1910.
Passengers—First-class	609,539	625,975
„ Second-class	1,774,241	1,937,939
„ Third-class	37,070,117	36,118,503
„ Total	39,453,897	38,682,117
Season-tickets	93,910	88,392
Mileage—Lines owned	1,731½	1,731
„ Partly owned	241	241
„ Leased or rented	152½	152½
„ Lines worked	28	28
„ Foreign lines worked over	899½	863½
„ Total operated	3,052	3,016
Train mileage—Passengers	14,476,626	14,158,182
„ Goods	8,431,310	8,471,955
„ Total	22,907,936	22,629,237

The report states:—"The greater part of the contract work on the Euston to Watford new railway has been carried out on the section between Kensal Green Tunnel and Harrow (about 6½ miles in length), and good progress is being made with the laying of the permanent way. Contracts have recently been let for the new passenger stations at Harlesden Stonebridge, Wembley, North Wembley, and Kenton, and the works have been commenced. The new goods yard at Kenton was opened for traffic on March 6 last. At Harrow Station, the new booking office buildings on the up side were brought into use on June 18 last. On the section between Harrow, Bushey, and Watford (High Street) Station (a distance of 5 miles), about 60 per cent. of the excavation has been removed, two of the 18 bridges are complete, and 11 in course of construction, and the arches are being turned for the viaduct over the River Colne, near Bushey. The new station buildings at Pinner will shortly be brought into use. Nearly the whole of the earthwork is finished for the widening of the Rickmansworth Branch; the bridges and retaining walls are in an advanced state, and the works at High Street Station, Watford, are being proceeded with. At Watford Junction Station, the new platforms, roofing, and waiting rooms are nearly finished. At Coventry a new loop line (3½ miles long) will be commenced at an early date. This will form a connecting link between the London and Birmingham Railway and the Nuneaton branch."

NORTH EASTERN RAILWAY.

The half-yearly meeting of the North Eastern Railway Company was held at York yesterday, under the presidency of Rt. Hon. J. Lloyd Wharton, chairman of directors. In moving the adoption of the report (an analysis of which was published in THE RAILWAY TIMES of August 5), the CHAIRMAN said they proposed to pay a dividend of 5½ per cent. as compared with 5 per cent. in corresponding half years 1909 and 1910. They paid 5½ per cent. in 1907 which was the only previous occasion in which the receipts in the June half-year had reached five million pounds. Their receipts were higher than in the June half-year of 1910 by £218,000, and their expenditure by £69,000, their increase in net revenue being nearly £150,000. That sum had been utilised by carrying to special reserve for contingencies £50,000, paying an additional ½ per cent. of dividend which took approximately £80,000, and increasing their carry forward by rather more than £20,000. Of the increased receipts £64,500 came from coaching traffic, mainly third class. Altogether they had carried 1,350,000 more passengers than a year ago. Much of the extra revenue from passengers was earned at Easter and Whitsun, and no doubt the fine weather had contributed, though he claimed that some part was due to the increased facilities.

Referring to the complaint of passengers with regard to the more stringent regulations they had felt compelled to adopt in respect to showing tickets, especially contract tickets, he said he hoped if there were any present who felt that as passengers they had a grievance in that respect they would remember that the precautions it was found necessary to adopt were really taken in their interest as shareholders, for he was afraid in the course of a year a railway company was deprived of a substantial revenue through the fraudulent use of tickets,

and until public opinion made people realise that cheating a railway company was as dishonourable as cheating an individual he did not see how the inconvenience attendant upon the collection and examination of tickets could be avoided. The amount of money collected on their trains from persons who either had no tickets or a ticket for only part of their journey was surprisingly large—over £30,000 a year—and the collection of that money necessarily occupied time and militated against the punctual running of their trains. In giving details of the extra traffic he said the bulk of the tonnage in minerals was in the coal shipped in the northern ports, which had gone up nearly 16 per cent., while coke sent to West Cumberland had fallen by 750,000 tons, and the shipments of coal at Hull showed a reduction of nearly 130,000 tons. Speaking of the heavy expenditure on new wagons and repairs to existing stock, he said they were compelled to keep abreast of the requirements of modern industry, the conditions of which made large demands on their wagon supply owing to rough usage; also the life of the wagons was short, and they had now 114,000, representing a carrying capacity of more than 1¼ million tons, and the expenditure necessary merely to replace them as they fell out of use amounted to over £350,000 a year.

Reviewing the accounts he said they would have allowed the payment of a higher dividend, but he thought they would agree that in placing a substantial sum to reserve, the directors had taken a prudent course. Their weekly returns had ceased to show the same steady increase of the early months of the half year, while there were also fewer furnaces in blast in the North of England. They could not close their eyes to the fact of the general unrest prevailing in the labour world, and no one suffered more in times of strikes and lock outs than a railway company. "I do not wish to pose as a prophet of ill or to take a pessimistic view of the present situation, but when you see trade held up and peaceable workmen intimidated for days together by the forces of unruliness, as we saw lately in Hull, you cannot shut your eyes to the fact that it is possible in a few days to drive away trade which it may take years to bring back." (Loud applause.)

In this connection he remarked how glad they all were that their railwaymen were not dragged into that dispute, or rather series of disputes, at Hull. When one reflected how small a spark kindled a big blaze, at a time when passions were roused on either side, and how rapidly during the past few weeks the strike fever had spread from trade to trade, he thought it said much, both for the good sense of the leaders amongst their men and for the tact of their officers that they did not become involved in the Hull disputes except so far as they affected their docks and the shipping in which they were interested. Referring to the National Insurance Bill, he said that before it emerged from the Committee stage it might be considerably modified, but if it was passed in anything like its present shape, the invalidity portion alone would cost the company over £35,000 a year. He proceeded,—"Whatever ultimately may be the incidence of tax of this kind (and we know that in many cases it falls on the very classes whom the legislation is intended to benefit), there is no doubt that in our case in the first instance this money has to come out of the pockets of the ordinary shareholders, and to them it will be equal to an addition to the income tax on their dividend of something like 4½d. in the £. In the case of some companies, whose proportion of ordinary stock in relation to preferred stocks is smaller than ours, or whose dividend is not so high, it will mean considerably more, and I see that the chairman of the Lancashire and Yorkshire Railway Company puts it as high as 8d. in the £, in the case of that company."

As the general principles underlying the Bill, or at any rate, the objects sought to be attained by it, have met with approval of both political parties, and the measure has been treated in Parliament as an uncontroversial one, I feel I am at liberty to criticise its provisions without trenching on the rule that very properly excludes politics from meetings like this; and the fact that the Bill imposes a tax upon railway shareholders such as I have mentioned makes me doubt whether the cost of the benefits which the Bill is intended to confer on the country is being evenly distributed amongst the members of the community, and you must remember that the burden I have spoken of is over and above what our shareholders will have to pay as ordinary tax-payers towards what is called the State's contribution to the scheme, which amounts, in the aggregate, to a very large sum. It must be borne in mind that a railway company differs from the majority of employers of labour in this respect, that they cannot pass on their burden to their customers or, at any rate, can only do so within limits and under conditions that often make it a practical impossibility, and, therefore, except to the limited extent this company

can recoup itself by an increase of its rates and fares, or can economise by withdrawing facilities, the burden of the Insurance Bill must fall upon its shareholders. The right hon. gentleman went on to say that he could point out other respects in which as it seemed to him the Bill was unfair to railway companies, but he would only refer to the provisions affecting their clerical staff. "At the present time," he said, "we make our clerks a more generous allowance in the matter of sick pay than they will receive under the Bill, and, therefore, while our clerks would be called upon to pay a tax from which they are free to-day, the company would be placed in the invidious position of either reducing the sick pay allowance they at present make, or else having to contribute sick benefits for their clerks twice over. I may mention that steps have been taken to ascertain the views of our clerks upon the subject and that a very large majority of them have expressed themselves as hostile to the compulsory insurance of railway clerks as provided in the Bill." Alluding to a movement amongst their men for compelling all their fellow-workers to join the trade union to which many of them belonged—namely, the Amalgamated Society of Railway Servants—he said he knew nothing of this movement beyond what had appeared in the newspapers, and it would be unwise for him to dwell on contingencies which might never arise. "I will, therefore, merely say," he continued, "that in my view—and in this I know that I am expressing the views of my colleagues on the board—it would be improper and indeed impossible for the board of a railway company to lay down that the company's service was to be confined either to unionists or non-unionists or to attempt anything in the direction of compulsion on one side or the other. The desire of the members of a Trade Union that their fellow workmen who are non-unionists should join their union, and so help to bear the burden of organised efforts as well as share in its results, may be a perfectly natural one, but, after all, we must all respect the rights of our fellow men and accord to them the same liberty of opinion and action that we claim for ourselves, and in a free country the question whether a man shall or shall not join a particular organisation is one the decision of which must rest with himself." (Applause.)

After an allusion to the progress of their engineering works, the Chairman mentioned that their Bill had passed through the committees of both Houses of Parliament. The two proposals in the Bill affecting Hull were opposed. He was glad to say that the opposition to the substitution of an overhead footway for the rights on the riverside was unsuccessful, because any other result would have made negotiations with Town Councils in parliamentary matters extremely difficult in future. The fact that the opposition to the acquisition of the timber storage ground from the Hull Corporation near Victoria Dock succeeded, would be imagined to be less satisfactory to the timber trade than to the Corporation. The Chairman replied to some questions sent in by shareholders as to the policy of the directors in concentrating the locomotive building at Darlington. He said it had been thoroughly gone into by the directors and they thought it was more economical to concentrate the whole of the boiler works at Darlington, where the shops had been enlarged and offices for the clerical staff were in course of construction. As regards the possibility of electrifying the Newcastle and South Shields line he said they were well satisfied with the electrification of the coast line of the north side of the line, but they were not yet convinced that the same result would follow the electrification of the South Shields line. He concluded by expressing their great sense of the loss which they sustained by the death of Lord Airedale, whose great sagacity, experience and expert knowledge were always freely at the service of his brother directors and the shareholders of the company. He might almost say that his sad death had inflicted an irreparable loss on the board. (Applause.)

LORD KNARESBOROUGH seconded, and after a few questions, the resolution was adopted. A resolution agreeing to the payment of the dividend of $5\frac{1}{2}$ per cent. was also agreed to unanimously.

NORTH STAFFORDSHIRE RAILWAY.

Our usual abstract of the report of this company was given in our last issue. Mr. TOMMAN MOSLEY (the chairman) presided at the half-yearly general meeting on Tuesday last, at the Cannon Street Hotel, London. He explained that it was their intention to revert to the custom of holding one of their half-yearly general meetings in London. He said that they were paying a dividend at the rate of $4\frac{1}{2}$ per cent. and carrying forward £10,952. They had not achieved this result by any cheese-

paring policy or any change in their policy of saving, so that little lands they had earned before the time. Last February he was perhaps told in looking over the accounts a possible 5 per cent. dividend for the whole of the year. So that time they had had to face certain adverse circumstances, and, considering those adverse circumstances, he could only help congratulating them on their ability to put forward such accounts. Remembering those unforeseen drawbacks, he did not propose to be optimistic or to forecast that they would be able to pay at the end of the year. Hitherto they had managed to avoid in the August half-year at least the payment of a dividend, which was the highest paid in any August since 1880. In 1880 the company did pay, for the whole of the year, a dividend of 5 per cent. Referring to the adverse circumstances occurring in the past half-year, he said that had had some effect on the shipping world, on the Humber and on the Mersey, and the effect had been considerable upon the Manchester trade. This, in its turn, was reflected in business circles in the district around Stoke. The Coronation festivities were rather a drawback to them than otherwise, or on the actual day of the Coronation the traffic was very poor, and the company did not benefit to any great extent by the excursions to London, which helped the revenue of other companies with termini in the Metropolis. The fine weather during the last summer had not assisted them in their passenger and excursion traffic as they had had, so far, in the current season. With regard to the increase in repairs to stations and buildings, they had followed out their old policy of lengthening the platforms at various stations, and they had relaid with new sleepers and gable steel rails over 11 miles of main line, besides relaying and re-sleeping a considerable number of their sidings. Finally, in referring to the National Insurance Bill, he remarked that that measure affected the company and their employees very considerably. As the Bill was at present drafted their clerks in receipt of £100 per annum and under would be insured under it. Already most of them were members of the Railway Clearing House Insurance Fund, which, except in one or two minor details, gave greater benefits than those provided under the Bill. The directors had reason to believe that most of their clerks would prefer to be scheduled out of the Bill altogether. Most of their staff, other than the clerks, were members of their Railway Friendly Society, which had been excellently administered, and to which the company contributed £1,000 a year. The question again was whether they also would be better off by being scheduled out or else by being included under section 19 of the Bill. Again, they had 638 members of what was called the Railway Engineers' Provident Society, which was specially provided for under the last Act of Parliament of the company. There was a very great disadvantage in these experimental measures, where there was usually too much waste in administration. Generally the danger in these experimental measures was in the direction of the country having too much bureaucratic government, bringing with it too much extravagance and much waste in administration. It would be very little good for the company to secure 2d. per head from the Government out of the taxpayers' pockets if those contributions were thrown away on the creation of new offices and an increase in bureaucratic government. The report was adopted.

HULL AND BARNESLEY RAILWAY.

The half-yearly meeting of the Hull and Barnesley Railway Company was held at the Assembly Rooms, Kingston-upon-Hull, on Wednesday, when Mr. W. S. WRIGHT (the chairman) presided, and remarked that a year ago he had explained that the receipts had been somewhat inflated by increasing traffic which found its way to their line owing to labour troubles in Durham and Northumberland. The receipts for the last half-year had to be compared with those of a record six months. The trades upon which they had to rely for their prosperity—timber, grain, and export coal—had not been so good as they were last year; and then there was the strike of seamen, which caused a cessation of work by all the men employed at the Alexandra Dock, and the stoppage of flour mills and other works, which had seriously affected the company's revenue. But for these incidents the directors might have been able to recommend the payment of a larger dividend. The results were lamentable to them, though they were not primarily parties to the quarrel, and if some less injurious means of adjusting these disputes could be adopted, he would heartily welcome such a departure. Last year they had a considerable dock revenue from the importation of soya beans; but owing to plague in Manchuria, and the equipment of crushing

machinery in that country, their revenue from this source had diminished this year. They might reasonably expect to do better in this branch of trade during the current half-year. The Chairman then touched on the main features of the report, an abstract of which was given in our last issue. Good progress had been made with the river pier, and the coal conveyors were proving a valuable addition to their coaling facilities. When the remaining portion of the pier is completed it will be equally available for general merchandise. A contract has been let for filling up with sand the land between the Alexandra Dock and the Hull Joint Dock, and when the work is completed in a few months a large additional area will be available for general dock purposes. The Joint Dock works are making good progress, and the Committee are about to deal with tenders for the construction and equipment of warehouses, grain silos, and other needful facilities. In response to representations made by shipowners, the Committee have decided to construct two graving docks, and arrangements have been made for the contractors to proceed forthwith with the work, but this will not delay the completion of the dock itself. The joint railway, in conjunction with the Great Central in South Yorkshire had been advanced during the past half-year, and steps were being taken for letting a contract for the construction of the remainder of the railway. In spite of the decreased dividend the directors thought the proprietors need not feel despondent. When they compared the situation with previous years they would see they were in a very favourable position. Only twice before had the revenue justified the declaration of a dividend of not less than 2 per cent. per annum for the June half-year—viz., for the so-called boom year of 1907, and the period ended June, 1910, and when they compared their position to-day with the year 1909 they had an increase of nearly £22,000 in receipts, and were able to pay $\frac{1}{2}$ per cent. more dividend on the ordinary stock, and the balance of renewal and contingencies fund had increased from £116,048 to £149,200, notwithstanding the fact that they had in the interval paid out of this fund about £15,000 for engine renewals, and about £5,000 for renewals of carriages and £2,500 for others. The report having been adopted, Mr. B. CROOK, of Huddersfield, in proposing a vote of thanks to the board, said there was some force in the contention that strikes were driving British capital out of the country. With all the present-day talk of higher education, surely such antics as the breaking of windows, the wrecking of machinery, and attacks on the police should be obsolete. Their thanks were due to their own workmen for the absence of such proceedings in their own undertaking. The CHAIRMAN, in acknowledging the vote, said that latterly it had been a period of very great anxiety to the directors and their officers, who appreciated the confidence reposed in them by the proprietors.

EAST AND WEST YORKSHIRE UNION RAILWAYS.

At the half-yearly general meeting of the East and West Yorkshire Union Railways Company, held at the Hotel Metropole, Leeds, on Wednesday, Mr. Z. Yewdall (chairman) presided, and in moving the adoption of the report and balance-sheet, said that anything which interfered with the consumption of coal had always a marked effect upon a small mineral railway, and the seamen's strike and woolcombers' strike caused a falling off representing about 6 per cent. in money and 8 per cent. in the tonnage of coal traffic. The shareholders might have imagined that traffic expenses would have been less, but the company came under the operation of the conciliation scheme, and, in consequence of an application from some of their men, the company granted them a guaranteed week. On their little line, if the pits were slack for holidays, they really could not find employment for all the men, and they consequently paid wages for which they did not get an equivalent return. The report was adopted, and a dividend declared at the rate of 4 per cent. per annum on the preference stock and 1 per cent. on the ordinary stock.

Cardiff Railway.—The half-yearly meeting was held on Tuesday at 22a, Queen Anne's Gate, London. Mr. F. I. Pitman (a director), who presided, after quoting the figures in the report, of which a full abstract was given in the RAILWAY TIMES of last week, stated that it had been decided to allocate the available balance of £73,142 as follow—viz., that a dividend at the rate of 1 per cent. per annum should be paid on the preference shares, 4 per cent. on the preferred ordinary stock of 1806, 3 per cent. on the second preferred ordinary shares of 1901, 3 per cent. on the ordinary shares, and that the balance £1,142 be carried forward. The report was adopted.

GREAT NORTHERN (IRELAND) RAILWAY.

The half-yearly meeting was held in the offices of the company, Belfast, on Wednesday, Mr. Fane Vernon, chairman of the directors, presiding.

The CHAIRMAN, in moving the adoption of the report and accounts, an abstract of which appeared in the RAILWAY TIMES last Saturday, said that the period under review had been one of fairly prosperous working. Under the head of passenger receipts there had been an increase of £3,130. The number of the passengers was 3,026,463, and he believed that this was the first occasion on which in any June half-year they had entered upon the fourth million of passengers. As usual the lion's share had fallen to the third class, the number of whom had increased by upwards of 30,000 and the receipts by £3,188. In parcels and miscellaneous there had been an increase of £1,452. Goods also showed a considerable increase. They had carried 33,230 tons more than in the corresponding period. They had now entered well on the second half million in tonnage. A decrease which had taken place in the live stock traffic was not exceptional, as he found that the exports from the whole of Ireland for the half-year showed a decrease of 59,706 head of cattle and 21,527 sheep. Under the head of mineral traffic they carried 7,956 tons less, the tonnage of coal from ports having decreased by 3,782 tons, which might be attributed partly to the warm weather, and partly to the stocks in the country at the beginning of the half-year having been exceptionally large. In regard to expenditure, the item for maintenance of way, works, etc., was about the same as last time, but the expenditure shown did not represent the actual work done. The balance sheet showed that £17,000 had been carried forward into the current half-year. This adjustment was occasioned by their having done practically the whole of the relaying for the year during the first six months when the line was less congested. They were rapidly improving the permanent way, and thought it wise to persevere in this policy. During the year ending December next they would have entirely relaid 29 miles. Although the new road was better and therefore more costly than the old, the entire expense was being charged to revenue. The renewal of the bridges was being steadily carried out, and he hoped to be able to report by the end of the year that the heaviest class of engines could be used on all sections of the line. Out of £23,000 expended on these things during the half-year, some £14,000 had been charged to the bridges renewal fund, which was provided for the purpose. Locomotive power had cost between £5,000 and £6,000 more, the main items of the increase being wages of drivers and firemen, and repairs and renewals of engines. Repairs and renewals of carriages and wagons showed an increase of £3,000. This was over and above £4,000 which had been previously placed in the renewal fund to meet the exceptional work to be done in respect of renewals. As they had during the last few half-years increased the renewals, they might hope that the effect would soon show itself in a proportionate reduction in the annual cost of repairs. Under traffic expenses there were increases in salaries and wages largely caused by the directors having voluntarily increased the pay and improved the conditions of labour of some of the wages staff. Certain matters in dispute with the employees had been under the consideration of conciliation boards. The greater part of the men's claims had to be submitted to an arbitrator. His award had recently been published and although the result had been a substantial increase under certain heads he had amply justified the directors in resisting the large demands made by the employees. Referring to the National Insurance Bill, the Chairman said that at present it was hard to forecast exactly what its ultimate effect would be. The Irish railway companies had addressed a letter to the Chancellor of the Exchequer regarding a number of points in respect of which, if the Bill was to be applied to Ireland, it required amendment. He proceeded to give some details in regard to future capital arrangements as required under the Act of Parliament which the company had recently obtained. Probable future capital expenditure had been set down at £225,000 during the next six half-years or so in respect of new lines and other works, and £75,000 for additional working stock. In conclusion the Chairman referred to the long and honourable service rendered to the company by Mr. Henry Plews, the general manager, who was now retiring. The directors hoped to have the advantage of his assistance in the capacity of a director.

Mr. W. P. CAIRNES, deputy chairman, seconded the motion, and after some discussion it was adopted.

At a special meeting subsequently held resolutions dealing with the stock were adopted.

GREAT SOUTHERN AND WESTERN RAILWAY OF IRELAND.

The 135th half-yearly meeting was held at Kingsbridge Terminus, Dublin, on Wednesday, Sir W. J. Goulding, Bart., presiding.

The CHAIRMAN, in moving the adoption of the report and accounts, an abstract of which appeared in last Saturday's RAILWAY TIMES, said he hoped that the report would prove of some satisfaction to those proprietors who had held on to the company through the lean years in the past. The receipts amounted to £736,731, being an increase of £25,310 over the corresponding period of 1910, while the net profit earned on the ordinary stock amounted to £27,825 more than in that period, showing that the careful and economical working had enabled them to retain all the increased gross receipts as available profits, the increase in dividend earned amounting to £10s. 11d. per cent. on the ordinary stock for the half-year. The money actually earned on the ordinary stock to June 30 last having amounted to £4 11s. 1d., the board anticipated that they would in the future be able to maintain a steady interim dividend of 4½ per cent., and, therefore, they recommended this figure at the present time. He was glad to say that the regrettable Roscrea accident account had now been finally closed, but it had cost the company the large sum of £52,670, which had all been paid out of reserve fund, to which they had already added £35,000 since the accident. This fund had proved such an admirable stand-by to the proprietors in their misfortune, and enabled them to receive dividends of £4 17s. 6d. per cent. out of the current earnings of the company while the accident was being paid for. The board recommended on this occasion that they should add £25,670 to it, which would bring that reserve fund up to £130,000, or £5,000 higher than it had ever stood at before. They then had a balance of £30,144 to carry forward, an increase of £2 724 18s. 11d. over 1910. He regretted to say that Mr. Robert Cory, who had been in the company's service for over thirty-one years, first as works manager, and since 1896 as locomotive engineer, had been compelled by ill-health to leave, and he was sure the proprietors would join with the board in wishing him many years of health and happiness in his well-earned retirement after so many years of able and devoted work in the company's interests. The directors had appointed Mr. R. E. L. Maunsell, who originally started at Inchicore as locomotive engineer, to be Mr. Cory's successor. In regard to traffic receipts first-class traffic showed a decrease of £618, due to the increasing use of motor cars. Second-class traffic showed a decrease of £1,253, due to the ever-increasing popularity of third-class travelling, while third-class traffic showed the very large increase of 94,891 in numbers, and £7,231 in money. These increases were an indication of the undoubtedly improved prosperity of the country generally. Goods and minerals showed the satisfactory increase of £17,074, or 5.77 per cent., and, constituting a record for the June half-year, was very gratifying. The coal traffic showed an increase of 12,040 tons, another indication of better times in the country, considering the fine season. The Rosslare route still continued to make satisfactory progress both in passenger and miscellaneous traffic. Turning to the expenditure side of the account, as the increase only amounted to £866 for the large increased volume of traffic dealt with, he considered all concerned were to be congratulated. The expenditure in the engineer's department was £97,651, as compared with £102,068, or a decrease of £5,317. About 17½ miles of relaying and resleepering were done in the half-year as against 24½ in the corresponding period, and this lessened amount of permanent way renewals chiefly accounted for the decreased expenditure. On the other hand, they had increased expenditure on other works, such as the renewal of Kingsbridge passenger shed roof, paving roads, Kingsbridge goods yard, overhauling and renewing signalling works at various stations, etc. During the half-year 36,320 cubic yards of stone ballast were put into the line, so that they had now 344½ miles of line so treated out of a total of 1,361½, or 25.30 per cent. In proposed further capital expenditure, £63,500 was to be spent at Inchicore. The existing carriage and wagon shops were inadequate to deal with the large increase in the company's rolling stock necessitated by the steadily increasing traffic, and the board had invited tenders for the erection of additional shops that would be able to meet all requirements in the most economical manner. He was glad to hear that the long-talked-of development of the coalfields in Kilkenny was likely to take practical form before long. He was sure that the proprietors would agree that any assistance in the company's power to the development of new industries in the country should be given. If the new railway was constructed the company were prepared to work it at cost price for a few years to give them a good start.

Mr. COLVILL (deputy-chairman) seconded the resolution, which was adopted and the dividends declared.

MIDLAND RAILWAY.

The 10th ordinary and 135th half-yearly general meeting of the shareholders of the Midland Railway Company was held at Derby on Thursday, August 10, Mr. Henry Hodgson, deputy-chairman, presiding.

The DEPUTY-CHAIRMAN, in moving the adoption of the report and statement of accounts, said he had to express the regret of the board that their chairman, Mr. James P. Gifford, was obliged a fortnight ago to place himself in the sick bed, very much against his will. He was, however, anxious to give them a satisfactory account of his progress, but he was unable to do so, and they must all hope that on the occasion of the next meeting he would be in his accustomed place. Since he joined the board, more than forty years ago, he had only missed two of the half-yearly meetings, and his last absence was due to illness some years ago. Sir Ernest became chairman in 1896, following his father at an interval of 32 years, and he had already presided at forty half-yearly meetings. Mr. Hodgson said to the shareholders that as regarded efficiency and capacity of plant and equipment the Midland Railway was prepared to deal with its heavy and growing traffic better than ever before. However, such would not be the case but for the hard work and continuous attention to detail, not only of the chief officers, but of all the members of the staff, to whom the thanks of the proprietors were due for their loyal service.

LABOUR DIFFICULTIES AND THE CONCILIATION SCHEME.

At the same time he was bound to take notice of the unrest in the labour world that appeared just now to be general over many parts of England. So far as the Midland staff was concerned, the events of the last few days were leading to serious trouble with traffic in Liverpool, as a result of many of their men ceasing work out of sympathy with other workers who were discontented. He need not say that that action of their men imperilled the whole conciliation scheme that was arrived at as a result of the negotiations with Mr. Lloyd George in 1907. It was his opinion that the people had not sufficiently realised how great were the sacrifices made in that year by the various railway companies for the sake of peace. The companies not only accepted a scheme for setting up conciliation boards, but agreed that in case of differences the questions before those boards should be settled by arbitration. Of course, that meant that as regarded the very essential questions of rates of pay and hours of labour the railway companies deliberately parted with the ultimate control of their own men. They did that deliberately, in order to purchase industrial peace, but at Liverpool certain classes of their men, parties to the conciliation scheme, and working under an arbitrator's award, which continued in force till the end of 1913, had deliberately ceased work without notice. The position then was that the railway companies, having paid in 1907 a very heavy price for the purchase of industrial peace, were not getting what they paid for, and unless, therefore, some means could be found for remedying that vital defect it was obvious that the conciliation scheme was in peril.

THE INSURANCE BILL.

The Government Insurance scheme was yet another matter that could not be passed over in silence. The shareholders were aware that the Government had introduced an Insurance Bill, with the objects of which the Midland directors were in full sympathy, as the scheme was intended to secure some, but by no means all, the benefits which had been provided for the last forty years by the Midland Railway Friendly Society. The Bill was very closely watched on the Midland Company's behalf, and was the subject of negotiations with the Government. Perhaps it was not desirable that he should go into the question of the basis of those negotiations; but he might be allowed to express the hope that they would result in nothing being done that would affect the character of the Midland Railway Friendly Society or in any way force it to reduce its benefits. However, he felt bound to tell the shareholders that, whatever happened when the Bill was passed, the additional expense to the proprietors would be very heavy.

REPORT.

Turning to the report, he said that the capital expenditure from year to year was becoming less. The company's Bill in Parliament had passed both Houses and was awaiting the Royal Assent, which was expected to be given that very day. The principal work authorised by that Bill was the construction of the new line from Low Moor to Bradford, and it would be commenced very shortly. As to the acquisition of the London, Tilbury, and Southend line, a Bill authorising the arrangement would be promoted in the next Session of Parliament. He need not refer to it fully on this occasion, but he was pleased to state that the sale of the undertaking to the Midland Railway Company had been approved by the

shareholders of the London, Tilbury and Southend Railway Company. They would have read, he hoped, with satisfaction of the action of the directors in allocating out of revenue £30,000 for the reconstruction of bridges, £50,000 for alterations of signalling equipment, and £40,000 for carriage renewal. They felt bound in these richer times to look round and see where things wanted improving and strengthening, and in the directions he had indicated the directors were satisfied that the money would be well spent. He alluded with regret to the resignation of Lord Farrar from the directorate. Lord Farrar had served the Board well for many years, but as his Parliamentary duties took up a good deal of his time, and as he lived to the South of London, he found the frequent journeys to Derby more of a burden to him than other members of the Board, and he had consequently resigned. His place was taken by Mr. A. G. Anderson, a gentleman well known in the shipping industry, and another great recommendation was that he was still in the bloom of youth. With regard to the revenue account, the passenger traffic showed that there had been an increase in the number of first-class passengers carried during the past half-year of 3,988 and in money an increase of £374. Third-class passengers carried during the same period showed an increase in number of 309,376, and in money £34,450. Season tickets were more in number by 3,883 and in money £5,884. Parcels, horses, and carriages were £390,630, against £381,248, or an increase of £9,382. As compared with the corresponding half-year of 1910, the traffic showed an increase from coaching, £50,724; an increase of £88,944 from merchandise; a decrease from cattle, £2,780; and an increase from minerals, £47,857; or a total increase of £184,745. The expenditure side of the revenue accounts, in the maintenance of way, works, and stations, showed an increase of £32,317; locomotive power a decrease of £13,155; carriage and wagon repairs, an increase of £24,242; traffic expenses showed a slight increase; general charges an increase of £7,831; law and Parliamentary charges were pretty much the same. (These figures will be found in great detail in the abstract of the report given in our last issue.)

The Deputy-Chairman, after some further remarks, concluded by proposing: "That a dividend is hereby declared (less income-tax) of £2 17s. 6d. on each £100 of the former consolidated ordinary stock. This will give £1 5s. on each £100 preferred converted ordinary stock and £1 12s. 6d. on each £100 deferred converted ordinary stock; £1 5s. on each £100 two-and-a-half per cent. consolidated perpetual guaranteed preferential stock; £1 5s. on each £100 two-and-a-half per cent. consolidated perpetual preference stock, all such dividends to be payable on and after Saturday, August 19th inst."

Sir ROBERT ALLISON seconded the resolution, which was put and carried unanimously, and the meeting shortly afterwards terminated.

METROPOLITAN DISTRICT RAILWAY.

The half-yearly ordinary general meeting was held on Thursday, at the Westminster Palace Hotel, the Right Hon. Lord George Hamilton, G.C.S.I. (chairman of the company), presiding.

The SECRETARY (Mr. W. E. Mandelick), having read the notice convening the meeting,

The CHAIRMAN said that all who had read the accounts he had the honour of presenting must admit that they were satisfactory, not only in the realisation of profits for the past half-year, but also in the prospect they held out for the future. The expenditure for the past half-year amounted to £88,668, of which £10,686 was part payment of arrears of dividend on guaranteed stock. They had spent £12,100 on the development of surplus land, £9,085 on new works and additions, £12,472 upon reconstruction and improvement of stations and £39,517 on the construction of new cars. It was satisfactory to note the good results that had been obtained from the capital expenditure during the last few years, upon the renovation and enlargement of stations and increased facilities for dealing with the growing traffic, and in developing the surplus land. The return upon the expenditure had been both satisfactory and immediate, and it was the outcome of this judicious expenditure which had largely contributed to the improvement of their financial position. For the forthcoming half-year they estimated that they should spend £90,000 on capital account, including £51,000 for new rolling stock, leaving a balance of £78,000 to be incurred in subsequent years. Shortly after the prior lien stock was created, they had an offer from the Tilbury Railway Company to purchase certain of the rolling stock for the sum of £130,000. They, therefore, undertook for the time being to reduce the further issue of the prior lien stock by that amount, reserving to themselves the right subsequently to issue

the amount thus postponed after consultation with the debenture holders. The holders of debenture stock now occupied a very much stronger position than they did at the time that under-stand- ing was arrived at, and as they would soon require additions to their rolling stock to enable them to handle their growing traffic, they proposed to acquaint the debenture holders shortly with their intention, to issue £130,000 prior lien stock thus reserved for the purchase of additional rolling stock to replace that sold to the Tilbury Company. Last year an order was placed for fifty-one additional carriages, but with the rapid growth in traffic that increase would not be sufficient for next winter's service, and a further order had been placed for fourteen carriages. The half-year's working showed an increase of £27,124 in the gross receipts, and an increase in passengers of 4,359,000 over the number carried in the corresponding period of the last half-year. No doubt the Coronation and its festivities contributed to that increase, also the opening of the Earl's Court Exhibition grounds, but quite independently of the Coronation and the crowds it brought to London, the traffic showed a general and satisfactory increase; the working expenses showed an increase of £9,410, which was due to improved and increased train service, extensions, improvements in the rolling stock, and to the exceptional outlay due to the Coronation period, including an extra day's pay to nearly the whole of the staff. Eliminating that exceptional expenditure, and taking a comparison between this half-year and the half-year ending June 30, 1910, it was found that the operating expenses per car mile in pence showed a reduction of .006, and per car hour of .259. The percentage of operating expenses to the gross receipts stood for the half-year at the ratio of 46.69. The arrangements made to meet the exceptional strain of the Coronation week worked most successfully, and reflected high credit upon the directing staff and the employees under them. They could have handled without difficulty a considerably larger number of passengers, there was no hitch whatever throughout this period, and not a single accident amongst the millions of passengers carried. Now, analysing the increase in the passenger traffic over the corresponding period by class and tickets, it would be found that first class increased 5.96 per cent., third class increased 12.25 per cent., workmen's tickets 6.08 per cent., season tickets 21.04 per cent.; total increase, 12.05 per cent., the result of the half-year's working being that there was a balance available for dividends of £82,991, which balance showed an increase over the balance in the same period last year of £20,715, but that increase included the balance carried forward from last half-year of £2,020. It was proposed to distribute it in payment of the 4 per cent. guaranteed stock, at the full rate of 4 per cent. per annum; in paying the third warrant for 10s. per cent. in respect of the arrears on guaranteed stock; and in paying a dividend on the first preference stock at the full rate of £4 10s. per cent. per annum, which allocation enabled the directors to carry forward £14,277, as against £8,528 for the corresponding period of last year—an increase of £5,749. It would be noted that the third warrant of £6,250 was payable this half-year, and the fourth and final one out of the earnings for the half-year ending December, 1911. This would relieve future half-years of the payment of £6,250. Although sufficient had been earned during the half-year under review to pay a small dividend on the 5 per cent. second preference stock, the directors did not recommend any payment this half-year. The half-year had been an exceptional one, and the directors deemed it advisable to take advantage of the opportunity to strengthen the reserve funds. It was just twenty-seven years ago that the last full dividend of the first preference stock was paid. That dividend gradually diminished, and from June, 1900, to December, 1909, it ceased altogether. In June, 1910, the District Company was able to pay 3 per cent. upon this stock; in December, 1910, 3½ per cent.; and in June, 1911, 4½ per cent. Those figures indicated how satisfactory and continuous had been the development of the traffic in recent years. As regarded work now in hand, rapid progress continued to be made with the widening of the railway between Ravenscourt Park and Acton Lane Junction. The South Western Railway Company, who had this work in hand, was doing everything possible to complete the improvement at the earliest possible date. The work was of considerable magnitude and involved the acquisition of a large amount of land, and the thanks of the company were due to the South Western Company for the excellent manner in which they had dealt with the improvement. It was expected they would be able to work over the new lines no later than November of this year, which would afford this company an opportunity of working a closer and more regular service of trains to Ealing and other points on the western lines. It was also proposed to increase the number of non-stop trains during the "rush" hours in the

morning and evening. The service on the railway generally would benefit by the improvement since the company's trains would be worked quite independently of the South Western Company's and would thus avoid the consequent delays to the company's traffic which resulted from the combined service of steam and electric trains. Another improvement which would benefit this company was the extension of the London Electric Railway from Charing Cross to the Embankment Station, powers for which were obtained by that company this year. This extension would provide suitable interchange facilities between the District, Hampstead and Highgate, and Bakerloo Railways, and would result in increased traffic to this railway. At the last half-yearly meeting a question was put by a shareholder as to whether this company was likely to embark in any heavy expenditure for the electrification of the East London Railway. The matter stood at present that the lessee companies had agreed to a scheme for electrifying the East London Railway. Negotiations were now in progress with the East London Company, and it was hoped that matters would be finally adjusted so that the work could be put in hand at a very early date. The proposal was that the Metropolitan Company were to work a through service of local trains (four per hour), and a close service of local trains to work between Shoreditch, Whitechapel and New Cross, with suitable interchange arrangements provided at Whitechapel, so that passengers could conveniently change from District trains to East London trains. One of the lessee companies was to provide the necessary capital required for the electrification of the line, and the East London Railway Company was entering into an agreement to apply their proportion of the receipts, when exceeding the minimum of £30,000 per annum, to the payment of interest at 4 per cent. per annum on the outlay so far as the receipts might be sufficient for the purpose, any balance remaining unpaid at any half-year to accumulate at 4 per cent., and to be payable out of any future receipts above the minimum. Terms for the supply of electrical energy, which was to come from the Lots Road Power House, had been agreed with the District Company. The arrangement might not perhaps be very clear to those shareholders who were not aware of the complicated arrangements which existed between the seven lessee companies and the East London, but practically the result would be that the company would not incur any serious additional liability, and even if the lessee companies did incur additional liability, which he thought very unlikely, the company would only have to pay $17\frac{1}{2}$ per cent. thereof. The Metropolitan District Railway Act of 1911, the Bill for which had the shareholders' approval on February 9 last, received Royal Assent on June 2. The powers conferred by that Act were fully explained to all the shareholders by circular. The negotiations with the Underground Electric Railways Company of London, Limited, for the sale of the power house to the Joint Committee of London Electric Railway and the District Railway Companies had been successfully concluded, and he could safely say that the bargain was a fair one for all parties concerned. It was proposed that the Lots Road Power House undertaking be transferred to the Joint Committee, which consisted of three members of the board of the District Company and three members of the board of the London Electric Railway Company, and leased by the Joint Committee to the two companies as from January 1, 1912. The future outlook for the District Railway was bright. With the growth of their traffic they ought gradually to bring to more and more of the shareholders the benefit of a dividend. On the other hand, the location and environment of their enterprise was such that they would always be subject to keen and possibly to new forms of competition. Relations with their competitors and other underground railways continued to be friendly. They recognised, as did this company that through co-operation, and by each company giving the best possible service, the best results would be obtained by the respective undertakings. Good, however, as their position was, they could not afford to make a mistake; caution would have to be combined with future developments, and under that associated impulse their expansion, even if it were slower than was agreeable to the shareholders, should be continuous and unbroken.

The CHAIRMAN then moved:—"That the report now submitted, together with the half-yearly statements of accounts to the June 30, 1911, be received and adopted."

This was seconded by Mr. W. H. BROWN (deputy chairman), and carried unanimously.

The motions for payment of dividends were proposed, seconded, and unanimously carried.

A vote of thanks to the chairman and directors was proposed by Mr. F. H. DARLEY, seconded by Mr. F. H. PILLEY, and carried unanimously.

The CHAIRMAN then presided at the meeting on behalf of his brother directors, Messrs. J. and J. H. the officers of the company, and said no doubt considerable progress had been made during the last few years, but he repeated a caution which he gave last year—viz., that the company carried no freight; therefore the margin between the working expenses and the gross assets was less elastic than was the case with companies which carried freight as well as passengers, and it was necessary for them to be cautious, as they did not want to make a mistake and by premature declaration of dividend be obliged to take a backward step.

The proceedings then terminated.

NORTH LONDON RAILWAY.

The half-yearly general meeting of the North London Railway Company was held on Thursday at Euston Station, the Right Hon. Lord Rathmore (chairman) presiding.

In moving the adoption of the report and accounts, the CHAIRMAN said the results of the working of the North London Railway for the past six months had been, on the whole, of the same satisfactory character as they had been for some time past. The general outcome was that, notwithstanding a decrease in traffic receipts of £2,470, as compared with the figures of twelve months ago, the savings which had been effected, together with an increase under the head of general interest, again enabled them to recommend the declaration of a dividend of 5 per cent., and to carry forward £1,600 more than in the corresponding period of 1910. The reserve fund had again been brought up to £100,000, as in the prosperous old days of the company, and the board had not thought it necessary to add any further sum to it at present, but they had charged £5,000 more than usual under the maintenance of way. The formidable competition to which reference had been made at previous meetings continued seriously to affect their passenger traffic—so much so that it had reduced their receipts from that branch of their revenue to the lowest figure they had touched for 40 years. On the other hand, the receipts from goods traffic were the highest on record. They had also done very well with their parcel traffic. The reduction in the expenditure, resulting from the working agreement with the North Western Company, had been generally well maintained. There had been a considerable increase under the heading of Parliamentary expenses, due to the opposition offered to the Greater London Railway Bill, which, before a Committee of the House of Lords, came to a speedy end. *Per contra* a substantial reduction had taken place in their rates and taxes owing to reduced assessments.

The report and accounts were adopted, and a resolution was agreed to declaring a dividend of 5 per cent., as recommended by the board.

The half-yearly accounts to June 30, 1911, were published on Tuesday. Our usual analysis is appended:—

CAPITAL.

Total expenditure	£4,106,487
Total receipts (allocated as follows)	4,023,238
Ordinary stock	£2,934,400
Preference stock	950,000
Debenture stock	987,100
Sundries	51,372
Balance to debit of capital account	£83,249

No estimate is given of further expenditure. The capital powers and other available assets are £280,651.

REVENUE.

The revenue account for the half-year ended June 30 shows the following results:—

	1911.	1910.
Passengers, parcels, etc.	£104,150	£105,211
Goods, minerals, etc.	107,078	108,316
Sundries	16,544	16,315
Total receipts	£227,772	£229,842
Total expenditure	129,589	129,288
Net earnings	£97,792	£103,554
Balance from previous account	6,142	4,918
General interest	1,032	649
Total	£105,566	£109,321
Prior charges	25,341	25,705
Reserve fund	—	5,000
Preference dividends	21,375	21,375
Dividend on ordinary stock	*50,860	*50,860
Balance to next half-year	7,990	6,381
Total	£105,566	£109,321

* At the rate of 5 per cent. per annum. * At the rate of 5 per cent. per annum.

The gross receipts for the past half-year show a decrease of £2,470, the expenses an increase of £3,292, and the net receipts a decrease of £5,762. The ratio of expenses to receipts is 56.99 per cent. (as against 54.95 per cent.).

TRAFFIC, ETC.

	Half-year ended June 30.	1911.	1910.

LONDON ELECTRIC RAILWAYS.

Lord George Hamilton (chairman) presided at the half-yearly meeting of the London Electric Railway Company, held on Thursday, at the Westminster Palace Hotel, London.

In moving the adoption of the report (an abstract of which appeared in our last issue) the CHAIRMAN said that the most important item of the capital expenditure was the cost incurred in the establishment of the escalator at Earl's Court, which would very shortly be completed. Extensive alterations were being made at the Highgate Station on the Highgate-Hampstead line, the company having acquired further property to effect an entrance to this station from Highgate Hill, which the directors anticipated would be beneficial to the company. The London Electric Railway Act of 1900 received the Royal Assent on June 2. This Act authorised the extension of the Bakerloo line to Paddington Station and the Hampstead-Highgate line from Charing Cross to the Embankment. The board anticipated that those two extensions would be of great convenience to the travelling public. Tenders for those works had been received by the company, the contract would be let within a few days, and the work would be proceeded with continuously. During the half-year they had sold £150,000 of debenture stock, the proceeds of which would be used towards paying the costs of these extensions. Referring to the six months' working of the railway, the chairman said that the exceptional traffic associated with the Coronation and its festivities accounted for a certain proportion of the increase in the receipts, but quite independently of such abnormal expansion of the traffic, the weekly receipts for periods unconnected with the Coronation contrasted favourably with those of the corresponding half-year. The working expenses included payment of the large contribution for local rates which had been imposed upon them by recent assessment. This extra sum for the half-year amounted to £2,900. The increased and improved train service accounted for the rest of the expenditure; but the ratio of working expenses to gross earnings had diminished, and now stood at the low figure of 44.53 per cent.

Including £3,474 balance from last year, they had available for dividend £124,156, against £105,930 for the same period last year. They proposed to distribute that by paying 4 per cent. on the preferred stock and 1 per cent. on the ordinary stock, and to carry forward £14,506, as against £12,401 for the corresponding period last year. The arrangements which they made to cope with the exceptional traffic due to the Coronation and its festivities worked most satisfactorily. They were able to handle with ease the increased traffic; in fact, their arrangements were considerably in excess of what was necessary. So successful were the arrangements that not one single serious accident occurred among the millions of passengers carried during that week—a result which reflected high credit both upon those who made as well as those who gave effect to the arrangements. The negotiations with the Underground Electric Railways Company of London, Limited, for the sale of the power-house to the joint committee of the London Electric Railway and District Railway had been successfully concluded, and he could safely say that the bargain was a fair one for all the parties concerned, and they were quite confident that they would realise for the benefit of their stockholders the full advantages they had anticipated from the transaction. Season tickets were again introduced on their railway on July 1 last, and it was hoped that the public would find them more convenient than the present strip tickets. Relations with their competitors and other underground railways continued to be friendly. They recognised, as this company did, that through co-operation, and by each company giving the best possible service, the best results would be brought to the respective undertakings. In

conclusion, the chairman stated that the figures he had quoted, and the statements he had made, demonstrated the growing financial strength of this enterprise, and that if care were exercised in the planning, supervision, and construction of further development year by year they would become a stronger and more remunerative enterprise.

Sir ALGERNON WEST seconded the motion, which was agreed to.

MIDLAND GREAT WESTERN RAILWAY OF IRELAND.

The 132nd half-yearly meeting was held on Thursday, at Broadstone Terminus, Dublin, the Hon. R. A. Nugent presiding.

The CHAIRMAN moved the adoption of the report and accounts, an abstract of which appeared in our issue of last Saturday. He said that the half-year had closed with a substantially increased revenue. It was higher by £8,374, which was not so much as the weekly traffic increases up to the early part of June led them to expect. As they approached the close of the half-year the receipts received a sudden check, due to special causes, such as strikes, drop in the cattle traffic occasioned by drought, etc. These he hoped were temporary causes, and he thought that their prospects at present were on the whole not unpromising. It would be remembered that on November 3rd last they held a special meeting to authorise the company to contribute £5,000 towards the promotion expenses of the scheme for making Galway a transatlantic port, on condition that a steamship company should, along with others, contribute a like sum. No such steamship company had been found, and they could only hope that the prospect of bringing the matter to a successful conclusion might yet arrive. An influential committee had been formed for the purpose of furthering the project, and the directors would lose no opportunity of taking advantage of any favourable circumstance that might arise.

In regard to the employees of the company, the directors had received a memorial from the station masters and clerks, asking for increased remuneration and improvement in their terms of employment. Meetings had been held with representatives of both classes, and the board were able to make certain concessions, which they believed were appreciated. With respect to the National Insurance Bill, if it should become law and should extend to Ireland, the company's position in relation to their employees' benefit society could not avoid being altered, as the company could not be expected to pay both by compulsion and by voluntary contribution. In regard to the development of tourist traffic, they had begun on June 1 to run a daily service of motor coaches between Clifden and Westport. There was good reason to hope that this would assist in developing the tourist traffic. In regard to the total receipts for the half-year, they showed an increase of £8,374, but the expenses were, unfortunately, up to the extent of £10,625. However, as they brought into the half-year from the previous period an additional sum of £3,272, they had been able to declare the same dividend as before, and to carry forward £1,268 more. The addition to the expenses was due to a very considerable extent first to the settlements with their men in regard to wages and hours of labour under the conciliation boards, and second to their having executed during the half-year larger renewals of permanent way and carriage and wagon stock. They expected in future to effect some saving in the cost of coal, having entered into contracts for Scotch coal, which was cheaper than Welsh, which had been hitherto used. The calorific property of Scotch coal was no doubt less than Welsh, but their locomotive engineer informed them that taking everything into account the net result would be a saving.

After some discussion the report was adopted, and a resolution was also passed promising support to the project to make Galway a port for a transatlantic route.

A special meeting was afterwards held, when a resolution was passed relating to the superannuation of the salaried staff.

BARRY RAILWAY.

The half-yearly meeting of the Barry Railway Company was held at the Barry Docks on Friday, the 4th inst., Mr. T. R. Thompson (one of the directors) occupying the chair, in the absence of the chairman, the Earl of Plymouth. The CHAIRMAN moved the adoption of the report, and said that no capital expenditure had been incurred during the past half-year, which was a novel experience for the company. The directors were deferring expenditure owing to the very disturbed state of trade. There had been a considerable loss in receipts owing to the strikes at the collieries and in the surrounding districts. There was a loss in traffic, due to labour disturbances alone,

of £31,000, or about 8 per cent., and there was a loss of £24,000 in the carriage of merchandise, live stock, and minerals. Shipping receipts declined by £5,300 and dock receipts by £12,000. This serious loss in traffic had given the directors considerable anxiety, and great care and watchfulness had been maintained over the expenditure, with the result that with only one exception all the items under that head shared a decrease. Altogether the diminished expenditure in the past half-year was £13,500, or 6 per cent. less. Under the circumstances he ventured to think that was highly satisfactory. A sum of £5,000 had been placed to the reserve fund, as against £10,000, which was not due to the stress of circumstances, but to the fact that they had practically wiped out the loss on the steamers.—Sir CRIFORD CORY, Bart., M.P. (a director), seconded the report, which was adopted without discussion. An abstract of this report was given in our issue of July 29.

LIVERPOOL OVERHEAD RAILWAY.

The half-yearly report states that the revenue was £37,857, and working expenses £27,230. During the half-year 303,517 more passengers have been carried than in the corresponding half of last year, and the revenue has been increased by £1,968. The Bill for the consolidation of borrowing powers and for authorising the Mersey Docks and Harbour Board to guarantee the payment of interest on debenture stock, which was approved on February 14 last, has passed both Houses of Parliament, and now only awaits the Royal Assent. The directors recommend dividends at the rates of 5 per cent. per annum on the preference shares and 1 per cent. per annum on the ordinary shares, carrying forward £4,665 to next half-year. The following summary gives a comparison of the results for the first half of the last three years.—

REVENUE:	1911.	1910.	1909.
Traffic	£39,994	£35,020	£34,286
Parcels	83	60	57
Transfer fees, rents, &c.	780	705	630
Total receipts ..	£37,857	£35,797	£34,973
EXPENDITURE:			
Operation	£6,471	£6,630	£7,170
Maintenance	3,437	3,310	3,360
Traffic	10,100	10,107	9,993
General	5,492	5,295	5,373
Total expenses ..	£25,730	£25,348	£25,872
Provision for renewals ..	1,500	1,500	1,500
Gross surplus	£27,230	£20,848	£27,372
Balance from last account ..	£10,627	£8,949	£7,001
General interest	4,247	4,614	4,210
	297	359	214
	£15,171	£13,922	£12,025
DEDUCTIONS:			
Interest on debentures ..	£4,171	£4,171	£4,171
Interest on calls paid in advance	158	158	158
Balance available for dividend	£4,329	£4,329	£4,329
	£10,841	£9,593	£7,696
Preference dividend, 5 per cent.	£3,675	£3,675	£3,000
Ordinary dividend, 1 per cent.	2,500		nil
Balance carried forward ..	4,666	5,917	4,696
	£10,841	£9,593	£7,696

RHONDDA AND SWANSEA BAY RAILWAY.

The half-yearly report of the Rhondda and Swansea Bay Railway states that, after payment of interest on the debenture stock, and the full dividend on the preference shares, the directors recommend a dividend on the ordinary share capital at the rate of 5 per cent. per annum, secured to the shareholders under the agreement with the Great Western Railway Company. The directors regret that Mr. Morgan B. Williams, on account of increasing age and failing health, has found it necessary to resign the chairmanship and his seat on the board, after a continued connection with the company since its incorporation. Mr. Williams was one of the original promoters of the railway, and by his regular attendance at the meetings of directors and his great experience of railway undertakings, has rendered invaluable services to the company during the whole of its existence. Mr. Deer, who has long acted as deputy chairman, has been appointed chairman, and Mr. W. H. P. Jenkins, deputy chairman. Mr. M. Barnsby Williams, mining engineer, has been elected to fill the seat on the board,

The revenue account shows a balance after meeting debenture stock interest, &c., of £2,170. There remains to be carried forward a balance of £991. A year ago the balance available for dividend and the carrying forward were the same.

MARYPORT AND CARLISLE RAILWAY.

The accounts for the half-year ending June 30, 1911, show a gross revenue of £5,777, and expenditure of £58,481, and a total expenditure of £31,354. The net revenue was £31,550, leaving a profit of £29,777 against £2,170 of the previous year, with a balance of £1,913 from the previous half-year. The interest received, gives a total net revenue of £31,550. On 9th, interest on debenture stock will absorb £2,154, and on 1st, preference stock at the rate of 6½ per cent. per annum £18, and dividend on the ordinary stock at 6½ per cent. per annum, £25,213, leaving a balance of £1,218 to be carried forward. Length of railway, 45½ miles. The capital expenditure has been £914,084, and the receipts £501,788, viz., ordinary stock, £777,800; debenture stock, 4 per cent., £107,695; premiums on stock, £6,293.

BRECON AND MERTHYR TYDVIL JUNCTION RAILWAY.

The accounts for the half-year ended June 30, 1911, show a gross revenue of £61,500 (against £57,788), and a total expenditure of £38,037 against £34,724. The net revenue, including £1,385 brought forward, amounted to £24,037, which, after allowing for all fixed charges, sufficed to pay dividends at the rate of 4 per cent. per annum on the first preference stock, carrying forward a balance of £1,601. The capital account shows total expenditure £2,179,429, and receipts £2,228,045, viz., shares and stock, £1,167,714; debenture stock, £1,037,031; rent-charges, £14,075; sundries, £9,525. During the half-year 461,788 passengers, 86,803 tons of merchandise, and 1,599,484 tons of minerals were carried.

GRAND TRUNK RAILWAY DIVIDENDS.

The accounts for the half-year to June 30, 1911, subject to audit, show the following results:—

	1911.	1910.
Gross receipts	£3,591,200	£3,321,000
Working expenses	2,628,200	2,456,000
Net receipts	£933,000	£865,000
Income from rentals, outside operations, and car mileage balance	22,400	58,100
Total net revenue	£955,400	£923,700
Net revenue charges for the half-year, less credits	511,000	507,000
Balance	£444,400	£416,700
Deduct—Canada Atlantic deficiency for the half-year	£41,700	£34,900
Detroit, Grand Haven and Milwaukee deficiency for half-year	39,700	34,000

Surplus £393,000 .. £347,200
This surplus of £393,000 added to the balance of £9,100 from December, 1910, makes a total amount of £372,100 available for dividend, which will admit of the payment of the full dividend for the half-year on the four per cent. guaranteed stock, and first and second preference stocks, leaving a balance of about £11,700 to be carried forward.

The accounts of the Grand Trunk Western Company for the year ending June 30, 1911, after providing for all fixed charges, including the balance brought forward from the previous year, show a deficit of £31,462. As this result has arisen owing to the unusual circumstances of the strike which occurred during the third and fourth weeks of July, and the first week of August, 1910, it has been decided to carry the balance forward to the next year.

ISLE OF WIGHT RAILWAY.

Presiding at the meeting of the Isle of Wight Central Railway, Mr. H. WILMOTT said that receipts had increased by £551 during the half-year, while working expenses had decreased by £600, as shown by the abstract of the report given in our last issue. Further reductions were expected to be made in the latter item in the course of a few months, and, as another matter of economy, the secretary's office would be removed to Newport, I.W., in October. A reserve of £4,658 had been provided at December 31st last to meet renewals, and a further sum of £2,000 had been transferred from net revenue account.

The wear and tear on both rolling stock and road necessitated this money being spent at once. It would be unwise to think of paying any dividend until everything was in order to meet increased traffic and economies in working, but he thought a small dividend might be paid on Second Preference stock in about a year and a-half.

The half-yearly report to June 30 states that the gross earnings has been £19,775, against £19,488 for the corresponding half-year, and the working expenses amount to £9,989, against £9,830. The amount at credit of net revenue account, including the £1,677 brought forward from last half-year, is £11,463, which, after providing for interest on the debenture stock and other prior charges, leaves £7,254 applicable to the payment of dividends. The directors now recommend a dividend at the rate of 2 per cent. per annum on the deferred converted ordinary stock, leaving a balance of £261 to be carried forward.

CAMBRIAN RAILWAYS.

The meeting of the Cambrian Railways Company was held yesterday. Mr. John Conacher, who presided, said that the net increase in the receipts was £1,433. Passengers, parcels, etc., showed an improvement of £443, the smallness of which was due to the falling off in second-class passenger traffic. It had been decided to abolish second-class at the end of the year owing to the fact that the L. & N.W.R. and the other big railways were doing the same. Merchandise and live stock showed an increase of £2,520, minerals a decrease of £1,396, and miscellaneous receipts a decrease of £134. The net increase in expenditure was £1,047. They had gained nothing from the Coronation festivities, since they had had extra holidays without any increase in traffic. They had also been affected by the mine troubles in Wales. The net revenue account, after providing for interest, etc., showed a surplus of £6,182 to be carried forward, as compared with £5,334 at the corresponding date last year. Further details were given in the abstract of the report in our last issue.

Didcot, Newbury and Southampton Railway.—The accounts for the half-year ended June 30 states that the traffic receipts were £19,784, a decrease as compared with last year of £231. The working expenses were £13,000, a decrease of £213. After deducting interest there is a debit balance of £7,224.

Ross and Monmouth Railway.—The report for the half-year

ended June 30 last states that the traffic carried on the railway for the half-year as compared with the corresponding period of 1910 shows an increase of £194. The directors recommend a dividend of 3s. 9d. per share on the ordinary share, less income-tax, leaving a balance to be carried forward of £24.

New South Wales Railways.—The revenue for the first half of the current year was £6,042,205, as compared with £5,485,715 for the corresponding period last year. The working expenses were £3,601,061, as compared with £3,276,409 in 1910. The mileage open for traffic was 3,760. The percentage of profit to capital invested was £4 14s. 6d., as compared with £4 11s. 7d. last year. The number of passengers was 60,919,000.

Cleator and Workington Junction Railway.—The receipts of the Cleator and Workington Junction Railway for the half-year ended June 30 were £35,636, including arrears of traffic receipts held in suspense, compared with £31,231 for the corresponding half of last year, and the expenditure was £23,905 compared with £19,527. A dividend at the rate of 4 per cent. per annum is proposed on the ordinary stock, carrying forward £215.

Buffalo and Lake Huron Railway.—The half-yearly report states that, after providing for the interest on the first and second mortgage bonds, the available balance, as shown by the revenue account, including the amount brought forward from the previous half-year, will be £14,913, which will enable the directors to pay the usual dividend of 5s. 3d. per share, and leave a balance of £1,129 to be carried forward, as against £1,044.

Shropshire Union Railways and Canal.—The half-yearly accounts show gross receipts £139,865 (against £136,292), and expenditure £115,583 (against £106,637); the net revenue being £24,282 (against £29,655). After adding the balance of £5,452 and deducting £23,292 rent chargeable as per lease to the London and North Western Railway Company, and £607 general interest, a balance is left of £5,835, which permits of a distribution at the rate of £3 per cent. per annum.

Port Talbot Railway.—At the half-yearly meeting of the shareholders of the Port Talbot Railway and Docks Company, held at Port Talbot, on Wednesday, the accounts, as abstracted in our last issue, were unanimously adopted. Shareholders, in proposing and seconding a vote of thanks to the chairman, directors, and staff, expressed their confidence in the directors and their satisfaction at the improved statement, and intimated that they looked forward with great confidence to the further increased dividends which had been foreshadowed.

WORKING OF THE ELECTRIC RAILWAYS OF THE UNITED KINGDOM IN THE YEAR 1910

(From the Board of Trade Railway Returns.)

NAME OF RAILWAY.	Length of Line over which Electric Trains were run during the Year.		Number of Miles Travelled.						Number of Electric Locomotives.	Number of Electric Motor Cars carrying passengers (excluding Motor Cars running on ordinary roads).	Number of Cars other than Motor Cars carrying passengers.	Quantity of Electrical Energy used for traction and other purposes (in Board of Trade units).
	Lines solely worked by Electric Traction.	Lines partly worked by Electric Traction.	By Passenger Trains or Cars.		By Goods and Mineral Trains or Cars.		Total.

(c) Including 2½ miles of extra platform

roads at Victoria and London Bridge Stations.

(d) Including ½ miles worked over foreign line.

(e) Supplied by the Metropolitan and Metropolitan District

Companies.

(f) Including vans used for coaching traffic.

(g) Supplied by the Metropolitan District Company.

(h) Including 18,000 miles run

by mixed trains.

(i) Including 36,000 miles run by wagons and cars in mixed trains.

(j) Including 20 motor cars belonging to the Great Western

Company used on the Hammersmith and City Railway.

(k) Including 40 cars belonging to the Great Western Company used on the Hammersmith and City Railway.

(l) Amended figures. See Report, page xvii.

DIVIDEND ANNOUNCEMENTS.

(The date given in parentheses is that on which the announcement was made.)

HADEFIELD'S STEEL FOUNDRY COMPANY. An interim dividend of 1s. each on the ordinary shares.
 DEARNE VALLEY RAILWAY (August 21).—At the rate of 1 per cent. per annum, the same as a year ago.
 THE BRITISH RAILWAY COMPANY. Interim dividends of 4s. per share on the £4 shares, and 1s. 4d. on the £1 shares.
 BRISTOL AND SOUTH WALES RAILWAY WAGON COMPANY. An interim dividend of 3s. per share (10 per cent. per annum), the same as a year ago.
 WESTERN WAGON AND PROPERTY CO., LTD. (July 31).—At the usual rate of 10 per cent. per annum for the half-year ended June 30.
 SCOTTISH WAGON COMPANY, LTD. An interim dividend at the rate of 6 per cent. per annum, free of income-tax, on the ordinary shares for the half-year.
 UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON. Interest on the income bonds for the half-year ended June 30 at the rate of 1½ per cent. per annum, free of income-tax.
 SAMANA AND SANTIAGO RAILWAY (August 8).—An interim dividend on both preference and ordinary shares for the half-year ended June 30, at the rate of 6 per cent. per annum.
 BRECON AND MERTHYR TYDVIL JUNCTION RAILWAY.—A full dividend on the first preference stock for the past half-year, carrying forward £1,501, as compared with £1,134.
 NORTH CENTRAL WAGON COMPANY.—The accounts for the past half-year show a divisible balance of £14,202. A dividend at the rate of 10 per cent. per annum, and a bonus of 3 per cent., are recommended, adding £3,070 to the reserve fund.
 GRAND CANAL COMPANY.—The net revenue for the half-year, after providing for debenture interest, the cost of a new iron motor barge with engines complete, and the cost of three sets of engines to be fitted into existing boats, amounting in all to £1,200, shows an available balance of £18,774. It is proposed to recommend the payment of a dividend at the rate of 3 per cent., less income-tax, on the preference shares, and at the rate of 4½ per cent., less income-tax, on the ordinary shares, carrying forward £7,017.
 FURNESS RAILWAY (August 10). At the rate of 3 per cent. per annum, and carrying forward £1,037. A year ago the dividend was at the rate of 1½ per cent. per annum, and £1,523 was carried forward. The following is a list of the dividends for some years past:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901

Locomotives for Australia.—The North British Locomotive Company, of Glasgow, has secured an order for twenty tank engines for the Western Australian Government railways. This makes a total of fifty-two locomotives to be delivered from the company's works for Western Australia.

RE-OPENING OF THE MAWDDWY RAILWAY.

The line of railway, which runs from Cones Road, on the Cambrian Railways, to Dwy Mawddwy was formally re-opened on July 26, after being closed to passenger traffic for nearly eleven years, and to goods traffic since 1908. Built by the late Sir Edmund Beck, Bart., lord of the manor, the line was originally opened in 1868. In 1900 the Board of Trade intervened, the line having got into a bad state of repair, through lack of capital, and in 1901 the ordinary passenger service was discontinued. Eight years later the conveyance of goods traffic over the line ceased. Two years ago, Mr. David Davies, M.P., acquired the undertaking, and intimated his willingness to transfer it to a newly-formed company, with a view to its reconstruction and ultimate working under the Light Railways Act. The Treasury were persuaded to lend financial aid in the shape of a free grant, help also being provided by the county councils of Montgomery and Merioneth. At the re-opening ceremony the first train was driven by Mr. David Davies, with Mr. Herbert Jones, locomotive superintendent of the Cambrian Railways, acting as his mate. Among those present at a luncheon given by Mr. Davies were: Mr. J. Conacher, chairman of the Cambrian Railways Company; Colonel Norton, deputy-chairman of the new line; Mr. Alfred Herbert, a director of the Cambrian Railways; Messrs. Edward Powell and R. C. Anwyl, directors of the Mawddwy Light Railway Company; Mr. G. C. MacDonald, engineer of the line; Messrs. S. Williamson, secretary; C. L. Conacher, traffic manager; Herbert E. Jones, locomotive superintendent; W. Finchett, accountant; W. K. Minshall, solicitor; T. S. Goldsworthy, storekeeper; and other officials of the Cambrian Railways Company.

The financial aspect of the undertaking was referred to by Mr. Davies. He said that they were greatly indebted to Mr. George Harrison for having secured the railway for such a reasonable figure as £4,300. They had received by way of a free grant from the Treasury £9,000, and by loans from local authorities £5,000, and they had fixed their ordinary and debenture capital at £6,500, making a total of £20,500. Of the 2,000 ordinary shares which they offered to the public, 1,814 had been taken up. The estimated cost of reconstructing the line was £15,000, while the preliminary legal and other necessary expenses involved them in an outlay of £1,200. The total amount expended up to date was £11,500. He thought that in so far as the ordinary shareholders were concerned, they would be able to look forward to a dividend at the end of the first five months, a result unprecedented, he believed, in the history of light railways. In apportioning the revenue, the Cambrian Railways Company agreed to take 70 per cent. of the receipts for working the line, the Cambrian Railways providing the rolling stock.

Mr. Conacher, who also spoke, said that he was not aware of any other application of the powers of the Light Railways Act which had proved itself to be so much in harmony with the purposes of that Act. That was the creation of feeders for bringing the thinly populated districts of the country into touch with the great populous centres.

Argentine Government Railway Bill.—The British Minister at Monte Video reports the publication of a Government Bill providing for the creation of a permanent fund for the construction by the State of railways of general and local interest. The fund is to be supplied by surplus profits paid to the State by concessionaires of guaranteed lines, a toll on the traffic of the lines to be built, and a contribution from proprietors of land adjoining the lines who do not send goods over them, together with a contribution of about £32,000 from the general revenue.

Baker Street Station Improvements.—The Metropolitan Railway Company have commenced building their enlarged station at Baker Street. It will have a frontage of 200 feet to the Marylebone Road, and will have an approach from Baker Street. In the first instance the station will only be carried up one storey above the road-level; but provision is being made to extend it vertically. It is contemplated to erect a large hotel on the site. The booking-hall and other offices will be just below the level of the approach road. The station building will contain a large concourse 80 feet by 50 feet, from which wide staircases will lead down to the platforms for the Extension line and the Circle line. The platform accommodation will be greatly extended, and traffic to and from the City accelerated, by means of a double line of rails through the East Station in place of the present single line.

Development of Railways in Sao Paulo.—The rapid development of railways in Sao Paulo within the past twenty years has constituted one of the most striking features of the progress of this State during that period. In 1887 there existed in Sao Paulo 1,100 miles of railway. At the present time the railway extension of this State amounts to about 3,000 miles in actual operation, being 27 per cent. of the total railway extension throughout all Brazil. The total of such extensions during 1910 amounted to nearly 270 miles. Several concessions for construction of new lines within the State have lately been granted, and extension of existing lines is projected to the extent of some 300 miles during the current year.

A Railwayman Awarded.—At the meeting of directors of the Glasgow and South Western Railway held at St. Enoch Station, Glasgow, on Tuesday, Mr. Caird, chairman, presented to Mr. John McIntock, surfaceman, Glenwhilly, a cheque for £5 and a silver watch with suitable inscription, which have been awarded him by the trustees of the Carnegie Hero Fund in recognition of his heroic action in averting danger to one of the company's passenger trains near Glenwhilly, Wigtownshire, on May 13, last, when, in consequence of an alarming storm and flood, a considerable portion of the railway was seriously damaged. Mr. McIntock has also been the recipient of an award (ten guineas) from the directors of the Glasgow and South Western Railway, with a letter of commendation from Mr. Cooper, general manager.

Canadian Immigration Traffic.—The Canadian Pacific Railway announces that since March 1 their immigration traffic from St. John and Quebec westward has reached the total of 110,000. Compared with last year's figures, the increase is not so marked, the difference being only about 15,000, but compared with 1909 the immigration traffic from St. John and Quebec westward has increased by nearly 65,000. The 1911 record to date means that since March 1, immigrants have been pouring through Montreal at the rate of 1,000 a day. Mr. J. Bruce Walker, Commissioner of Immigration, whose headquarters are at Winnipeg, Manitoba, is recorded to have stated that immigration into Canada from all parts of the world for the current year will total 400,000. This is a very substantial increase over the fiscal year just closed, when the figures were 315,000. In the course of the action by this company against the Canadian Pacific Land Company, Mr. Hodge, who appeared for the plaintiffs, when applying for leave to serve short notice on the defendants, stated the railway company had millions of acres of land for sale, and employed 400 or 500 agents in the United Kingdom alone.

Canadian Railways.—Messrs. Foley, Welch and Stewart, the contractors for the line over the Canadian Rockies, mean to establish a new record by grading the track as far as Tête Jaune before the end of the year. The same contractors are building a branch from the main line near Edison to the Brazeau coalfields, forming part of some 500 miles of branches contemplated, and over 2,500 men are being employed by this and two other firms of contractors. Messrs. Burn, Jordan, and Welch are sub-contractors under the Northern Construction Company, and Messrs. Grant, Smith and Co. on 53 miles of the work. Construction was rushed rapidly in 1910, 102 miles having been built from Prince Rupert to Tête Jaune Pass, in British Columbia, and it is expected that the main line will be completed in 1913. The Canadian Northern is constructing a line from Tête Jaune down the valleys of the Thompson and Fraser rivers to Vancouver, which will connect by ferry with Victoria, and from that point with Alberni by rail. The Canadian Pacific is building an extension on Vancouver Island from Victoria to Comox and Alberni, and has surveyed a line from Nicola to Hope. Other lines have also been surveyed, and construction on some of them has been started. Vancouver at the close of 1910 had a population of 125,000, a gain of 32,000 during the year. These figures do not include South Vancouver, with a population estimated at 25,000, which will no doubt be included in greater Vancouver in the near future. The rapid development and extension in the city and in the adjacent country of the lines of the British Columbia Electric Railway Company indicate the confidence of this corporation in the growth and importance of this part of the Province. During the past year this company and its subsidiary company, the Vancouver Power Company, invested £1,562,500 in extensions and new equipment. In 1909 the railway company had 130.7 miles of track, which was increased during 1910 to 204.5 miles. This increase in mileage necessitated additions to the rolling stock, which included 43 city passenger cars, two electric locomotives, 60 covered goods, 80 open goods; 10 cattle wagons, and four guard's vans. Extensions were made to transmission lines, sub-stations erected, and the capacity of the power plants increased by the addition of new generators.

Neath and Brecon Railway. The revenue for the half-year ended June 30 was £26,747, an increase of £1,491, and the working expenses £21,188, or £301 more than for the same period last year. Interest on the rate of 4 per cent. per annum was paid to the holders of Bonded stock for the half-year ended December 31, 1910, and on the rate of 2½ per cent. per annum was paid to the holders of preference stock for the year 1911. The directors of the First A1 and A2 debenture stocks for the half-year have decided, and it is proposed to pay the full late interest on the A1 debenture stock, carrying forward £8,742, 10s. 6d. with £4,434 a year ago. Mileage worked for the half-year was 1,008, and worked by the Midland Company, 29, 20s. 6d. The capital account shows a total expenditure of £2,222,112, whilst the receipts have been £1,477,155. The rolling stock, £251,230; preference stocks, £4,041,000; first mortgage stock, 4 per cent., £120,954; A1 debenture stock, 4 per cent., £190,000; A2 debenture stock, 4 per cent., £150,000; B debenture stock, 4 per cent., £222,112.

LONDON & SOUTH WESTERN RAILWAY

SOUTHAMPTON DOCKS

(1 hour and 40 minutes)
from London (Waterloo).

POSITION AND FACILITIES UNRIVALLED.

DOUBLE TIDES.

HIGH WATER 4 TIMES EVERY DAY.

Never less than 28 feet alongside new Ocean Quays. Channel to Docks being dredged to 35 feet at lowest low water.

LARGE OCEAN LINERS DOCK ANY HOUR, DAY OR NIGHT.

Passenger and Mail Trains go alongside Steamers. No Tender required. Docks fully equipped with Hydraulic and Electric Appliances "Trafalgar" and "Prince of Wales" Dry Docks, 875 feet and 760 feet long respectively. The former now closed, being enlarged to 897 ft. long.

WAREHOUSES, BONDED AND FREE, FOR STORAGE OF WINE, TOBACCO, PROVISIONS, GRAIN, &c.

A new 16-acre dock, with a depth of 40 ft. L.W.O.S.T. is now open for the accommodation of vessels.

COMPLETE EQUIPMENT OF GRAIN ELEVATING & CONVEYING MACHINERY.

SPACIOUS SHEDS FOR WOOD GOODS UNDER COVER.

Coal Barge Docks, floating 14,000 tons of Coal in Lighters, ready for the Coaling of Line Steamers. The finest installation of Cold Storage in the Kingdom.

STEAMSHIP SERVICES.

PARIS, via SOUTHAMPTON & HAVRE. Daily each way (Sundays excepted).

The favourite Normandy Route for PARIS, ROUEN, ETRETAT, HONFLEUR, CAEN, TROUVILLE-DEAUVILLE, SWITZERLAND, SOUTH OF FRANCE, &c. New Daylight service from July 25th.

Steamer leaves SOUTHAMPTON at 12.0 midnight, last train from Waterloo 9.45 p.m. Train leaves Havre 8.8 a.m., due Paris 11.20 a.m. Steamer leaves Havre 12 Midnight, last train from Paris 7.50 p.m., due London about 10.0 a.m.

SOUTHAMPTON AND ST. MALO. Passengers and Merchandise.

SOUTHAMPTON to ST. MALO—Tuesdays, Thursdays and Saturdays.

ST. MALO to SOUTHAMPTON—Mondays, Wednesdays and Fridays.

SOUTHAMPTON AND CHERBOURG. Passengers and Merchandise.

SOUTHAMPTON to CHERBOURG—Every Tuesday, Thursday, and Saturday at 12.5 midnight. (Last train from Waterloo, 9.45 p.m.)

CHERBOURG to SOUTHAMPTON—Every Monday, Wednesday, and Friday night, at 11.0 p.m.

SOUTHAMPTON

AND THE

CHANNEL ISLANDS.

Daily (Sundays excepted) in each direction.
From SOUTHAMPTON—Steamer sails 12.30 midnight. Last train from Waterloo 9.45 p.m.
To SOUTHAMPTON—Steamer leaves JERSEY 8 a.m. GUERNSEY, 10 a.m. (about).
JERSEY to ST. MALO, and vice versa } Twice weekly each way.
JERSEY to GRANVILLE, and vice versa }

There are also services between SOUTHAMPTON and HONFLEUR, with Cargo only.

The fullest information on all points connected with the business of the Docks and the Steamship Services may be obtained on application to the Docks and Marine Manager, Mr. T. M. WILLIAMS, Southampton; for Passenger Traffic, from Mr. H. HOLMES, Superintendent of the Line; and Goods Traffic, from Mr. A. MALBY, Goods Manager, Waterloo Station, S.E.

THE REAL MOTIVE OF THE STRIKE.

The disinclination of the railway men's leaders to accept the mediation of the Government has occasioned some surprise among those who do not understand the real motive of the present agitation. That motive is the same as it was in 1907; it is the determination to make the railway unions the dominating influence in railway matters and to crush the non-unionist out of existence. The Conciliation Boards are not perfect instruments for securing harmony between the men and the companies, but on the whole they have served both sides well. They have given the men much that they wanted and they have, at the same time, protected the companies from unreasonable demands. No doubt their operations might have been carried on more rapidly; but they have to deal with complicated matters and considerable delay in some cases has been inevitable. This has been seized upon by the agitators, who endeavour to foster discontent among the men by every possible means, and they have roundly condemned the boards and all their works. Their proposal is not that the methods of the boards should be improved, but that they should be abandoned, and in their place these agitators offer their services to the railway companies and to the men. They are convinced, they say, that if only they are recognised by the railway companies as the representatives of the men all trouble will be removed. We trust that this insidious proposal will continue to receive the condemnation of the companies. Indeed, we do not see how it is possible for the companies to give way with any justice to the great majority of their servants who are not members of the unions and for whom the unions are not in any way authorised to speak. Let there be no mistake about the intentions of the A.S.R.S. leaders. They intend to make it impossible for any others than members of the unions to find employment on the railways. Their ideal is the complete solidarity of railway employees under the close rules and discipline of their orders. If anyone doubts this in the slightest degree, let him read carefully the official organ of the A.S.R.S. The *Railway Review*, for instance, referring to the demands of the South Eastern railwaymen that non-union men shall not be employed there, says in its current issue: "Things being as they are in the labour world at the moment, the sooner the non-union man gets himself extinguished the better it will be for all concerned." That is the immediate purpose of all the agitation and threats of the past two weeks—the extinguishment of free labour, the negation of liberty, and the final submission of all railway men to the dictates of the executives of the railway unions. This, as we have said, explains the point-blank refusal to accept the offer made by the Government on Thursday of a Royal Commission, and the instant issue of orders to strike. No Royal Commission would ever compel the companies to recognise the leaders of the railway unions, and while it might afford redress of grievances and remove causes of complaint against the Conciliation Boards, such a result would be of no use to executives struggling for admission to the board-rooms of the railway companies. It was, therefore, expedient from their point of view that no time should be allowed the

men or the public for consideration of the Government's original offer, and with almost incredible disregard of the real interests of the public and those whom they are supposed to serve, these agitators dispatched fifteen hundred telegrams calling out railway men all over the country—not to insist upon consideration of their claims, because that was already granted, but to fight, to obscure the issue, and to help their leaders to gain what they have been striving for during many years past. It is impossible not to feel deep sympathy with the men who are to suffer for this astounding callousness on the part of those who should protect their true interests. Men, indeed, suffer in this world for their ignorance even more than for their sins, and the railway employees by their blindness are running terrible risks of untold pain and suffering. The circumstances are too serious for recrimination; and the railway managers are quite rightly overlooking the gross infraction of the agreements into which the men entered in 1907. It is no feeling of rancour which prevents the companies from yielding to the men; but a determination to do their duty by the public and the shareholders as well as by their men. With the loyal assistance of the Government they will be able to avoid the consequences of the rash action of the employees and it is inconceivable that in the circumstances any considerations of false sentiment will influence the Government towards any action which should lay them open to a charge of partiality.

THE RAILWAY HANDY-MAN.

Two recent events—the introduction of another fog-signalling device and the summer meeting of the Permanent Way Institution—naturally direct attention to the platelayer. Truly, he is the handy-man of the railway. He not only attends to his legitimate duties on the line, but acts as porter at country stations in an emergency; his wife attends to a level crossing; he mends broken signal-wires and executes numerous other temporary repairs about a station. Next to mechanics and artisans, of which there were 78,389 employed on the railways of the United Kingdom on December 31, 1910, platelayers are the most numerous in the various occupations of railway service, there being 66,305. Whilst not filling such a dangerous occupation as a shunter or goods guard, the number of fatal accidents to platelayers is greater than in any other grade. During the year 1910 there were 95 platelayers killed, the next highest being 47 porters. These include those killed in goods sheds, etc.; away from the movement of trains and under the head of injuries in goods sheds, &c., porters come highest with 5,612 cases and platelayers next with 2,473. But the saddest part of the story, so far as platelayers are concerned, is that nearly one-half of the casualties to platelayers out on the line proved fatal. Of the 95 fatal accidents to platelayers mentioned above, 90 were caused by the movement of trains. But the non-fatal cases caused by the movement of trains only numbered 116, so that out of 206 accidents to platelayers, 43.7 per cent. were fatal. The platelayer serves a very important rôle on a railway when he acts as fogman. This reminds us of the wonderful freedom from fog we now enjoy as compared with a few years ago. This is not the place to discuss the why and wherefore for this happier state of affairs. Suffice for us that such is the case. With becoming gratitude, and remembering that "he who thinketh he standeth should take heed lest he fall," we would call attention to the fact that since the West Hampstead collision of October, 1907, there has not been a serious accident on our railways due to fog. The Board of Trade have reported on five accidents since then, three of which occurred in the same fog—that of January 21 and 22, 1909—and on the same line—the Lancashire and Yorkshire. In one of the latter a driver was killed, but that, fortunately, is the only

fatality recorded for nearly four years. Since that unfortunate mishap, now two and a half years ago, the Board of Trade have not had occasion to report on any train accident which has occurred during fog. But while we have enjoyed this greater freedom from fog and a consequent higher immunity from accident, fogs have, unfortunately, yet to be contended with. We may, however, hope that the conduct of our enormous traffic under the unusual conditions that prevail during foggy weather will continue to be as remarkably free from mishap as in the past. For this we have to be grateful to enginemmen, signalmen and fogmen. To the first-named we are especially thankful. They have practically to feel their way and grope from signal to signal, relying upon some landmark, such as a bridge or house, to tell them where they are. Signalmen have a very trying time, too, in making sure that the tail-lamps are on the trains and in communicating with the men in charge of trains that are shunting. We have, further, known cases where, there being three or four running lines in the signalman's charge, he has been uncertain on which line a train has passed. The fogman, too, is worthy of our gratitude, not because, as is generally assumed, he has a rough time of it—on the contrary, he has what is vulgarly called a soft job, being provided with shelter, a fire and overcoat and being fed free of cost to himself at regular intervals—but for the care with which he does his work. In looking through the Board of Trade reports on railway accidents we can only find one case where the fogman's action or inaction contributed to a mishap that called for an inquiry by the Board of Trade. Mechanical fog-signalling, like automatic signalling, has advantages in eliminating the human agent so apt to fail, but a machine cannot talk or exercise discretion, and, altogether, the matter requires careful consideration before it is decided to dispense with hand fog-signalling, which, among other things, would take money from the platelayer who acts as fogman and who may truly be called the railway handy-man.

SHOULD STRIKERS WEAR A BADGE?

In view of the imitation of the sabotage methods of the French railway strikers which has already commenced in the North, we would suggest that the representatives of railway companies' interests in the Legislature should immediately consider the advisability of securing legislation to require men who are on strike to wear a badge. Preferably the badge might be that of the men's organisation, which they generally take a pride in wearing at a time of excitement, and for the liberty of displaying which, while at work, quite a number of battles have been fought by men of the tramway service. The wearing of their own emblem would obviate any objection which might be raised if it were proposed to issue a Government or a police badge for strikers. Once the strikers are all labelled the control of them by their officials would become of a firmer character, and the authorities would soon be able to determine the truth or otherwise of the statements that strikers have taken no part in the riots so prevalent in the Midlands and the North during the past fortnight. It is specially important now that "peaceful" picketing has been legalised that pickets should display badges.

Accident at a Glasgow Station.—At Queen Street Station, Glasgow, the terminus of the high-level North British line, on Saturday, a crowded passenger train from Edinburgh failed to pull up, owing, it is supposed, to the failure of the brakes, and the engine ploughed through the stationary buffers, mounted the main platform (which was crowded with holiday-makers), dashed across to the opposite side, and crashed against a refreshment buffet. Lord Provost Sir Archibald M'Ennis Shaw, of Glasgow, had a hairbreadth escape, jumping clear with Mr. Fiddes Watt, the Scottish artist. The noise of the crash warned those on the platform, or the consequences must have been appalling. Eight persons in the train were cut and bruised.

This week the figures of the Bank return show that £110,000 was received in coin from the provinces, and £299,000 in bullion from abroad, while the active circulation of notes decreased by £539,000. The Reserve is, therefore, £948,000 higher, bringing it to the handsome figure of £28,609,000. Public Deposits and Other Deposits show little change, the former being £168,000 higher, and the latter £156,000 lower. Government Deposits are unaltered. The principal change is a decline of £902,000 in Other Securities, arising, no doubt, out of the arrangements which have been made for propping the Yorkshire Penny Bank. The ratio of Reserve to the liabilities of the Bank is higher, by nearly two points, at 55.9 per cent. The rates charged for day-to-day money and for short loans are a shade higher than they were last week, and discounts have stiffened appreciably. But the state of Other Deposits shows that the resources of the market are adequate, and the way gold is coming into the Bank inspires confidence in monetary conditions as far as they can be foreseen. The industrial unrest is not likely to affect the state of the money market very much, and if it exercises any influence at all it will probably tend to make money cheaper by diminishing occasions for its use. The period is one of harvest. The fruits of Limehouse speeches and other hudget oratory are being gathered in. The Lords have been fettered, and the proletariat let loose. Incidentally the Stock Exchange has been subjected to a series of shocks which cannot fail to still further reduce the confidence which was at one time reposed in the safety and security afforded by Home Rails as investments. The recovery in prices, which we were glad to record when we last went to press, was not long lived. Dealers began to get uneasy about the labour situation the very next morning,

and subsequent events have shown that the forebodings were only too well founded. Prices were marked down on Saturday as a measure of precaution, the amount of business conducted being very small, and quite insufficient to account for the change. Monday was continuation day, and markings down were soon supplemented by real sales, as well as sales initiating bear operations. The falls were consequently still more pronounced, in spite of the very moderate rates for contango, which were, in most cases, 3½ per cent. to 4 per cent., and in only a few cases 4½ per cent. South American Rails were done at the same rate. These were also weak, and falls occurred where any change was made. Trunks and Mexicans declined as well, but Canadas, exceptionally, closed ½ higher. The most remarkable falls in the Home Rail section were 3 in Brighton A and South Eastern A, 2½ in North Eastern Consols and London North Western, and falls of 2 occurred in London South Western Ord., Great Eastern, Great Western, and Great Central 1894 Preferred. Declines of 1 and over were too numerous to mention, and there were practically no stocks in the active list that escaped a reduction of quotation. The next day a better feeling ensued. It was thought the depression of prices had been overdone, and some recovery took place, though it was irregularly distributed and did not by any means embrace the whole list of active securities. In Home Rails, North London fell 2½, Chatham 2nd Pref. 1, Furness 1, Great Central '91 and '94 Pref. each 1. On Wednesday, though the settlement disclosed three small failures, besides giving rise to many rumours of help being required in several quarters, the general tone was more cheerful. It was felt that things might easily have been much worse. Prices, after having been quoted at a reduction upon the figures of the night before, by way of precaution, tended to recover during the day. Several falls, however, occurred in American Rails, and Canadas were affected by sales from Berlin. Fortunately the movements of United States stocks have now but little influence, and the day ended in a spirit of hope. On the following day this spirit gathered strength enough to initiate a rise in Home Rails, which included advances of 1¼ in London and North Western, 1½ in Great Eastern, and 1 in North Eastern Consols. Canadas rose in spite of a further decline in the American market, and foreign rails were higher in many cases.

On Friday the rise which had begun the day before, founded on the efforts of the Government to pacify the railway trouble, was checked by the fact that these efforts had not averted the declaration of a strike. But the check did not amount to very much, certainly to not so much as onlookers might have expected from recent fluctuations which have accompanied the crescendo and decrescendo of rumour and conjecture upon the event. Midland Deferred was marked down by 1½, with little business done. North Western and Great Western fell a point each, and there were other falls, most of them in mere fractions. Towards noon the tendency was again upwards, and nearly every stock in the active list closed at prices better than the worst. Of course, a great deal of the support afforded to the market must be ascribed to the repurchases of bears who had foreseen the issue of negotiations, and it is no doubt a wise policy for speculators who have sold short to close their commitments early, because the effect of an actual strike is usually to stiffen the backs of genuine holders and to reduce the amount of stock coming on the market.

The principal movements of the week, so far as they relate to securities in which the readers of this journal are likely to be interested, are set forth in the following table:—

Name of Stock.	Rise.	Fall.	Name of Stock.	Rise.	Fall.

THE RAILWAY STRIKE.

THE CONCILIATION BOARDS.

In the following pages we give an outline of the principal events during the past week leading up to what must now be described as the great railway strike. Before dealing with the immediate situation we summarise briefly the history of the Railway Conciliation Boards, which are now so bitterly attacked by the men. These are the result of a prolonged agitation which culminated in October, 1907. Early in that year the Amalgamated Society of Railway Servants put out what was known as the "all grades programme," which included demands that were speedily shown by the railway companies to be utterly impracticable. In fact, it was generally recognised that the programme was not regarded seriously, even by the association, but was launched as a *ballon d'essai*, with the object of securing recognition and some fresh concessions from the railway companies. Elaborate efforts were made to arouse the men, and the agitation in favour of the all grades programme was continued for many months. In July, 1907, the general secretary, who was then Mr. Richard Bell, addressed a letter to the general managers of the various railway companies, reiterating the request that a deputation of the A.S.R.S. should be received by them, accompanied by himself, to discuss the proposals. In that letter Mr. Bell said it was not intended to attempt to interfere with any question affecting the management of the railways, "but simply to assist in or conduct negotiations on behalf of the men in regard to their conditions of employment only." Here the case was put in a nutshell; for it was made plain that the principal object in the agitation was to secure the recognition of the A.S.R.S. by the railway companies. Clearly, as the association then represented only about 80,000 out of a total of 600,000 men employed by the railways of the country, it was impracticable for the railway companies to treat the association as though it was in any way adequately representative of the whole of the employees. The demands of the association not being met, the agitation was continued. Much heat was imported into the proceedings of the men's representatives, and the fear of a general strike increased. In September it had become still more clear that the motive of the agitators was the desire on the part of the officials of the A.S.R.S. that they should be recognised. We find Mr. Richard Bell saying that "there might be room for negotiations between the companies' minimum and the men's maximum, but there was no room for compromise between receiving the men's official representatives and not receiving them." At the annual congress of the A.S.R.S. in October, the president (Mr. J. R. Bell) emphasised the demand that the companies should recognise the association, and Mr. Richard Bell, in October, made it clear that he proposed to force a strike. Eventually, in November, the Board of Trade offered their services, and various conferences took place between Mr. Lloyd George and the railway chairmen on the one hand, and the men's representatives on the other. After negotiations, which extended over some days, an agreement was finally reached at the Board of Trade, by which a scheme of conciliation and arbitration was adopted, full particulars of which are to be found in our issue of November 9, 1907.

The arrangement was to be binding for a period of not less than seven years, expiring in October, 1914; and under it the railway companies were to establish boards of conciliation, on which there were to be representatives of the companies and elected delegates of the men. Commenting on the matter at the time, the RAILWAY TIMES remarked that only a practical trial could determine whether the scheme could be worked successfully. It involved no recognition of the various trade unions, and for this reason it was from the outset unsatisfactory to the men's leaders, who had all along been fighting primarily for such recognition. The underlying feature of the whole scheme is similar to that of receiving deputations from the staff, which had hitherto been in operation on all the railways. The companies had all along maintained that that system had worked well, and they were unable to see the necessity for the new boards, the setting up of which involved much work and great expense.

But at the suggestion of Mr. Lloyd George, and in order to meet the men as far as possible, the companies made the concession, and the scheme was put into operation as soon as possible. From the outset, however, it appears never to have been cordially accepted by the men. Mr. Richard Bell and other leaders were also frequently in evidence with criticism. Mr. Bell, for instance, objected to the offer of the London and North Western Railway Company to bear all expenses of the conciliation boards, including the wages and expenses of the men's

representatives. The object of the company was to give all railway employees an equal opportunity to serve on the conciliation boards. The objection of the A.S.R.S. was raised in the hope that it would be impracticable for any but their representatives—who, of course, were paid by the society—to serve on the boards. The *Railway Review*, the organ of the society, while ostensibly giving its adhesion to the new arrangement, constantly excited the discontent of the men by bitter criticism. When the arbitrators, who were appointed in accordance with the arrangement when differences arose in the work of the conciliation boards, gave their decisions, it was found that these were not so favourable to the men as the latter had hoped. Discontent began to be loudly expressed. The interpretation of the decisions of the arbitrators also gave rise to friction, and during the present year a new agitation was launched against the whole scheme. The history of the past few weeks is, of course, within the recollection of all readers. Labour unrest has been universal, and the A.S.R.S. has seized upon the moment as opportune for fomenting a great railway strike. When we went to press on Friday last the outlook was threatening, and during the past week it has grown steadily worse.

THE PAST WEEK.

On Friday night, August 11, there was little disorder in Liverpool, owing to the presence of increased numbers of police and military. The shipowners had to warn the Dockers' Union that unless their men abided by the agreement come to they would have to close down all operations. The Lord Mayor made an impracticable suggestion to the shipowners to summon the conciliation board, but, as the men had disregarded the arrangements made by their representative, there was no *locus standi* for the commission. The shipowners, however, appointed a committee to meet any responsible representative of the men for any purpose which might accelerate the resumption of normal business.

It was reported on Saturday that the railway carmen's strike was spreading. The Great Central and Metropolitan men called on all employees to come out unless every claim was fully and justly met. As a matter of fact, the strike had spread to the carmen, checkers, loaders, and truckmen at the London goods yards of the Great Northern, Midland, Great Western, and the South Eastern and Chatham. On the same day the London Dock strike was declared at an end, and the leaders congratulated the men on their victory; but there have been ominous signs that all is not well even now. The fifteen members of the strike committee, representing four unions, have taken credit for having done their utmost to avert a stoppage of the transport trade of London, and for their partial success in the case of the Port of London Authority's men—who, however, have not all come in yet. The coal porters, carmen, lightermen, watchmen, apprentices, engine-room men, and firemen were all affected by the movement, while some half the number of stevedores are working under the Rollit award. The strike committee, meanwhile, had issued "permits" to the West Ham Board of Guardians for food for the children, and, on the instance of a Post Office official, to the haulage contractors for the passage of vans laden with fodder for the horses. This was much criticised in the press. Want of petrol caused one-third of the motor omnibuses and many other vehicles to be laid up, and meat and butter had sensibly risen in price, while ice was not to be had. Very little produce arrived either at Smithfield or Covent Garden, and what did come was under escort. Ice and drugs were conveyed to the hospitals in a similar manner, and the Woolwich troops stole a march in the night to procure their rations. In a letter to the press the chairman of Carter, Paterson and Company stated that the whole of his staff were willing and anxious to continue their duties, but that they were unable to do so, except in a few cases where escorts were provided, and that this scandalous state of affairs would not have continued for half an hour had sufficient protection been available. In Manchester 500 of the Cheshire lines employees ceased work at the Central Station, and decided that unless the Liverpool men's demands were satisfied they would call a general stoppage.

In Liverpool on Sunday serious disturbances took place, and the Riot Act had to be read. Some 200 injured people were treated at the Lime Street Station and in St. George's Hall. Food stuff was subsequently released from Edgehill Station, and convoys of it were accompanied by large bodies of troops mounted and on foot. The Home Secretary had issued a serious warning to the people, cautioning them that effective means would most certainly be taken to check disorder and to protect peaceful workers. The Government have been severely heckled in Parliament by both the Labour and some of the Nationalist members for their action, and by others for their inaction.

On Tuesday, in Liverpool, the labour unions gave 24 hours' notice to the railway companies to decide whether they would meet the men, failing which a national stoppage would be declared. The Prime Minister and the President of the Board of Trade held conferences with the leaders on both sides. A general strike would involve nearly 400,000 men, of whom it is reckoned that only 25 per cent. belong to one or other of the four unions. The Great Western Railway had considerable trouble with their men both at Bristol and at Birmingham. In Liverpool there was a serious riot, when troops escorting some prison vans were attacked. Two deaths occurred, and the trade both of Liverpool and of Manchester has remained paralysed. Late at night the leaders of the transport workers issued a manifesto declaring their dissatisfaction with the action of the Port of London and other authorities, and labour at the docks was only carried on in a half-hearted way, while the unrest was spreading to South Wales ports.

On Wednesday more rioting took place late at night in Liverpool. The unrest was discussed in Parliament, and the Government assumed a determined attitude, while the railway companies undertook to give a limited service, even in the case of a general strike, if adequate protection was available.

A conference was held on Wednesday afternoon between Mr. Sydney Buxton, the President of the Board of Trade, and representatives of the railway companies, namely:—Mr. Sam Fay, general manager, Great Central Railway; Sir F. Banbury, director, Great Northern Railway; Mr. H. Holmes, traffic superintendent, London and South Western Railway; Sir J. Inglis, general manager, Great Western Railway; Lord Claud Hamilton, chairman, Great Eastern Railway; Sir Guy Granet, general manager, Midland Railway; Mr. William Forbes, general manager, London, Brighton and South Coast Railway; and Mr. Frank Ree, general manager, London and North Western Railway.

Mr. Buxton also met representatives of the railway trade unions—viz., Mr. T. Lowth, general secretary of the General Railway Workers' Union; Mr. J. E. Williams, general secretary of the Amalgamated Society of Railway Servants; Mr. A. Fox, secretary of the Associated Society of Locomotive Engineers and Firemen; and Mr. Chorlton, secretary of the Pointsmen's and Signalmen's Unions.

At a meeting held on Wednesday at the offices of the Amalgamated Society of Railway Servants, the following resolution was passed:—

That this Joint Committee hereby express our determination not to settle our present dispute unless the lock-out imposed upon our fellow workers (because of their support of the railwaymen) in Liverpool and elsewhere is removed and all men affected reinstated.

This appears to open a new situation which may afford the opportunity of a compromise later, or it may be the prelude to a wide-spread extension of the strike.

A DAY OF CROSS PURPOSES.

Thursday was a day of violent surprises, and though a strike was declared negotiations were continued. In the morning a conference took place between the President and other representatives of the Board of Trade and the Executive Committee of the railwaymen, who, to the number of 41, travelled from Liverpool to London for the purpose of the meeting. The men were accompanied by officials of the four trade unions concerned in the dispute. An official report was afterwards issued. From this it appeared that Mr. Buxton, President of the Board of Trade, put to the men the following questions:—

(1) What were the actual grounds on which the Executive had founded their action in issuing their manifesto?

(2) What were the actual grievances in connection with the Conciliation Board Agreement of 1907?

(3) Were these grievances sufficiently grave to justify the action which the Executive had taken?

(4) Could these grievances not be remedied in a less drastic way?

(5) Could these grievances be remedied in the way proposed, by means of a General Railway Strike?

The men retired to consider the President's statement, and on meeting him again replied as follows:

(1) and (2) The failure of the Railway Companies to observe the spirit and letter of the Conciliation Board Agreement of 1907 and the utter impossibility of the men's representatives to redress the many grievances of which the men complain.

(3) Yes.

(4) Yes, by the suggestion offered by the Committee to the Railway Companies yesterday to meet the official representatives of the men.

(5) Yes. In our opinion it is the only course.

We have also considered the possibility of further questions being asked, and we have unanimously come to the conclusion that the only way that will now be an effective method of peace is that the Companies consent to meet us.

AN IMPORTANT OFFER FROM GOVERNMENT.

The President and the representatives of the Board of Trade then retired to consider the position. Subsequently the Prime Minister, accompanied by the President of the Board of Trade, met the Executive and made the following statement:

I have considered carefully, in consultation with the President of the Board of Trade and my colleagues in the Cabinet, the replies given by Mr. Bellamy on your behalf to the five questions submitted by Mr. Buxton to you. Your answer to the first and second questions is that the ground of your action is the failure of the Railway Companies to observe the spirit and letter of the Conciliation Board Agreement of 1907 and the utter impossibility of the men's representatives to redress the many grievances of which the men complain. Your answers to all the remaining questions depend upon, and assume the correctness of, this statement, and it is of the first and most essential importance to establish or disprove by impartial investigation the soundness of your first contention. For this purpose his Majesty's Government are prepared to appoint immediately a Royal Commission to investigate the working of the Conciliation Agreement and to report what amendments, if any, are desirable in the scheme, with a view to the prompt and satisfactory settlement of differences. I hope to announce without delay the names of the Commissioners, who will meet at the earliest possible moment. I may further add that I confidently hope that we may rely on your assistance in giving the Commissioners the fullest possible help and information.

The Prime Minister added that the Government were completely impartial as regards the merits of the various points of dispute which have arisen between the companies and their employees. The Government had to regard exclusively the interests of the public, and, having regard to those interests, they could not allow a general paralysis of the railway system of the country and would have to take the necessary steps to prevent it. They had, therefore, put forward a proposal which would ensure the promptest investigation by a perfectly independent tribunal of the complaints formulated in answer to Mr. Buxton's questions. It was for the representatives of the employees now to consider whether they would fall in with that proposal. Their refusal would, in his opinion, impose upon them a heavy responsibility, and (quite apart from the merits of the case) would put them in the wrong in the court of public opinion. He had not employed, and had no wish to employ, the language of menace, or even of warning, but he earnestly desired them to weigh carefully what he had said on behalf of the Government before they came to a decision.

At three o'clock the Executive of the Railwaymen met the Prime Minister and the President of the Board of Trade, and announced that they were unable to accept the proposal of the Government.

Immediately after seeing the Executive, the Prime Minister and Mr. Buxton met the general managers of the railways, to whom the Prime Minister made a similar statement.

The general managers of the railway companies, at a meeting held subsequently to their interview with the Prime Minister, unanimously passed the following resolution:

"At a meeting of the chairmen and general managers of the companies it was resolved that a communication having been received from the Prime Minister to the effect that the Government proposed to appoint a Royal Commission composed of impartial persons with a view to the investigation of the working of the Conciliation Scheme, the Prime Minister be respectfully informed that the companies will be prepared to give evidence before the proposed tribunal."

RASH AND PREMATURE ACTION OF LABOUR LEADERS.

The men's Executive Committee at their afternoon meeting were dissatisfied with the offer of the Government, and deter-

mined to call the men out. About half-past four o'clock some 2,000 telegrams were sent to the local centres throughout the country calling on the railway men to strike. The following was the resolution passed:—

"That this Joint Committee of the Executive Committee, representing the Amalgamated Society of Railway Servants, the Associated Society of Locomotive Engineers and Firemen, the General Railway Workers' Union, and the Signalmen's and Pointsmen's Society, which societies represent all grades of railway workers, have given careful consideration to the Prime Minister's statement and the remarks which accompanied it, but which the Government has not ventured to commit to writing, and resolve as follows: That we consider the statement made on behalf of his Majesty's Government an unwarrantable threat uttered against the railway workers, who for years have made repeated applications to the Board of Trade, also to Parliament, to consider the advisability of amending the Conciliation Board scheme of 1907 with a view to so adjusting the machinery that the grievances of the men may be remedied, and further, the failure of the Board of Trade to amend their own scheme and also of the railway companies to give an impartial and fair interpretation to such scheme is in our opinion the primary cause of the present unrest, which is not limited to any one company or grade, but common to all. We therefore reiterate our claim that the workers of the railway companies are entitled to the same treatment from their employers as workmen employed by other employers of labour, inasmuch as this joint meeting has already urged the employers to meet us with a view to discussing the whole position, and this, if agreed to by them, would, in our opinion, have settled the matter. We therefore refuse to accept the responsibility which the Government is attempting to throw upon us, and further, respectfully but firmly ask his Majesty's Government whether the responsibility of the railway companies to the nation is in any degree less than that of any other employer of labour, and with a full sense of the grave step we are taking feel justified that our duty to those we represent compels us to refuse the offer of his Majesty's Government and reluctantly resort to the decision of this body on Tuesday last."

Thereafter on the invitation of the Labour Party and the Parliamentary Committee of the Trades Union Congress the Joint Executive met at the House of Commons, when a full statement of the position was made to that body. After discussion the result was a unanimous resolution expressing the determination of those bodies to do everything possible to help the railway men in the coming fight.

IN THE HOUSE OF COMMONS.

There was great excitement on Thursday in the House of Commons. Early in the afternoon Ministers were bombarded by questions on the situation. Later on, when it became known that a strike had been declared, the business of the House was suspended in order that the Government might make a fresh statement with the object of averting what appeared almost inevitable. It is probable that one strong reason for the precipitate action of the men's representatives was that the suggestion of a Royal Commission carried with it the idea of prolonged delay—it might be for several years if the usual leisurely proceedings of a Royal Commission were to go on. Accordingly Mr. Lloyd George, Chancellor of the Exchequer, in his statement to the House of Commons, said that the Prime Minister's suggestion was that the Commission of Inquiry should consist of three persons—a representative of the labour interest, a great employer of labour, and a chairman, who would be a man of distinction and well-known impartiality. The Chancellor of the Exchequer said he could not help thinking that the spirit and intentions of this proposal were not fully understood. "At any rate," he added, "I am very glad to be able to say that the negotiations have been reopened . . . and that the parties are giving full consideration to the interpretation which I now place on the proposal of the Government—namely, that it is really not the intention to set up a roving Commission merely for the purpose of delay, but the intention is to have a small Commission, and, above all, one that will lead to a prompt decision and produce a report which would involve decisive action for putting an end to the sources of the friction that have been so fruitful of unrest and disturbance and so charged with possible disaster and catastrophe to the industrial system."

Mr. Ramsay MacDonald, chairman of the Labour Party,

said in reply, that there had been a misunderstanding all round. He put several questions to the Chancellor of the Exchequer, who replied to the following effect:—

If the Commission was accepted on Friday, the Government would announce the names of the Commissioners on Saturday (to-day). The Commission, if appointed on Saturday, would meet on Monday and sit *de die in diem* until it could make its report. When it reported the Government would have to consider the report. It was the intention of the Government to take administrative action on the report, and if necessary legislative action. Meantime there must be a truce all round, so that not merely men who struck must return to work, but those over whom there hung the menace of notice must share in the truce. He pledged himself to bring all the influences of the Government to bear in these directions. The Government would bring pressure to bear on both parties in favour of a truce.

Following on the Parliamentary statement, the men's representatives met again late on Thursday night, and conferred with the Parliamentary leaders of the Labour Party. The proceedings ran into Friday morning.

In London on Thursday night there was little sign of response to the strike order, but at several provincial centres a number of men came out. The War Office occupied the time by pushing forward their arrangements all over the country for troops being in readiness to preserve order, to protect non-strikers, and to facilitate the working of the railways. Many special trains loaded with troops were despatched from Aldershot in the course of the night, and on Friday morning soldiers were stationed at the principal railway termini.

FRIDAY'S PROCEEDINGS.

A DAY OF CONFERENCES.

Yesterday (Friday) was largely a day of conferences among parties in London. Members of the Government met representatives of the railway companies at the Board of Trade offices. Various consultations subsequently took place. The Executive of the four trade unions concerned, after their midnight meeting, met again at nine in the morning and sat for many hours. Communications went on with the Labour leaders in Parliament. Probably it was on the tenor of these that Viscount Haldane in the House of Lords and Mr. Lloyd George in the House of Commons stated that the negotiations with the object of getting the men to accept the offer of a Commission of Inquiry were in a delicate and difficult position. The Government also informed both Houses that, instead of adjourning as had been intended from yesterday till October 24 next, they would meet again on Tuesday next in view of possible eventualities. The rumour went round yesterday that this course was dictated by the Labour members. Usually a Government prefers to dispose of trouble when Parliament is not sitting, so that awkward discussions can be avoided.

It is understood that the result of the conference between the railway managers, held at their joint office in Parliament Street, after their interview with the Board of Trade officials on Friday morning, is that the former are ready to abide by the offer of the Government to appoint a Royal Commission, but decline to make any further concessions to the men's unions. One of the managers observed, "The next step must rest entirely with the men's representatives."

Last evening the representatives of the men were still in conference at Euston Road, and one of the officials informed a Press Association representative that there was no likelihood of a settlement for some hours. The statement in the press that there was a deadlock was untrue, and the best evidence of that was that negotiations were still in progress at that time.

Reports from all over England showed that yesterday large numbers of the railway men went on strike, and in some districts the passenger service has been almost suspended.

We give below some notes by our representatives of the state of matters at the London termini yesterday evening.

KING'S CROSS.

Here the position was almost normal. The representative of the general manager stated that the main line service was running as usual. All the suburban travellers were brought up in good time, and they had every hope of being able to take them back all right at night. The official considered the company had been very fortunate. The aspect of the station was

quite usual; there were no pickets, and only a few extra police indicated that anything was afoot. Business appeared to be brisker, and there was no apparent congestion.

ST. PANCRAS.

Enquiries at the stationmaster's office showed there was some tension. Restricted main and local services had been arranged, and these commenced running on Friday. Instead of nine Scotch expresses only two were despatched, one morning and one evening. No news had reached the office concerning any attempt on the permanent way, and no reports of any violence had come to hand. The station presented the normal appearance, there being, perhaps, a slight congestion, though it was obvious the passengers were all very anxious. The railwaymen on duty were civil and obliging. The stationmaster's officials said the temporary service had worked well, but it being the first day, there was naturally some smoothness wanting. On the following day all difficulties would be removed.

ELSTON.

Soldiers guarded the outer courts, but there was a large traffic to be dealt with. The stationmaster said that all trains up to 5.30 p.m. that ought to go out had been despatched safely. There had been no undue accumulation of people. Two trains to Liverpool and two to Birmingham had been discontinued. The up-trains were running from half to an hour late, and were getting away again fairly well. No trouble had been experienced with the men. It was advisable, however, that only those people who were compelled to do so should travel just now.

MARYLEBONE.

The Great Central line was in a sorry plight. The station was closed and practically deserted. Only two trains had come in, and one out. At six o'clock the officials expected two more in, and hoped to get one more out. Things were about as bad as they could be. The local traffic was entirely suspended, and the officials were unable to understand the reason for the exceptional position of the line. Police were in force. There was no information as to damage to permanent way or rolling stock. Passengers were being sent by other lines, their tickets being available.

PADDINGTON.

There were large numbers of passengers here waiting for trains. The local service had been fairly well maintained, and the up-trains were running a quarter of an hour late. There was no information as to the number of men out. A special programme of trains had been issued, and the staff were working to this. Precautions had to be taken in the goods yard; and there were a good number of police about. Restaurant and sleeping cars were discontinued, and all excursion trains were temporarily suspended; horse and carriage traffic was not accepted for conveyance by rail. Through bookings were varied, and other necessary alterations were made. The superintendent of the line and officials hoped that all the great difficulties had been overcome by five o'clock.

HOLBORN VIADUCT.

At the S.E. and C. Railway's Station at Holborn Viaduct there was little interruption of the traffic. In reply to an enquiry, a prominent official stated that very few men had struck in the Holborn section. The trains had all been running as usual with the exception that they were a little delayed. None had been cancelled, and the signalling was efficient. On going to press the company at this station were able to deal comfortably with the suburban traffic.

CANNON STREET.

Conditions at Cannon Street Station were practically normal throughout the day. All trains were running, though some were late, and few men had struck. The evening service to the suburbs went as usual, and there was no congestion.

FENCHURCH STREET.

On making inquiries yesterday at the London, Tilbury and Southend Railway, it was found that all trains were running as usual, and fairly to time. The company had been able to manage up to that time. The delays experienced were caused mostly by the dislocation of the Great Eastern Railway's traffic in and out of Fenchurch Street Station, and by the unusual state of affairs on the District line. Many District Railway passengers from Barking and stations onward to Bromley had to be conveyed by London, Tilbury and Southend trains. No alteration in the holiday arrangements had taken place up to the time of our going to press. Developments, however, were expected.

LIVERPOOL STREET.

At Liverpool Street Station the general manager stated that they were working a modified service both for main line and suburban traffic. In several cases two trains were made up as

one. Few men were out at Liverpool Street itself, and many union men were still working. The men on strike were mostly drivers and belonged to London. The station was packed in the evening by a dense crowd of people anxious to get home, and it was easy to see that the officials were experiencing great trouble in getting the people away. The 5.5 Clacton tea-car express ran out eight minutes late, and the 5.3 Southend restaurant-car express left at its usual time with a large number of passengers on board. The soldiers were still in possession of the terminus in the evening, and guards were posted with fixed bayonets. At Stratford a large body of troops held the junction, and the Maxim guns looked as if great trouble was anticipated. A restricted service is begun.

VICTORIA (L.B. and S.C.R.).

The train service here is chaotic and anxious passengers fill the station. An attempt is made to run a Sunday service, but the effort is a poor one. Some 40 main line trains have been cancelled. Some of the engines have been running all night and all day, others not being available to take their place. When these give out the system will be at a standstill. The notice to strike, it was stated, came rather suddenly, or else this would have been the state of things to-day. It will, in all probability, be the case to-morrow. Soldiers with fixed bayonets are stationed all down the line, but there was no attempt to do any damage to property on the part of the men on strike.

The greatest disaffection seemed to be among the men in the suburbs, and Battersea Station was said to be closed, although passengers were informed that they could alight there.

The following two notices were posted up both at Victoria and London Bridge (L.B. and S.C.R.):

1. "In consequence of the labour difficulties the ordinary train service on work days and Sundays will, until further notice, be suspended, and a restricted service will be in force, particulars of which can be obtained at the stations. On the branch lines the through service, with the exception of the rail motor service, will, as far as possible, be maintained, but the connection of the trains at the junction station cannot be guaranteed."

2. "In consequence of the labour difficulties and the restriction of the ordinary train service the issue of all kinds of cheap tickets and all through workings to other companies' lines will be suspended until further notice."

These notices indicate the paralysis of traffic which actually existed. Suburban and main line trains, as well as goods trains, were usually affected. The impression made on the mind of the inquirer was that by to-day (Saturday) the whole system would be at a standstill.

LONDON BRIDGE (L.B. and S.C.R.).

The position here was as bad as that at Victoria. Railway men and passengers view the situation with the greatest concern. Engine-drivers, firemen and signallers are out in considerable numbers, and a strong effort is being made by the strikers to spread disaffection. Those who came to work this morning are being retained, and the company are providing them with meals. The pickets are very strong at New Cross, where most of the employees work, and where the locomotives are stationed. If the men go home, they declare they will not be allowed to return to work. One of them, indeed, in order to get to London Bridge, was obliged to leave his house by the back. Troops are stationed at New Cross to prevent violence. The officials would not guarantee trains beyond Battersea, and Victoria was declared to be cut off, although trains were coming through from that station. Strenuous efforts are being made to cope with the heavy suburban traffic in the evening.

WATERLOO (L. and S.W.R.).

At Waterloo everything was going on as usual. Not a train had been cancelled, and the times of departure and arrival were maintained as well as at an ordinary time. "We are all right here," said an official, "as long as the intimidators are kept away." Some of the men as they came to work were asked by pickets if they were not going to strike; but the men made no reply, and went on to their work. In case of disturbance, however, guards were on duty at the station, but the only excitement was the arrival of the soldiers' kit. Clapham Junction was fully protected at every vulnerable point by armed troops. Waterloo Station was crowded with people going on, or returning from, holiday.

CHARING CROSS (S.E. and C.R.).

No interruption of the train services took place at Charing Cross, and passengers were astonished to find that the trains departed at their scheduled times. In fact, the Continental trains which left at 2.15 and 2.20 were full of passengers, and

left to the second. All the men were said to be working. There were no troops on duty and no extra police.

MANIFESTO OF A.S.R.S.

The conference of railwaymen's executives at the offices of the A.S.R.S., Unity Hall, sat throughout Thursday night until one o'clock on Friday morning, when it was adjourned until nine. When the conference adjourned the following manifesto was issued:—

Fellow Workers.—Nearly four years ago an Agreement was entered into between the Board of Trade, the representatives of the Railway Companies, and your Organisations, which provided machinery for the purpose of dealing with disputes regarding rates of wages and hours of labour.

Your organisations made every effort loyally to carry out both the spirit and the letter of the agreement they had entered into on your behalf.

From the commencement the companies showed they were not prepared to carry out their share of the bargain, by delaying in every way the formation of the boards, so much so that in the case of one company boards were not formed until April, 1909. After the boards were formed every obstacle the ingenuity of the companies could suggest was placed in the way of the men's claims being considered and redressed.

After considerable delay, when agreements had been arrived at, the companies applied their own interpretations thereto, the signatories on behalf of the men being refused any voice in this all-important matter.

Whether in revenge for having to meet the men or not we do not know, but coincident with the settlement a policy of harassing and driving the men was instituted, until to-day railwaymen are worse than slaves.

All these circumstances, which are well known to railwaymen and can be amplified from their practical experience, cause outbreaks at various centres. Even then, had the companies met the representatives of the men the present situation would have been saved.

The companies arrogantly refused this, and by so doing denied the railway workers of this country what has been conceded to every other class of worker.

As the men throughout the United Kingdom have shown their unchangeable determination not to tolerate this state of affairs any longer, we call upon every railwayman to join his fellows, and so strike a united blow for deliverance from petty tyranny, and also help to obtain higher wages, shorter hours, and a more humane life for all.

On behalf of the Joint Executive Committees,

J. E. WILLIAMS, Gen. Sec., A.S.R.S.
A. FOX, Gen. Sec., A.S.L.E. and F.
T. LOWTH, Gen. Sec., G.R.W.W.
S. CHORLTON, Gen. Sec., U.P. and S.S.

THE STRIKERS AND THEIR FUNDS.

So far as can be ascertained from the latest returns by the Board of Trade and from Parliamentary Blue Books (up to the end of 1909), 111,759 men, or 25 per cent. of the railway workers of the United Kingdom, are members of six trade unions. These six unions had accumulated funds amounting to £621,351. The number of members of the A.S.R.S. is stated to be 90,000, and it is asserted that applications for membership have been received at an average rate of 700 per day for some time past. This Society's funds available for strike pay are said to amount to £450,000. Leaving a margin of £18,000 for contingencies and working expenses, an eight weeks' strike would see the entire funds of the society exhausted.

Festiniog Railway.—The report for the half-year ended June 30, 1911, shows receipts amounting to £5,931, an increase of £724, and expenditure £4,011, a decrease of £132. After payment of debenture interest and other prior charges there is a balance of £1,815, including £392 brought forward. It is proposed to pay dividends at the rate of 4½ per cent. per annum on the 5 per cent. preference shares, and at the rate of ½ per cent. per annum on the ordinary stock, and to carry forward £299.

PERSONAL.

Mr. Robert Graham, assistant secretary of the Buenos Ayres Western Railway, is a passenger on the R.M.S.P. "Austurias" from Buenos Ayres to Southampton.

Mr. E. E. Lucy has been appointed chief mechanical engineer of the New South Wales Government Railways. He succeeds Mr. W. Thow, who has retired after some twenty years' service, having passed the age limit.

Mr. J. Stones has been appointed superintendent for the Lancaster and Carlisle and West Cumberland districts of the London and North Western Railway, in succession to Mr. L. D. Price, who retires under the age limit. Mr. Stones has been assistant superintendent on the Chester section, and belongs to a family long connected with the railway service, his father having been superintendent for many years of the stores for the Northern division.

Sir W. Guy Granet, who recently received the honour of knighthood from the King, was referred to in very complimentary terms by the chairman at the half-yearly meeting of the Midland Railway Company last week. Mr. H. Tylston Hodgson said that in the opinion of himself and his colleagues, Sir Guy Granet brought honour to them and all his fellow workers by the honour he had so deservedly received at the hands of His Majesty the King, in connection with his good work for the Midland Railway, and for the railway interest generally.

Sir Bradford Leslie, K.C.I.E., the veteran engineer, received many congratulations yesterday (Friday) on the attainment of his eightieth birthday. In 1847 he was apprenticed to L. K. Brunel, and after much experience in bridge building in this country and in India he was appointed agent and chief engineer of the East Indian Railway in 1876. Returning home in 1887, he was appointed chairman of the Southern Punjab Railway, and he is now designing an improved floating bridge over the Hooghly, at Calcutta. These and other interesting facts were mentioned in our reviews of his autobiographical notes in the issues of January 14 and March 4 last, his photograph appearing in the former. According to *The Times*, his hope is to live to see the recognition of what he regards as the fallacy of the so-called elastic suspended joint. Elimination of joint concussion, permanence of track, and consequent economy of maintenance under the intense conditions of modern traffic can, he believes, be secured only by the abandonment of timber sleepers and by the reintroduction of reversible rails firmly fixed in imperishable cast-iron supports.

HOME RAILWAY DIVIDENDS.

Payments of home railway dividends will be made as follows:—

Company.	Rate per cent p.a.	Date payable.
Stratford and Midland Junction	1½	August 21
Maryport and Carlisle	6½	" 21
Great Western	4½	" 22
Hull and Barnsley	2	" 22
London and North Western	6	" 22
Furness	1	" 31
Great Northern (Ireland)	5½	September 1
Midland Great Western of Ireland	3	" 1
Belfast and County Down	6	" 1
Cork and Macroom	4	" 1
Cork, Bandon and South Coast	3½	" 1
Great Southern and Western (Ireland)	4½	" 1
Great Central and North Western Joint Committee	4½	" 1
Sheffield District	1½	" 1
Dublin and South Eastern	1	" 11

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

FORTH AND CLYDE JUNCTION RAILWAY.—At the rate of 7 per cent. per annum on the ordinary stock, carrying forward £645.

CANADIAN PACIFIC RAILWAY.—At the rate of 2 per cent. for the half-year on the preference stock, and on the common stock of 2½ per cent. for the quarter ended June 30, being at the rate of 7 per cent. per annum from revenue and 3 per cent. from interest on the proceeds of land sales.

New Railways for Chili.—The Chilean Council of State Railways has agreed to the construction of five railway lines, to augment railway facilities in the agricultural districts.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Aug. 23 (Wed.).—**Furness Railway** (Half-yearly), Barrow-in-Furness, at 2.
 Aug. 23 (Wed.).—**Ross and Monmouth Railway** (Half-yearly), Ross, at 1.30.
 Aug. 24 (Thurs.).—**Festiniog Railway** (Half-yearly), Portmadoc, at 12.
 Aug. 25 (Fri.).—**Tralee and Fenit Railway** (Half-yearly), 11, Victoria Street, S.W., at 2.30.
 Sept. 6 (Wed.).—**Buffalo and Lake Huron Railway** (Half-yearly), 14, Cook Street, Liverpool, at 12.
 Oct. 4 (Wed.).—**Canadian Pacific Railway** (Annual), Montreal.

Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

METROPOLITAN RAILWAY OF CONSTANTINOPLE FROM GALATA TO PERA, LTD.

An extraordinary general meeting of the proprietors was held on Wednesday, August 16, at the offices, 25, Bucklersbury, E.C., Baron Emile Beaumont d'Erkanger (chairman of the company) presiding, for the purpose of confirming the resolutions passed at the special general meeting on the 31st ult., having for their object the winding up of the company.

The SECRETARY (Mr. John Paterson) having read the notice convening the meeting,

The CHAIRMAN said: I now beg to move the confirmation of the first resolution:—"That the company be wound up voluntarily."

Mr. LOUIS HOOPER LE BAILLY: I beg to second that.

The resolution was put and carried unanimously.

The CHAIRMAN: The second resolution is:—"That John Paterson, of 1, Walbrook, in the City of London, chartered accountant, be, and is hereby appointed liquidator for the purpose of such winding up." I move that it be confirmed.

Mr. LE BAILLY: I beg to second that.

The resolution was put and unanimously agreed to.

The CHAIRMAN: I now beg to move the confirmation of the resolution:—"That the remuneration of the said liquidator is hereby fixed at the sum of £250."

Mr. LE BAILLY: I will second that.

The resolution was put and carried unanimously.

The CHAIRMAN: That is all the business of the meeting.

The proceedings accordingly then terminated.

RHONDDA AND SWANSEA BAY RAILWAY.

The 58th half-yearly meeting was held in the Hotel Metropole, Swansea, last Saturday, Mr. George Dear presiding.

The CHAIRMAN, in moving the adoption of the report, reminded the shareholders that the apportionment of receipts from competitive traffic was made once a year only—at the close of each year—and therefore for this half, as in the first half, they could only declare a dividend at the minimum rate of 5 per cent. per annum, which they were entitled to under the agreement with the Great Western Railway Company. The figures relating to the competitive traffic for 1910 had been agreed between the Great Western Company and themselves, with the result that they were entitled for that year to the minimum dividend of 5 per cent. only. He was pleased to say that their working agreement with the Great Western Company went on most harmoniously, and they could congratulate themselves on having made such an excellent arrangement. They would remember that the Great Western Company some three years ago obtained powers to construct a loop line connecting their new South Wales district line with the Rhondda and Swansea Bay Railway at the Neath River Bridge, so as to enable them to make further use of the Rhondda and Swansea Bay Railway. The intention was to proceed with that work at once, which would, of course, bring bigger traffic.

Mr. W. H. P. JENKINS seconded and the motion was carried.

The CHAIRMAN said they ought, in some tangible form, to recognise the valuable services of Mr. Morgan B. Williams (the late chairman), but the directors had suggested that this was a question which should be decided entirely by the shareholders.

Mr. ARTHUR THOMAS thereupon moved that the meeting unanimously desired to recognise the valuable services

rendered to the company by the late chairman, Mr. Morgan B. Williams, and resolved the sum of 100 guineas should be expended out of the funds of the company for the purchase of a souvenir to be purchased by the directors.

Mr. MORDECAI seconded, and Messrs. W. EVANS and J. R. DAVIES supported, the last-named suggesting that the sum named was too little considering the deep debt of gratitude the shareholders were under to Mr. Williams.

The CHAIRMAN, in putting the resolution, which was carried unanimously, said while the directors appreciated what Mr. Davies had said, it was not the intrinsic value of the souvenir that Mr. Williams would prize so much as the unanimous and spontaneous way in which the shareholders had said "Yes."

ISLE OF WIGHT CENTRAL RAILWAY.

At the half-yearly meeting, which was briefly reported in our last issue, Mr. S. Peto (a director) announced that he was responsible for the election of Mr. Harry Willmott as the chairman of the company. Mr. Willmott had only been chairman for three months, but he must express his great satisfaction with all he had done in that short time. He trusted that the shareholders would unanimously vote the increased remuneration, which he really deserved.

Mr. E. L. WALFORD proposed a resolution that the fees of the board should be £1,250 a year, of which £1,000 was to go to Mr. Willmott. He congratulated Mr. Peto upon inducing Mr. Willmott to accept the chairmanship. Mr. Willmott had been successful in bringing other derelict lines into a prosperous condition, and making them dividend-paying concerns. It was simply owing to his experience of what Mr. Willmott had already done that he had become a shareholder in this company.

Mr. SAUNDERS seconded the resolution, which was agreed to unanimously.

An extraordinary general meeting followed, at which four resolutions were passed. The first was in respect to the superannuation fund of the officers of the company, the second was the approving of the working agreement between this company and the Freshwater, Yarmouth, and Newport Company; the third was to give notice to the Newport, Godshell, and St. Lawrence Company to determine the existing agreement; and the fourth was the approval of an alternative agreement with the latter company.

THE BRECON AND MERTHYR TYDFIL JUNCTION RAILWAY.

The ordinary meeting of the shareholders was held yesterday (Friday) at the offices of the company, 134, Palmerston House, Mr. William Bailey Hawkins (chairman of the company) presiding.

The SECRETARY (Mr. H. R. Price) read the notice convening the meeting.

The CHAIRMAN said that before he addressed himself to the business of the company he felt obliged, and in fact he thought it was absolutely necessary, to remind the company of the great loss the directors and also the shareholders of the company had sustained in the death of their late colleague, Mr. H. F. Slattery, which occurred in May last. During the 30 years he was chairman of the company his services were invaluable, and eminently to the advantage of the company. They regretted his loss, indeed. He also regretted to have to report the death, in April, of Mr. Robinson, who had been engineer to the company for upwards of 33 years. His loss was also severely felt, as he was an excellent servant who did his utmost for the company at all times. The accounts which were now laid before the shareholders, the chairman said, ought to be considered very satisfactory. It had been a most trying period of continuous unrest, and he was sorry to have to say that within the last half an hour a telegram had been received stating that the men were out and the Brecon had stopped. Mr. Price would return at once to Wales, and if he could obtain the necessary protection from the authorities they would do their best to open the line. He had heard that two signal boxes had been burnt, but he did not know whether they belonged to the company or to the Great Western Railway. There was no doubt that the present moment was a very serious one for all railways. There had been no unpleasantness with the men, and the unreasonableness of their striking at the present moment was incomprehensible. There was not a single man upon the line who had a complaint of any sort or description. His opinion was that the railway companies should now combine together and fight it out to a finish. It would be the best thing for the future of England and her railways. He stated that he could not tell the meeting how strongly he felt upon the subject. He had had 50 years' experience of railways and railway management, and this

was not the moment for compromise. Let an end be made of the strikes.

The traffic had increased. As the shareholders knew, the line was one which mostly carried coal, and when there was a hold-up they naturally lost a great deal of traffic. The first class traffic showed a slight decrease both in numbers and money. The second class showed an increase of 670 in numbers and £51 in money. The third class showed an increase of 50,079 in numbers and £574 in money—so that there had been an increase in the passenger traffic. Other traffic showed a substantial increase. Altogether there was an amount of £3,814 to deal with after paying fixed charges, but the expenses had to be looked at. They had spent £4,200, and this was spent principally in relaying the main line. During the half-year they had laid 2 miles 27 chains, and he was glad to say that they were approaching the end, as there only remained 1 mile 23 chains to lay to finish it. He trusted they would then get an interregnum which would enable them to do better for the shareholders. The locomotive charges were up, but they had run a considerable number of miles more than the previous half-year. The thing was to consider which was the wisest thing to do. They were able to pay a small dividend of 4 per cent. per annum on the first preference stock, and could carry forward a sum of £1,691; but the question was, if the strike was going to last, whether it would be wise to pay this or to carry it forward, as to which he asked the views of the meeting. He mentioned that the Cambrian Combine strike had been settled that day. The Chairman then formally moved: "That the report and accounts now before the meeting be and are hereby approved and adopted."—This was seconded by Sir GEO. PIGOT, Bart., deputy-chairman, and carried unanimously.

It was then moved by Mr. GARDINER WILLIAMS, and seconded by Mr. G. J. WHITE, that the payment of a dividend on the first preference stock be deferred until after the next general meeting.—This was carried unanimously.

The CHAIRMAN stated that the prospects for the future of the company were excellent. Pits were being sunk on their line, which would have an excellent effect upon their traffic.

The meeting then terminated.

GREAT SOUTHERN AND WESTERN RAILWAY (IRELAND).

At the meeting in Dublin, on August 9, of the Great Southern and Western Railway (Ireland), at the Kingsbridge Terminus, Dublin, Sir William Goulding (chairman), who presided, alluded to the main features of the report, of which an abstract was given in a recent issue. He said that in 1913 and thereafter the accounts would only be presented once a year, and the June dividend would only be an interim one. He anticipated that in future they would be able to maintain a steady interim dividend of $4\frac{1}{2}$ per cent. The cost of the Roscrea accident was £52,600, all of which was paid out of the reserve fund, to which £35,000 had been added since these payments. The reserve fund was now £130,000, or £5,000 higher than it ever stood at. The increases in receipts were general over the whole system and indicated improved prosperity of the country generally. Excursion traffic accounted for one-half. Amongst the other increases was one of 12,000 tons in coals, which he also regarded as another indication of better times in the country, considering the fine season which they had had. Turning to the National Insurance Bill, he said that they were all in sympathy with any measure that would bring increased benefit to their employees, but they did not consider that Ireland in this matter should be treated in the same manner as England. They hoped that amendments might be introduced that would enable the contributions of the company and of the employed to give more benefits than are suggested in the present Bill. He was glad to see that the long-talked-of development of the Kilkenny coalfields was likely to take practical form, and if a new railway was constructed the company would work it at cost price for a few years to give them a good start.

EAST AND WEST YORKSHIRE UNION RAILWAYS.

The report of the East and West Yorkshire Union Railways Company for the half-year ended June 30, 1911, states that the gross revenue receipts amount to £11,597, as compared with £11,652 for the half-year ended June 30, 1910. The working expenses were £5,516, as compared with £5,357. After payment of the fixed charges, amounting to £2,310, there remains a balance of £3,571, to which must be added £2,232, brought forward from last half-year, making the sum of £5,804 to be dealt with, compared with £5,989 for the corresponding period last year. The directors recommend a dividend at the rate of 4 per cent. per annum on the preference stock and 1 per cent. per annum on the ordinary stock, carrying forward £2,602.

The total weight of goods and mineral traffic passing over the railway for the half-year was 422,501 tons, as compared with 450,092 tons carried in the half-year ended June 30, 1910, showing a decrease of 27,591 tons.

FURNESS RAILWAY.

The half-yearly accounts to June 30, 1911, were issued on Tuesday. Our usual analysis is appended:

CAPITAL.

Total expenditure	10,023,588
Total receipts (allocated as follows)	6,822,079
Ordinary stock	£2,642,000
Preference and guaranteed stocks	2,401,500
Debenture stock	1,739,441
Premiums	48,148

Balance to debit of capital account	411,500
---	---------

The expenditure in the past half-year amounted to £1,137, of which £634 was expended on lines open for traffic, £167 on working stock, and £336 on docks, stations, warehouses, etc. Estimated further expenditure—In the current half-year, £45,739; in subsequent half-years, not yet determined. Capital powers and other available assets, £321,857.

REVENUE.

	1911.	1910.
Passengers, parcels, mails, etc.	£101,792	£59,627
Goods, minerals, and live stock	186,820	195,251
Miscellaneous	17,381	17,458

Total receipts	£205,999	£272,336
Total expenditure	150,586	142,743

Net receipts	£115,413	£129,593
Balance from last half-year	3,170	2,009

Total net revenue	£118,583	£131,602
Prior charges	£48,041	£47,454
Steamers' depreciation fund	2,000	2,000
Preference dividends	57,597	57,597
Dividend on ordinary stock	7,908	*23,118
Balance to next half-year	1,037	1,523

Total	£118,583 ..	£131,602
† At the rate of 7 per cent. per annum.	At the rate of 11 per cent. per annum.	

The receipts for the past half-year show a decrease of £6,337, the expenses an increase of £7,843, and the net receipts a decrease of £14,180. The ratio of expenses to receipts is 56.61 per cent. (as against 52.41 per cent.).

TRAFFIC, ETC.

	1911.	1910.
Passengers—total number	1,394,411	1,334,660
Season-tickets	495	487
Merchandise (tons)	290,008	309,330
Minerals (tons)	1,000,293	1,849,952
Mileage—Lines owned	117½	117½
Partly owned	33½	33½
Lines worked	19	19
Total	170	170
Train mileage—Passenger	333,310	331,360
Goods	315,798	320,504
Total	649,114	650,864

The report states:—"That the Bill deposited in the present session of Parliament to extend the time of the sale of certain lands has obtained the Royal Assent."

Cockermouth, Keswick and Penrith Railway.—The directors' report recommends a dividend of $1\frac{1}{2}$ per cent. per annum on the ordinary stock of the company. The shrinkage in the carriage of coke from Durham to the West Cumberland iron works has prejudicially affected the receipts of the company.

Nottingham and Grantham Railway. The report for the half-year ended July 31, 1911, shows that the net revenue balance amounts to £24,943. The half-yearly rent has been received from the Great Northern Company, and the directors propose a half-yearly dividend of £2 0s. 10d. per cent. leaving a balance of £4,241.

Cleator and Workington Junction Railway.—The report for the half-year ending June 30 shows gross receipts were £35,636, including arrears of traffic receipts held in suspense, as compared with £31,231 for the corresponding half-year. The expenditure was £23,005, as compared with £19,527. The directors recommend a dividend of 4 per cent. per annum on the ordinary stock for the half-year ended June 30, carrying forward £215.

Clonakilty Extension Railway.—The half-yearly report states that the gross receipts from all sources amounted to £2,537, an increase of £85 over the corresponding period of 1910. After providing for the debenture interest and baronial guaranteed dividend, and placing a sum of £100 to general purposes fund, a sum of £352 appeared to credit of net revenue account, and out of this the directors recommended the payment of a dividend on the ordinary stock at the rate of 2 per cent. per annum for the half-year, carrying forward £102 to next account.

Gloucester Railway Carriage and Wagon Company.—In their report for the year ended June 30th last the directors express regret that they are not able to recommend a further dividend for the past year. They propose to take £10,000 from the reserve fund, and after deducting the loss, will carry forward £2,134 to next year's account. The loss is said to have arisen owing to contracts having been taken at severely competitive prices. The directors state that the orders now upon the books are being executed at remunerative prices, and they look forward to satisfactory results in the coming year. Mr. John W. Howard, owing to ill-health, retired from the position of general manager, and Mr. John J. Steinitz has been appointed to that position.

Maryport and Carlisle Railway.—At the half-yearly meeting held in Maryport on Wednesday, Mr. Hartley, who presided, said 43,000 tons less of North Eastern coke had been carried in the past six months owing to smelters using local coke. Their general traffic was improving. The London and North Western Company had decided to discontinue second-class traffic throughout the whole system, and, owing to their working arrangement, they would have to follow suit. He was sorry, because it would lessen the comfort and convenience of the public, but financially they would, perhaps, be better off. As to the labour unrest, their relations with their workmen were cordial. They had no reason to think the employees had any grievances, and if left alone they would remain contented. The report was adopted, and a dividend at the rate of 6½ per cent. was declared.

Neath and Brecon Railway.—At the half-yearly meeting in Charing Cross Hotel, London, on August 11, Mr. J. G. Griffiths, who presided, said that the gross receipts continued to be of a satisfactory character, having increased by £1,391. The total receipts for the half-year of all descriptions of traffic had been £40,226, as against £38,835 for the corresponding period of last year. Although the passenger receipts were slightly larger, the number of passengers had decreased by £2,261—the first and second-class showing a decrease of 361 and the third-class of 1,900 passengers. They had had steadily-increasing business all round. The negotiations with the Midland Company had been of a friendly nature, and had existed for some time, but no conclusion had been arrived at. They were going to press for a settlement. Notwithstanding the present labour troubles, they were on excellent terms with their men, and did not contemplate any trouble. Since the accounts were made up, their business continued to improve, and there was no reason why the current year should not prove as successful as the past year had done.

Mersey Railway Company.—At the ordinary general meeting of this company, held on Friday, July 28, the chairman alluded to the steady progress which the company is making. Since the introduction of electric traction, the number of ordinary passengers has more than doubled, while the number of season ticket holders has trebled. The working expenses have decreased from £36,000 in the first half of 1908 to £30,000 in the last half-year. Alluding to the increased economy with which the railway was worked, the chairman said that the reduction of the expenses was due to a great extent to the work of the engineer and general manager, and he believed that further economies would yet be effected. The revenue had increased by £4,115 in the past half-year, and after the payment of all expenses there was a balance of £8,061 available for payment of interest on the contingent debenture stock. As the payment of interest was, however, contingent on the revenue available in each separate year ending December 31, they could not make any distribution at this time, but the amount would be available for distribution at the next meeting. For the first time in the company's history they would then be able to pay some interest to the debenture holders, who had waited so long and patiently for some return on their capital.

Cork, Bandon and South Coast Railway.—At the 132nd half-yearly meeting held in Cork, on August 9, Mr. Joseph Pike, who presided and moved the adoption of the report, said the revenue receipts showed the satisfactory increase of £1,964. Both the ordinary passenger traffic and excursion traffic showed

satisfactory increases. The tourist traffic was only fairly satisfactory, owing to the attraction of the Coronation. The number of passengers carried was 220,818, showing an increase of 5,740, or 2.67 per cent. The passenger receipts amounted to £15,416, an increase of £724, equal to 4.93 per cent. The tonnage of goods carried amounted to 93,670 tons, representing in money £22,979, showing an increase in tonnage of 3,228 tons, or 3.57 per cent., and in money £1,241, or 5.70 per cent. The total increase in expenditure was £476, and the percentage of working expenses to receipts was 57.62, as compared with 59.03 for the corresponding half of 1910. After making provision for dividends on preference stock a balance of £6,302 was available, and they recommended the payment of a dividend at the rate of 3¼ per cent. on the ordinary stock, being an increase of ¼ per cent., and carried forward a balance of £2,402—an increase of £112. He was glad to say that the line being constructed by the Cork City Railways Company to connect their line with that of the G.S. and W. Railway Company, and steamships on the other side of the River Lee was nearing completion, and was expected to be ready by September next. The motion was adopted unanimously.

New Cape Central Railway.—The report shows that the balance for the year at the credit of the profit and loss account, after providing for the general expenses of working and maintaining the line, including trustees', directors', and auditors' fees, office and management expenses, etc., in London and at the Cape, amounts to £40,767, which, with the balance brought forward, makes £41,517. The four per cent. interest on the consolidated first mortgage debenture stock, the washaways account, and the reserve account (rolling stock) absorb £22,482, leaving a credit balance of £19,035, of which £18,943, being 4½ per cent. upon the cumulative income debenture stock, will be applied in payment thereof, in accordance with the trust deed, leaving a credit balance to carry forward of £92. The reserve of £12,000, set aside at December 31, 1903, to meet capital expenditure subsequently provided for under the reconstruction of the debenture stock, has been re-transferred, and reduces the debit balance of the profit and loss account at December 31, 1908, to £22,104. The directors report that the satisfactory progress made by the company during 1909 has been more than maintained during the year 1910. There is an increase in the traffic receipts of £9,871 over the previous year, and the train mileage has risen from 194,395 miles in 1909 to 206,946 miles in 1910. The earnings per train mile were 8s. 8.46d. and the expenditure 4s. 5.41d. leaving a profit of 4s. 3.05d. per mile for the year 1910, or an increase of 8d. per mile over that of 1909. According to present appearances, results of an equally satisfactory nature may be anticipated for the present year.

Isle of Wight Railway.—At the half-yearly meeting held in the Westminster Palace Hotel, London, on Wednesday, Mr. Percy Gilbert, who presided, said that the past half-year was a satisfactory one, and they could pay the proprietors the following dividends—viz., 4 per cent. per annum on the preference stock, 4 per cent. per annum on the preferred converted ordinary stock, and 2 per cent. per annum on the deferred stock. With regard to their future prospects it was too early to say what the present half-year would bring forth. The beautiful resorts of Ryde, Sandown, Shanklin, Ventnor, Bembridge, and other parts of the island were fully maintaining their popularity and were again full of visitors, and the company had every reason to look for a satisfactory half-year, particularly if the coal market became easier, although they had not to lose sight of the fact that expenses were steadily creeping up. The expenses he was particularly referring to were the new obligations constantly placed on railway companies by the Board of Trade, increased cost of insurance, etc. The only item calling for special comment was the increase in locomotive power, which was owing to the increase in cost of coal and general repairs. It would be expected that he would make some reference that day to the grave unrest amongst railway and other workers. It certainly was a cause of great anxiety to railway managements generally. He was, however, happy to tell them that so far as their own staff was concerned the loyalty and willingness generally extended by all grades was remarkable. He hardly need remind them that their principal revenue was derived from pleasure seekers, and during the holiday season their men certainly worked very hard, which they did most cheerfully and willingly, recognising that they were kept on throughout the long slack season. The board could not, of course, give leave during the summer season, but their manager, Mr. H. K. Day, was at present working out a scheme under which he would again give to the men the fullest leave possible after it closed. The report was adopted and the dividends declared.

RETIREMENT OF MR. H. A. IVATT.

APPOINTMENT OF HIS SUCCESSOR.

The announcement was made in Doncaster this week of the pending retirement of Mr. H. A. Ivatt, locomotive engineer to the Great Northern Railway, and chief of the extensive plant works at Doncaster. Mr. Ivatt's decision was not altogether unexpected. Railway officials have the option of retiring at the age of 60, and as Mr. Ivatt will have reached that age next month he has decided to relinquish work. He had always made up his mind to do so then, he told our representative.

By his retirement the West Riding of Yorkshire will lose a prominent personage, and Doncaster one of its best known citizens, as Mr. Ivatt has decided to make his future residence in the neighbourhood of Hayward's Heath, Sussex. In railway circles Mr. Ivatt's name is very widely known and respected. He has had a singularly successful career, and retires upon his pension with a splendid record.

Mr. Henry Alfred Ivatt, member of the Council of Mechanical Engineers, M.Inst.C.E., was born in September, 1851, being a son of the Rev. A. W. Ivatt, M.A., Rector of Coveney-cum-Maney, Cambridgeshire. He was educated in the upper school of Liverpool College. In April, 1878, he proceeded to the works of the London and North Western Railway Company, at Crewe, where he served his apprenticeship. At the end of that term he became an ordinary fireman on the London and North Western Railway Company's system, and discharged these duties for 12 months, receiving a fireman's wages only. He worked on all classes of trains—goods, minerals, and passengers—graduating up to the fastest expresses on the line running between London and Crewe and Crewe and Carlisle. In this practical way he obtained a splendid knowledge of the locomotive under all conditions.

From fireman Mr. Ivatt became assistant foreman of the running sheds at Stafford station, and in 1874 he went to Holyhead in charge of the locomotive district, remaining there for 2½ years. Following this he had charge of the locomotive department in the Chester district. In 1877 he was appointed district-superintendent of the Great Southern and Western Railway, Cork. In 1882 he became assistant locomotive engineer to the same company, at the Inchicore Works, Dublin, and in the year 1886 the company promoted him to locomotive engineer.

In this capacity he had a long and successful run till 1895, when the death of Mr. Patrick Stirling, at Doncaster, caused the Great Northern Railway Company to look round for a successor. The position was offered to Mr. Ivatt. He could not take up his duties at once, but in 1896 he commenced work at the plant works in Doncaster. During his *régime* at the plant works he has seen considerable extensions and witnessed a number of important improvements. He leaves his department in a high state of efficiency, and the severance of his long connection with the Great Northern Company is generally regretted. Whilst at Crewe he joined the 5th Cheshire Volunteer Battalion, and rose from private to the rank of captain.

When Mr. Ivatt took charge of the Great Northern locomotive department in 1896, he was at once confronted with the serious problem of bringing it into closer touch with traffic requirements. Towards the close of Mr. Patrick Stirling's career the remarkable and sudden increase in speed and the weight of express trains became so exacting as to require a thorough departure from conservative traditions. Here Mr. Ivatt stepped in, and soon justified the deservedly high reputation which he brought with him from across the Irish Sea. It was not until the close of 1896 that any engine exclusively of his design made its appearance on the metals of the Great Northern Railway, but when it did it marked a new departure so far as that line was concerned. It was an improved development of the four coupled passenger engines already in use, and apart from main characteristics afforded ample evidence of the change of *régime*.

Among Mr. Ivatt's contributions to the locomotive stock of the railway soon after he took up his duties was a further supply of the six-coupled goods engines. Comparatively few of these were put in hand at the Doncaster works, the greater part of the total of fifty-two built under his directions being the product of outside firms. About the middle of 1898 he produced from the Doncaster plant works a passenger express locomotive of a type novel in this country, and far exceeding in power and capacity any engine so far built for the Great Northern Railway. This engine embodied the general characteristics of what is known as the "Atlantic" type. It proved so successful that ten new engines were built of practically similar design and dimensions. Following this totally new departure in locomotive design, Mr. Ivatt brought out an enlarged pattern of the eight-

wheeled bogie passenger locomotive, and five engines were built at Doncaster of this modified type.

Another new departure was the production of an express locomotive with single driving wheel and a leading bogie. Subsequently it became necessary for exceedingly powerful engines to be provided to deal with the heavy mineral traffic of the line. Mr. Ivatt responded by designing a type of locomotive which bids fair to meet all requirements for years to come.

During the last few years almost every locomotive superintendent of note has designed a four-cylinder engine for express traffic, and it could scarcely be thought that an engineer of Mr. Ivatt's standing and ability would refrain from showing in practical form what his conception of a locomotive of this type was. Accordingly, in 1902, he designed a very fine engine, as his contribution to the series of the four-cylinder locomotives, which proved a noteworthy creation. It was a singularly fine-looking and powerful machine, and its design proved that he had no intention of allowing the Great Northern Railway to rest upon past laurels.

The fact is worth recording that Mr. Ivatt is but the third in the succession of chief locomotive engineers to the Great Northern Railway. Mr. Sturrock held the first appointment and retired in 1866; Mr. Patrick Stirling succeeded him, and held the appointment until his death in 1895, when Mr. Ivatt was appointed. The fifteen years during which Mr. Ivatt has filled the office from which he is now retiring have been years of high-speed pressure in the railway world generally, and more particularly so in the locomotive sphere. Locomotives have had to be designed to give increased speed, to cover greater distances, and to draw heavier loads. Mr. Ivatt has provided the Great Northern Railway with what is universally admitted to be the finest heavy type of long-distance locomotive in the country in the famous Atlantic. He has also designed at least half-a-dozen other types.

His principal designs have been the Atlantic express engine, with wide firebox boiler, cylinders 19in. diameter, 24in. stroke, wheels 6ft. 8in. diameter. Express passenger engine—cylinders 19in. diameter, 26in. stroke, wheels 7ft. 6in. diameter. Express passenger engine—cylinders 17½in. diameter, 26in. stroke, wheels 6ft. 8in. diameter. Passenger engine—six wheels coupled, side tank, cylinders 18in. diameter, 26in. stroke, wheels 5ft. 8in. diameter. Metropolitan passenger engine—four wheels coupled, side tank, cylinders 18in. diameter, 26in. stroke, wheels 5ft. 8in. diameter. Eight wheels coupled side-tank engine—cylinders 18in. diameter, 26in. stroke, wheels 4ft. 8in.

MR. IVATT'S SUCCESSOR.

Mr. H. M. Gresley has been chosen by the Great Northern Railway Company to become chief locomotive engineer in succession to Mr. Ivatt. He is the son of the Rev. Nigel Gresley, Vicar of Netherseil, Leicestershire, and belongs to a Derbyshire family, although he was born at Edinburgh. He was educated at Marlborough College, Wilts, and commenced his professional career at the Crewe works of the London and North Western Railway Company. He remained at Crewe for a period of five years under the late Mr. F. W. Webb, and then went to the Horwich works of the Lancashire and Yorkshire Railway Company as pupil under Mr. Aspinall. Working his way up he became assistant engineer in charge of the testing department at Horwich. From there he went to Blackpool, where he had charge of the locomotive sheds for eight months; afterwards he joined the carriage department as outdoor assistant superintendent. In due time he was appointed assistant works manager at Newton Heath, and acted in that capacity for 12 months. He was then promoted to the office of chief works manager, and later to the position of assistant superintendent. In 1905 Mr. Gresley left the service of the Lancashire and Yorkshire Railway Company and entered that of the Great Northern Railway, at Doncaster, as carriage and wagon superintendent. It is an interesting fact that Mr. Gresley is the first chief locomotive engineer appointed by the Great Northern Railway from the ranks of their own officials. His three predecessors—Colonel Sturrock, Mr. Stirling and Mr. Ivatt—were all brought into the position from other railways.

Tramway Over King's Cross Underground Station.—The Board of Trade have notified Islington Borough Council that they have approved the proposal of the London County Council for the construction of a tramway across the new bridge over the Metropolitan Railway at King's Cross Station. This will enable a connection to be made between the tramways in Gray's Inn, Caledonian and Pentonville Roads.

PARLIAMENTARY.

PROGRESS OF RAILWAY BILLS.

Railway Bills Completed.

As will be seen from our table showing the progress of railway Bills the work of the Parliamentary Session on these measures was completed yesterday before the adjournment till the autumn. All the Bills have been disposed of.

Railway Companies (Accounts and Returns) Bill.

This Bill, which has now been before Parliament for more than one Session, and which is a Government measure, was passed by a Standing Committee of the House of Commons on Tuesday. It will be remembered that it provides for yearly accounts and returns being furnished to the Board of Trade in a form set out in the first schedule, for the filing of certain accounts with the Registrar of Companies, the removal of the obligation to prepare half-yearly accounts, and other matters. On the motion of Mr. Tennant, Parliamentary Secretary of the Board of Trade, an amendment was adopted giving railway companies power to close their registers and books of transfer before the declaration of an interim dividend.* Mr. Jonathan Samuel suggested that Mr. Walter Rea's amendment to the first schedule, requiring a separate return of receipts and expenditures in respect of each separate service of steamboats, might be moved in the absence of Mr. Rea. Mr. Tennant declined to accept the amendment. He stated that the Bill had become an agreed Bill, after long negotiation between the Board of Trade and the railway companies. Mr. Jonathan Samuel said the practice was becoming more and more prevalent of things coming before Parliament already agreed between a department and those interested. The Committee were there to see whether things were right or wrong, and if arrangements were come to outside he did not see why they were there at all. They only came there to register what had already been agreed to outside. Mr. Tennant said members of Parliament ought to be grateful for these agreements, because they saved time and removed the grievance sometimes heard that legislation was not sufficiently considered. The amendment was withdrawn, and the Bill was ordered to be reported to the House.

Messrs. Hawtayne and Zeden, consulting engineers, have dissolved partnership by mutual consent as from June 30, 1911. Mr. W. C. C. Hawtayne will continue the business in his own name at the old address, 9, Queen Street Place, London, E.C.

GENERAL NEWS.

DERAILMENT DUE TO ALLEGED INSECURE LOADING.

An accident of an unusual character occurred on Monday last on the Great Western Railway, at Saltney, near Chester. About 12.40 a goods train was proceeding from Chester to North Wales loaded with pit-props and large ridge steel rollers, each weighing about five tons. At Saltney, owing, it is supposed, to the rollers not being properly scotched and rolling about in the carriage, two of the wagons left the line, and were precipitated down a 20ft. embankment at the end of Curzon Street, Saltney. The guard's van, fortunately, got wedged and kept the metals. The embankment was strewn with pit-props, and one large steel roller crashed through some railings on the street pavement. Three wagons nearer the front of the train also became detached from the engine and front van, and ran to near Saltney Station, when they left the metals and went crashing over the embankment. A breakdown gang despatched to the accident had a miraculous escape, a travelling crane toppling down to the foot of the embankment and turning an adjoining coach over on its side, injuring two men.

THE NEW S.-E. AND C. RAILWAY STEAMER.

The *Riviera*, the first of two new 23-knot turbine steamers which are to be placed on the Channel service of the South Eastern and Chatham Railway Company this year, has now commenced running. The vessel was built at Dumbarton, and is 315 ft. in length, 41 ft. broad, and 24½ ft. deep. The sister ship, which is to be named the *Engadine*, is now in course of construction.

Each vessel is of the awning-deck type, with a boat deck extending for a considerable length amidships. Arrangements are made whereby all the vessels' boats are swung outboard as soon as they clear the pier, and are stowed again before coming alongside at the other terminal port. This arrangement has the double advantage that the whole of the deck is left free as a passenger promenade, and in case of emergency the boats can be lowered into the water in a few seconds. A wireless telegraph office is fitted on board each boat. The first-class passenger accommodation is situated amidships. On

PROGRESS OF RAILWAY BILLS.

The following tables show the progress of Railway Bills to date, after the formal first reading stage:—

TABLE I.—BILLS ORIGINATING IN HOUSE OF LORDS.

NAME OF BILL.	PROGRESS IN HOUSE OF LORDS.			PROGRESS IN HOUSE OF COMMONS.			ROYAL ASSENT.
	Second Reading.	Result in Committee.	Third Reading.	Second Reading.	Result in Committee.	Third Reading.

Contractors to the Railway Companies.

the awning deck there are several private cabins. On each side of the midship house the deck forms a well-sheltered promenade, as the boat deck covers it from rain, and close bulwarks are fitted instead of the usual rails. On the main deck forward is a large and airy apartment for first-class lady passengers, and is so constructed that the windows may be kept open in almost any weather to ensure thorough ventilation.

The whole construction of the ship aft has been specially devised to suit motor cars. The appliances for steering the vessels are especially complete and powerful, and include an auxiliary rudder at the bow, worked into the shape of the vessel, arranged for steering when the ship is backing out of harbour, and worked by steam gear, controlled, like the main steering gear, from the flying bridge by a telemotor.

Water-tight bulkheads sub-divide the hull. The number of doors has been reduced to the minimum, but where absolutely necessary these have been fitted, and are of the latest type. They are controlled both from the doorways themselves and from the bridge, so that in an emergency all the doors can be closed immediately by the officer on watch; a special tell tale indicator shows when this has been accomplished.

The propelling machinery consists of three sets of turbines constructed at Dumbarton. Each turbine drives its own line of shafting and propeller direct. The steam generating installation consists of a set of water-tube boilers. There will always be one boiler off duty for cleaning, so that the vessel may remain in service longer than would otherwise be the case.

A NEW B.T.H. ELECTRIC LAMP.

The British Thomson-Houston Company, of Rugby, have now put on the market a new type of tungsten incandescent lamp, which promises to be a marked improvement upon anything else. For some three years back the company have been making tungsten filament lamps, and while the efficiency of these is very great in comparison with that of the old carbon filament lamp, the tungsten filament suffers owing to its extreme fragility. In the past it has not been found possible to produce tungsten except in the form of a powder. This powder is mixed with a binder and squirted through dies in order to produce a filament, which is afterwards dried and the separate particles to some extent welded together by means of the passage of the electric current through them. The resulting filament is very hard and liable to fracture on very slight shock. Thus it was that in the construction and mounting of the lamps there was great risk of losing many of them. The British Thomson-Houston Company and their associates in America have for a long time been carrying on careful experiments, with the object of trying to obtain tungsten in a ductile form, and this object has now been attained. The metal is so tough that it can be subjected to the process of wire-drawing in the same way as iron or steel, and there is now produced, not a filament of colored powder, but a continuous wire, tough and flexible, and approximating in breaking stress in proportion to section to piano wire, which can be wound and twisted as required; and in putting it into a lamp it is simply wound zig-zag from hook to hook of the top and bottom spider supports.

It is claimed by the company that this new discovery will make a revolution in incandescent lamp lighting. The lamp, which is called the "Mazda drawn-wire tungsten lamp," has an efficiency of 1.2 to 1.4 watts per candle, while the old carbon lamp had an efficiency of 3.8 to 4.2 watts per candle. The new lamp thus consumes only about one-third of the current of the carbon lamp, taking lamps of the same candle-power, and running on 200-volt circuits. Although the new lamp costs about four times the price of the old carbon lamp, when its long life is taken into account and also the economy in current consumption, it is much cheaper in the long run to use the new than the old. The Rugby works have now got a capacity of 30,000 Mazda drawn-wire lamps per week. It is anticipated that these lamps will be very useful for traction purposes, both on railways and tramways, and from the extreme toughness of the wire it will be very unusual to find any breakage caused by vibration.

Codification of Railway Law.—A petition from the Scottish Railway Traders' Association as to the codification and consolidation of railway law was submitted to the Glasgow Chamber of Commerce on August 14, and the chairman explained that they were asked to afford facilities for members signing it. The communication was remitted to the Home Affairs Committee for consideration.

RAILWAY NOTES.

Railway Bridges in the City of London.—A return recently issued shows that there are nineteen railway bridges in the City, three bridges across roads, and sixty-two across public ways connecting private premises. Of the latter forty-five were erected before 1900, and pay no rental. The remaining seventeen were subsequently constructed, and pay an annual rental to the Corporation.

Proposed London-Ostend Steamship Service.—It is reported that a London syndicate proposes to inaugurate a steamship line between the Port of London and Ostend, with the support of the Belgian Government. Tenders have been invited for the construction of two turbine boats embodying many novel features. The American lakes steamer has been taken as the type, and the cabins will be ranged round galleries.

Tirrill Regulators.—At the yearly meeting of the Mersey Railway Company, Mr. J. Falconer, M.P., chairman, in replying to a shareholder, stated that the Tirrill regulator, which had recently been installed in the station, was effecting a saving of £500 a year, so that it had abundantly justified itself. It may be of interest to note in this connection that the Tirrill regulators installed in stations where the voltage varied considerably have kept the voltage constant within 1 per cent.

The Contract for the Coventry-Foleshill Railway.—The contract for the construction of a branch railway from Coventry to Foleshill for the London and North Western Railway Company has been placed with the firm of Holme and King, of Liverpool. This new line is intended chiefly for mineral and goods traffic, and the line will run close to large motor and engineering works. It is probable that the railway will also be used ultimately for conveying passengers. The work is to commence very shortly.

London Railways Athletic Association.—The fourth annual sports have been arranged to take place on Saturday, August 26th, on the track at the Crystal Palace, beginning at 3 p.m. The attractive programme includes the seventh annual race for the one mile inter-railway club championship. Admission to the Palace and to the covered stand will be 1s., and all the Festival of Empire attractions will be available. Mr. W. H. Hyde, general manager of the Great Eastern Railway, is the president of the association.

Midlands and Bristol Waterway.—The Severn Commissioners on August 14 decided to arrange a conference of representatives from the Bristol Channel ports, Worcester, Dudley, Birmingham, and Wolverhampton, to discuss what steps, if any, should be taken to get the Government to authorise and provide for the improvement of the water communication between the Midlands and the Bristol Channel ports, and that it be referred to the committee to cause steps to be taken to bring about the conference. It was suggested that the Development Commissioners would assist a scheme, and that with improved facilities hundreds of tons of goods which now went by rail would be sent by water.

Competition for Epping Forest Traffic.—A year hence the Great Eastern Railway will have to meet additional tramway competition for the traffic to Epping Forest. At present there is a tramway service from Moorgate Street and Aldgate worked by the London County, West Ham, and Leyton Councils. The new service will be from Seven Sisters' Corner, Finsbury Park, and the terminus of the Walthamstow tramways communicating with the Forest, arrangements having been made for the connecting lines, two miles in length, to be constructed by the Middlesex County Council for the Metropolitan Electric Tramways Company. Joint running powers over the link have been arranged between the company and Walthamstow Council. The new route should prove beneficial to the London Underground Railways, as well as to the County Council tramways running to Finsbury Park.

Railway Engineers Wanted for Canada.—Lieut.-Col. H. E. Greenwood, assistant chief engineer of the Canadian Northern Railway, is now in England in search of resident engineers to take charge of a section of the new construction work now proceeding between Sudbury and Port Arthur, and this affords an excellent opportunity to railway construction engineers to obtain Colonial experience in railway work. Selected applicants, who must provide their own transit theodolite, level, and drawing instruments, are required to pay their passage to Toronto; but will have free transportation on the Canadian Northern lines. The salary offered is about £20 per month,

with board. Men going out will probably have to live in tents, as the area of construction is completely in the wilds, and be prepared to face cold in winter and put up with mosquitos and black flies in summer. The London offices are at Walbrook, E.C.

Great Western Railway Publicity Department.—The methods adopted this season to bring the attractions of the districts served by the Great Western Railway before the attention of holiday seekers are of a notable character. Descriptive articles dealing with numerous places are published in various journals as advertising matter, and great attention is being paid to the issue of handbooks of more than ordinary interest. The latest publication is a 24-page brochure, entitled "Cornwall and its Wild Life." A series of admirably selected views depict the impressive cairns, the shelly coves, the mighty cliffs, the prehistoric cromlechs, the smugglers' caves, and the wealth of fauna. The useful map, which clearly indicates the position of all the features mentioned throughout the booklet, goes to complete a dainty little publication which every traveller to Cornwall should read and every booklover will be pleased to keep. The superintendent of the line, G.W.R., Paddington Station, will forward a copy to applicants who send a penny stamp.

CARRIAGE OF EXPLOSIVES IN THE UNITED STATES.

On October 1 some revised rules of the Interstate Commerce Commission for the transport of inflammable articles and acids will come into effect. The Pennsylvania Railroad Company has had these rules printed and distributed, with instructions that every employé concerned must obtain a copy. The regulations were formulated by the Chief Inspector of the Bureau for the Safe Transportation of Explosives for the American Railway Association. They are based upon an Act of Congress approved May 30, 1908, and are designed to emphasise the dual responsibility in the interest of public safety that rests upon the shipper and the carrier. The particular purpose is that the shipper shall know the true characteristics of his shipments and familiarise himself with the requirements of the regulations in order that he may inform the carrier by use of prescribed certificates and labels. The importance of the regulations may be realised from the fact that there are in the United States more than 150 factories, the combined product of which in the course of a year is over 500,000,000 lbs. of explosives. In 1906 a single railroad transported over 91,000,000 lbs. of explosives, and used for this purpose 19,000 cars. Since the bureau referred to began its operations there has been very little trouble from the transportation of explosives, and it is believed that when the work of the bureau has been fully developed the danger from this source will have been reduced to a minimum. The thoroughness with which this campaign for safety has been pursued may be indicated by the fact that special supervision is given not only to the transportation of powder, dynamite and other heavy explosives, but it is now provided that special care shall be pursued in the handling of any material that gives off inflammable vapour at or below a temperature of 80 deg. Fahrenheit; materials subject to spontaneous combustion; materials other than acids that are liable to cause accidents by friction, concussion, absorption of moisture, contact with organic matter and otherwise. Special rules also govern the handling of compressed gases of liquids, as well as a list of the more virulent acids and corrosive compounds.

ROYAL INSURANCE COMPANY.—At a meeting of the general board of directors, held at Liverpool on August 8, Mr. E. Douglas Muir, of Messrs. Ross T. Smyth and Co., Liverpool, was elected a director of the company. The chairman reported that it had been arranged, in accordance with the wish of Mr. Charles Alcock, the general manager, that his retirement, which was announced at the annual general meeting, should take effect from the 31st instant, and that Mr. Alcock would then join the directorates of the Royal and the British and Foreign Marine Insurance companies, with a seat also on the London boards of those companies. Further, that Mr. William Roper, one of the company's assistant secretaries, would at the same date retire after 45 years' service. Consequent upon the above changes, Mr. George Chappell was appointed general manager; Mr. J. J. Atkinson, sub-manager; Mr. Alex. D. Robertson and Mr. Walter Carter, assistant secretaries.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING
RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40 to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last 2½ times the life of the ordinary
cast iron Block, with equal braking effect, and
slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe
can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all
classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways
we now supply.

Our Representatives, with suitable samples for trial, are
at your command.

The National Rail & Tramway Appliances Co. Ltd.,

COMPANY NOTICES.

East Indian Railway Company.

NOTICE is hereby given that the Registers of Annuities, Classes "A," "B," and "C," will be closed from Friday, the 1st, to Saturday, the 30th day of September, 1911, both days inclusive, for the purpose of preparing warrants in respect of the Annuities "A," "B," and "C," for the six months ending the 30th September, 1911.

Transfers of the above Annuities will not be received at this Office while the Registers remain closed.

By order,

C. W. YOUNG, Secretary.
28/30, Nicholas Lane, London, E.C.,
10th August, 1911.

TENDERS INVITED.

The Great Indian Peninsula Railway Company.

THE Directors are prepared to receive Tenders for the Supply of the following Stores, namely:—
Steelwork for Bridges. Pressed Steel Transverse Sleepers.
Points and Crossings. Steel Fishbolts, etc.

Specifications and forms of Tender may be obtained at this office on payment of the fee for the Specification, which payment will not be returned.

Tenders must be delivered in sealed envelopes, addressed to the undersigned, marked "Tender for Steelwork for Bridges," or as the case may be, not later than 11 o'clock a.m. on Thursday, the 31st instant.

The Directors do not bind themselves to accept the lowest or any Tender.

J. I. BERRY,
Secretary.

Company's Offices,
48, Copthall Avenue,
London, E.C.,
23rd August, 1911.

Bombay, Baroda, and Central India Railway.

THE Directors are prepared to receive up to noon, on Tuesday, 5th September, Tenders for the Supply of:—

1. Wheels and Axles.
2. Laminated Springs.

Tenders must be made on forms, copies of which, with specifications, can be obtained at these offices on payment of 21s. each (which will not be returned). The Directors do not bind themselves to accept the lowest or any Tender.

C. CROMMELIN,
Secretary.

Offices, Gloucester House,
110, Bishopsgate, London, E.C.,
24th August, 1911.

India Office—London.

THE Secretary of State for India in Council is prepared to receive Tenders from such persons as may be willing to supply Bridgework. The conditions of contract may be obtained on application to the Director-General of Stores, India Office, Whitehall, S.W., and Tenders are to be delivered at that office by Two o'clock p.m. on Tuesday, the 5th September, after which time no Tender will be received.

W. G. BUTLER,
Director-General of Stores.

India Office, Whitehall,
August 23rd, 1911.

Baroda State Railways.

TENDERS are invited for the following

Permanent Way Material:—
3,177 Tons Steel Flat-footed Rails (B.S.) 30 lbs. per yard, with Fishplates.
No. 678,940 Dog Spikes.

Specifications and Form of Tender can be obtained from Messrs. Rendel and Robertson, 13, Dartmouth Street, Westminster, S.W., on payment of One Guinea (which will not be returned). Tenders must be delivered at the same address before noon on Friday, September 1st, 1911.

Dublin and South Eastern Railway Company.

THE Directors of this Company are prepared to receive Tenders for the Re-construction of Three Bridges carrying the railway over the Ovoca and Anghrim Rivers, near Woodenbridge, Co. Wicklow.

Plans and specification may be seen, and forms of Tender and schedule of quantities obtained, at the office of the Chief Engineer, No. 52, Westland Row, Dublin, between the hours of 10 a.m. and 5 p.m.

Tenders, addressed to the undersigned, and marked "Tender for Bridges," will be received on or before 10 a.m. on the 6th day of September, 1911.

The Directors do not bind themselves to accept the lowest or any Tender.

M. F. KEOGH,
Secretary.

Westland Row Station, Dublin,
9th August, 1911.

OUR HOME RAILWAYS:

HOW THEY BEGAN, AND HOW THEY ARE WORKED.

THE STRIKE AND AFTER.

Yesterday, for the first time since the labour trouble became acute, there was a fair prospect of the restoration of industrial peace. It may be too early even yet to speak definitely, but there appears to be a disposition, for the present at any rate, to get back to work and to accept as final the terms agreed upon. It has been one of the most serious difficulties of the negotiations that the representatives of the men could give no guarantees that the settlements would be accepted, or if accepted would be adhered to. In some cases the terms agreed upon were regarded apparently as points of advantage from which fresh attacks could be made, while so recently as Thursday there was the possibility of a renewal of the worst disturbances because some 250 tramwaymen, who had struck without reason or notice, had not on their demand been welcomed back by the Tramways Committee. That they are to be allowed to return shows how little confidence is felt in the stability of the peace which has at length been secured only by considerable sacrifices on the part of employers. The railway settlement, of which full particulars are chronicled in the following pages, can, we fear, be accurately described as a truce only. It is not quite four years since a previous "settlement" was arranged, although this was to continue effective for seven years. It brought great advantages to the men and none to the shareholders, except the negative one of checking for the time the manoeuvres of the men's leaders to foment unrest among them. Indeed it was held out to the companies as an inducement to accept the Conciliation Boards that they would ensure freedom from labour troubles for seven years. Yet in little more than half that time we have had the greatest upheaval witnessed in a generation, and for no other reason than the dissatisfaction of the men because the boards have not proved quite so advantageous to them as they would like. Such circumstances in no other business relations would for a moment be regarded as a justification for tearing up private agreements, much less those publicly entered upon after formal inquiry and mutual acceptance of the result. Yet the railway unions did this, and did it without notice; they inflicted enormous injury on the companies, and they dislocated the trade of the country until they were promised that the whole matter should be reopened. Not the slightest penalty is exacted from them for the violation of their agreement, nor has any guarantee been obtained from them that they will abide by any new settlement which the Commission of five may recommend. It is not indeed surprising that the unions claim the result as a "victory." Men of rudimentary morals generally describe their escape from merited penalties for the infraction of business agreements as victories, and in the present case there is no doubt that such a triumph has been achieved. It is the wiser course to look the position squarely in the face. Henceforth the railway industry, and indeed almost any kind of industrial business in this country, must be described as a speculation, for the conditions are subject to such violent alterations without the shortest notice that it is impossible to take those long views which are necessary to the development of great commercial undertakings. When a body of workmen can inflict on the community such enormous

losses as have been experienced during the past few weeks, not because they are oppressed, but merely because they feel that some changes in wages and other conditions are desirable, it is clear that no one can forecast the future with any confidence. It is natural that the situation should have some encouraging features. No doubt legislation may be secured which will rectify some of the abuses—such as “peaceful picketing”—which now flourish, and railway shareholders may derive some consolation from the promise of the Government to allow some increase in railway charges if the Commission decide that further advances are to be made in wages or other burdens are placed upon the companies. It would be well, however, not to attach too much importance to this; for the treatment of the railway industry by Parliament has long been unsympathetic. Such efforts as the companies have themselves made towards greater economy by means of co-operation have been discouraged; and there will be very serious opposition to any legislation having for its avowed purpose to assist the companies at the cost of the public. Still the admission by Government that railway shareholders ought not to be required to bear alone all the expense of providing their employees with increased pay and other privileges—forced upon them not by economic reasons, but by the arbitrary requirements of organised labour endorsed by the State—is some advantage. It may at least serve to check further demands both on the part of the men and the public, whose requirements for luxury in travel at unremunerative fares is another difficulty which railway managers need to consider carefully.

FINANCIAL LOSS FROM THE STRIKE.

It is impossible to assess with any accuracy the total financial loss to the country caused by the railway strike, short as was the duration of the struggle. Neither is it possible to tell how much it cost the railway companies if increased expenses are reckoned as well as diminution in receipts. When the next half-yearly accounts are issued they will of course show the actual revenue and expenditure, and doubtless boards of directors will inform the shareholders to the best of their ability how much of the decrease in revenue and increase in expenditure was caused by the stoppage of work, increased payments to loyal men, getting the systems into full working order again and so forth. The traffic returns for last week, which are set out in the usual detail in our present issue, show the losses which were incurred in revenue during part of the time of the strike as compared with the revenue of the corresponding week of last year. The traffic returns for the week now ending will show further losses, as on many of the railways full work was not resumed till the week was well advanced. Taking last week's figures as they are, our usual traffic summary for the 52 principal railways of the United Kingdom shows that there was a decrease of over £481,000 in receipts as compared with the corresponding week of last year. The falling off is equal to 19.18 per cent. We also publish a detail table showing the individual decreases and percentages of decrease in the case of 32 leading companies. From this it will be seen that the companies which show the largest aggregate decreases were not in all cases the companies which suffered worst in proportion to their total revenues. The loss of £101,000 to the London and North Western is equal to 29.61 per cent., and that of £91,000 to the Great Western was 28.44 per cent. But the diminution of £50,000 in Lancashire and Yorkshire receipts is equal to 35.36 per cent. The most extreme case is that of the Barry Railway, where a loss of only £5,856 means one of 36.98 per cent. The figures for the London and South Western testify to the loyalty of its employees. The goods traffic on that line shows an actual increase of £1,500 for the week, and the comparatively small decrease of £4,700 in passenger traffic is attributable to the natural disinclination of the

public to travel at the time of the strike rather than to any inability of the company to provide facilities. The aggregate decrease is £478,000. In addition to the disaster to railway shareholders' prospects for the half-year, one has to take into view the facts that great numbers of other businesses were either seriously hampered or brought to a standstill, that great numbers of men employed in these businesses were temporarily and involuntarily thrown out of employment, that trade generally was partially paralysed, that in many districts railway and other property was damaged or destroyed by rioters, and that great numbers of troops and police had to be used to protect life and property. All these things mean heavy loss to the community, and it will be seen that, could all the items be correctly reckoned, the total loss to the country runs into a good many millions. And all to what end? Not a single individual among railway servants who struck will gain a penny beyond what he would have gained had there been no strike at all and had the executive of the men's unions accepted at first the offer of the Government which they did accept a few days later. A heavy responsibility lies on that executive and on those members of the unions who urged on the executive to extreme measures.

THE EMPLOYMENT OF TROOPS.

It is a question whether the Government were well advised in calling Parliament together again on Tuesday last instead of, as originally intended, adjourning from Friday of last week till October 24th. Of course on Friday, the 18th, the situation as regards the railway strike was extremely dubious, and it was thought desirable in view of possible emergencies that the House should meet again last Tuesday. As things turned out, however, there was happily nothing to be done on Tuesday but to agree to the adjournment till October 24th. But the opportunity was seized by some of the Labour members for a violent attack on the Government because the latter had employed the military forces of the Crown all over the country for the purpose of preserving order, protecting loyal workmen, safeguarding railway property, and keeping the railway service open so that the general public might be preserved from the risk of famine. For this highly praiseworthy course of action the Government were blamed by a handful of malcontents as if they had been guilty of some crime. The ostensible basis of the criticism was that troops were sent to places without requisitions from the local magistrates and to places where there was no disturbance, and that such action was likely to lead to riot on the part of those who objected to the presence of the troops. These flimsy objections are not new; one hears them from time to time when disorders arise. The real point of view of the objectors seems to be that if the local police cannot cope with disorder the rioting should be allowed to go on. In this particular case the great grievance was that by the presence of troops the paralysis of the railways was prevented and the strikers were baulked in their designs. The Government had a very good reply, and their position is supported by all right-thinking and law-abiding people. It was absolutely necessary—not on account of the railway companies, but on account of the safety and lives of the public—that the Government should protect the railways and keep them open for traffic. For that purpose it was desirable to employ great numbers of troops so that strikers and hooligans should be overawed without bloodshed. It was also necessary that the generals should be at liberty to move troops wherever desirable for protection purposes, wholly irrespective of whether there had been requisitions from the local authorities or not. Best of all, the policy was successful. The peace, as a rule, was kept, the railways were as well worked as the available employees could work them, and in few places were there anything like famine prices for the necessities of life. What might have happened if the Government had been less prompt is

exemplified by the case of Llanelly, where for a few hours the mob got out of hand and caused a great deal of damage not only to railway property, but to private property in the town. Far more people were killed through their own excesses, which produced an explosion, than by the rifles of the soldiers. Whatever different people may think of the merits of the settlement which has been reached, there will be a general opinion among the vast majority of the public that in the work of protection and peace preservation the Government did well. There is also the satisfaction that no railway strikers or other disaffected person can in the future cherish the delusion that a British Government will stand by during a railway strike and see the country sink into anarchy and famine. If any such delusion was entertained it must have been in connection with a Radical Government, which, in certain circles, is supposed to be more sympathetic towards the working classes than a Conservative Government. Even if that is admitted, it has been demonstrated— if any demonstration was needed—that sympathy with the working classes does not mean sympathy with riotous strikers, but, on the contrary, means a wide sympathy which takes into view the needs of the poor of the country who immeasurably outnumber all the strikers in this or any other railway strike.

Weekly Traffic Summary.

The traffic receipts for the week ended August 20, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,029,312, which was earned on 21,521 miles, being at the rate of £94 5s. 10d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,510,851, with 21,467 miles open, or £116 19s. 3d. per mile. There was thus a decrease of £481,539 in the receipts, an increase of 54 in the mileage, and a decrease of £22 13s. 5d. in the receipts per mile. Thirty-five of the returns distinguish between the receipts from passenger and goods traffic, and these show a decrease of £211,579 (or £10 4s. 9d. per mile) in the passenger receipts, and a decrease of £252,018 (or £12 3s. 5d. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-five railways for seven weeks in the passenger receipts has been £164,059, while the aggregate decrease in the goods traffic was £292,643. The aggregate receipts of the fifty-two railways for seven weeks (July 2 to August 20) amounted to £17,067,967, in comparison with £17,574,939 in the corresponding period of last year—a decrease of £506,972. The disastrous effect of the railway strike is indicated by the decrease of nearly half-a-million pounds in the receipts for the week as compared with the corresponding week a year ago. The decrease is equivalent to 19.18 per cent. The full effect of the strike is not revealed in the figures for the past week, as some of them do not include last Sunday, when the service was on some lines still curtailed.

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

WIRRAL RAILWAY.—At the rate of $\frac{3}{4}$ per cent. per annum on the ordinary stock, carrying forward £1,359.

QUÉBEC CENTRAL RAILWAY.—The board have declared the full interest on the seven per cent. income bonds, payable on September 1.

GREAT NORTH OF SCOTLAND RAILWAY (August 22).—At the rate of $\frac{1}{2}$ per cent. per annum on the deferred ordinary stock, placing £2,000 to renewals fund, and carrying forward £6,234. A year ago the dividend was at the same rate, and £5,504 was carried forward, but nothing to renewals fund.

The following is a list of the dividends for some years past:—

	1911.	1910.	1909.	1908.	1907.	1906.	1905.	1904.	1903.	1902.	1901.

Monetary conditions have not undergone much change in the past week, but rates showed a slight tendency to harden until the Bank Return was issued on Thursday. This revealed a position of strength, although the market's expectation of a large return of cash from the provinces was not realised. The Reserve has increased by £894,000; of this £850,000 came from abroad and was retained in the coin and bullion stock. The remaining £44,000 represents notes returned from circulation. The Reserve now stands at £29,503,397, an increase of 1.12 per cent., which brings the ratio to 57.13 per cent. as compared with 52.65 per cent. a year ago. Other Securities now stand at the low level of £25,223,000, showing a drop of £403,000, which may perhaps be attributed to repayments of advances made by the Bank in connection with recent banking operations in the north. Public Deposits have increased by £250,000, and Other Deposits by £233,000. The details of the return will be found, as usual, in another column. Continental exchanges have moved irregularly, and on balance stand at about the same level as a week ago. The industrial unrest in this country, which reached a climax on Saturday last, has exercised practically no influence on the state of the money market, and there is nothing at the moment to foreshadow any unusual movement. It is probable that the period of expanding trade is already giving place to a retrogression, and in the normal course this change should tend to easier money rates, and as speculation is reduced to the smallest proportions, money is likely to be plentiful for the present. Prices of securities have, however, now fallen to a point at which buyers may again be tempted to enter the markets, and when the labour troubles are more remote the stock

markets may become suddenly much more active than for some time past. Public confidence has, however, had such a series of shocks that the period of rest may very well be protracted.

On Saturday the Stock Exchange was closed in order that the waiters might enjoy their usual holiday. As the railway strike was then at its worst this was perhaps a fortunate circumstance, although the previous day the Railway Market had taken the situation with a calmness that astonished not a few. In fact, the firmness of prices for some days had been a little surprising in view of the possibility of a continuance of the trouble. Happily, at just after the eleventh hour on Saturday night, peace was proclaimed, and instructions were sent to the men to return to work. Consequently by Monday morning the railway services were more or less normal, and members were able to reach the House without difficulty. Markets opened with a burst of strength. Bears came in quickly to cover, and almost all Home Railways were put up from 1 to 2½. Later in the day reports arrived of difficulties attending the settlement, and prices slipped back somewhat, although the close was well above Friday's prices. The Brighton traffic, showing a decrease of £9,540, gave a foretaste of more important decreases to come later, and Brighton reacted sharply. London and South Western was well supported in view of the good relations which the loyalty of the employees showed to exist between the company and the men. United States railways were irregular but fell heavily towards the close. Union Pacific dropped from 178½ to 174½, and there were other and extensive declines. Canadas relapsed to 242, but Grand Trunks were firm, the Third Preference putting on ¾. On Tuesday the Home Railway market was more quiet, and prices moved within much narrower limits. In the American market, on the other hand, there were wide fluctuations. Liquidation was constant, and the market was very weak at times. Canadas and Grand Trunks also suffered from liquidation and closing prices showed numerous falls. The following day Moroccan questions loomed ominously in the minds of dealers, while the dilatory return of strikers to work caused some anxiety in regard to the final settlement. Consols, which throughout recent troubles have remained firm, were still unaffected, and at 78½ were actually a trifle better on the day. Home Railway prices began, however, to feel the effect of the stoppage of traffic for two days. The North Western traffic return, showing a drop of over £100,000, and Great Western return, with a fall of £90,000, appeared to surprise the market, and prices went back sharply. The full list of decreases will be found elsewhere, and they serve to show how great was the disorganisation on the Friday and Saturday; but it will be several weeks before anything like an accurate estimate can be obtained of the actual losses sustained by the railways. Sentiment in the American market was not at all agreeable to holders, and bears operated freely, encouraged by fears of United States Government investigations and attacks on capital. Canadas declined to 239½, but Grand Trunks remained steady. Mexican Ordinary fell ½. Thursday was a day of liquidation. Home railway stocks, United States and Canadian railways, Mexican railways, and other more speculative undertakings all suffered. The Trunk traffic increase of £21,000, though good, was not equal to sanguine expectations, and as a result the Ordinary lost ½ and the Third Preference 1½. The Mexican traffic decrease of £26,000 was not liked as the dividend prospects are becoming distinctly poor.

Yesterday brought a much better tone. Reports that the Moroccan trouble was settled came early in the day, and though there was some doubt at first as to the accuracy of the news, it was assumed later that good progress had been made towards an adjustment of the question. A cessation of the liquidating sales that had unsettled the markets recently was noticeable, while the news that the Liverpool tramway difficulty had been settled

was also an encouraging factor. Under these influences Home Railways opened at slightly higher levels, and though there was little demand prices remained firm. Good buying orders from Berlin helped American railways, and Canadas and Grand Trunks also appreciated. Mexican rails were a little firmer, and the South American group closed steady. Consols, although lower at first, recovered to 78½.

The movements of the week are set forth in the following table:—

THE RAILWAY STRIKE.

THE COMMISSION OF INQUIRY APPOINTED.

On Parliament re-assembling on Tuesday last Viscount Haldane, in the House of Lords, and the Prime Minister (Mr. Asquith), in the House of Commons, announced that the following gentlemen were appointed as the Royal Commission of Inquiry regarding the railway dispute:

The Right Hon. Sir David Harrel, K.C.B., K.C.V.O. (Chairman).

Sir Thomas Ratcliffe Ellis.

Mr. Arthur Henderson, M.P.

Mr. Charles Gabriel Beale.

Mr. John Burnett.

The Secretary will be Mr. J. J. Wills, of the Labour Department of the Board of Trade.

The terms of reference are as follow:—

To investigate the working of the Railway Conciliation and Arbitration Scheme signed on behalf of the principal railway companies and of three trade unions of railway employees, at the Board of Trade, on November 6, 1907, and to report what changes (if any) are desirable with a view to the prompt and satisfactory settlement of differences.

and the Lancashire and Cheshire Coalowners' Association. He is also secretary of the employers' side of the Board of Conciliation for the coal trade of the federated districts. In these capacities he has had great experience in settling disputes in the coal trade. The confidence which he has inspired is shown by the great success which has attended his efforts.

Mr. ARTHUR HENDERSON is member of Parliament in the Labour interest for the Barnard Castle Division of the county of Durham, a position which he has occupied since 1903. He was chairman of the Labour Party in the House of Commons from 1908 to 1910. At one time he was secretary of the Iron Moulders' Society, and he has been secretary of the North East Coast Conciliation Board since 1904. He is also a member of the labour panel of the Board of Trade Court of Arbitration. He has never identified himself with extremists, and his experience in arbitration will be of much service to the Commission. His latest work in conciliation was to act last week as one of the intermediaries between the Government and the Joint Executive of the men's unions.

Mr. CHARLES GABRIEL BEALE, is a member of the firm of Messrs. Beale and Co., of 16, Great George Street, Westminster, and 12, Newhall Street, Birmingham, solicitors to the Midland Railway Company. Mr. Beale has in his professional capacity had great experience in railway affairs, and is both a sound business man and one of wide interests. This is clear when

Mr. A. Henderson.

Sir T. R. Ellis.

Sir D. Harrel.

Mr. C. G. Beale. — Mr. J. Burnett.

First Meeting of the Royal Commission of Inquiry.

Sir DAVID HARREL, the Chairman, is one of those permanent Government officials of whom the country hears comparatively little, but who are men of great ability and carry on with success administrative work which is often of great difficulty. Sir David, who was at one time Chief Commissioner of Police for Dublin, was Under-Secretary for Ireland from 1893 to 1902, during which time he won the confidence and admiration of successive Lords Lieutenant and Chief Secretaries. He is now chairman of the Irish Inland Fisheries Commission and one of the official members of the Congested Districts Board. In one direction his experience has specially fitted him for the task now set, because he is a member of the panel of chairmen of the Board of Trade arbitrator he has dealt with a large number of important cases. Among them were the dockers' trouble at Newport, the claim of Messrs. Houlder Brothers for damages against Newport Corporation, and the disputes affecting the firemen in tinplate works in South Wales, the patent fuel workers at Swansea, the carters and quay workers at Londonderry, the ironstone miners in Cleveland, and the Manchester tramway workers. He is thus no novice in the difficult kind of work to which he is now called.

Sir THOMAS RATCLIFFE ELLIS, who was made a Knight at the Coronation of the present King, is a man of extraordinary experience in connection with the coal industry, and he is also familiar with arbitration in trade disputes, as he is a member of the employers' panel of the Board of Trade Court of Arbitration. He is secretary of the Mining Association of Great Britain

it is mentioned that he is chairman of the South Staffordshire Waterworks Company, and a director of the London City and Midland Bank, and is Vice-Chancellor of Birmingham University, a Justice of the Peace, and an alderman of the City of Birmingham.

Mr. JOHN BURNETT was general secretary to the Amalgamated Society of Engineers from 1875 to 1886. In the latter year he entered Government service by being appointed the first Labour correspondent of the Board of Trade. During the existence of the Labour Commission from 1891 to 1894 he acted as joint secretary along with Mr. Geoffrey Drage. When the Commercial, Statistical and Labour Department of the Board of Trade was formed in 1893, Mr. Burnett was appointed chief Labour correspondent. He has acted as Board of Trade conciliator in numerous cases, and though he retired in 1907 he sometimes is engaged in similar work still. Thus he also has much experience for the work now in hand.

We now append a summary of events in connection with the strike since Saturday last.

THE SETTLEMENT.

Prolonged negotiations, lasting for some twelve hours last Saturday, resulted in a settlement. Mr. Lloyd George (Chancellor of the Exchequer), Mr. Sydney Buxton (President of the Board of Trade), Mr. G. H. Claughton (chairman of the London and North Western Railway), Sir Guy Granet (general manager of the Midland Railway), Mr. Ramsay Macdonald, M.P. (chairman of the Labour Party), Mr. Arthur

Henderson, M.P., Mr. G. H. Roberts, M.P., and the representatives of the four railway trade unions carried on the negotiations at the offices of the Board of Trade, and the President of the Board had also the valuable assistance of Sir H. Llewellyn Smith and Mr. G. R. Askwith. At half-past eleven at night the official announcement was made that an agreement had been reached. The text of it, along with the proposals of the Government as to the Special Commission of Inquiry, is as follows:—

Acting on representation made to the railway companies by the Government, they to-day empowered Mr. Claughton and Sir Guy Granet to confer on their behalf with representatives selected by the joint executives of the trade unions of railway

After prolonged discussion the following settlement was unanimously arrived at, and signed at 11 p.m.:—

TERMS OF SETTLEMENT OF THE RAILWAY DISPUTE.

Signed on August 19, 1911, at the Board of Trade, on behalf of the railway companies who have adopted the Conciliation Scheme of 1907 and of the joint executives of the trade unions of railway employees and of the Government and the Board of Trade:—

(1) The strike to be terminated forthwith, and the men's leaders to use their best endeavours to induce the men to return to work at once.

(2) All the men involved in the present dispute, either by

Sir T. Ratcliffe Ellis.

Sir David Harrel.

Mr. A. Henderson.

employees with a view to discussing with them the suggested terms of settlement drafted by the Board of Trade.

The Conference met at the Board of Trade offices at 3 p.m. There were present Mr. Claughton and Sir Guy Granet on behalf of the companies; Messrs. Bellamy, Williams, Thomas, M.P., Fox, Lowth, and Chorlton on behalf of the men; and the Chancellor of the Exchequer, the President of the Board of Trade, Sir H. Llewellyn Smith, and Mr. G. R. Askwith on behalf of the Government and the Board of Trade. Mr.

Ramsay MacDonald, M.P., was also present.

During the course of the Conference Mr. Claughton stated that upon certain representations of the Government Sir Guy Granet and himself had authority from the companies to meet the representatives under the special circumstances and with a view of discussing the suggested terms of agreement. The terms had been discussed and agreed. Mr. Claughton and Sir Guy Granet further stated that the recommendations of the Commission would be loyally accepted by the railway companies, even though they be adverse to the contention of the companies on any question of representation, and should a settlement be effected, any traces of ill-will which might have arisen during the strike would certainly be effaced.

Mr. C. G. Beale.

Mr. John Burnett.

strike or lock-out, including casuals, who present themselves for work within a reasonable time to be reinstated by the companies at the earliest practicable moment, and no one to be subjected to proceedings for breach of contract or otherwise penalised.

(3) The Conciliation Boards to be convened for the purpose of settling forthwith the questions at present in dispute so far as they are within the scope of such boards, provided notice of such questions be given not later than 14 days from the date of this agreement. If the sectional boards

fail to arrive at a settlement, the Central Board to meet at once. Any decisions arrived at to be retrospective as from the date of this agreement. It is agreed that for the purpose of this and the following clause "rates of wages" include remuneration whether by time or piece.

(4) Steps to be taken forthwith to effect a settlement of the questions now in dispute between the companies and classes of their employees not included within the Conciliation Scheme of 1907 by means of conferences between representatives of the companies and representatives of their employees who are themselves employed by the same company, and failing agreement, by arbitration to be arranged mutually or by the Board of Trade. The above to be a temporary arrangement pending the Report

of the Commission as to the best means of settling disputes.

(5) Both parties to give every assistance to the Special Commission of Inquiry, the immediate appointment of which the Government have announced.

(6) Any question which may arise as to the interpretation of this agreement to be referred to the Board of Trade.

Signed:

(1) On behalf of the Railway Companies,

G. H. CLAUGHTON.

W. GUY GRANEL.

(2) On behalf and at the request of the Joint Executives of the trade unions of the railway employees:

For the Amalgamated Society of Railway Servants,

A. BELLAMY.

J. E. WILLIAMS.

J. H. THOMAS.

For the Associated Society of Locomotive Engineers and Firemen,

A. FOX.

For the General Railway Workers' Union,

T. LOWTH.

For the Signalmen's and Pointsmen's Society.

S. CHORLTON.

(3) On behalf of the Government and the Board of Trade,

D. LLOYD GEORGE.

SYDNEY BUXTON.

H. LEWELLYN SMITH.

G. R. ASKWITH.

THE SPECIAL COMMISSION.

The following are the proposals of the Government with regard to the Special Commission of Inquiry into the working of the Conciliation Scheme of 1907:—

The Commission to be appointed with the following reference:—

To investigate the working of the Railway Conciliation and Arbitration Scheme signed on behalf of the principal railway companies and of three trade unions of railway employees at the Board of Trade on November 6, 1907, and to report what changes (if any) are desirable with a view to the prompt and satisfactory settlement of differences.

The Commission to consist of five members, including members representing employers and workmen in equal numbers, with an impartial chairman, the names to be announced if possible by Tuesday and the Commissioners to meet during next week.

The Commission to proceed with its inquiries as expeditiously as possible, and to report with the least possible delay.

Assurances have been given by both parties that they will accept the findings of the Commission.

The Government have given an assurance to the railway companies that they will propose to Parliament next Session legislation providing that an increase in the cost of labour due to the improvement of conditions for the staff would be a valid justification for a reasonable general increase of charges within the legal *maxima*, if challenged, under the Act of 1864.

CONGRATULATIONS BY THE KING.

The King sent the following telegram to the President of the Board of Trade:—

Bolton Abbey, Aug. 26.

To Right Hon. Sydney Buxton, Board of Trade, London.

Rejoice to hear that railway strike has been declared at an end. Congratulate representatives of railway companies and representatives of men on successful termination of negotiations. Feel sure that this satisfactory solution is in a great measure due to your untiring efforts of the last few days.

GEORGE R.I.

His Majesty sent the following message to Mr. Lloyd George:—

The Chancellor of the Exchequer:

Very glad to hear that it was largely due to your energy and skill that a settlement with regard to this very serious strike has been brought about. I heartily congratulate you, and feel the whole country will be most grateful to you for averting a most disastrous calamity. It has caused me the greatest possible anxiety.

GEORGE R.I.

The King further telegraphed congratulations to the Prime Minister and the Government, and in another message to Viscount Haldane, Secretary for War, he expressed to officers and men his appreciation of the manner in which they had performed a very difficult duty and of the forbearance and self-restraint shown by all ranks.

FOLLOWING UP THE SETTLEMENT.

The men's Executive sent telegrams to the branches of their societies all over the country in the following terms:—

"Joint Executive to settle strike. A victory for trades unionism all round. Men must return to work immediately."

On Sunday the Executive issued the following manifesto to railway workers:

After a brief but magnificent struggle a settlement has been arrived at between the representatives of the railway workers and the railway companies sitting in joint conference, and it has been decided to ask you to accept the settlement and to return to work at once.

It is necessary to point out that the trouble originated in Liverpool and district, where nearly 100,000 railway workers came out on strike for better conditions and were immediately dismissed from the service of the companies. In order that these men should have their position secured other men came out at Manchester, Stockport, Sheffield, and other centres, and there was a general demand for a national stoppage. The executives of the four railway organisations met at Liverpool and determined to give the companies 24 hours' notice that unless a settlement of the matters in dispute was arrived at between them and the whole of the organisations concerned the whole of the men on the railways would be called out. When this statement was made public the Government at once sent for the managers and representatives of the companies and also the four secretaries of the men's societies to meet them. At first there was no response to the overtures of the Government and the President of the Board of Trade, and they then wired for the whole of the members of the Joint Executive to come to London.

Without going into details, it is only necessary to state here that the efforts to bring the parties together proved abortive and a national strike was declared. So magnificently did the men respond to the call that within 48 hours the representatives of the Railway Companies' Association met the representatives and officials of the men's societies face to face to negotiate a settlement. That settlement secured that all the men who had been dismissed or who had come out on strike should return to their work with full and complete unanimity, and thus the immediate and first object of the strike was secured—viz., no man who responded to the call of his leaders should suffer, and those who struck work should not only return to their former position, but we have an absolute guarantee that no malice will be shown by the companies, and we have also secured the very definite pledge that all the long standing grievances of the men shall be immediately considered and in a manner foreign to our past experience.

An urgency Commission is to be immediately set up, which will consider the whole question of settling disputes between the companies and our men, adjusting conditions of service, the working of conciliation boards, and the question of representation. It is important to remember that the railway companies have agreed in writing to accept the findings of that body, even if it recommends "recognition" of the unions. We have no hesitation in saying that in addition to having won official recognition in negotiating the present dispute our evidence before the Commission will be such that justifies us in saying before many weeks are over railway workers will have won a charter long enjoyed by every other class of the community. We would therefore urge you to loyally accept the agreement and demonstrate your confidence in the executive and representatives of the four societies, who, by working together, have not only shown their power and taught our opponents a lesson, but by the loyalty which has been displayed have swept away the petty tyranny that has for years been the cause of so much unrest.

In cases where we are not bound by the Conciliation Agreement of 1907 the grievances of the men in respect to remuneration, etc., are to be immediately considered by representatives of the men and the railway companies, it being understood that the men may select as their representatives any of their fellow employees, irrespective of the grade to which they may belong and the place where they may be residing. This splendid success has only been accomplished by the justice of our cause, the perfect cohesion and unanimity of purpose between the four executives conducting the campaign, and the loyalty and courage of the rank and file of our organisations. It must be clearly understood that this settlement is contingent upon the promises of His Majesty's Government and the representatives of the Railway Association being faithfully adhered to. Every assistance will be given to the Government and the railway companies to establish with us a lasting peace in the railway service, providing they do their part. Prudence demands that we shall still remain ready to take up the battle again should occasion require. In this dispute we have to thank the Labour Party, especially Messrs. Ramsay MacDonald, A. Henderson, and G. H. Roberts, for the splendid assistance rendered both in Parliament and during the negotiations which have been proceeding. This settlement was not arrived at until a statement had been made by the Board of Trade that the lock-out at Liverpool would be withdrawn immediately the railway dispute was settled.

We urge every non-unionist to immediately join one or other of the organisations concerned, and do their part in assisting us to

further improve the conditions of the railway worker and enable him to live a more humane and satisfactory existence.

HYDE PARK DEMONSTRATION.

A great gathering of railway employees took place in Hyde Park on Sunday, when from six platforms speeches were delivered by leaders of the unions. The proceedings were orderly. The speakers were very jubilant over the result and their auditors appeared to be in a like frame of mind. The general tone may be gathered from the following summary of the remarks made by Mr. J. H. Thomas, M.P. :—

He said that for the first time the British public had now realised what the railwaymen's power was if they only exercised it, and so had the railwaymen themselves. Within forty-eight hours the representatives of the companies, speaking on behalf of their trade union, met the representatives of the unions face to face. This statement was received with round upon round of cheering. Mr. Thomas then emphasized that when the companies had met them half their difficulties were over. Referring to the promise of legislation to allow the companies to increase their charges he said he did not care what the companies did so long as they increased the wages and improved the condition of the men. He prophesied that within two months any deputation of railway employees desiring to see the officials would be accompanied not by men who could be victimised but by their own officials. They had won a magnificent victory, and he hoped they would go back without any carping spirit or resentment against those who would not come out. Just as he hoped that they would bury the hatchet he trusted the companies would realise their responsibility.

SERIOUS RIOTS AT LLANELLY

On Sunday troops in London and many other districts were moved back to their stations. On Saturday, while the strike was still in progress and was extending, disturbances took place in various districts and attempts to wreck and damage trains were not infrequent. In the metropolis nothing of the kind was reported, but the North London and City and South London Railways were shut down for the day owing to employees joining the strikers. On the other railways in London matters were much the same as on the preceding day (Friday)—that is to say, the Great Central was practically paralysed, others were working limited services, and one or two others had almost full services. The most serious disturbances occurred at Llanelly where seven persons were killed and many were injured in riots on Saturday and on Sunday morning. As the result of an attack on a train a conflict between rioters and soldiers took place. The soldiers were obliged to fire on the crowd, killing two men and injuring several others. At midnight the mob attacked magistrates' houses, and then set fire to a goods shed at the railway station. They also fired some wagons, and as one of these had explosives on board an explosion took place which killed five persons and injured many others. The troops do not seem to have been sufficiently numerous to cope with the rioters, but order was ultimately restored.

RESUMPTION OF WORK.

The reports on Monday morning showed that work was being generally resumed, but Newcastle and Manchester were exceptions to the rule. Mr. Butterworth, general manager of the North Eastern Railway, issued an intimation to the public on Sunday that the settlement did not include the North Eastern Railway Company and that the train service for some days might be seriously restricted. It was also announced that men might resume work as required, but that until the directors had considered the situation the manager was not in a position to discuss conditions of reinstatement. At Manchester the men threw over their Strike Committee and refused to return to work. Carlisle men also refused. In Liverpool, however, the men were more docile, and the settlement was the more acceptable in view of the inquiry by a Home Office Commission consisting of Mr. T. P. O'Connor, M.P., Colonel Kyffin-Taylor, M.P., and Mr. D. J. Shackleton, regarding the labour troubles of the port.

Enormous numbers of Lancashire working people suffered great hardships on Saturday because of the interruption of the train services. They were returning from their holidays spent in the Isle of Man, in Blackpool, and elsewhere, and failing railway communication many of them started to walk to their homes in the inland towns. Others camped out till trains could be got, and others who had money took apartments again.

QUIETING DOWN.

On Monday the strikers in the Manchester district thought better, and a steady return to work set in. The same statement applied to Liverpool, so far as railway servants were concerned, but there were still difficulties as to the dock strike. At various centres on the Midland Railway, however, and all over the North Eastern Railway the men refused to resume

work, on the ground that the terms of reinstatement were not satisfactory. Men whose places had been filled by non-strikers often found that they could only obtain re-engagement in a lower grade and at a lower wage. During the day the men's Executive had another conference with representatives of the Board of Trade, and it was announced that various satisfactory adjustments had been made.

The directors of the North Eastern Railway held a special meeting during the day at York, and subsequently issued the following statement :—

Although the North Eastern Company were not represented at or invited to the Board of Trade conference, and are not parties to the terms of settlement signed on behalf of the other railway companies, and although the North Eastern men have illegally joined in the strike arising on the other railways out of a dispute which did not exist on the North Eastern, the company are willing to allow all men on strike to resume work on the terms of reinstatement agreed to on behalf of the other railway companies at the Board of Trade on August 19, which read as follows :

"All men involved in the present dispute, either by strike or lock-out, including casuals, who present themselves for work within a reasonable time, to be reinstated by the companies at the earliest practicable moment, and no one to be subject to proceedings for breach of contract or otherwise penalised"—subject to the following conditions :

"(1) Men to resume work without delay.

"(2) Men to work amicably with and not to molest or annoy such of the companies' employees as have not joined in the strike.

"(3) Either the company or the men to be entitled to require the adoption of whatever procedure may be recommended by the proposed Commission in their report as the best means of settling disputes."

At meetings of the men held in the evening dissatisfaction was expressed with the board's announcement. Serious disturbances were threatened at Darlington, and 1,500 soldiers were drafted into the town.

Train services on most of the railways in the country had become practically normal on Tuesday. The directors of various companies issued messages of thanks to their servants who had remained loyal, and in different districts the public contributed subscriptions to funds for the reward of those men. The directors have also promised double pay or other substantial recognition of the services of the loyal men.

THE SETTLEMENT COMPLETED.

Tuesday evening saw practically the end—for the present, at least—of the railway troubles. As the result of further conferences at the Board of Trade, it was arranged that all the Midland Railway strikers should be reinstated in their old positions at their old rates of pay within fourteen days. Regarding the North Eastern Railway, a deputation from the Executive of the four unions travelled to York, where they conferred with Mr. Butterworth, the general manager. An agreement was arrived at under which the men are to be allowed to return to work on the terms of reinstatement settled at the Board of Trade meeting last Saturday. It was also provided that the men should return without delay and should not molest the men who had not come out on strike. It was also a condition that the company held themselves free to adopt whatever procedure might be recommended by the Commission in their report as to settling disputes. These terms, it will be noted, are practically the same as those offered on the previous day by the directors. During Tuesday there was again some disorder at some of the North Eastern Railway centres where the men were still on strike. Elsewhere in the country the railway situation was back to the normal. The deadlock at Liverpool as regards employees at the port continued, the question being the reinstatement of tramway employees who have been on strike. Rioting occurred in some places in Wales, but this was an anti-Jewish outburst having no connection with railway matters.

THE EMPLOYMENT OF MILITARY.

In spite of the appeal made by Mr. Asquith in the House of Commons on Tuesday that the subject of the strike should not be discussed at present, a number of Labour members severely criticised the action of the Government in employing troops to preserve order, protect the railways, and keep traffic open. Their particular complaint was that troops had been sent into districts where the local authorities had not made a requisition for them. Mr. Churchill, the Home Secretary, was easily able to answer the complaint by showing that it was necessary to give the generals commanding power to move the troops to whatever places were deemed desirable for the protection of railway property. The Labour men were really angry, however, because the Government had foiled the strike by securing railway property and by seeing that for the benefit of the public

trains were run. Underlying such arguments as were used by Mr. Keir Hardie, Labour member for Merthyr Tydvil, were really the principles of anarchy. Mr. Lloyd George, Chancellor of the Exchequer, made a slashing reply to Mr. Keir Hardie, and the attitude of the Government was supported by Mr. Austen Chamberlain on behalf of the Opposition. Perhaps one of the most effective points brought forward from the Government side was one made by Mr. Churchill, and moreover it is one which many people may have overlooked. It is the fact that if soldiers are to be employed at all for keeping the peace they should be employed in large numbers. It is easy for a small body of troops armed with deadly weapons to put down a riot with loss of life. But it requires a large body of troops to prevent a riot beginning, or, if it has begun, to stop it without the shedding of blood. The debate in the House of Commons was kept up for five hours, and when it came to an end it was found that the malcontents who had been making so many mischievous speeches could only muster 18 votes. They voted for the House meeting again on Tuesday next, with the object of their being enabled to indulge in more wild talk if so disposed, but the Government's proposal to adjourn till October 24 was easily carried.

HAPPENINGS ON WEDNESDAY.

FIRST MEETING OF COMMISSION.

The Royal Commission of Inquiry held their first meeting on Wednesday at the Royal Commissions House, Westminster, when all the Commissioners were present. The proceedings were private. The Commission, after discussing questions of procedure, took formal evidence of the Agreement of 1907 from Mr. W. F. Marwood, assistant secretary in charge of the Railway Department of the Board of Trade, and then adjourned till Monday next. It was afterwards stated that it had been decided to admit representatives of the press during the hearing of evidence. The Commission will sit daily except on Saturdays and Sundays.

A PROTEST.

The Joint Executive of the four unions at a meeting in London on Wednesday passed the following resolutions:—

"That the attention of this Joint Executive having been called to the fact that some railway companies are not giving effect to the agreement arrived at on Saturday, August 19, we desire to inform our members and all concerned that we intend to enforce the agreement to the letter and the spirit."

"That this meeting of the Joint Executive learns from the announcement in the House of Commons last night that Mr. Beale, solicitor to the Midland Railway Company, has been appointed on the Commission. We therefore enter an emphatic protest against what is, in our opinion, a serious tendency to prejudice what should be an impartial tribunal to consider the case submitted to it, and therefore the statement in the press this morning that the men's representatives had agreed to its composition is utterly untrue. Nevertheless, we will endeavour to faithfully carry out Clause 5 of the agreement of Saturday, August 19."

As a result of the second resolution, an official denial has been issued of the statement that Mr. Beale is solicitor to the Midland Railway Company.

A FRESH COMPLICATION.

Liverpool Corporation Tramway Committee having refused to reinstate 250 uniformed men who went on strike, the local Strike Committee who have run the dispute in connection with dockers and others issued a manifesto on Wednesday forbidding all strikers in the city to return to work. They also sent a deputation to London to confer with the Joint Executive of the railway men's unions and the National Transport Workers' Federation. The meeting in London was held in the evening, and as a result it was decided to send telegrams to the Lord Mayor of Liverpool, the Board of Trade, and the Prime Minister requesting an answer to the question whether the Liverpool tramway strikers would be reinstated before noon on Thursday. Mr. Askwith, of the Board of Trade, proceeded to Liverpool on Wednesday night, as the malcontents threatened to organise a national strike on behalf of the Liverpool tramwaymen thrown out. The difficulty in which the Tramway Committee were placed was that their loyal men threatened to cease work if the strikers were reinstated. On Wednesday there was peace on the North Eastern Railway practically all the men having returned to work.

The text has been published of an "open letter" circulated by the Amalgamated Society of Railway Servants among non-union railwaymen in the north-east of England urging them to join the union and threatening them if they do not.

The London dockers' dispute with the short sea traders was settled on Wednesday through the mediation of the Board of Trade and the Local Government Board.

TRADE UNION AGREEMENT.

The day closing saw the conclusion, for the time being, of the troubles in Liverpool, and a general order was issued for transport workers and others on strike to resume work. Mr. Askwith, of the Board of Trade, was busy during the day interviewing the various parties concerned. The Liverpool Strangers' Committee made great representations to the Corporation Tramway Committee to give in to the demand for reinstatement of the tramway employees who had struck work. The Tramway Committee, in the afternoon, when it was pointed out by Sir Charles Petrie to the vacancies created by the strike of certain members of the uniformed staff had been filled up, and that it would be a gross injustice to discharge men who had come forward in a time of difficulty. The seriousness of the threat of a general strike was, however, before the Committee, and ultimately a compromise was adopted in the form of a resolution that the men should be reinstated "as and when required, and satisfactory to the general manager." The strikers were faced with what interpretation might be placed on the words "as and when required"; but assurances were given to them that the resolution would be carried out sympathetically with a view to reinstatement of all the men at as early a date as possible. The Strike Committee met, accepted the proposal, and issued a manifesto asking all strikers in Liverpool to resume work.

THE MEN'S EXECUTIVE.

The Joint Executive of the men's unions passed a resolution on Thursday repudiating "the unwarrantable attack by the Chancellor of the Exchequer, Lloyd George, upon Keir Hardie." The Executive of the Amalgamated Society of Railway Servants agreed to the following:—"That in view of the splendid feeling of solidarity existing between all grades in the railway service and the good feeling existing between the Joint Executives of the Railway Trade Unions on this occasion, we hereby instruct the general secretary and our representatives not to move the resolution standing in our name at the forthcoming Trades Union Congress, and in taking this course we are convinced that the united action we have just taken has not only demonstrated to the railway companies the power gained by such unity, but will result in a closer unity between the various unions in the future." The resolution referred to calls attention to the attempts of the Associated Society of Locomotive Engineers and Firemen to induce members to leave the Amalgamated Society of Railway Servants for their society, and declares such action to be contrary to the spirit of trade unionism.

The general railway situation, so far as work is concerned, had on Thursday gone back to the normal. There are, of course, mutterings in various quarters because the men have not got what they asked. The final outcome will only be known after the Commission of Inquiry have reported.

THE GOVERNMENT AND RAILWAY RATES.

To the Editor of the RAILWAY TIMES.

SIR,—It has been apparent for many years past that a revision of railway rates would be necessary to meet the extra cost of working arising from the combined causes of labour demands, public facilities, Board of Trade requirements, etc. The Government having now promised to expedite matters in this connection, it is advisable to consider what class of rates should be operated upon. So far as Ireland is concerned—and I speak with special knowledge and as a large railway shareholder and a director—I may safely predict that any increase of rates on home products and manufactures is not likely to meet with the support of the Irish Members of Parliament, and I presume that any such proposal would meet with strenuous opposition in England. Therefore, to save time and complications, I would suggest to the railway companies that, in submitting their scheme, they should confine the increase as far as possible to the freights on imported products and manufactures, there being ample scope to raise the required additional revenue from this source. I may add that such a course would give general satisfaction throughout Great Britain and Ireland, and could not be said to be in any way inconsistent with the policy of the Government.

Yours, etc.,

F. W. CROSSLEY.

Irish Tourist Development,
65, Haymarket, London, S.W.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Aug. 31 (Thurs.).—**Colne Valley and Halstead Railway** (Half-yearly), 144, Palmerston House, 93, Bishopsgate Street, E.C., at 1.
- Aug. 31 (Thurs.).—**Midland and South Western Junction Railway** (Half-yearly), Swindon Town Station, Swindon, at 2.
- Sept. 6 (Wed.).—**Buffalo and Lake Huron Railway** (Half-yearly), 14, Cook Street, Liverpool, at 12.
- Sept. 19 (Tues.).—**Caledonian Railway** (Half-yearly), 30, George Square, Glasgow, at 1.30.
- Oct. 4 (Wed.).—**Canadian Pacific Railway** (Annual), Montreal.

(Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

FURNESS RAILWAY.

The half-yearly meeting was held at Barrow-in-Furness on Wednesday, Lord Manchester, in the unavoidable absence of the Duke of Devonshire, in the chair.

The SECRETARY Mr. Alfred Aslett having read the notice convening the meeting,

The CHAIRMAN moved the adoption of the report and accounts, an abstract of which appeared in last Saturday's RAILWAY TIMES. In doing so, he first referred to the appointment of Sir John S. Randles, of Bristow Hill, Keswick, chairman of the Workington Iron and Steel Company, as a director of this company in place of Mr. Edward Wadham, whose resignation was mentioned at last half-yearly meeting. Sir John was intimately connected with the iron and steel industries of the West Cumberland district, and he would be a very useful member of the board. The dividend proposed would be a disappointment to the shareholders, and the directors greatly regretted that, in consequence of the serious loss of traffic caused by the depression in the iron and steel industries of the Furness and West Cumberland districts, in conjunction with the increased expenditure in the maintenance of way, works, etc., the dividend on the ordinary stock should unfortunately be levelled down to $\frac{3}{4}$ per cent. per annum. The passenger traffic was again progressive, showing an increase of 29,751 passengers and £2,165 in the receipts. The directors were always on the lookout for new industries for the company's undeveloped property on the docks. Messrs. Burt, Boulton and Haywood, Limited, of London, Newport Mon., Southampton and other ports, had arranged to lease eight acres of land from the company on the Devonshire Dock for an important creosote works and timber business, which would no doubt largely increase the company's timber traffic.

The working expenses showed an increase of £7,843, of which the renewals of the permanent way and the Eskmeals Viaduct and other expenditure were responsible for £6,536. This followed on an additional expenditure of £7,270 in the corresponding half-year of 1910 compared with 1909 in the engineer's department. The directors were fully alive to the necessity of economy. In locomotive power there was a small decrease in expenditure. In carriage and wagons there was an increase of £1,655. This had nearly all arisen in the extra expenditure on wagons, which work during the period the men in the workshops were on short time was somewhat in arrears. About £2,000 of the additional expenditure during the June, 1911, half year had arisen in consequence of all their men in the shops working full time as compared with short time for the first five months in the June, 1910, half-year. In traffic expenses they had an increase of £878, nearly one half of which was due to an increase in wages. The directors recently considered it desirable to pay the clerical staff at the stations for Sunday duty, and the re-classification of some of the signal boxes had also added to this expenditure. In the harbour department the expenses showed a substantial decrease of £1,907. They had again transferred a sum of £2,000 to the credit of the steamers' depreciation fund.

In the December, 1911, half-year they were providing for a somewhat large amount on capital account, which was estimated at £45,739. Of this sum about £33,000 would be expended in widening and improving the fairway of Walney Channel and Piel Bar, and in providing a new deep-water berth in Walney Channel near the entrance to the Ramsden Dock. Messrs. Vickers, Limited, were dividing the cost with the company. In fact, that firm were taking all responsibility in the event of this

expenditure coming out beyond the engineers' estimates. It was not only Messrs. Vickers' extensive shipbuilding business which they had to consider, for only last month they had two Japanese battleships visiting Barrow, one of which was unable to obtain access to the docks, and had to remain in the Lune Deep, at Morecambe Bay. At the deep-water berth had been constructed this battleship could have anchored outside the company's docks in Walney Channel.

The National Insurance Bill would necessarily seriously affect all railway companies, should it receive the Royal Assent. The total cost to the several railways in this country was estimated at from £1,000,000 to £5,000,000 per annum. The Furness Railway would approximately be affected to the extent of £2,000 per annum. The details of the Bill were being closely watched by the committee of the Railway Companies' Association, of which this company was a member, and important negotiations were now pending with the Chancellor of the Exchequer on behalf of the railways.

There was one other matter which was no doubt uppermost in shareholders' minds. The railway situation during the last few weeks had probably been the most trying and anxious period which the railway companies generally in this country had ever had to deal with. The general manager, with the approval of the board, issued an important announcement to all those concerned in the working of the traffic of the Furness Railway, which conveyed to the staff that every man who was interested in the four sectional boards and remained loyal to the company would receive a bonus of 50 per cent. on his wages during the continuance of the strike. He was glad to say that about two-thirds of their men remained loyal to the company. The board heartily thanked those men who had so loyally stuck to their work. Loud applause. It would, no doubt, be a profound relief to the public mind generally, and particularly to all connected with the railways, to know that the railway strike throughout the country was brought to a close late on Saturday last. The Government had appointed a Special Commission to investigate the Railway Conciliation and Arbitration Scheme of 1907, and it would report what changes, if any, were desirable with a view to the prompt and satisfactory settlement of all outstanding differences between the companies and their employees. The Government had also given assurances to the railway companies that they would propose to Parliament in the next Session legislation providing that the increase in the cost of labour, due to the improvement of conditions for the staff, should be a valid justification for a reasonable general increase of charges within the legal maxima, if challenged under the Act of 1864. Applause. He felt sure the shareholders would join in expressing a fervent hope that the outcome of this inquiry by the Special Commission would be to prevent, if possible, another national railway strike. During this very trying period they should acknowledge the services of all the officers and staff of the company who were responsible for the working of the line and who the directors were satisfied had, in their loyal and cordial working with the general manager, done everything in their power to minimise the trouble, delay, inconvenience and loss which the traders and the public and also the railways had sustained since the national strike was proclaimed. He wished to emphasise and acknowledge the very loyal and true service which the Furness Railway officials, from the highest down to the lowest, had shown towards the company. The percentage of workers who were out was 38. The remaining 62 per cent. behaved admirably, and did all in their power to minimise as much as possible the inconvenience which very many passengers suffered.

Mr. W. B. TURNER seconded the motion, and it was adopted.

The CHAIRMAN, in replying to a vote of thanks to the chairman, directors, officers and staff of the company, said it had taken a great deal of trouble and thought on the part of their able staff and general manager and accountant to get this $\frac{3}{4}$ per cent. dividend, and he could only say on behalf of his colleagues on the board that they had to thank the shareholders very much for the kind way in which they had proposed and received this resolution.

ROSS AND MONMOUTH RAILWAY.

The Hon. Robert H. Eden presided at the half-yearly general meeting of the Ross and Monmouth Railway Company, held on Thursday, at the offices, St. Mary Street, Ross. The directors' report was adopted, the chairman referring to it as very satisfactory, and the following dividends were declared:—12s. per share on 4,000 £20 preference shares, less income-tax, absorbing £2,260, and a dividend of 3s. 9d. per share on 4,000

£20 ordinary shares, less income-tax, absorbing £706 5s. Mr. J. G. Gordon, Queen Anne's Mansions, London, was elected a director to fill the vacancy caused by the death of Mr. C. L. Liddell.

QUEBEC CENTRAL RAILWAY TO BE LEASED.

The directors of the Quebec Central Railway Company announce that they have entered into a provisional agreement with the directors of the Canadian Pacific Railway Company to lease their undertaking for a term of 999 years for a rental sufficient to provide for interest and dividends as follows:—Interest on the 4 per cent. debenture stock, preserving all existing rights; $3\frac{1}{2}$ per cent. per annum on the 3 per cent. debenture stock, which is to be converted into a fifty-year debenture stock at the new interest rate, and payment of principal guaranteed by lessee; 5 per cent. per annum (half-yearly) on the 7 per cent. income bonds, these bonds being converted into new fifty-year bonds at the new rate of interest, and a 10 per cent. cash bonus to be given as compensation to the converting bondholders for reduction of interest, and also payment of principal guaranteed by lessee; and a dividend of 4 per cent. per annum (payable half-yearly) on the shares for the first four years and 5 per cent. per annum afterwards. The lease will commence from January 1 or July 1, as the case may be, next after the date when the agreement becomes effective.

Cockermouth, Keswick and Penrith Railway.—The half-yearly report states that the receipts have been £19,236, a decrease of £1,708. The working expenses have been £13,674, a decrease of £854. The revenue balance, after provision for dividend on the preference stock, is £2,982, which permits of a dividend of $1\frac{1}{2}$ per cent. on the ordinary stock, leaving £676.

Bantry Extension Railway.—At the half-yearly meeting held in Cork, on August 9, and presided over by Mr. J. Pike, it was reported that the gross receipts amounted to £1,488, as compared with £1,435 in the corresponding period of last year. The report was adopted, and a dividend of 5 per cent. per annum on the baronial guaranteed shares of the company passed.

Colne Valley and Halstead Railway.—The report for the half-year ended June 30 last states that the receipts were £8,662 (against £8,909), while the working expenses amounted to £6,710 (against £7,517). The revenue balance was £1,952 (against £1,392). After making provision for rent charges and interest, £400 has been placed in reserve and £279 carried forward.

Didcot, Newbury and Southampton Railway.—At the half-yearly meeting, held in Westminster Palace Hotel, London, on August 11, Mr. F. B. Turner, who presided, said there had been a decrease of £231 in the receipts during the half-year as compared with the six months ended June, 1910. Shareholders must remember, however, that they were comparing this half-year with an exceptionally good half-year, when the receipts were £1,896 higher than in the corresponding half-year in 1909.

Cleator and Workington Junction Railway.—At the half-yearly meeting, on August 18th, Mr. J. S. Ainsworth, M.P., who presided, said that the iron trade during the last six months had been duller in West Cumberland than in any part of the kingdom. It took some time for amalgamations such as they had seen in the iron and steel trade to settle down, but new developments were going on—new furnaces and new coke ovens,—and he looked forward to their doing as well in future as they had done in the past.

Sheffield District Railway.—Sir R. A. Hadfield (chairman), presiding at the half-yearly general meeting of the Sheffield District Railway Company, held at 71, Finsbury Pavement, London, on August 10, said that the figures in the revenue accounts showed an improvement upon those of the corresponding period of 1910, and they were glad, therefore, to recommend a dividend on the ordinary shares at the rate of $1\frac{1}{2}$ per cent. per annum, as against 1 per cent. per annum in 1910, as well as the full dividend of 5 per cent. per annum on the preference shares.

Londonderry and Lough Swilly Railway.—The report states that for the half-year ended June 30th the aggregate receipts show an increase of £390 when compared with the corresponding period of 1910. After paying working expenses, interest on mortgages and debenture stock, and other charges, and placing £3,000 to general renewal fund, there remains a balance of £13,215 available for dividends. The dividend on the five per cent. preference stock absorbs £1,240, leaving £11,974, out of which the directors recommend a dividend at the rate of 7

per cent. per annum upon the ordinary shares, carrying forward £10,213 to next half-year.

Tralee and Fenit Railway.—The half-yearly report states that the traffic receipts show an increase of £430. The gross receipts amount to £2,267, and the net receipts, after deducting working expenses, to £907, as against £1,836 and £734 respectively for the corresponding half of last year. The number of passengers carried was 16,451, representing £337, as against 12,053, representing £275, an increase in number of 3,798, and in amount of £62. Goods show an increase of 3,543 tons, and in receipts of £192. Minerals have increased by 4,191 tons, and by £158 in receipts. Parcels and miscellaneous, etc., traffic has increased by £19.

Midland and South Western Junction Railway.—The report of the directors shows that the receipts for the half-year amounted to £46,480, a decrease of £936 as compared with the receipts for the corresponding half-year. The latter included £2,400 receipts from the Whitsuntide manoeuvres, which were not this year held on Salisbury Plain. The general traffic, however, has shown a satisfactory increase. The expenditure amounted to £34,350, a decrease of £1,047 as compared with the expenditure of the corresponding half-year. After making provision for rents, dividend on rent-charge stock, and interest on "A" debenture stock, there remains a balance of £1,670 to be carried forward to the current half-year. Regarding the agreements between this company and the Midland Railway Company, negotiations have been entered upon which may result in a settlement of the outstanding matters in dispute under these agreements. In view of these negotiations the directors have temporarily suspended the arbitration proceedings.

Manchester Ship Canal.—The company report that the expenditure out of capital was £18,599, but as the proceeds of sales of land and plant amounted to £8,795, the net outlay was £9,804. The total expenditure on capital account amounted to £16,808,330, leaving a balance to credit of £257,308. The Ship Canal revenue receipts amounted to £274,419, and the expenditure to £143,936, leaving a credit balance of £130,483. The profit of the Bridgewater department was £10,794. The balance carried to net revenue account was, therefore, £141,277, to which was added £2,107 bankers' and general interest, making an available balance of £143,384, which was distributed as follows:—Interest on the first and second mortgage debentures, £44,743; interest on the three and a-half and four per cent. debenture stocks, £10,500; interest on the mortgage of surplus lands, £1,000; rent of transit shed, dock No. 8, £3,130; rent of dock No. 9 and transit sheds, £12,500; and the remainder, £71,511, to the Corporation of Manchester on account of interest on the debentures they hold. The weight of toll-paying merchandise which passed over the Ship Canal during the two half-yearly periods under comparison was:—

	Six months ended June 30, 1911.		Six months ended June 30, 1910.
	Tons.		Tons.
Sea-borne traffic	2,410,063		2,232,499
Barge traffic	165,673		153,620
	2,575,736		2,386,119

The financial result of the half-year in the Ship Canal department was an increase of £20,916 in the receipts, of £7,889 in the expenditure, and of £13,027 in the working profit, as compared with the corresponding period of the previous year. The weight of merchandise traffic imported and exported which paid toll for passing over the Ship Canal was 177,564 tons greater than during the first half of the previous year, 1910. As the strike at the Manchester docks did not begin until June 28 it had but little effect on the financial result of the half-year's working of the Ship Canal department. The net result of the half-year in the Bridgewater department was an increase of £527 in the working profit. If the Bridgewater traffic had not been seriously curtailed by the labour troubles at Liverpool during the latter half of the month of June there would have been a larger profit. The company's Bill in this Session of Parliament, the main provision of which is to authorise the construction of a solid jetty outside Eastham Locks to facilitate the navigation of vessels entering and leaving the Ship Canal, has been passed by both Houses of Parliament, and now awaits the Royal Assent.

Station Porters and the Luggage in Advance System.—It is stated in some quarters that the loss of tips suffered by station porters, consequent upon the widespread adoption by passengers of the luggage in advance system, was in a large measure responsible for porters joining in the strike.

GENERAL NEWS.

L. AND N. W. OBSERVATION CARS.

Observation cars are run on many foreign railways every day, and there are few things that add more to the charm of a journey through beautiful country than to sit at one's ease in the luxurious vehicles provided and watch the surrounding country unfold itself as the train journeys along. Large plate-glass windows at the sides and ends of the carriage enable passengers to view the passing scenery without that vexatious neck-craning which is entailed in an ordinary compartment; and it is gratifying to learn that the L. and N.W.R. is about to introduce them. Arrangements are being made for a vehicle of this description to run between Llandudno and Bettws-y-Coed, and for a small extra charge the magnificent scenery of the Conway Valley will be shown to the passenger from many different aspects.

MANCHURIAN LOCOMOTIVE CONTRACTS.

A contract, tenders for which were submitted by all the leading locomotive builders in Great Britain, the United States, and Continental Europe, for ten powerful passenger locomotives of the ten-wheeled type, required for the South Manchuria Railway, has been divided between Messrs. Boyer, Peacock and Co., Limited, of Gorton, Manchester, and the American Locomotive Company, of Schenectady. The last-mentioned firm has just delivered 30 locomotives of the Callet and Pacific type for main line service on the Imperial Japanese Railways.

C. C. v. A. C. RAILWAY WORKING.

According to the *Electric Railway Journal*, New York, great savings have been effected on the Washington, Baltimore and Annapolis Electric Railway by the substitution of high-tension continuous current working for the single-phase alternating current system. The voltage used for the continuous current is 1,200. The maintenance of the single-phase cars cost 0.42d. per car-mile, but the new system will cost 0.00d., whilst the maintenance of the electrical equipment on the cars has fallen by 33 per cent. The total operating expenses for single-phase current were 11.9d. per car mile, and have been reduced by the new system to 0.5d. Electrical delays have been reduced from 33 per cent. of the total to 10 per cent., although the total delays, including "power off," have been much reduced.

INDIAN RAILWAY CONFERENCE ASSOCIATION.

At the annual meeting at Simla on September 18 and subsequent days, the following will be amongst the subjects for discussion:—

A further discussion of the proposal for the establishment of a clearing house at Agra.

The responsibility of railways for warehousing goods under section 72 of the Railways Act.

Measures relating to the safety of passengers in railway trains, particularly relating to the question of inside bolts for carriage doors.

The responsibility of railways under "risk note" forms B. and H.

L. & N. W. Observation Car.

CANADIAN RAILWAY CONSTRUCTION.

Concerning the completion of the Grand Trunk Pacific and the Grand Trunk from ocean to ocean, Mr. Hays, President of the Company, who recently completed a six weeks' tour of inspection of the greater part of the system, says the line will be completed in 1914. This is a year later than the estimate made early in 1910, the delay being due to the difficulties presented by the rough country and also by a scarcity of labour.

An active railway construction programme is projected for the Dominion generally and for Saskatchewan particularly, in the present fiscal year. In Saskatchewan over 1,000 miles of new line will be laid. Last year this province led the others with total new track amounting to 476 miles. According to the plans so far announced by the three principal railroads of Canada, Canadian Northern will construct 330 miles in the Province, Grand Trunk Pacific 342 miles, and Canadian Pacific about 350 miles, making a total of about 1,020 miles. In addition to this new construction work, about 1,350 miles of new grading will be done.

Light Railway Order.—The Board of Trade have confirmed the Morley Corporation Light Railways Order, 1911, authorising the construction of light railways in the borough and parish of Morley, and amending the Morley and District Light Railways Order, 1901.

Proposed modifications of the Railway Act to meet the case of indigent persons travelling in railways without tickets.

The electrical lighting of trains.

The discussion on the existing regulations for interchange of rolling-stock, and associate membership of the Association, applications for which have been received from steamer companies.

Increased rates for haulage of postal vans.

Rules for explosives and other dangerous goods.

Uniform discharge certificates for railway employees.

Proposal of uniform rates for fodder.

Revised rules for the prize essay competition.

To confirm the proceedings of the goods classification committee.

A proposal for the provision of a special type of third class bogie carriage for British troops.

An Oil-Propelled Cargo Boat for Canada.—A vessel equipped with a Diesel oil engine has been despatched from an English yard across the Atlantic to the Canadian Great Lakes. The ship measures 24ft., has 42½ft. beam, a draught of 14ft., and burns or explodes about 1½ tons of crude oil a day. Crude oil in Canada costs 1½d. a gallon, whereas gasoline is worth 10d. Her fuel oil is carried like ballast, as water is carried in other great freight boats. The advantages of this new type of carrier are extra hold space, extra deadweight carrying capacity, extra economy of fuel and labour, and no stokers are necessary.

THE SUMMER HOLIDAY SERVICES.

Not less remarkable than the strike of last Friday and Saturday is the manner in which the railway companies have this week restored the busy holiday services in every detail. One result of the restoration is that the suspended traffic—tourist as well as ordinary passenger—has burst upon the systems with a rush equal to Bank Holiday pressure. This in itself is valuable testimony to the confidence of the public in British railway management and running. The smooth working has only been accomplished at the expense of almost superhuman efforts on the part of the officials and their staffs, fatigued as they were by the continuous day and night duty during the strike. The publicity departments of the various companies have been alert this week to maintain the stream of traffic as soon as the arrears have been disposed of.

The displayed advertisements of the Great Eastern line's seaside resorts were continued during the two days of the strike, and doubtless served to attract holiday traffic on the restoration of the services. This company's announcements have been a model of appropriateness during the hot summer, their most prominent note being, "Where to go for cool breezes and bracing air," heading a list of the nineteen coast towns for which the Great Eastern cater. To the majority of the trains through lavatory carriages, first and third class, are attached, and on a number there are also restaurant cars. Non-stop trains perform the long-distance runs to Gt. Yarmouth, Gorleston, and Lowestoft in the capital time of 2 hours 30 minutes and 2 hours 35 minutes respectively, and, in addition to the great traffic from London, the fashionable and popular resorts on the Norfolk and Suffolk coasts secure many visitors by the express services from Liverpool, Manchester, Sheffield, etc. When it has attracted its patrons to the seaside the G.E.R., by means of posters, handbills and booklets, induces them to visit the Broads and neighbouring places.

Apparently the Midland Railway leads the list in the number of illustrated publications which it is obliged to issue to do justice to the many attractions of its system. A parcel of these

recently received contains "The Emerald Isle," a well-written and finely illustrated guide to Ireland; "Droitwitch," the most accessible of British Spas; "Holidays on the Norfolk Coast," "The Peak of Derbyshire," "How the Giant's Causeway was Built," "The Isle of Man," "By the Midland to Morecambe," "Ilkley and the Yorkshire Moorlands," "An Ideal Country Holiday in the Peak of Derbyshire," "By the Midland to Harrogate," "Buxton, the Mountain Spa of Derbyshire," "The Midland Route to and from Scotland" (giving the choice of three routes), and "Country and Seaside Holidays." Several of the foregoing are folders, and all have attractive covers.

The system least affected by the events of last week was the London and South Western Railway, whose coast and Continental facilities coped with ease with traffic diverted from other systems. In addition, this line brought into the metropolis during Thursday night many thousands of troops from the Aldershot district for the protection of the railways and as a measure of precaution against disorder. In order to transport the military, the company had to keep a number of trains standing in sidings with steam up, ready to move at a minute's notice, while for a week the troops had slept without undressing.

Expert aid has long been taken advantage of by the Great Western management for the preparation of its holiday literature. The latest folders sent out are headed, "Week-Ends in the West," "Summer in Cornwall," "More Fast Trains," "Up-the-River," "The Annual Dilemma: Some Solutions in Brief," and "Holidays in Brittany." The latter gives particulars of some remarkably cheap circular tours in England and France. Several of the folders contain the numbers of "The Holiday Line Bulletin," which form an attractive advertisement in daily newspapers.

Holiday seekers in hundreds were inconvenienced by the closing down of the services of the Great Central Railway, but with the prolongation of the fine weather which has followed the showers of the early part of this week the tide of traffic should flow again to the north-east and north-west coast towns and to Shakespeare's country, to which places the Great Central offers facilities.

TRAFFIC DECREASES ON PRINCIPAL RAILWAYS.

Our usual traffic returns are given in this issue, as well as the summary, but the following table is interesting as showing at a glance the decrease of receipts on the principal railways last week and the percentage of these decreases arising from the strike which has now come to an end.

Name of Company.	Receipts £	Passengers Decrease. £	Goods Decrease £	Decrease. £	Decrease. per cent.
Barry	9,977	—	—	5,856	36.98
Caledonian	95,000	100	7,000	7,100	0.91
Cambrian	7,517	1,450	535	1,985	20.89
Central London	3,592	—	—	1,151	24.26
City and South London	2,506	—	—	473	15.88
Dublin and South Eastern	6,431	230	Inc. 105	125	1.90
Furness	11,406	Inc. 258	1,359	1,101	8.63
Glasgow and South Western	42,800	100	700	800	1.83
Great Central	63,500	8,600	17,700	26,300	29.28
Great Eastern	113,400	5,700	11,200	16,900	12.97
Great Northern	112,000	2,500	14,000	16,500	12.84
Great Northern (Ireland)	23,799	346	Inc. 141	205	.85
Great North of Scotland	11,800	Inc. 50	Inc. 50	Inc. 100	—
Great Southern and Western	33,749	1,037	443	1,480	42.01
Great Western	229,000	47,000	44,000	91,000	28.44
Highland	15,665	Inc. 182	79	Inc. 103	—

PERSONAL.

Caledonian Railway Appointments.—The following staff changes are announced: Mr. J. D. Lang, district superintendent at Perth, and Mr. J. D. Lawie, district superintendent at Carlisle, retire from service under the age limit; Mr. J. Smyth, district superintendent at Oban, to be district superintendent at Perth; Mr. J. Newlands, district superintendent at Edinburgh, to be district superintendent at Oban; Mr. A. Fulton, assistant district superintendent at Perth, to be district superintendent at Edinburgh; Mr. J. Mason, assistant district superintendent at Glasgow, to be district superintendent at Carlisle.

Messrs. R. Docherty and J. Liddell, M.A., LL.B., who are leaving the service of the Caledonian Railway to take up important positions on the Buenos Ayres and Pacific Railway under Mr. Guy Culthorp, the general manager of that railway and lately the general manager of the Caledonian, have been presented with gold watches, tea and coffee services, and other articles by the staff. Mr. Docherty quits the position of assistant general superintendent, and Mr. Liddell leaves the general manager's office. Speeches in praise of the departing officials were made by Mr. Donald A. Matheson, general manager; Mr. Waddell, goods manager; Mr. Pettigrew, general superintendent; Mr. Steven, assistant solicitor; and Mr. David Reid, secretary, Lanarkshire and Ayrshire Railway Company. Subsequently the staffs of the general manager and the general superintendent entertained their late colleagues at the Argyle Café, Glasgow, together with Mr. J. C. Somerville, late of the general manager's office, who is also going to the Buenos Ayres Railway. Mr. McGregor, speaking for the men's side of the central and sectional Conciliation Boards, said the three gentlemen named had fought them at the recent arbitration and the men received nothing but courtesy from them.

UNDERGROUND ELECTRIC RAILWAYS OF LONDON.

The Underground Electric Railways Company of London, Ltd., have issued the following comparative statement of receipts and expenses of the Associated Companies for July:—

Metropolitan District Railway.

	Month of July	1911.	1910.		Inc.
Gross receipts	£90,847	£87,897	+	£2,950	
Working expenses	28,345	28,000	+	345	
Net receipts	£62,502	£59,897	+	£2,605	

London Electric Railway.

	Month of July	1911.	1910.		Inc.
Gross receipts	£60,186	£58,973	+	£1,208	
Working expenses	31,815	30,678	+	1,137	
Net receipts	£28,371	£28,300	+	£71	

London United Tramways.

	Month of July	1911.	1910.		or dec.
Gross receipts	£25,658	£31,007	+	£4,651	
Working expenses	18,841	19,847	—	1,006	
Net receipts	£16,817	£11,160	+	£5,657	

RAILWAY NOTES.

Midnight Train to Brighton.—The 12.5 a.m. train which now leaves Victoria for Brighton three nights a week will become a nightly feature in October, reaching the seaside in 65 minutes.

Train Lighting in India. Messrs. Mather and Platt have obtained an order from the South Indian Railway Co. for supply of train-lighting dynamos; Messrs. J. Stone and Co. have received the order for supply of train-lighting cells; and E.M.F., Ltd., has secured the contract for ventilating fans.

Special Constables Guard London Railways.—Those of the large number of London residents who on Friday of last week gave in their names for the post of special constable, and had not left their homes for business between nine and ten the following morning, received a call from police messengers to attend at mid-day at the police courts to be sworn in and receive batons. A member of THE RAILWAY TIMES editorial staff took the oath at the South-Western Court, and in the evening the special constables in this division, numbering nearly 200, were given a night of duty in guarding signal boxes, etc., on the Brighton line between Clapham Junction and Croydon.

New Zealand Government Motor Service.—In 1907 the first daily motor service run with solid-tyred vehicles was started in New Zealand by the Railway Department. Five twelve-passenger vehicles of the char-à-banc type, fitted with 16-20 h.p. engines, were put on a run of 36 miles, over fair roads, thinly metalled,

to act as feeders to the railway terminus at Culverden from Hagar, the South Island tourist resort. As the result of experiments conducted by private concerns, the Department installed British vehicles, built by the Albion Motor-Car Co., Glasgow. The service is running as satisfactorily as when installed, carrying 100 heavy loads of passengers and mails.

Persia and Railway Concessions. The text has been published of the Russo-German agreement with regard to Persian railway, road, or telegraph concessions. Under it Germany is bound not to seek concessions in the Russian sphere, and Russia agrees to seek a concession for a railway from Tcheran to Kamekin. Both Governments agree to grant facilities for international traffic on the Kamekin-Tcheran and Kamekin-Bagdad lines, and not to introduce such measures as transit duties and differential tariffs.

A Solicitor and Railway Prosecutions.—A Sheffield Police Court, on Wednesday last, Mr. J. G. Chambers, solicitor, asked the Stipendiary to condemn the custom of railway companies to dispense with legal aid when prosecuting offenders. The point arose in connection with a case in which a man was charged with travelling without a ticket, and Mr. Chambers contended that such a case should be presented by a solicitor, and not by a railway inspector. This practice of railway companies, he said, had been strongly commented on times without number by the Law Society and the Bar Council. The Stipendiary said it had been a practice for years to allow a man to appear, if he had a formal appointment from his company to do so. It was a difficult question, and if it were insisted that a solicitor must appear it would be difficult to carry on the business of the Court.

The Number of Railway Shareholders. Mr. G. Smith, of Dalby-Welch, Ltd., London, has supplied to the daily press the following particulars of the number of shareholders in each railway in the United Kingdom that has over 10,000 shareholders. The Midland contains 80,000; Great Western, 65,000; London and North Western, 60,000; Great Northern, 40,000; North Eastern, 40,000; Caledonian, 37,000; North British, 33,000; Great Central, 23,000; Great Eastern, 27,500; Lancashire and Yorkshire, 27,000; London, Brighton and South Coast, 10,000; London, Chatham, and Dover, 15,000; South Eastern, 15,000; Glasgow and South Western, 11,500.

Telephone No. Avenue 5555 (4 lines).

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,
12-18, TAYLOR STREET, LIVERPOOL.

Telephone: 1198 Royal.

Telegrams: "Brakeblock Liverpool."

TENDERS INVITED.**East Indian Railway.**

THE East Indian Railway Company is prepared to receive tenders for the supply and delivery of Steelwork for strengthening Bridges, as per specification to be seen at the Company's offices. Tenders are to be sent to the undersigned, marked "Tender for Steelwork," not later than Twelve o'clock noon, on Wednesday, the 13th day of September proximo.

The Company reserves to itself the right to divide the order, also to decline any Tender without assigning a reason, and does not bind itself to accept the lowest or any Tender.

For each specification a fee of £1 1s. is charged, which cannot under any circumstances be returned.

By order,

C. W. YOUNG, Secretary.

Nicholas Lane, London, E.C.
30th August, 1911.

**Madras and Southern Mahratta
Railway Company, Limited.**

THE Directors are prepared to receive tenders for the supply of:—

- (1) (about) 2,491 Tons Steel Rails,
- (2) (about) 80 Tons Steel Fishplates,
- (3) (about) 33 Tons Steel Coachscrews,
- (4) (about) 337 Tons Steel Sleepers and Keys,

as per the specifications which may be seen at the Offices of the Company. The charge for the specifications will be one guinea, except for the Coachscrews, which will be half-a-guinea, and is not returnable.

Tenders must be sent in marked "Tender for Rails," or, as the case may be, not later than 2 p.m. on Tuesday, the 12th September, 1911. The Directors do not bind themselves to accept the lowest or any tender.

H. BONHAM-CARTER, Secretary.

Company's Offices,
91, York Street,
Westminster, S.W.
29th August, 1911.

South Indian Railway Company.

THE South Indian Railway Company, Limited, is prepared to receive tenders for the supply of Locomotive and Engineering Stores, comprising Copper Plates, Steel Boiler Plates, Steel Tires, Steel Axles, Locomotive Duplicate Parts, Laminated and Helical Springs, and Spare Parts of Buffers for Carriages and Wagons.

Specifications and forms of Tender may be obtained at the Company's offices.

Tenders, addressed to the Chairman and Directors of the South Indian Railway Company, Limited, marked "Tender for Locomotive and Engineering Stores," must be left with the undersigned not later than 1 o'clock p.m. on Wednesday, the 13th September, 1911.

The Company is not bound to accept the lowest or any Tender.

A charge, which will not be returned, will be made of 20s. for each copy of the specification.

Copies of the drawings may be obtained on payment at the office of Robert White, Esq., M.I.C.E., Consulting Engineer to the Company, 3, Victoria Street, Westminster, S.W.

By order,

V. E. DE BROE, M.I.C.E.,
for Managing Director.

Company's Offices,
91, York Street, Westminster, S.W.,
1st September, 1911.

**Dublin and South Eastern Railway
Company.**

THE Directors of this Company are prepared to receive Tenders for the Re-construction of Three Bridges carrying the railway over the Ovea and Aughrim Rivers, near Woodenbridge, Co. Wicklow.

Plans and specification may be seen, and forms of Tender and schedule of quantities obtained, at the office of the Chief Engineer, No. 52, Westland Row, Dublin, between the hours of 10 a.m. and 5 p.m.

Tenders, addressed to the undersigned, and marked "Tender for Bridges," will be received on or before 10 a.m. on the 6th day of September, 1911.

The Directors do not bind themselves to accept the lowest or any Tender.

M. F. KEOGH, Secretary.

Westland Row Station, Dublin,
9th August, 1911.

POSITION VACANT.**London—India Office.**

BY Order of the Secretary of State for India in Council. Wanted, for service on the Subordinate Establishment of Indian State Railways (North-Western Railway), a Draughtsman for the Bridge Engineer's Office. Candidates must be capable of making detailed drawings of girders from sketches, showing section and joints. Age about 30 years.

Salary, Rupees 325, rising to Rs. 400 per calendar month. Agreement for five years in the first instance. Free second class passage to India and home again on termination of service, unless forfeited by misconduct. Candidates should state age and give a brief record of professional education and employment, together with references to employers and copies of testimonials.

Applications should be addressed to the Director-General of Stores, India-office, Whitehall, London, S.W., and must be received at the India-office not later than 19th September, 1911.

W. G. BUTLER,
Director-General of Stores.

India-office,
Whitehall, London, S.W.,
30th August, 1911.

THE VALUATION OF HOME RAILS.

The valuation placed by the market on any stock depends primarily upon two factors. The first is the yield of the stock to the investor, and in estimating this regard must be had to profits earned as well as to profits distributed. The second is the prospect that the yield will be maintained. When these two factors are ascertained there is no difficulty in forming a judgment upon what price a stock should command. Whether such a judgment, however well founded, will be subsequently justified by conformity of the market price is another question. Competition among investors for the highest yield compatible with a given degree of security is the main force at work tending to bring the market price of stocks into conformity with sound judgments upon their merits. It is a force which is obstructed by many matters of foreign import and often takes a long time to make itself apparent, but it is one whose ultimate effect is inevitable and the only one which can be safely counted upon in making investments intended to be of a permanent character. In forming a judgment as to the price which should be commanded by Home Rails, the most difficult factor to estimate at present is the second. The yield is now satisfactory enough and very much above the level to which investors have been accustomed for some time past, but when we come to the question of what prospect or probability there is for the continuance of the yields, which is in effect to ask what likelihood is there of permanency for the conditions under which these yields have been earned, we meet with great difficulties. In past years it was a question which troubled investors not at all. It was taken for granted that the conditions under which our railways earned their dividends would always be commercial—severely commercial, but nothing else, not political for example. The difficulty of coming to a sound conclusion as to the effect of the changes which have been introduced, and are being introduced, into the conditions under which our railways must now work, has been several times alluded to in these columns. That it has been still further enhanced by the recent strike must be obvious to anyone who thinks. A large body of opinion, carrying great political influence, now leans to a view of the functions of our railway organisations and the conditions under which they should work, which is quite other than commercial. They entirely lose sight of the fact that a railway company is a company incorporated for the purpose of gain. They would deny that a man cannot be said to be underpaid while there is another able and willing to do his work with equal efficiency. They seem to claim for the workman a vested interest in his particular employment, an interest not vitiated by breach of contract even with violence. The difficulty is to decide whether under the altered conditions which these ideas are bringing in their train it will be possible for British railways to maintain their present rates of yield. At first sight it seems unlikely. The only ameliorating circumstance is to be found in the alleged intention of the Government to introduce some modification of the obligation imposed upon railways under the Act of 1894 and so enable them to increase their rates when their profits are invaded. But as was suggested in

an earlier issue, it would be well not to attach too much importance to the Government's intention in this matter. It was a suggestion put forward in a time of crisis with the object of securing the assent of the companies to a re-opening of the whole question of the wages and conditions of employment, and it will doubtless be found difficult of realisation. The best hope for the companies lies in a more general and more thorough application of the principle of co-operation. Much greater economies may yet be effected in this way, and these economies are now more imperative than ever.

A COMMISSION ON THE TRADES DISPUTES ACT.

It does not follow that because the railway companies are parties to the investigation into the working of the Conciliation Act, that they are to take no part in the consideration now being given by the commercial men of the country to the question of demanding a Special Commission to inquire at once into the working of the Trades Disputes Act, 1906. The request was first voiced by the Leeds Chamber of Commerce, and on Wednesday last it was endorsed by the annual conference of the Association of Chambers of Commerce. On both occasions the opinion was expressed that the Act has, by authorising "peaceful picketing" and relieving trades unions from the responsibility for their acts, made possible intimidation, violence and interference with trade. It was only by the prompt manner in which the Government placed the railways under military protection that the "peaceful" representatives of the strikers were prevented from the extreme use of those forms of "persuasion" which paralysed the trade of Liverpool, and also of London in the dockers' and carters' disputes. Railway officials admit that even with the protection of the soldiery it was difficult in London, and still more so in the provinces, for loyal railway men to remain at the post of duty, and in this connection it is satisfactory to note that Earl Brassey, a lifelong Liberal statesman, expressed from the chair at the conference of the Chambers of Commerce, his opinion that "to take a liberal view as to the reward of labour was not to condone outrage and violence and the persecution of those loyal men whose brave and devoted service on the railways in the recent troubles had won the admiration and gratitude of the country." Yet trade unionists, whose movement Earl Brassey did much to encourage in his early political life, stigmatised the loyalists as blacklegs. The current issue of the organ of a section of railwaymen refers to the wages of the loyalists as "blood-money," and the cowardly treatment which is to be meted out to them may be gathered from the following incitement:—"Stern and unbending is the decree, never written indeed, which compels civility towards the man who baulks his mates; equally stern and unbending is the coldness of the eyebeam against which no decree avails. It is all part of the great game by which the laggard is brought into line, and he with the weak heart strengthened. Let that process go on." Earl Brassey's opinion undoubtedly coincides with that of the country generally. It is the more valuable because of the fact that his position as the son of the first of the great railway contractors, whose thousands of navvies won the admiration of every foreign country in which they laboured, led him to become an authority on the relations of capital and labour at a period when the question excited little interest. At that time there were not more than one or two trade union representatives in the House of Commons; since then the Socialist wing has captured the labour movement. Indeed, its influence was powerful enough to secure amendment of the Trades Disputes Acts of 1906 to the undesirable extent of legalising the picketing methods which, as recently shown, endanger the food supply and industries of the country. It was during the existence of the last Unionist Government that the Labour Party en-

deavoured unsuccessfully to obtain for strikers and trade unions the conditions of immunity for their acts which destroy public rights, and with the advent of a Liberal Government their Labour allies secured those amendments into which the business men of the country are now calling for an enquiry. We are glad to note that the demand has simultaneously been taken up by the Liverpool magistrates, who have further informed the Government that owing to the intimidation practised in that city the police found it almost impossible to obtain evidence which would justify prosecutions under the Conspiracy and Protection of Property Act, 1875, and they therefore asked that Parliament should not adjourn until additional and adequate powers had been given to magistrates to enable them to prevent intimidation, and to deal with the disorder then rife in the city. In the opinion of the Liverpool Bench nothing short of a repeal of Section 2 of the Trades Disputes Act, 1906, will secure order and enable peaceful citizens to pursue their avocations. This report has also been forwarded to other benches of justices "with a view to ascertaining their feeling on a matter which strikes at the very root of the peace and prosperity of the country." It is of the utmost importance that railway companies should add the weight of their conclusions to the wave of resolutions which, we believe, will flow in upon the Government, and it is satisfactory to note that one railway chairman has already given expression to his individual opinion. In a letter to a newspaper, Lord Claud Hamilton, M.P., refers to the Act as being a disgrace to the Statute Book, and observes that he cannot imagine any sane or fair-minded person desiring to perpetuate a condition of things which must be opposed to public policy. That the outburst against this one-sided and mischievous Act should become as widespread as possible will be acknowledged when the fact is recalled that the Government are dependent for their continuance in office upon the votes of the Labour Party.

AN UNJUSTIFIABLE STRIKE.

Into the merits of the grievances of railway servants in connection with the working of Conciliation Boards a Royal Commission is now inquiring, and accordingly we desire to say nothing on the matter at present. But we do desire to draw attention to the extraordinary case of the men employed on the North Eastern Railway, who did not allege grievances, who have a special conciliation scheme of their own, and whose officials have for years been "recognised" by the railway company. At the time of the recent railway strike, the average man who knew anything about the relations between the North Eastern Company and their servants must have been puzzled to find any reason for the latter going on strike at all. They were not concerned in the merits of the general railway dispute; they were a class apart already enjoying practically everything for which other railway servants were contending. Yet without giving notice they gratuitously struck work, inflicting great loss on their employers and on the public. The facts are set out in a published letter by Mr. Butterworth, the general manager, an abstract of which is given in our present issue. The executive of the railwaymen's trade unions did not think it worth while to make any communication to the management of the North Eastern Railway before the strike, or to reply to letters or telegrams, but the executive sent a telegram to the North Eastern men, as to the men of other companies, ordering them to cease work. Then followed the spectacle of the North Eastern men, who had no grievances, ceasing work. When a general settlement was reached, the North Eastern Railway was left out of it. The directors, however, agreed to take the men back, and ultimately, after the strike had lasted longer than on any other railway, the executive agreed to the directors' terms and the men were reinstated.

Thus the company gained nothing by having "recognised" the union officials; instead of that they lost. Mr. Butterworth shows that the rules of the Amalgamated Society of Railway Servants providing for negotiation, offer of arbitration, ballot, and strike notices were entirely disregarded by the Society. If the Trades Disputes Act had not been passed, the unions could not have disregarded their rules without throwing themselves open to actions for damages which would have meant bankruptcy for them. If the rules had not been disregarded, there could not have been a strike on the North Eastern Railway. The moderation of the directors in the face of such exasperating circumstances is highly commendable, but it is obvious that the resolve to which they have come may mean a good deal for the faithless employees in the future, and that those employees may no longer enjoy a bed of roses. The promise of the directors is that they will review the whole question of the procedure to be followed in connection with the settlement of differences between the company and the men by the light of the recommendations of the Commission now sitting. Many of the experiences of the North Eastern Company since they "recognised" the union leaders have been discouraging but surely none so discouraging as this. The facts must have weight with the Commission now sitting, and the facts must also strengthen general opposition by railway companies to deal direct with paid officials of trade unions.

Weekly Traffic Summary.

The traffic receipts for the week ended August 27, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,342,851, which was earned on 21,521 miles, being at the rate of £108 17s. 3d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,432,777, with 21,467 miles open, or £113 6s. 6d. per mile. There was thus a decrease of £89,926 in the receipts, an increase of 54 in the mileage, and a decrease of £4 9s. 3d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show a decrease of £318 (or 3s. 3d. per mile) in the passenger receipts, and a decrease of £83,100 (or £4 2s. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-four railways for eight weeks in the passenger receipts has been £163,962, while the aggregate decrease in the goods traffic was £375,886. The aggregate receipts of the fifty-two railways for eight weeks (July 2 to August 27) amounted to £19,410,818, in comparison with £20,007,716 in the corresponding period of last year—a decrease of £596,898. The effects of the recent strike are still traceable in the returns, as the railways could not at once get into full working swing immediately on the strike ending.

Victorian Suburban Railway Electrification.—As already reported in this journal the Premiers of Victoria and New South Wales, together with their consulting engineers, took advantage of their visit to England for the Coronation to study underground and other electric railways. Subsequently German systems were inspected. Speaking at a dinner in Melbourne recently the Acting Premier stated that information had come to hand by letter and by cable from the Premier that the Government would have a policy to announce within two months in respect to the conversion almost immediately of the suburban railways to electrical working.

Who Invented the Steam Whistle?—A few weeks ago the Leicester and Swannington Railway, which is owned by the Midland Company, celebrated its 79th anniversary, and it was recorded in the Press that through an accident on this line in 1833 the steam whistle originated. Prior to this date, however, a steam whistle invented by Mr. A. Stephens, and made of wood, was fixed to the engines working at the Dowlais Iron Works, and was subsequently improved upon.

MONEY AND STOCK MARKETS.

SETTLEMENT DATES.

CONSOLS.—THURSDAY, October 5.

Bar gold came into the Bank this week in considerable amounts, and this source of supply was further supplemented by imports from France, while only moderate withdrawals were made for destination in the Mediterranean and the Near East. On balance £509,000 was received. Coin began to come in also from the country, somewhat delayed, apparently by the strike, which may have caused many persons to retain by them a larger proportion of cash than they would have otherwise thought needful. It is a common precaution in times of social commotion. The amount received from this source was small—£290,000—while the active circulation of notes expanded by £100,000. The Reserve was therefore higher to the amount of £699,000. The payments for Treasury bills last Friday caused an advance of £2,723,000 in public deposits, and other deposits have risen £1,608,000, probably because the purchasers found it necessary to borrow part of the money to pay for them. Other deposits are consequently but £735,000 lower, and Government securities are £370,000 down, showing advances to the Exchequer paid off. As the result of all changes, the ratio of reserve to the liabilities of the Bank is lower by eight-tenths of a point at 56.33 per cent., indicating a position of great strength. The foreign exchanges remain favourable, and there is not much indication of a hardening tendency of loans and discounts considering the nearness of the season when the usual autumn drain may be expected. It is worth mentioning that a time of tumult, such as we have just passed, and, indeed, are not yet wholly free from, in which the operations of trade are obstructed and delayed, does not lead to higher rates being charged for the use of money unless the solvency of responsible dealers is called in question. So long as there are no doubts on this

head the tendency is always the other way, and money is more easily borrowed, because cautious capitalists in larger numbers prefer to lend money to others rather than make use of it themselves.

On the Stock Exchange things have gone from bad to worse, particularly in respect to Home Rails. The modern habit of speculators in taking stocks off the market and borrowing upon them from the banks, to which attention has often been drawn in this column, has brought woeful fruit. So long as stocks speculatively purchased are contangoed from account to account, the market, and thence the public at large, soon comes to know of any top-heaviness in the position for the rise. Precaution can then be taken betimes, and it is rare that any very severe reaction occurs before stability is re-established. When, however the banks are carrying an unknown mass of securities, and after a slight set-back proceed to safeguard themselves by throwing them on the market, there is no telling to what depth the prices may descend.

Last Saturday, apart from a rise of $1\frac{1}{2}$ in Hull and Barnsley, Home Rails were stagnant. In the American market only falls were recorded. Canadas were down $1\frac{1}{2}$, but Trunks, Mexicans, and foreign railways generally remained firm. When the markets opened on Monday, Americans rallied somewhat, but relapsed later, and Canadas fell two points after hours. Again the best features of the market were among foreign rails. On Tuesday the carry-over showed that the bull position had been much reduced as far as the House was concerned, and this caused a false feeling of security, which led to a better tone being exhibited in many departments of the exchange. In Argentine railways the advance was very pronounced, and both Trunks and Mexicans rose briskly. Americans were also higher, but Home Rails did not share the advance, and numerous declines were recorded, though nothing like so great, either in number or amount, as occurred on Wednesday. The falls in Home Rails that day were remarkable, and included 3 in Great Central 1891 Preference, $3\frac{1}{4}$ in Brighton A, $3\frac{1}{4}$ in South Eastern A, 2 in Midland Deferred, $2\frac{1}{4}$ in Great Central 1894 Preference, $2\frac{3}{4}$ in Great Northern Deferred, and a dozen more of between 1 and 2 points, to say nothing of fractions. Canadas were down $2\frac{3}{4}$, but Mexicans and foreign railway stocks generally remained fairly firm, with a rising tendency. The next day similar conditions prevailed. Mexicans and foreign railways were firm, while Home Rails declined. A rally occurred in Americans, which raised prices throughout the active list.

On Friday the subsidence of threatened trouble with returned strikers on the Great Eastern Railway had a calming influence, and the pressure of liquidation having lifted, a tendency to recovery of prices set in for all Home rails. The improvement began with the heavy stocks which had been least affected by the decline, and extended subsequently all round. Great Easterns rose 1, Great Westerns, North Westerns and North Easterns, $\frac{3}{4}$, Southern deferred the same amount, and Brighton deferred $\frac{1}{2}$. The tone of the market, as a whole, however, was not good. Consols declined a fraction. Mexicans and Trunks were lower. Some weakness was displayed in Argentine railways, and although the American market revived and Canadas were marked $1\frac{3}{8}$ higher, no great amount of business was accomplished, and a good deal of nervousness was apparent. The market in international stocks was dull, and other departments of the market, such as rubber, oils and Kaffirs, reflected a very weak tendency.

The movements of the week are set forth in the following table:—

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

PENARTH HARBOUR, DOCK AND RAILWAY.—The usual dividend at the rate of £5 5s. per cent. per annum.

LINCOLN WAGON AND ENGINE COMPANY.—The usual interim dividend at the rate of 10 per cent. per annum.

HIGHLAND RAILWAY (August 30).—At the rate of $1\frac{1}{4}$ per cent. per annum on the ordinary stock, appropriating £1,500 to general renewal fund, and carrying forward £8,082. A year ago the dividend was at the same rate, and £7,127 was carried forward, with £1,500 to general renewal fund.

The following is a list of the dividends for some years past:—

	1911.	1910.	1909.	1908.	1907.	1906.	1905.	1904.	1903.	1902.	1901.
1st Half ...	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	1 nil.	nil.	nil.
2nd Half ...	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	1 nil.	nil.

THE RAILWAY COMMISSION OF INQUIRY.

THE CASE FOR THE MEN.

The Royal Commission appointed to inquire into the working of the Railway Conciliation Scheme began the hearing of evidence at the Royal Commission House, Westminster, last Monday. The terms of reference to the Commission are:

"To investigate the working of the Railway Conciliation and Arbitration Scheme signed on behalf of the principal railway companies and of three trade unions of railway employees at the Board of Trade on November 6, 1907, and to report what changes (if any) are desirable with a view to the prompt and satisfactory settlement of differences."

It had been arranged that evidence on behalf of the men should be heard first, the case for the companies to be taken afterwards. All the Commissioners were present. Sir David Harrel in the chair.

EVIDENCE OF MR. J. E. WILLIAMS.

The first witness called was Mr. J. E. WILLIAMS, general secretary of the Amalgamated Society of Railway Servants. In reply to the Chairman, he said that the agreement of 1907 provided for sectional conciliation boards and a central conciliation board for each company. For the purpose of forming the sectional boards certain grades of men working under somewhat similar conditions were grouped together in sections, which varied in number from four to six or seven in different companies. The representatives of a section must be members of one of the grades of which it was composed. They were elected by the men of their own section, the area served by the company being divided into districts for convenience of election. A candidate must be nominated by at least 20 men of his own section, each adult, aged 20, having a vote. The men elected for a particular section in each district when assembled together formed the employees' sectional board for the company to deal with questions affecting the grades concerned. The company's representatives of equal number were supplied from a panel arranged by the company, but that panel was not strictly adhered to. It was varied according to circumstances. The central board was formed of one or more members of each sectional board and a number of representatives from the company's panel. The numbers had not always been equal. It was not a question of majority voting. The sections of the conciliation board were set up by petition. The petition must come from a particular section. There was no definite rule as to how many men must sign a petition in order to be recognised. They might obtain numerous signatories to a petition and be still in doubt whether a company would accept it as representative of the demands of the men. A proportion had been arrived at in the case of the Great Eastern Company. It was twelve per hundred. After applications for the consideration of demands had been made by the men, two months were allowed to elapse before a reply was made. He could give numerous instances of delay.

DELAY IN OPERATION.

There was no fixed period within which an agreement must be arrived at by a conciliation board. That was one of the men's grievances. If there was no agreement the question was referred to the central board, and if it failed to agree an arbitrator was appointed by the Speaker of the House of Commons or by the Master of the Rolls. There should be a more extensive panel of arbitrators. The settlement machinery was set up in November, 1907, and the two earliest cases in which boards were established were the Great Eastern and the Midland in March and April, 1908. The latest were the Caledonian, in December, 1908, and the Midland and Great Western of Ireland, in March, 1909. The delay of the railway companies in setting up the boards had caused a good deal of aggravation among the men. The railway companies took exception to the Amalgamated Society, from which the demands came on behalf of the men. The complaint was not so much about the delay in the election of the boards as about the delay in calling the elected representatives together after they had been chosen. Formerly, resolutions passed at mass meetings had been accepted as representing the men's views, but in many instances after the adoption of the new scheme, the railway companies instituted a new procedure by insisting on petitions, which resulted in further delay. He gave the following dates on which applications for meetings were made by sections of the Great Eastern Railway men, and the meetings actually took place:—Superintendents' department, March 20, 1908, and October 15, 1908; permanent way department, April 7 and October 22; goods department, April 7 and December 2; local department, April 14 and December 15. On some railways they had been obliged to engage men specially

to act as arbitrators, and to act as arbitrators, and to act as arbitrators.

LIST OF ARBITRATIONS.

On 19th January the arbitrator met the sectional board of the Great Eastern Railway. In the case of the London and North Western Railway the cost of the arbitration board's side alone was £636 10s. 8d. As to the arbitrator's side, and the printing, would be equally divided between the cost of his witness. In this case the arbitrator had no charge whatever, and the arbitration lasted 100 days, being among the shortest. In the Great Western case the cost was £636 4s. 6d., made up of arbitrator's £318 2s. 3d. and £318 2s. 3d. for interpretation, witness's expenses £48 10s. 0d., and printing £211 0s. 3d., and £636 4s. 6d. for the arbitrator's share. The cost of other arbitrations had been:

Great Eastern	£1,170 0s. 0d.
Great Northern	1,336 0s. 0d.
Great Northern of Ireland	831 0s. 0d.
North Stafford	150 0s. 0d.
G.N. and City	80 10s. 0d.
North British	1,417 10s. 0d.
Caledonian	1,294 3s. 0d.
Midland	1,896 0s. 0d.
North Eastern	1,035 0s. 0d.

The total cost of the arbitration proceedings was £12,508 8s. 3d. Then there was the preliminary expense of the sectional boards and the central boards. The total cost of the whole of the machinery to his society had been £27,033 18s. 2d.

INTERPRETATION OF AWARDS.

In regard to interpretation of awards, the position of his society was that the awards were the joint products of the Central Board, both sides of which agreed to go to arbitration. But when they came to deal with the question of interpreting the awards, the whole of the railway companies claimed that the award was their instrument, and the men had nothing whatever to do with its interpretation. As a consequence, it was only in one or two instances, and then not until a serious stoppage had been threatened, that the Central Board on the men's side had been permitted to meet the company's side to discuss the disputed points of interpretation under the arbitrator's award. One company had suggested that the award should be made the subject of legal proceedings. That was one of the causes of the terrible dispute recently passed through. The societies refused to go to the courts. They tried to do the best they could under the circumstances. In one or two instances the arbitrator had been approached on certain small points, but the company claimed the exclusive right of deciding whether they should go to the arbitrator or not. In the instances in which they had gone to the arbitrator, it had generally been on very small points. He had a list which gave the dates on which claims were originally submitted, the dates of the settlements, the period taken in effecting the settlements, and by what agency the settlements were arrived at, whether by Central Board or arbitration. From the period of the men's applications to the period of the settlements, the time extended over 10 months, 15 months, 18 months, and so on.

ALTERNATIVES.

As an alternative to the present arrangement, he suggested that there should be one board for each railway. The sectional boards had not effected many settlements in proportion to the whole. There had been very heavy expenditure for parties using the sectional boards, and without any really beneficial result. The North Eastern Board, which was a general one, had given much greater satisfaction than the scheme set up in 1907. There were 18 representatives of the men and 18 of the employers, and the working of that board had been marked by greater despatch than the working of smaller boards under the scheme of 1907. It was also necessary to have an independent secretary to work up evidence. The failure of the present system was largely the result of the want of the freedom which would exist if a secretary outside the employees of the company were allowed to urge the claims of the men. Settlements would be arrived at more quickly and more effectively, and if the principle had been conceded during the negotiations preceding the present dispute it was absolutely certain that this country would not have seen a cessation of work.

Another proposal was that there should be a National Board. Its work would be very small if the officials of the organisations were recognised in the deliberations of the other boards. The National Board would be a kind of Court of Appeal from the Central Board. He proposed that the board should be composed of elected representatives from the companies and the men's executives. If they did not agree, they should call in an independent person as arbitrator or chairman. The only hope of salvation from these disputes was to give the men some agency whereby they could be satisfied that their complaints had been

properly sifted and investigated. He did not think that any award should stand longer than three years, because of changing economic conditions.

VIOLENT MEN.

By Sir T. R. ELLIS: Could you be assisted by legislation or otherwise against the more violent men whom you cannot control?—Well, I think that severe restrictions create material for the more violent men in getting adherents.

You would not for a moment justify any man being intimidated into not carrying out an award?—Quite so.

Could you have assistance in that direction?—I think if the awards had been quicker and there had been avenues to consider grievances, we would not have had this railway strike.

You think that, with the law as it stands, the moderate man could control the immoderate man?—I do, if we had an improved machinery to operate on behalf of the men.

Answering Mr. BURNETT, the witness said that the membership of his union was approximately 100,000, which represented probably 40 per cent. of those who were eligible to join the organisation. The union only catered for certain sections, and he should say that altogether they had 75 per cent. of the railwaymen organised. With regard to representation on the boards, he would have the grades represented according to the number of men employed in each grade. There would be, as at present, no distinction between union men and non-union men. He wished that the railway companies would make that distinction, and only give concessions to union men, because it was they who obtained them.

TUESDAY'S PROCEEDINGS.

On the Commission resuming on Tuesday.

Mr. ALBERT FOX, general secretary of the Associated Society of Locomotive Engine Drivers and Firemen, was called. In answer to the CHAIRMAN, he said that his society included 50 per cent. of the whole of the locomotive engine drivers, firemen, and cleaners. In the first grouping of the men for the purpose of electing members of conciliation boards, the engine drivers, firemen, and cleaners were in a group by themselves. That was all right, but subsequently the companies varied the arrangement by including other sections of railway servants, who for the companies' convenience received their wages from the same department. The inclusion of these men prevented the locomotive men from electing whom they preferred to represent them. It was impossible to institute any scheme satisfactory for the settlement of either conditions of service or other matters that did not give the men direct control over their own conditions and the power to decide when a satisfactory settlement was arrived at in any case of dispute. Assuming that the engine drivers brought a complaint to the Central Board, they would only be represented on the Board by one in six or eight.

NO NEED FOR A CENTRAL BOARD.

The witness, in answer to the CHAIRMAN's questions, said that the sectional board, supposing it was confined to locomotive men, gave exactly what he wished. If any boards would meet their desire it would be the sectional boards. That was the opinion of the twenty odd thousand men whom he represented. In the case of the sectional boards failing to agree, the men should have the right of appealing direct to an arbitrator or other authority. The Central Board, as at present constituted, blocked the way. The men not included in the 1907 agreement were what were called shopmen, such as fitters and brassworkers. The term applied to the others who were dealt with by the agreement was running men or railway men.

Mr. FOX proceeded to say that the scheme merely set out to deal with hours and wages. He handed in some illustrations of cases that did not come within the scheme. For example, every diagram train had been put on the trip system for payment. A diagram train was a train which a man was booked to run. The change had been made since the arbitration award. It was obvious after Sir Edward Fry decided that trip rates did not come within his purview to be dealt with under the conciliation scheme that to pay men on trip rates left them without any remedy. The Great Eastern Railway to a large extent irritated the men by varying the award. The company reserved to itself the right to reduce a man's wages as much as 1s. 6d. per day after the arbitrator had interpreted what his award should be. The cases he had put in would show the failure of the scheme of 1907. Then, the scheme did not make provision for representation in accordance with the wishes of the men, and it made no provision whatever for dealing with various grievances, such as punishments inflicted upon men for slight mistakes in some instances, and in other cases for something over which they had no control whatever. There were cases where men were punished without inquiry, the general method adopted by the railway companies being to punish the men first, and hold the inquiry afterwards.

"IRRITATING FACTS."

There were a hundred and one irritating facts of this nature, which, if allowed to ferment, would bring about the condition of things which occurred a little while ago. There were instances where men had been suspended, fined, and reduced 1s. or 1s. 6d. per day for having lost five minutes with an express. He felt satisfied that the men could prove to the companies, if they were given the opportunity to do so, that in many instances they were not to blame at all. But the opportunity to do this was not given. It could also be proved that when men were so punished they had no means of redress, all they could expect being a reply to the effect that if they did not like it they could leave the service.

Then we may take it from you that the scheme should include every relation between the companies and the men?—Yes.

Is not a reduction of 1s. per day covered by the term "wages"?—No. It takes the shape of a punishment.

It is discipline?—Discipline the company call it, but it is not discipline to the man's pocket and his family.

THE QUESTION OF "RECOGNITION."

The witness's next point was that the decision of the men in connection with the ultimatum they had just passed was that they wanted direct recognition of the trade union officials to render them assistance in preventing them from being unjustly punished. Many of the men were so heartily sick of the present methods that they absolutely refused to take any part whatever either in the election of representatives to the Conciliation Boards or in laying matters before the boards when they were elected. In 99 cases out of every 100, especially in the locomotive department, the complaints of the men were not so much concerned with hours and wages, but turned on a multitude of points similar to those he had already mentioned—unjust fines, suspensions, reductions, withdrawal of advances, not getting promotion in accordance with seniority, and a host of other things.

AN ALTERNATIVE PROPOSAL.

The witness next put forward an alternative to the scheme of 1907. His proposal was that in the event of any complaint arising, either with respect to hours, wages, punishments, or injustices, the local officials of the company at the depot concerned should be approached by the employees of the particular grade at that depot. In the event of satisfaction not being obtained, the dispute should be submitted to a general representation of the men of that particular grade or grades, who should elect from their number a deputation to meet the management accompanied by their trade union officials. If an agreement could not yet be arrived at, the matters in dispute should be at once submitted to a tribunal consisting of two persons selected by the men and two by the company. The four should agree on an independent chairman, or if they failed to do so the Government should be requested to select a chairman for them. Before this tribunal the trade union officials should state the case on behalf of the men if desired.

By Sir T. R. ELLIS: Do you suggest that whenever in the opinion of those responsible for the carrying on of railway traffic it is necessary for disciplinary purposes to fine a man, it should be made the subject of arbitration?—Not necessarily.

Any fine might be the subject of arbitration if the men chose to go to arbitration about it?—Yes.

Do you think it would be possible to carry on a railway company's business like that?—I do.

Replying to further questions by Sir T. ELLIS, the witness admitted that his suggestions would ultimately leave the decision of a dispute to one man. If this gentleman's award were not unanimously accepted, he could only hope that the parties to the agreement would be honourable men who would abide by the agreement as far as possible.

Would you be prepared to say that any workmen who did not carry the award out should have no assistance from the union funds?—Yes.

Questioned as to whether people who wished to work and carry out the award should be secured from intimidation, the witness said he was not prepared to give a direct answer at the moment. He would rather be prepared to consider favourably the recommendation of the Commission on matters of that sort.

THE GENERAL RAILWAY WORKERS.

Mr. THOMAS LOWTH, general secretary of the General Railway Workers' Union, stated that his society, which had a membership of 20,000, consisted of men from the goods and permanent way depôts, and what were known as "shops." His union asked for the abolition of the scheme of 1907. He gave instances to show that the scheme had worked unsatisfactorily, and subsequently said that non-recognition of the unions by the companies was one cause of the national strike. He had definite instructions not to support anything by way of a new scheme which did not give full recognition to the railway trade unions. He admitted that the action of the members of

his society in striking without notice was not in accordance with the scheme of 1907. Since the scheme came into operation they had lost control over their men, and they could only regain that control by means of trade union recognition. In order to settle disputes, he suggested that the railway company and the men should each appoint a representative, and the Board of Trade should add a third. The witness also complained that there was a growing tendency to increase the number of temporary and casual men, and to reduce the number of the permanent staff who alone were affected by the award of an arbitrator.

By Mr. HENDERSON: In the event of your own scheme being put into practical working operation, what proposal do you make to the Commission—supposing it was prepared to recommend the adoption of your scheme—for guaranteeing that awards would be fully carried out, and in the event of the men being dissatisfied, in what way are you going to compel the men to accept that award?—I could only promise you that I should use my best endeavours, and I am quite sure my executive would. I could not give you any particulars of the methods I should use.

THE MIDLAND RAILWAY BOARD.

Mr. JOHN T. WHITE, secretary to the men's side of the Midland Railway Conciliation Board, said he objected to the 1907 scheme because its machinery was cumbrous, and too much time was taken in the settlement of complaints, and because it was only applicable to certain sections of the railway staffs.

EVIDENCE ON WEDNESDAY.

Mr. WHITE continued his evidence on Wednesday. He said that one of the weaknesses of the present scheme was that there was nothing laid down to give the right to any employee coming within the scheme to send down what information he liked respecting matters which were to be submitted to the Conciliation Boards. There had been several cases where men had had to submit to unfair treatment for having supplied information to the men's representatives, and the result had been that these men had not felt as free to supply the information as they otherwise would have been. The men's representatives on the Conciliation Boards could not do their work as efficiently as they might do because the men were deterred from sending information forward. The scheme should make some provision for the protection of individuals who gave information, and also for preventing any undue influence being brought to bear on the men's side of the Conciliation Board to give a decision favourable to the company's side. He put forward as an example of the matter complained of, the dismissal of a number of goods guards by the Midland Company last year while the subject of the guaranteed week for goods guards was before the Conciliation Board. The company averred that the dismissals were necessary because of a serious diminution in traffic receipts, but the men were afterwards taken back. The witness was also of opinion that if the Boards were to be effective their constitution must exclude those who took part in negotiations between the company and the staff. Another point was, that while the company's side had access to all official information, the men's side had no practical means of getting it. The men's side of the Board had to get information by collecting it from the men over the whole system—a most difficult operation. The data should be submitted to the Board by the company's side. There were cases where head shunters had had their wages reduced and their hours raised through a system of re-grading by which the men lost the concessions which followed the agreement or the award of the arbitrator. There was no provision in the scheme to prevent this.

Then no provision was made for interpreting an award or settlement, and the arbitrators would not consent to give interpretations of their awards unless an application was signed by the two secretaries of the Conciliation Board. The Midland Railway Company almost from the first negotiated points of difference through their secretary and himself, but he believed this was the only company that so acted.

By Sir T. R. ELLIS: He was in favour of the method of conciliation provided they had efficient machinery.

I gather that you do not think that the companies have given the scheme a fair chance?—I do not want to be harsh. While the scheme is as it is there is no one who can blame the companies for taking the course they took.

In your view, although the companies have carried out the letter of the agreement they have not altogether carried out the spirit?—That is so.

He did not approve the principle of having sectional Boards with an appeal to a Central Board, but he would approve of one Board for the settlement of all disputes for a railway, provided it was a composite body and that they could get men of

unbiased minds. When a Conciliation Board such as he approved of was established, he would admit that there should be no stoppage of work until a dispute had been considered by the Board.

TO PREVENT STRIKES.

How would you prevent the things which recently happened? The men ceased work without notice and without discussion? In the first place I would take the grievance at its roots. The further they go the worse they become. I would make provision in the scheme for the men's grievances to be dealt with effectively as soon as they arose.

Having got all that, how would you secure that there should be no stoppage of work until the matter had been considered by some outside authority?—If you deal with a man's grievance as soon as he feels it, he has no desire to strike.

Is it practicable to have all grievances considered within a very short time by the Central Board?—I don't say by the Central Board. I think a man ought to try to settle individual grievances through his own officials. If he cannot get them settled that way, his trade union should negotiate the settlement.

Do you think that strikes will be obviated if trade union officials are allowed to represent the men?—I think it is almost, if not absolutely, certain, because there can be no effective strike unless it is supported and managed by the trade unions.

How do you account for the North Eastern Railway case, where the union officials had met the officials of the company?—In so far as the present case is concerned, the North Eastern Railway men were involved in the strike because it was a strike on all railways for the purpose of getting back a considerable number of men to their employment who could not have been got back by any other means.

Do you propose making that a matter for discussion by the board?—If any railway company is going to dismiss a considerable number of men, as in this case some 15,000—there must be some effective means of compelling the railway company to take them back.

A NATIONAL BOARD.

In reply to further questions the witness said that there should be a court of appeal to decide when the Board failed to agree. This court should be a National Board representing railway interests, but not those of the railway concerned.

By Mr. HENDERSON: There should be on the National Board representatives of each of the nineteen principal railways and of the employees of each of those companies. The workmen's representatives should be selected by the executive committees of the unions. The secretary to the Board should be a permanent official of one of the unions concerned.

You do not think the National Board would work satisfactorily as far as the men are concerned unless there were this trade union representation?—No; the men have come to a point now when they will accept no machinery as satisfactory unless the unions are represented throughout.

ARBITRATION DIFFICULTIES.

If there were any failure on the part of the National Board to agree and you declined to say that you would go to arbitration, would you suggest any plan to prevent a stoppage of work?—I do not see any effective course. If you go to arbitration and the arbitrator's award is not acceptable to the men, what you have had this time may occur again. The men cannot be bound even by an arbitrator's award.

Supposing the Commission were to adopt your suggestion and set up a National Board, what guarantee have the public or the railway companies that every time the Board fails to come to an amicable settlement we are not going to have a stoppage of work?—You have this guarantee: you have got a board for each railway, which is not what you may call sectarian, you follow it up by a National Board, which again is not sectarian, and the idea of a strike is a long, long way off.

If the Board cannot arrive at a satisfactory decision, do you prefer some system of arbitration to a deadlock in the shape of a strike?—I cannot prefer arbitration. As I say, you cannot alter human nature.

You do not support Mr. Williams in his statement that he would be prepared to have a National Board with a deciding chairman?—I do not favour the deciding chairman.

By Sir T. R. ELLIS: Would you be in favour either of legislation or some other way of giving ample protection to men wishing to carry out the award?—I am not in favour of further legislation, because these men are amply protected at present.

Some instances which occurred in the recent strike went rather beyond "peaceful persuasion"?—Very few on our own

system, one of the largest. The police inspector told me himself he had not a complaint to make against the men.

A WITNESS FROM SCOTLAND.

Mr. JOHN CUTHBERTSON, Glasgow, a signalman employed by the North British Railway Company, and the secretary to the men's side of the Conciliation Boards on that railway, said that many objections were made by the men to the method of administering the settlements arrived at by the Boards. With regard to expensive methods of procedure, the choice of an arbitrator was limited by the expense that would be entailed. Another expensive item was that of witnesses, forty-five of whom were examined in the preparation of the men's case on the North British system. The arbitrator's fee alone came to £1,100, the printing, etc., to £500, and witnesses cost £300. The Amalgamated Society's share of the cost came to £1,800 or £2,000, while other societies whose members were affected contributed in proportion.

His alternative to the present scheme was that there should be one board for each railway not necessarily composed of any particular grade or grades. He would allow the men on the railway to elect anyone they chose. These Boards should adjudicate on all matters referred to them by the men in respect of wages, hours, or other conditions. It would be necessary to have trade union representation on the Boards. In the event of failure to arrive at a settlement he would agree to the establishment of a National Board, which would take the matter entirely out of the hands of the men, who would have to abide by whatever decision was then arrived at. The National Board should be composed on the one side of representatives of the railway associations and on the other of the men, either railway employees or trade union officials, elected by the unions' executives. If the National Board failed to agree it should have power to call in a neutral chairman to be mutually acceptable to both parties, whose decision should be final.

Mr. HENDERSON: Your new scheme, as far as I can understand it, is going to involve us in greater confusion and greater diversity of procedure than anything that has existed in the past, and in the end it is tantamount to arbitration. You cannot have your scheme of conciliation pure and simple without carrying with it an obligation to use the whole of the powers of the union to keep the men employed until the whole of the processes of the scheme have been completely exhausted.

The WITNESS replied that the unions would be loyally bound to carry out the machinery they had accepted.

Mr. NATHAN RIMMER, secretary of the Amalgamated Society of Railway Servants for Ireland, spoke of the difficulty of getting railway companies to adopt the scheme.

Answering Mr. Henderson, he said that he preferred the existing scheme, with all its blemishes, to the older methods.

THURSDAY'S EVIDENCE.

HASTE AND FAILURE.

Mr. J. H. THOMAS, Labour Member of Parliament for Derby, and assistant secretary of the Amalgamated Society of Railway Servants, was the first witness on Thursday. In reply to the chairman, he said that in his opinion the machinery set up by the agreement of 1907 had failed entirely to remove the grievances of which the men complained. Much of that failure could be attributed to the haste and pressure with which it was drawn up. Those who signed it on behalf of the men had no opportunity to discuss the scheme except for a few hours on the same evening as the scheme was eventually adopted, and no discussion took place between the railway companies and the railwaymen. The scheme was formulated by the Board of Trade under considerable pressure, and was submitted to the railway companies and to the men all within a few hours, and the pressure he spoke of was pressure which was brought to bear to avert what was then likely to be a stoppage. He believed that had a free and frank discussion taken place at that stage between the representatives of the men and the companies they themselves would have seen and altered probably many of the points in the scheme that had since been the real cause of the trouble. There was some excuse for both sides in not seeing the failures that had since been experienced.

There were practically two years of agitation in favour of certain altered conditions of service before the scheme was eventually set up, and the view of the men's representatives was that the machinery set up to deal with these questions ought to have been immediately set in operation to deal with the men's complaints. After nearly 12 months had elapsed only 11 sectional boards had met. That contributed very largely to the suspicion that the men entertained as to whether the machinery was likely to be of any benefit to them. In the next

place certain railway companies observed the letter rather than the spirit of the scheme, and there was no desire shown to meet the men and see what the difficulties were of which they complained. As far back as May, 1908, Mr. R. Bell, then secretary of the Amalgamated Society, wrote to Mr. Churchill, then President of the Board of Trade, complaining of the way in which certain railway companies were breaking the terms of the agreement and reducing the settlement to little more than a farce.

THE POWER OF THE BOARDS.

Another point was that the boards had not dealt with questions that were of vital importance. They had not the power, as the questions of hours and wages were the only matters that the scheme provided for. He thought, however, that too narrow an interpretation had been placed on hours and wages. He complained particularly of the system by which men were paid by the trip. In one case, owing to fog, although a man was on duty 12 hours he only earned 11d, because his train could not travel. The men asked that the "trip" system should be abolished and that the men should be paid a time rate. Witness further contended that the powers of the board should be extended to consider questions other than those of hours and wages.

RULE 55.

The witness also referred to Rule 55, which he said provided that when an engine was standing at a signal it should be the duty of either the fireman or the guard to go to the box and remind the signalman. The men felt that this rule was impracticable, and that modern railway development rendered it impracticable, obsolete, and dangerous. It would be to the advantage of the companies that they and their men in a representative capacity should discuss such a question as that.

REPRESENTATION OF NON-UNIONISTS.

The point had been raised as to how non-unionist men were to have representation in the suggested machinery. He submitted figures to show how trade unionists practically represented all sections. The number of seats to be filled on Conciliation Boards in England and Wales was 619. Of these at the elections three years ago 579 were filled by representatives of the unions and 40 by non-unionists, giving a percentage of the former of 93.54. In Scotland the percentage of unionists was 81.25 and in Ireland 89.19. Thus in actual practice the non-unionist preferred a trade unionist to represent him. The witness proceeded to complain of intimidation of men by certain companies.

RECOGNITION OF UNIONS.

On this point Mr. Thomas said that it was to the advantage both of the men and the company. There was nothing so much calculated to bring peace to the railway service as the knowledge that the men had the opportunity through their official representatives of directly dealing with the employers. He gave instances in which such negotiations had resulted in settlements at moments of crisis. He urged that there should be an immediate revision of all awards and settlements, and was pleased to know that some companies were already doing this since the settlement of Saturday week. When the agreements were arrived at about 1908 the prosperity of the railway companies was not such as it was now.

AN ALTERNATIVE SCHEME.

As an alternative to the present scheme, he suggested that there should be one board for each railway, and that the sectional boards should be abolished. The representatives would be allocated in proportion to the numerical strength of the grades. In the event of this board failing to agree, the matter should be referred to the National Board on the lines suggested by Mr. Williams. He would leave the calling in of a determining chairman to the National Board. In spite of all that had happened he still said that given a conciliation scheme equitable and fair, which gave direct recognition to the men to choose whom they liked to represent them, and in the circumstances he had described, there was no body of men who would place more value upon the principle of conciliation than railwaymen.

By Sir T. R. ELLIS: When there is an award, how do you suggest it should be carried out, supposing the men refused?—No one can bind every man and say: "You shall go to work," but if an agreement were arrived at honourably and under proper machinery, pre-supposing fair dealing on both sides, I personally would take the responsibility of saying to the men: "We are bound by this agreement." He would agree, he continued, that the whole strength of the Union should be devoted to carrying out the agreement, and would go the length of saying that if one section were not desirous of carrying it out it was the duty of the whole of the other sections to see that it was carried out.

Would you also agree that the funds of the union should not be applied in supporting men who would not work?—We not only would do that, but I could give you scores of illustrations.

As a matter of principle?—I agree, absolutely.

By Mr. HENDERSON: Do you recognise that if such machinery was accepted by the companies it carries with it the recognition of the obligation to remain in the employment of the companies collectively once the processes have been entered upon until the whole of the processes have been completed?—Absolutely. And I would be prepared to say we have no right to ask for that recognition unless we were prepared to fulfil our side of the obligation.

By Mr. BURNETT: In connection with strikes, the rules of his society was that arbitration must be offered before a strike took place. The only exception to this was the national strike of a few days ago, and there the rule in spirit was carried out, because before the national strike was decided upon the Executive offered to meet the railway companies, and if the companies had said they were prepared to submit the points in dispute to an arbitrator even then the rule would have been absolutely carried out and the strike would not have taken place.

Mr. JOHN CUTHERBERTSON, the secretary to the men's side of the North British Railway Board, was recalled to remove a misconception as to his views. He said that he agreed that when once the men had handed over the case to the first board, they should have no power to take any steps until the machinery had been completed. That had always been their practice.

A SCOTISH VIEW.

Mr. JAMES ROBINSON, signalman in the employment of the Great North of Scotland Railway Company, and secretary to the men's side of the Conciliation Board, put forward objections to the existing scheme similar to some of those advanced by previous witnesses. He was in favour of having only one board for each railway, and of referring questions to an outside chairman if the two sides could not agree. The authority of the union should be used to make the men carry out any settlement.

Mr. EDWARD CHARLES, a member of the Executive of the Amalgamated Society of Railway Servants, complained of the delay in getting the conciliation boards to work. The method of conducting negotiations to settle questions of interpretation was also unsatisfactory.

YESTERDAY'S PROCEEDINGS.

NON-UNION MEN TO BE HEARD.

At the opening of yesterday's sitting of the Commission,

The CHAIRMAN said: In order to afford all employes who do not belong to any of the trade unions an opportunity of expressing their views, the Commission will consider applications which may be made to them by that class. The grade and section of the witness proposed should be given, and a short statement of the evidence should be submitted. Necessarily the numbers must be kept within reasonable limits. I would like to add to that that it is not proposed that such witness or any witness should come here with the idea that this Commission sits for the purpose of enquiring into or correcting particular grievances. The object of the Commission, as you will all see by reading the terms of reference, is not to settle questions of hours and wages, or any other question which is at present the subject of difference between employers and employed. It is with the object of considering the machinery which was set up in 1907, and which is alleged not to have been satisfactory, and to receive evidence, general and particular, bearing on the subject of the working of this agreement in order that we may arrive at some decision and make a report as to the amendment of that agreement if any be required. Therefore it is necessary in particular in addressing those who do not belong to societies to ask them to consider that we are not here as a Commission of Settlement with regard to grievances.

Mr. EDWARD CHARLES resumed his evidence and insisted on the necessity of giving the men freedom to present their claims from the first through their unions. He had known many a man's case to be spoilt through not being able to state his case properly. In matters of discipline also, which meant punishment to the men, the union should have the right of making representations when a punishment was excessive. There should be one board for each railway, with adequate representation of all sections of the men. That would tend to remove existing inequalities. The unions should be represented on the board. Questions not settled by it should be referred to a National Board, having not more than six

members on each side, and the trade union representatives on it should all be trade union officials. The non-union men would be prepared to have a non-representation.

TO FURTHER RECOGNITION.

Sir T. R. ERIS: The witness is to the course to be adopted in case the company did not comply with a recommendation from the Commission that recognition should be granted to the unions.

The WITNESS said that on understanding when the agreement was signed last Saturday week was that both sides, masters and men, would accept the findings of the Commission, and abide by them locally. The recommendation of the Commission, therefore, was all that was necessary.

Sir T. R. ERIS: Was that the understanding? If it had not been the understanding the strike would not have finished when it did.

Do you suggest that there should be a provision in some Act of Parliament that the company should receive the trade union officials? Yes, if they are so obstinate that even the recommendation of the Royal Commission has no effect on them.

In the recent disturbance there was a decision of a Conciliation Board in existence. How did it come that there was a strike?—Because the men felt they were being "had." They were compelled to observe their obligations, while the railway companies were given a free field to do what they liked.

Do you anticipate that that is a thing which is likely to happen in the future?—If you get a similar condition of things, if obligations that are laid on the men are not also laid on the other side, violation on the one side will necessarily entail violation on the other. Given observance on both sides, you will find the trade unions will stick to their contracts.

By Mr. BEAVER: Would you have any objection to taking the opinion of the whole of the men as to whether they did or did not on any particular line desire to be represented by the union?

No. I am making a claim for trade union recognition.

Whether the men wish it or not? No. If you had a method of that sort the same thing that we have found on certain systems would happen again. When the ballot papers were circulated the officials of the company would take a pretty considerable part in their circulation and the way they were filled up. There would be undue influence, and we do not want the men to be subjected to any more of that kind of thing.

Mr. ALBERT BELLAMY, a London and North Western Railway engine driver, and president of the Amalgamated Society of Railway Servants for 1911, said that he was also president of the Joint Executive of the railway trade unions during the recent dispute. He joined with previous witnesses in complaining of delays under the conciliation scheme. He was in favour of the immediate revision of all wages and settlements. Given satisfactory machinery, he thought they would never have a recurrence of recent troubles. He, however, did not favour any obligation to have an independent chairman or an arbitrator. He could not imagine that there would be any deadlock.

The Commission adjourned till Monday.

FURTHER G.E.R. TROUBLE AVERTED.

Publicity was given on Thursday to an appeal by the Great Eastern Railway employers' strike committee at Stratford to the Joint Executive of the railway trade unions for the issue of an ultimatum to the railway companies for the bringing out of the union men on all railways on account of an allegation that the Great Eastern management were not adhering to the undertaking given to the Government for the reinstatement of all the strikers in their old positions. Certain men at the time of the declaration of the strike were "acting" drivers. On the declaration of the strike they left the places to which they had been temporarily promoted, and these were filled by the appointment of loyal firemen as "acting" drivers. The strikers, on going back, were offered, not the work to which they had been temporarily promoted, but their permanent jobs, the temporary ones having been filled by men who declined to come out on strike. The allegation of the strikers was that this meant that the loyal men who took their jobs had got a step in front of them for promotion. Mr. J. H. Thomas, M.P., stated on Thursday that a satisfactory guarantee had been given that the Great Eastern Railway Company would fall into line with all other companies. Mr. Thomas added that an assurance was given by the Great Eastern Company at the Board of Trade that the men would be reinstated as soon as possible, and that the notices which were posted for the removal of certain men would be immediately withdrawn.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

Sept. 4 (Mon.).—	Brazil Great Southern Railway (Annual), Winchester House, Old Broad Street, E.C., at 12.
Sept. 6 (Wed.).—	Buffalo and Lake Huron Railway (Half-yearly), 14, Cook Street, Liverpool, at 12.
Sept. 6 (Wed.).—	Waterford and Tramore Railway (Half-yearly), Waterford, at 12.30.
Sept. 9 (Sat.).—	North Cornwall Railway (Half-yearly) South Western Hotel, Padstow, at 11.30.
Sept. 19 (Tues.).—	Caledonian Railway (Half-yearly), 39, George Square, Glasgow, at 1.30.
Sept. 19 (Tues.).—	Underground Electric Railways of London (Half-yearly), Electric Railway House, Broadway, Westminster, at 3.30.
Oct. 4 (Wed.).—	Canadian Pacific Railway (Annual), Montreal.

(Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. (Telephone, 2948 Gerrard. Telegraphic address, Altimetry, London.)

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON.

The report of the directors for the half-year ended June 30 last, to be submitted to the shareholders at the meeting which will be held on September 19, states that the result of the past half-year continues to show a substantial improvement. The following statement gives the net revenue and shows the method of its disposal:—

	1911.	1910.
The net revenue from investments and properties (including general interest), after deducting general expenses, amounted to	£106,106	£96,768
Amount receivable under guarantee on Metropolitan District Railway assented first preference stock	2,687	—
	£108,793	£96,768
The net income from the operation of the power house was	£45,472	45,417
The interest on £1,000,000 4 per cent. first power house debentures, and a proportion of commission, discount and expenses incurred in connection with the issue, required	20,870	20,870
Leaving a surplus from the power house of	24,602	24,547
	£133,395	£121,315
The service of the £1,000,000 5 per cent. prior lien bonds required	£26,549	£26,459
The service of the £2,818,700 4½ per cent. bonds of 1933 required	67,349	67,120
The payment under the guarantee on Metropolitan District Railway assented extension preference stock amounted to	—	1,343
	£93,898	£94,922
Leaving a surplus over half-yearly charges of	£39,497	£26,393
Which amount will be applied as follows:—		
Interest at the rate of 1½ per cent. per annum on £4,928,050	£36,960	£24,640
6 per cent. income bonds of 1848	2,290	1,438
Income tax	£39,250	£26,078
Balance to reserve applied in reduction of the accumulated revenue deficiencies	247	315
	£39,497	£26,393

The income from investments for the six months showed an increase of £15,678, or about 17 per cent. over that for the corresponding half-year of 1910.

The directors note with satisfaction that the Metropolitan District Railway Company has paid for the last half-year a dividend at the full rate of 4½ per cent. per annum on its first preference stock, and that consequently the company is now deriving the full benefit of the arrangement under which it guarantees the dividend on the Metropolitan District Railway assented first preference stock. The company received on balance in respect of last half-year the sum of £2,687, whereas for the corresponding half-year of 1910 the amount paid by the company was £1,343.

The traffic of the Railway Companies and the London United Tramways, Limited, in which the company is interested, is increasing satisfactorily.

The eighth Parson's turbine has now been installed and is in operation. The net output of electric energy during the half-year was 69,636,800 kw. hours as against 63,627,200 kw. hours during the corresponding period of 1910.

The London Electric Railway Bill received Royal Assent on June 2 last. The railway company has let the contracts in connection with the construction of the Charing Cross

and Paddington extensions and actual construction has been started. It is hoped that these works will be completed within eighteen months.

The Metropolitan District Railway Bill also received Royal Assent on June 2 last. The powers conferred by this Act; whereby the Lots Road power house undertaking is to be purchased by the joint committee of the Metropolitan District and London Electric Companies and leased to the two railway companies were fully explained in the circular issued to the shareholders and holders of 6 per cent. income bonds of the company on June 9 last. A provisional agreement has been executed stating the terms on which the power house will be transferred to the joint committee and leased to the two railway companies as on and from January 1 next.

£1,250,000 London Electric Railway 4 per cent. preference stock was sold during the half-year for delivery on September 1 next. The proceeds will be used towards the redemption of the entire series of £1,000,000 5 per cent. prior lien bonds on that date.

The proceeds of £2,200,000 Metropolitan District and London Electric Railways joint power house rent charge stock, which has been sold for delivery on January 15 next, will constitute the purchase price for the Lots Road power house undertaking above referred to, and will be used to redeem on that date £1,000,000 4 per cent. power house debentures and £1,088,700 4½ per cent. bonds of 1933.

CANADIAN PACIFIC RAILWAY.

The directors in their report for the year ended June 30 last state that the accounts of the company show the following results:—

Gross earnings	\$104,167,808.21
Working expenses	67,467,977.04
Net earnings	\$36,699,830.57
Net earnings of steamships in excess of amount included in monthly reports	1,118,349.87
	\$37,818,180.44
Deduct fixed charges	10,011,071.44
Surplus	\$27,807,109.00
Deduct amount transferred to steamship replacement account	—
Contribution to pension fund	80,000.00
	1,080,000.00
	\$26,727,109.00

From this there has been charged a half-yearly dividend on preference stock of 2 per cent., paid April 1, 1911	\$1,112,333.33
And three quarterly dividends on ordinary stock of 1½ per cent. each, paid December 31, 1910, April 1, 1911, and June 30, 1911	9,450,000.00
	\$10,562,333.33
	\$16,164,775.67

From this there has been declared a second half-yearly dividend on preference stock, payable September 30, 1911	\$1,141,533.31
And a fourth quarterly dividend on ordinary stock of 1½ per cent., payable September 30, 1911	3,150,000.00
	\$4,291,533.31

Leaving net surplus for the year \$11,873,242.30

In addition to the above dividends on ordinary stock two and one-half per cent. was paid from special income.

The following are the details of special income for year ended June 30, 1911:—

Interest on cash proceeds and on deferred payments for land sold	\$1,688,170.70
Interest on deposits and loans	1,030,377.88
Interest on Can. Pac. Ry. 1st mortgage bonds acquired	61,003.66
Interest from Minneapolis, St. Paul and Sault Ste. Marie Ry. bonds	159,720.00
Interest from Duluth, South Shore and Atlantic Ry. bonds	150,000.00
Interest from Mineral Range Ry. bonds	50,160.00

Interest from Toronto, Hamilton and Buffalo Ry. bonds	\$10,840.00
Interest from Kingston and Pembroke Ry. bonds	9,345.00
Interest from Dominion Government bonds ..	182,500.00
Interest from Ontario Government bonds ..	48,000.00
Interest from British Consols	110,544.28
Interest from Montreal and Atlantic Ry. bonds and on other securities	140,022.40
Dividend on St. John Bridge and Ry. Extension Co. stock	50,000.00
Dividends on Dominion Express Co. stock ..	100,000.00
Dividends on Minneapolis, St. Paul and S.S.M. Ry. common stock	7,300,100.00
Dividends on Minneapolis, St. Paul and S.S.M. Ry. preferred stock	308,030.00
Dividend on Alberta Ry. and Irrigation Company stock	80,102.50
	\$5,049,856.42
Transfer of balance of interest from land surplus at June 30, 1910	1,555,348.75
	\$6,605,205.20
Less Payments to shareholders in dividends October 1, 1910, December 31, 1910, April 1, 1911, and June 30, 1911 ..	3,000,000.00
	\$3,605,205.20
From this a dividend has been declared, payable September 30, 1911	1,350,000.00
Leaving net surplus carried forward ..	\$1,352,205.20

The working expenses for the year amounted to 64.77 per cent. of the gross earnings, and the net earnings to 35.23 per cent., as compared with 64.38 and 35.62 per cent. respectively in 1910.

Four per cent. consolidated debenture stock to the amount of £1,263,007 was created and sold, and of the proceeds the sum of £745,480 was applied to the construction of authorised branch lines; £194,178 was devoted to the acquisition of the bonds of the St. Maurice Valley Railway Company, the interest on which had been guaranteed by the company; £134,000 was used to acquire a like amount of the company's first mortgage 5 per cent. bonds, and with the balance, £190,000, the outstanding Canada Central second mortgage 6 per cent. bonds were purchased and retired. Four per cent. preference stock to the amount of £300,000 was created and sold, the proceeds being used to meet capital expenditures sanctioned. The company's guarantee of interest was endorsed on 4 per cent. consolidated bonds of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company to the amount of \$3,600,000, issued and sold to meet the cost of constructing 180 miles of railway added to that company's railway system.

The sales of agricultural land during the year aggregated 650,874 acres for \$6,558,427.17, being an average of \$14.09 per acre. Included in this area are 10,097 acres of irrigated land, which brought \$33.03 per acre, so that the average price of the balance of the land was \$14.11 per acre. The Hudson's Bay Company had parcels of land scattered throughout the Irrigation Belt, and, in order that the company might control the entire belt and thus receive the full advantage of expenditures on irrigation, it was decided to acquire these lands belonging to the Hudson's Bay Company, about 102,174 acres, at a price of \$13.50 per acre. All of these lands will be sold at a substantial profit.

The directors proposed to the Alberta Railway and Irrigation Company, in which the company owned a controlling interest, an arrangement whereby, in consideration of a lease of their railway lines and a transfer to the company of their coal mines, lands and other assets, the company would guarantee the interest on their outstanding debenture stock (\$3,250,000), and an annual dividend of 6 per cent. on the Alberta Company's share capital during the life of the lease, and coupled with this proposed arrangement was the company's offer to purchase all of the outstanding shares of the Alberta Company's capital stock at the price of 150 and accrued dividend. The proposition was accepted, an agreement and lease were approved by the shareholders of the Alberta Company, and will be submitted for sanction. Since the agreement was made a large part of the outstanding stock has been acquired, and the company now hold all the shares excepting about 2,000 out of a total of 32,500 shares. Worked in conjunction with the company's system, this line will not only be profitable in itself but will be useful in connection with future extensions in Southern Alberta.

By the construction of a railway 16.2 miles in length between

Hamilton and Gravelly Junction, in the Province of Ontario, the line from Hamilton to points on the company's lines in Western Ontario will be shortened very materially, and, therefore subject to the usual agreement has been made with the South Ontario Pacific Railway Company for the construction of the line, and for a lease of it to the company on its completion for a period of 99 years at a rental equivalent to 4 per cent. per annum on the bonds of the South Ontario Pacific Railway Company, issued with the consent of the company.

In order to provide transportation facilities for incoming settlers it is very desirable that the following branch lines in Saskatchewan and Alberta should be constructed without unnecessary delay: Moose Jaw, southwest, 22 miles; Kerbert northeast, 25 miles; Weyburn branch extension, 10 miles; Estevan branch, 55 miles; Swift Current southeast, 14 miles; Swift Current northwest, 25 miles; Wilkie northwest, 22 miles; Wilkie, southeast, 31 miles; Kininzie branch extension, 37 miles; Bassano to Kininzie Junction, 20 miles; Kipp branch extension, 27 miles, and the shareholders will be asked to authorise the sale of a sufficient amount of 4 per cent. consolidated debenture stock for the purpose.

An order has been placed with the Fairfield Shipbuilding Company, of Glasgow, for two steamships, 570 ft. long and 68 ft. beam, with a speed of eighteen knots per hour, to supplement the fleet now engaged in the Pacific trade between Vancouver, Yokohama and Hong Kong. The approximate cost of these steamships will be £440,000 each, and they are to be delivered early in 1913. During the year 103 locomotives, 204 passenger cars and 3,808 freight cars were added to the rolling stock equipment, at a cost of about \$6,000,000, and there are orders outstanding for cars and locomotives to the value of \$7,000,000 that are expected to be available for the autumn traffic.

The work of enlarging the terminal yards and buildings, providing additional shops and machinery, laying many miles of new passing tracks, extending the telegraph lines, and of generally improving the standard of the property and of the operating facilities to meet the requirements of the traffic, continues to have the earnest attention of the directors, the amount expended for these purposes during the year aggregating \$18,000,000. The double track between Winnipeg and Brandon is nearing completion, and it is evident that a second track must be laid on some portions of the main line between Brandon and Calgary in the near future.

In this annual report the earnings and expenses of the railway and steamship lines are shown together, and the revenue from other sources is given in a separate statement. This is in accordance with the policy outlined by the directors in the circular letter of March 15 last.

The directors report with sincere regret the death at Nice in April last of their esteemed colleague and friend, Hon. L. J. Forget. Senator Forget, who had been a member of the board since 1906, always displayed a keen and intelligent interest in the company's affairs.

Mr. Herbert S. Holt, of Montreal, was elected a director of the company to fill the vacancy caused by the death of Senator Forget.

BRAZIL GREAT SOUTHERN RAILWAY.

The report for the year ended December 31, 1910, states that the receipts, which include £6,243 carriage on construction material, amounted to £29,004, being an increase over the previous year of £11,945. Expenditure during the year amounted to £22,293, showing an increase of £4,067. This is accounted for by the cost of handling a larger amount of traffic, necessitating the running of 368 additional goods trains, and also special expenditure incurred in adapting certain rolling stock to carry construction material. The general revenue account for the year shows a profit on the working of the railway, at the current rate of exchange, of £7,204, of which only about £1,436 is on account of construction material, against a loss of £719 for the previous year. The net revenue account, after allowing for interest on debentures and flood loan bonds, shows a total credit balance of £32,840. Against this amount there has been charged £6,100 on account of new rolling stock and additional station accommodation, in accordance with the arrangement entered into with the Brazilian Government, and £1,000, the balance of the account in connection with the construction works on the extension, thus leaving a balance of £25,740, which, however, is not available for distribution until the item in suspense on the other side of the balance-sheet has been realised. The payments of the half-yearly guarantee were made by the Government with the usual punctuality, and the interest on the company's debentures

and other prior charges have been duly met. The redemption of the 1886 mortgage debentures was maintained during last year, and debentures to the value of £9,600 were redeemed. The balance of the original issue of £250,000 is thus further reduced, and now stands at £109,000. The friendly relations previously existing between the Brazilian Government and the company continue. The construction works on the extension to San Borja have not progressed as rapidly as was expected, owing chiefly to the difficulty of obtaining labour and to the drought experienced during the latter part of the year. The locomotives and rolling stock shipped last year have been erected, the whole of the rails and material for the bridges have been delivered, and the first section of about 44 kilometres is practically ready to be opened for traffic, but awaits formal approval before it is taken over from the contractors. In March last Mr. Ambler, then general manager, reported that the outlook for the current year could not be considered promising, owing to the effect of the long drought on the cattle, and damage to agriculture by the plague of locusts, and although the receipts for the first three months showed a decrease, the traffic, however, has since materially improved, notwithstanding the indifferent conditions existing. The total receipts for the first six months to June, 1911, show an increase over last year of £766, although the carriage of construction material for this period amounted to only £1,026, as compared with £2,547 last year. The difficulties referred to in the last report regarding the negotiations for the construction of the international bridge have been entirely removed, and the directors are now able to report that the Quarahim International Bridge Company, which company will construct the bridge, was registered on May 25, 1911. A satisfactory agreement between this company, the North Western of Uruguay Railway Company, and the Quarahim International Bridge Company has been entered into; new plans have been prepared and presented to the respective Governments for approval. The directors regret that, owing to continued ill-health, and under medical advice, Mr. F. Ambler found it necessary to resign his position as general manager early this year, but they have succeeded in obtaining the services of Mr. A. F. Lockwood Thompson, an engineer of considerable experience in South America, and that gentleman took up the duties of general manager in Brazil in February last.

WAGES AND HOURS OF RAILWAY SERVANTS.

The annual report has just been issued by the Board of Trade on changes in rates of wages and hours of labour in the United Kingdom. The section of the report relating to railway servants says:—

The first week in December was selected in each year, except 1903, when the second week was chosen, as employment in the first week was much affected by heavy fog. The intention is to indicate the total effect of all changes in the earnings of railway servants arising out of (a) real changes in the scales of pay, (b) ordinary advances under existing scales, and (c) overtime or short time. Thus the method of measuring changes in the wages of railway servants differs from that adopted for other employments, inasmuch as it takes into account actual earnings rather than changes in rates of wages, and does not show the number of workpeople affected by changes during the year. The changes in the rates of pay of particular classes are, of course, obscured in the general averages based on total numbers employed and total amounts earned.

Twenty-seven railway companies, employing over 90 per cent. of the total number of railway servants in the United Kingdom, have supplied the information on which the following summary is based:—

Period to which the figures relate.	Number employed in selected week.	Amount paid in the selected week.	Average weekly earnings per head.
First week in December:—		£	s. d.
1901.....	440,557	551,114	25 0½
1902.....	448,420	559,170	24 11½
1903.....	448,321	557,810	24 10½
1904.....	445,577	557,820	25 0½
1905.....	449,251	568,338	25 3½
1906.....	457,942	582,207	25 5½
1907.....	478,000	618,304	25 10
1908.....	454,120	574,050	25 0
1909.....	459,444	582,782	25 4½
1910.....	463,010	590,342	25 9

The table shows that in the first week of December, 1910, the average earnings of the railway servants included in the returns were higher than in the corresponding week of 1909 or of any of the other years included in the table, with the exception of 1907. The number employed was higher than in 1901-6, 1908, and 1909, but was lower than in 1907. Some caution is necessary, however, in drawing inferences from this comparison as regards general changes in the average weekly rates of pay of railway servants. The return is a statement of earnings, not of rates of wages, and would be affected by changes in the amount of overtime worked and the like, independently of any variation in weekly rates. Moreover, it refers to earnings in one week only, and though this week has been chosen, in consultation with the railway companies, so as to avoid as far as possible any abnormal conditions, there may have been some difference of circumstances in the selected week in the different years.

The Board of Trade have also issued a return under section 4 of the Regulation of Railways Act, 1889, of railway servants of certain classes who were on one or more occasions during May, 1911, on duty on certain railways for more than twelve hours at a time, or who, after being on duty more than twelve hours, were allowed to resume work with less than nine hours' rest. This return is the twelfth of a series, the last one relating to October, 1910. The number of railway servants dealt with is 109,041, spread over the following classes: Passenger guards and brakemen, passenger enginemen, goods guards and brakemen, goods enginemen, signalmen, examiners. These men, during the month of May, worked a total 2,740,693 days. The number of days on which the men were on duty for periods exceeding twelve hours by one hour and upwards amounted to 14,813, or .54 per cent. of the total days worked. The number of days on which men were on duty for periods exceeding twelve hours in April, 1910, was 17,141, or .65 per cent. of the total days worked, and in October, 1910, 29,369, or 1.10 per cent. The percentage was highest in the case of passenger guards and brakemen, being 1.04, and lowest in the case of signalmen, where it was .25. The percentage in the case of the other classes of men were: Passenger enginemen .56, goods guards and brakemen .29, goods enginemen .77, and examiners .44. The total number of instances of servants being allowed to resume duty with less than nine hours' rest after having been on duty more than twelve hours was 344. This total was made up as follows: After four hours' rest 2, after five hours 11, after six hours 18, after seven hours 72, and after eight hours 241. Of the 344 instances 14 were passenger guards and brakemen, 60 passenger engine drivers and firemen, 34 goods guards and brakemen, 171 goods engine drivers and firemen, 47 signalmen, and 9 examiners.

GRAND TRUNK RAILWAY OF CANADA.

Revenue statement for the month of July, 1911:—

Grand Trunk Railway Company of Canada.			
	1911.	1910.	Increase.
Gross receipts	£685,600	£521,600	+£164,000
Working expenses	518,400	375,400	+ 143,000
Net profit	£167,200	£146,200	+ £21,000
Canada Atlantic Railway Company.			
Gross receipts	£30,500	£20,000	+ £10,500
Working expenses	32,250	28,000	+ 4,250
Net profit	£4,250	Dr. £2,000	+ £6,250
Grand Trunk Western Railway Company.

A Bakerloo Extension.—The proposed extension of the Bakerloo Tube to Paddington Station, sanctioned by Parliament, will, when carried out, bring the western suburbs into direct communication with central London and Waterloo Station.

NORTH EASTERN RAILWAY AND THE STRIKE.

Mr. A. Kaye Butterworth, general manager of the North Eastern Railway, in a long letter to the *Times* published on Tuesday last, explains how it was that the strike not only extended to the North Eastern Railway, whose men were not involved in the question at issue, but lasted nearly twice as long there as on other railways. In the course of his communication Mr. Butterworth says:—

"The first and only intimation that the North Eastern Company received of the likelihood of any trouble was a circular letter from representatives of four railway unions enclosing the Liverpool resolutions, which threatened a general railway strike unless the railway companies met the unions within 24 hours. This was on Wednesday, August 16. As it was understood that the questions which the unions wished to raise had reference to the Board of Trade scheme of Conciliation Boards and the recognition of trade unions, and as the North Eastern Company were not parties to the Board of Trade scheme and had long recognised trade unions, a telegram was at once sent, followed by a letter, asking for a statement of any questions outstanding between the company and its men which it was desired to discuss. No answer was received to either telegram or letter, nor to any other communication addressed to the secretary of the Amalgamated Society of Railway Servants."

Mr. Butterworth proceeds to narrate the events of the next few days, including the abrupt cessation of work by the North Eastern men on the Thursday evening, and points out that the company received no communication from the unions, their own men, or any Government Department. No representative of the company was summoned to the conferences in London. Mr. Butterworth continues that on Sunday the strike was said to be over, but one of the principal railways was deliberately left out of the settlement, and this was the railway on which probably more men were on strike than on any other, and, moreover, it was the one railway from which nothing was asked and which had no concern in the questions in dispute.

"On the Sunday it became necessary to decide what was to be said to men who might wish to return to their work on Monday. Obviously, no one except the board of directors could take the responsibility of waiving the company's right to recover the large sum lost, or part of it, from the men whose breach of contract had caused the loss.

"The occasion was a specially important one, because, so far as I know, this was the first strike without legal notice authorised by a trade union since the passing of the Trades Disputes Act. Before that Act was passed, in a case like the present, where a strike without proper notice was ordered by the responsible leaders of a trade union, the funds of the union would have been liable to make good the loss sustained by the company."

Having narrated the decision of the directors and the acceptance of the terms by the Strike Executive on which the men were to return to work, Mr. Butterworth says:—

"The point which I wish to emphasise—because, so far as I know, it presents a novel feature in railway strikes—is that not only did the company receive no demand from the men or their leaders before the strike, but they received no communication from them until the strike had been going on for nearly four days.

"This fact seems to me to have an important bearing upon two subjects, one of which is receiving much attention at the present moment—viz., the 'recognition' of trade unions; while the other—the difference between regular and irregular strikes, or strikes with and strikes without notice—seems hardly to be receiving the attention which its importance deserves.

"The North Eastern Company for some years past has, in accordance with the usual practice of employers in the North, 'recognised' trade unions. This has mainly applied to the Amalgamated Society of Railway Servants, which has had a much larger membership amongst North Eastern railwaymen than any other union, and whose rules, if observed by the executive and the members, go far in themselves to justify the policy of 'recognition.' By those rules, if any question arises between a railway company and its men which negotiation fails to settle, the society has first to make an offer of arbitration; if the company refuses arbitration, a ballot of the members is taken to decide whether a strike shall be entered upon; and if the result of the ballot is in favour of a strike, then the men's notices of intention to cease work are handed in to the company, the length of notice being determined by the terms of their employment.

"The rules of the society thus provide for (1) dispute; (2) negotiation; (3) arbitration; (4) ballot; (5) strike notices; (6) cessation of work. The advantages of this procedure and its reasonableness (if once it be admitted that railway com-

panies are not in a position to dictate terms absolutely to their employees) are obvious. If it is followed, no strike is probable—I might almost say possible—except upon some vital question of principle, which a company feels that it cannot properly submit to the arbitration of a third party.

"Now note the procedure followed on the present occasion. To add point to the contrast between theory and practice, I will set out the two side by side:—

<i>Rules of the Amalgamated Society of Railway Servants.</i>	<i>How far observed towards North Eastern Railway.</i>
1. Dispute	Entirely disregarded.
2. Negotiation	do
3. Offer of arbitration	do.
4. Ballot	do.
5. Strike notices	do.
6. Cessation of work	Yes, after 24 hours' ultimatum, which did not apply to the North Eastern Railway.

"I submit that a national railway strike has been rendered possible by two things: (1) the readiness of the unions to disregard their own rules, and to order an irregular strike in defiance of them; and (2) the passing of the Trades Disputes Act, to which I have already referred. If that Act had not been passed, the unions could not have disregarded their rules, for bankruptcy would have ensued; if they had not disregarded their rules, I do not see how there could have been a strike, at any rate so far as the North Eastern Railway was concerned. That being so, neither the public nor the North Eastern men will have been surprised at the decision of the directors to review the whole question of the procedure to be followed in connection with the settlement of differences arising between the company and its men by the light of the recommendations of the Commission now sitting."

NEW ZEALAND RAILWAY EXTENSIONS.

The Minister for Public Works states that £15,000,000 is likely to be required for the construction of new railways, and £3,000,000 for extending lines now in operation. It is also proposed to expend £10,000,000 on power stations, irrigating works, telegraph and harbour extensions, public buildings and schools. The money is to be raised out of the revenue of the works and also by loans.

PROSPERITY OF QUEENSLAND RAILWAYS.

The Budget statement presented on Tuesday last in the Legislative Assembly, Brisbane, showed that the revenue from railways had increased by £400,000, the total receipts being £2,750,000. The miles of line of Government railways opened for traffic showed an increase of 207, and an additional 211 miles were almost completed, while 772 miles were under construction. An additional 1,244 miles had been authorised by Parliament. Railways were paying £3 18s. 10d. per cent. on the construction cost after deducting working expenses. Nearly 7,000,000 acres of Crown lands had been made available last year for settlement, and there had been 3,323 new holdings—an increase of 400 as compared with the previous year—taken up under freehold conditions.

THE REBUILDING OF WATERLOO STATION.

In the course of a few weeks the London and South Western Railway Company management will open for public use the new road which has for some years been in course of construction from near the railway bridge crossing Westminster Bridge Road to Waterloo terminus. After passing under the railway lines the thoroughfare encircles the whole area of the station, and along its course spur roads lead from it down to Lower Marsh on the south. More than seven years have elapsed since the extension and remodelling of the station was taken in hand, and the entire work will not be completed for another two years and a half. A new south station has been in use for a considerable period, and now the little used rail connection with the South Eastern Company's station has been terminated in accordance with terms arranged in Parliament, while the continuation of the roof of the centre station is being proceeded with on the scheme adopted for the south station. This has necessitated the closing of two of the main line platforms, and the re-arrangement of the places of departure and arrival of a number of trains. The work is to be carried out more rapidly than in the case of the south station, and on its completion the north station is to be remodelled.

THE SEPTEMBER HOLIDAY SEASON.

An artistic gratuitous illustrated booklet, issued by Mr. Henry Holmes, Superintendent of the Line, South Western Railway, dealing with the excursions by rail, coach, motor omnibus, and on foot at Dartmoor should serve to make the attractions of the "Highlands of Devon" more widely known. As the result of a perusal of the publication, many persons who have not yet taken their holidays should be induced to visit a district embracing not only fine scenery, but romantic associations. This can be done even in a day by certain trains from Waterloo, while week-end and tourist fares are very reasonable. This is also the case for the circular tours by rail and coach from the numerous towns around the great moorland, while visitors to Exeter, Chagford and intervening places can enjoy at very low charges a motor omnibus trip through some of the prettiest districts in the West, the run occupying two hours. Nature lovers are indebted to the South Western management for bringing the little known national possession to their notice. Free publications giving facilities for holidays at seaside and other places on the South Western system may also be obtained from Mr. Holmes.

At an opportune moment the Great Western Railway has issued a new publication bearing the title "The Holiday Line Herald." This miniature magazine is compiled with the idea of suggesting suitable holiday grounds for those who have decided upon a September vacation. Week-end and short excursions are also described and dealt with. The illustrations and the attractive style in which the holiday suggestions are

The summer traffic returns of the Great Western Railway show that the equable nature of the climate of the Cornish Riviera has been greatly appreciated. It is noteworthy that now, when there are signs of a change in the temperature in England, the weather in Cornwall remains as fine as ever. There is every indication that during September and October the Cornish Riviera will be as popular with holiday-makers as it was in July and August. In Cornwall, good accommodation is always obtainable at moderate prices.

AN ELECTRICALLY ILLUMINATED SIGN.

GREAT CENTRAL RAILWAY ENTERPRISE.

We give on this page photographs, taken day by day and by night, of an electrically illuminated sign recently erected on the corner of the Great Central Railway Publicity Office, 216, Marylebone Road, N.W. The sign extends the entire length of the 50-ft. wall. It is double faced and attracts the attention of the public travelling in both directions along Marylebone Road, and serves also to direct them to the Great Central Station entrance.

The sign is built of the standard construction usually employed by Messrs. O. C. Hawkes, Ltd., in all their railway work. Each letter stands in a separate frame, the frames being all built of rolled channel iron, the corners being dovetailed and brazed. Each panel is held in position in its frame by a $\frac{1}{4}$ -in. iron fillet, screwed in position in front of the glass. The frames are held together by forged connections, and the

set forth are very pleasing. Statistics over a considerable period show that during September the weather conditions are more dependable than at any other season, which fact is becoming appreciated even by those who have the choice of the whole year for their vacation. The publication is obtainable gratuitously at the G.W.R. offices in London, or from the enquiry office, Paddington Station.

The late Sir Theodore Martin wrote in the highest terms of the G.W.R. travel-book entitled "The British Tyrol," describing the treatment of the subject as the "realisation of one of his early dreams as a pioneer of railway extension in the Dee Valley." It has now been brought up to date both as regards text and illustrations of places in the Dee Valley, the Chester district, and North Wales, and should prove a boon to holiday-makers of all classes. The published price is 3d. or post free 6d. from the G.W.R. Superintendent of the Line, Paddington Station.

For those who cannot undertake a visit to Scotland, which is so popular at this season, the Great Central Railway offers an attractive alternative in its express excursions to the Yorkshire moors, and the north-east and north-west coast resorts, as well as to the Isle of Man. A holiday even more easily obtainable may be spent by taking advantage of the day and half-day trips to the Chiltern Hills and Shakespeare's country. The wide range of facilities offered by the Great Central is fully described in the A.B.C. Programme, which may be obtained free at Marylebone Station and other London offices, including the Publicity Department, 216, Marylebone Road, N.W.

sides of the sign of heavily gauged sheet steel are screwed to the frames above-mentioned. Massive stays, specially forged, hold the sign in position above the wall, and are brought down the wall so as to add the necessary stiffening strength, to stand the extra strain.

The glass letters are imperishably engraved, and a fine effect is produced by using alternate panels of red and blue ground, each containing a white letter. The white letters are shaded black, and lined with gold to give them a distinctive appearance.

By day the effect is strikingly handsome—a result rarely achieved in illuminated signs—and at night it is brilliant in the extreme. The electric equipment consists of parallel-wired special non-corrodible porcelain lamp-holders, and Tantalum lamps. The sign achieves what all sign-makers are constantly aiming at, and so seldom attain—distinctive novelty, without departing from the ordinary canons of good taste.

PERSONAL.

Mr. F. T. Kinsman has been appointed chief outdoor goods manager of the London and North Western Railway.

Sir William Whyte, on retiring from the position of vice-president of the Canadian Pacific Railway, has been elected a director of the company.

Mr. Harry Watson, of Belfast, has been appointed manager of the Tredegar Dry Dock and Wharf Company, Limited, Newport. Mr. F. C. Miller, who has been with the company for a number of years, has been promoted to the secretaryship.

Mr. A. Fulton, the new district superintendent of the Caledonian Company at Edinburgh, entered the service twenty-eight years ago as a clerk in the Glasgow district traffic office. Transfer to the chief superintendent's office was followed by the charge of the rates and fares department office, and ten months ago he became assistant district traffic superintendent at Perth.

Mr. J. Smyth, who, as stated last week, succeeds Mr. J. D. Lang as district superintendent at Perth for the Caledonian Railway Company, is one of four brothers holding positions of responsibility in the service, while their father was for many years a station-master. Mr. Smyth's career began thirty-six years ago as a telegraph clerk at Perth Station, and after holding various positions he became a relieving station-master. A period of work as parcels agent at Perth was followed by seventeen years as chief clerk to Mr. W. Gillespie, district traffic superintendent, who on retirement was succeeded by Mr. Lang. In June, 1907, Mr. Smyth was appointed district traffic superintendent at Oban.

Chicago Electrification Commission Staff.—The staff of Mr. H. G. Burt, chief engineer of the commission appointed by the Chicago Association of Commerce to report on the feasibility of electrifying the railway terminals of Chicago, is announced as follows in the *Railway Electrical Engineer*:—Electrical engineer, Mr. Hugh Pattison, who has been connected with the electrical equipment of the Pennsylvania railroad tunnel and terminal in New York city; mechanical engineer, Mr. Theodore H. Curtis, for several years past superintendent of motive power and machinery of the Louisville and Nashville Railroad; terminal engineer, Mr. Louis H. Evans, who has been chief engineer of the Chicago Junction Railway, and was in charge of the first track elevation by the Chicago and North Western Railway in the city of Chicago.

RAILWAY NOTES.

A Railway Oil Contract.—It is stated that the Broxburn Oil Co., Ltd., of Scotland, have secured a contract from a leading English railway company for 25,000 barrels of burning oil, the deliveries to extend over a year.

By Rail to Khartoum.—At the consecration of the cathedral at Khartoum in January next many visitors are expected. From London the city can be reached in eleven days. The return fares are £81 7s. and £120. To cross the desert from Wady Halfa to Khartoum travellers are provided with a train de luxe.

Victorian Railway Contracts.—Contracts for the supply and delivery at Melbourne of 21,365 tons of steel rails and 1,911 tons of fish-plates, which are required by the Railway Department of the State of Victoria, have been placed with Messrs. Elder, Smith, and Co. The material will be manufactured by Messrs. Bolekow, Vaughan, and Co., of Middlesbrough.

New Pullmans on the Brighton Line.—Two new Pullman cars, named "Myrtle" and "Vivienne," have been added to the rolling stock of the London-Brighton service, and attached to the "Southern Belle" train. The "Myrtle," a parlour car, is beautifully upholstered in green plush. It has a smart buffet, and accommodates 23 passengers. The "Vivienne" is a smoking car with seats in elegant green leather, and has room for 27 persons.

Underground Railway for Mails.—A note attached to the contract for a greatly extended service of motor vehicles in London, just concluded between the Post Office and McNamara and Co., Ltd., states that an underground electric railway for the conveyance of mails may be constructed between King Edward's Building and the Mount Pleasant Sorting Office before the expiration of the minimum period of the contract, and that in that event the van services between these two points will be discontinued.

A Disaster due to a Defective Rail.—Thirty persons were killed in an accident to a train composed of fourteen Pullman and day coaches on a bridge spanning a creek at Manchester, on the Lehigh Valley Railroad, Rochester (N.Y.). The engine and five cars passed over in safety, but the sixth car toppled over the bridge. The seventh car crashed on top, and the next car also fell over, landing end on. The other cars remained on the track. The Public Service Commission attributes the accident to a defective rail "piped" in the rolling, which broke into 76 pieces.

L. and S.W.R. Orphanage to Benefit by the Strike.—Up to Wednesday the sum of £500 had been subscribed to Lord Middleton's fund for the benefit of the home for orphan children of London and South Western Railway employees by members of the public, in recognition of the loyalty of the men of this

company during the strike. Viscount Middleton's address is Peper Harow, Godalming. In six days the *Devon Daily Gazette* raised a fund amounting to £671 9s. 2d, as the tribute of its readers to the loyalty of the railwaymen of Devonshire. It is proposed to endow a cot for a boy and a cot for a girl in the South Western Railway Orphanage, these cots to be known as the "Devonshire Cots," and to bear an inscription that they were "Endowed by Devonshire travellers in appreciation of the services of the loyal employees of the London and South Western Railway, August, 1911." This endowment will leave a further sum available for the Widows' and Orphans' Fund of the London and South Western, which has been established nearly 50 years, and is for the benefit of the widows and orphans of deceased members in all branches of the service. It is also proposed to make a vote to the Widows' and Orphans' Benevolent Fund of the Great Western Railway.

The Mexican Railway Company, Limited, has issued the following estimated revenue statement for the month of July:

	1911.	1910.	Decrease.
Gross receipts	\$647,500	\$719,500	\$72,000
Expenses	315,900	360,200	44,300
Net	\$331,600	\$359,300	\$27,700

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40 to 60 %.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

TENDERS INVITED.**H.H. The Nizam's Guaranteed State Railways Company, Limited.**

THE Directors of the above Railways are prepared to receive tenders for the supply of—

76,000 Transverse Steel Sleepers with Corrugated Clips, and
167,200 Steel Keys for same,
as per specification to be obtained at the Company's Offices for the sum of Five Shillings, which amount will not be returned.

Tenders should be addressed to the Secretary, marked "Tenders for Sleepers," and should reach him not later than noon on Thursday, the 21st September, 1911.

The Directors do not bind themselves to accept the lowest or any Tender.

By order of the Board,

M. T. WALKER,

Secretary

Offices of the Company,
268, Winchester House,
50, Old Broad Street,
London, E.C.

Dated 6th September, 1911.

Bombay, Baroda, and Central India Railway Company.

THE Directors are prepared to receive up to noon on Tuesday, 19th September, Tenders for the supply of

1. Leather belting, hides, etc.,
2. Manilla lashing ropes and crane ropes.

Tenders must be made on forms, copies of which, with specifications, can be obtained at these offices on payment of 2s. each (which will not be returned).

The Directors do not bind themselves to accept the lowest or any tender.

C. GROMMELIN,

Secretary.

Offices: Gloucester House,
110, Bishopsgate, London, E.C.,
7th September, 1911.

The Great Indian Peninsula Railway Company.

THE Directors are prepared to receive Tenders for the supply of the following stores, namely:—

Brake Rigging,
Dressed Wagon Covers,
Helical and Volnte Springs.

Specifications and forms of Tender may be obtained at this office on payment of the fee for the Specification, which payment will not be returned.

Tenders must be delivered in sealed envelopes, addressed to the undersigned, marked "Tender for Brake Rigging," or as the case may be, not later than 11 o'clock a.m., on Thursday, the 14th September, 1911.

The Directors do not bind themselves to accept the lowest or any tender.

J. I. BERRY,

Secretary.

Company's Offices,
48, Copthall Avenue, E.C.
London, 7th September, 1911.

POSITION VACANT.**The Great Northern Railway Company (Ireland).**

THE Great Northern Railway Company (Ireland) will require, from November next, the services of a Manager, salary £1,500 per annum. Applications, stating age, and giving particulars of experience, accompanied by copies of testimonials, should be forwarded to the Secretary, under cover, marked "Private," not later than Monday, the 2nd October, 1911.

By Order,

T. MORRISON, Secretary.

Amiens Street Terminus, Dublin,
September 5th, 1911.

THE PROGRESS OF THE ROYAL COMMISSION.

It is very apparent that it is the intention of the Royal Commission on the Working of Railway Conciliation Boards to report as early as is practicable. They sit daily except Saturdays for nearly six hours, but still no attempt is made to cut short any witness nor to exclude any whose evidence simply corroborates what has already been given. It is expected that the case of the employees' unions will be completed this week. Up to Friday night there had been heard: Messrs. Williams, Rimmer, Thomas, M.P., Charles, Bellamy, and Hudson, M.P., of the executive of the A.S.R.S.; Mr. Fox, of the Locomotive Engineers and Firemen; Mr. Lowth and Mr. Brassington, of the General Railway Workers' Union; and Mr. Chorlton, of the United Pointsmen and Signalmen's Society. Testimony has also been given by seven servants and one ex-servant of the locomotive department, seven signalmen, one shunter, and one goods porter. No witness has had a good word for the present scheme, especially for the results of arbitration, and it is indicative of the present rate at which we live that "speeding-up" has often figured as a grievance. From the evidence of a North Eastern driver yesterday, this complaint is as bitter on that line as elsewhere. Up to now all the witnesses, having been put in the chair by the societies, have, of course, advocated recognition. The other side of this particular point will be heard next week, as the Commission has expressed a desire to hear evidence from non-unionists. The railway companies are, however, taking no action for obtaining such evidence, but we hear that quite fifty non-unionists have communicated with the Royal Commission as to bearing testimony in this particular matter, which is, admittedly, the most important point of the inquiry. The majority of the locomotive men that gave evidence supported what is apparently the policy of the Locomotive Engineers' Society, which is that they should revert to the arrangements in force before the settlement of November, 1907, which were that local difficulties and disputes should be dealt with by the men themselves with the local officials, and that all higher questions should be handled by deputation to the directors and chief officers. Up to this stage the unions play no part, but if an agreement is not arrived at it is suggested that there should be a meeting between representatives of the company and an equal number of representatives of the men, who may, or may not, be union officials. They should have power to call in a chairman who may vote in order to secure a decision, but any decision so obtained shall be subject to revision within a certain period. Judging by the evidence of Mr. Chorlton, of the United Pointsmen and Signalmen's Society, and of four signalmen called on Thursday, this, too, is the aim of the Signalmen's Society. We trust that we shall not be guilty of disrespect to the Royal Commission if we say that this course of procedure would seem to have commended itself to some members of the Commission, but they recognise that in the locomotive men dealing with locomotive matters and the signalmen with their own grievances sectionalism is introduced and the weaker may go to the wall. It is, however, only human nature that a driver with 25 or 30 years' service behind him is not going

to jeopardise his remaining days over the grievance of a man who can more readily find work. The evidence to be given by non-unionists will be awaited with great interest by all those concerned in the settlement as well as by the public. The large non-union element in the railway service cannot, and, indeed, ought not, to be overlooked. In any settlement their position should in the public interest be very carefully considered. When the evidence of their representatives is completed, probably about Thursday next, the companies' case will begin. They enjoy the advantage of knowing what they have to answer. Much evidence has been given as to irritating pinpricks; interpretations of the awards being rendered from the companies' point of view solely; delays in dealing with complaints and what cannot but appear to most fair-minded people as evasions of the awards as to Sunday duty, overtime, etc. We trust that the companies will be perfectly frank as to these. Knowing something of railway administration, we fear that much of this trouble is due to "jacks-in-office" who have seen an opportunity to get even with the men. These may be explained away, but there will still remain the more important question—that of recognition—and on this we trust the companies will concentrate the greater part of their energies.

SCOTTISH RAILWAY DIVIDENDS.

With the official announcement of the North British dividend on Thursday, the Scottish Railway series of distributions for the half-year ended July 31 last is now completed. The half-year was not marked by any decided improvement in the gross receipts in this group of railways; indeed, the rate of recovery in this respect hardly seems to be in keeping with the reports of improved trade in the North. Certainly the rate of increase in traffic receipts among the Scottish group was not nearly so marked as among the English lines during the same period. It follows, therefore, that the dividends do not show any striking change for the better. Indeed, the Caledonian, the Great North of Scotland, and the Highland have merely maintained the rates paid a year ago, with slightly better balances forward. The best dividend result is once again that of the Glasgow and South Western Company—namely, $\frac{1}{2}$ per cent. per annum on the Deferred stock, raising the distribution to $2\frac{1}{4}$ per cent., against $1\frac{3}{4}$ a year ago. The dividend on this stock for the year is now the comparatively good one of $2\frac{1}{4}$ per cent., making $4\frac{3}{4}$ per cent. on the original ordinary stock, of which $2\frac{1}{2}$ per cent., of course, goes to the preferred ordinary issue. The gross receipts, as published by the Glasgow and South Western Company, showed an increase last half-year of £28,000, and apparently about half of this sum has been retained as net profit, and it is highly satisfactory to observe that the distribution for the past half-year is the best for the July period of any year since 1899. The Caledonian dividend result, on the other hand, has been disappointing. A gross increase of about £36,000 has yielded no improvement in the dividend, and once again the deferred stockholders of this company have to rest content with the trivial dividend of $\frac{1}{4}$ per cent. per annum. Apparently the Caledonian Company is still feeling to some extent the burden of rather heavy capital expenditure incurred up to a few years ago, and the expansion in its traffic receipts has not been in keeping with the large outlays then incurred. Bearing in mind that the Great North of Scotland and the Highland companies published decreases in receipts of about £1,900 and £600 respectively, it is perhaps not surprising that they have merely maintained their dividends. The Great North of Scotland is paying $\frac{3}{4}$ per cent. on its deferred ordinary stock for the year ended July 31 last, the terminal date of the financial year of this company. The Highland dividend was at the rate of $1\frac{3}{4}$ per cent. on its ordinary stock, the same as a year ago,

with some increase in the balance forward. Having regard to the published increase in its gross receipts of only £11,000, the North British dividend showing an improvement of $\frac{1}{4}$ per cent. was rather a pleasant surprise, and certainly a more acceptable result than that of the Caledonian Company. The extra $\frac{1}{4}$ per cent. represents about £15,000, so that the net results of working in the past half-year must have been fairly satisfactory. Two deductions may be made from the dividend declarations of this particular Home Railway group for the past half-year. The first is that none of these companies is yielding a large dividend; on the contrary, four out of the five companies are yielding an utterly inadequate return to their stockholders. Only that of the Glasgow and South Western—namely, $4\frac{3}{4}$ per cent. upon the original ordinary stock, can be considered at all adequate from the ordinary shareholders' point of view. The second deduction is that the payment of higher dividends by the North British and the Glasgow and South Western Companies appears to argue that the directors of these undertakings are, at any rate, not unduly alarmed by the demands put forward on behalf of railwaymen generally. Indeed, as we pointed out at the critical period of the controversy, the whole "hullabaloo" is summed up in the blessed word "recognition."

COLONIAL ORDERS FOR RAILS.

Some attention has been directed within the last few days to a report that the South African Union Government have given an order to a German firm for a large quantity of steel rails, and the question was raised why the order had not come to the Mother Country. It now appears that tenders were invited from manufacturers in Britain, Germany, Belgium, and the United States for 27,000 tons of rails, and that the lowest tender—that of a Düsseldorf firm—was accepted. The figure is about £170,000. As leading up to the question of the policy pursued in this instance by the South African Government, we would direct attention to the different practice which obtains in the case of some other British colonies. A daily newspaper, by interviewing some of the Agents-General, has ascertained what has been done in two or three actual cases. Western Australia has repeatedly bought British-made rails, though they were somewhat dearer than some foreign makes. The same policy has been followed in the purchase of locomotives, large orders for which have recently been placed in Scotland and Lancashire. The Government of Victoria also favour British manufacturers, but in some instances they have not been able to place their orders here, not because of prices, but because some British tenderers would not comply with the c.i.f. condition, substituting therefor the f.o.b. condition. On this ground large orders have gone to the United States, where the c.i.f. arrangement was agreed to. A few days ago a British firm agreed to ship c.i.f., and obtained an order for rails to the amount of £150,000. Without entering here into the reasons for refusing the stipulated shipping terms, it can hardly be denied that as things are there is little inducement to the Colonies to give a preference to British-made railway material. Their overtures to the Mother Country as regards preferential duties have been treated with scant respect, and they have virtually been told that the Mother Country buys in the cheapest market and that they had better do likewise. In the meantime the foreign manufacturer, protected in his home market, is secure against competition from other countries. Being able to count on a steady volume of home trade it often pays him to take orders from abroad at terms which would be ruinous to his British competitors. Moreover, on the Continent wages are, as is well known, generally lower and hours of labour longer than in this country, so that the cost of production is less. In the circumstances it

seems to be clear enough that if we wish to encourage Colonial trade some fresh views must be taken of the position. From a sentimental point of view it is natural to assume that the Colonies should give British manufacturers a preference; and in the long run it might even pay them to do so. But some more tangible advantage to the Colonies will be necessary if we do not wish to see our trade with them diminish. Some scheme, it may be hoped, will eventually be arranged by which a preference will be given to British goods, even though the price may sometimes be a little higher. The Dominions have strong reasons for maintaining their trade with this country, and although they are unable to influence the present British Government in favour of Tariff Reform for Imperial purposes, it is quite open to them to make their present tariff preference for British goods so substantial that the foreign rail maker need no longer try to compete. If this were done it is inconceivable that the Mother Country could long fail to reciprocate. In the meantime it ill becomes us, bearing in mind the fact that our large local authorities—such as the London County Council and Manchester Corporation—do not hesitate to buy foreign manufactured goods because they are cheaper than equally good home productions, to cavil at the Colonies when they follow these notorious examples.

Weekly Traffic Summary.

The traffic receipts for the week ended September 3, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,565,640, which was earned on 21,521 miles, being at the rate of £119 4s. 4d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,502,434, with 21,467 miles open, or £116 11s. 5d. per mile. There was thus an increase of £63,206 in the receipts, an increase of 54 in the mileage, and an increase of £2 12s. 11d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £66,864 (or £3 os. 9d. per mile) in the passenger receipts, and a decrease of £6,411 (or 9s. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-four railways for nine weeks in the passenger receipts has been £97,098, while the aggregate decrease in the goods traffic was £382,297. The aggregate receipts of the fifty-two railways for nine weeks (July 2 to September 3) amounted to £21,976,458, in comparison with £22,510,150 in the corresponding period of last year—a decrease of £533,692.

Index Numbers of Railway Debentures.

Our Index Numbers for the prices of best debentures of English Railways, based on the average yield obtained from these stocks, are repeated below, and the table is brought up-to-date. The rate of interest is assumed to be $3\frac{1}{2}$ per cent.

Area of Southampton Docks to be Doubled.—The London and South Western Railway Company have arranged to acquire about four hundred acres of land on the Woolston side of Southampton Water, for docks and shipping developments. The area thus acquired is considerably larger than the existing dock estate, whilst the depth of water and width of the channel lend every natural facility for the provision of deep water quays.

The figures of the Bank Return this week show a net efflux of gold of £111,000, chiefly to South America; at the same time £157,000 was withdrawn for the provinces, while the active note circulation declined by £217,000. Consequently the Reserve is down a trifle, the decline being £51,000. Again the principal feature among the other items of the return is to be found in Other Securities, which have lost almost the whole of the advance last week, and with a reduction of £1,482,000 returns to its much diminished level of £25,340,000, for which a satisfactory explanation has yet to be discovered. The amount of this item is now over four millions below the level which obtained at the corresponding date of last year, and may reflect a policy of the court of directors to be ready for a large addition to their loans and investments later in the year. Last week's perturbation is accounted for by operations following upon the issue of Treasury bills, and the policy which keeps this item at its present attenuated amount is evidently to be maintained for the present. The addition to Rest, which is usual at this date, brings that item to £3,707,000, and argues the usual distribution at the rate of 9 per cent. per annum to the stockholders. Public Deposits are lower by £668,000, and Other Deposits by £888,000. Government Securities show no alteration. As the result of all changes, the ratio of Reserves to liabilities of the Bank is $1\frac{1}{4}$ points higher, bringing it to over 58 per cent.—a very high figure indeed. The position is certainly so strong that it really suggests the question whether dangers may be feared in high quarters for which special preparation is considered desirable. Money remains plentiful, and discounts can be barely said to have hardened during the week.

On the Stock Exchange business remained demoralised until Tuesday, when the markets began to pluck up heart in the belief that realisations had come to an end for the present. The bears then thought fit to reduce their commitments for the fall, and an irregular rise began, which developed later into a more substantial advance, though the whole amount of business done was very little. United States railways, as well as our own, made some recovery, without bringing to light any particular reason for the recent remarkable collapse of prices. Some of the causes which are conjectured for that and freely discussed and widely accepted in America are worth mentioning as an object-lesson to those who complain of the conditions prevailing at home in the railway world. Here employees consider themselves ill-treated if directors discover and introduce a means of getting any work done with equal efficiency by a cheaper grade of labour. This, in fact, sums up in brief the worst that British railway servants have found to say of their masters. In that free and enlightened Republic the directors are charged with selling stock for the purpose of breaking prices on the market, and with discharging hands and taking other steps to foment a general strike in order to repurchase on a large scale at still lower figures.

Last Saturday the abandonment of a conference of miners at Cardiff to discuss the wisdom of striking for a minimum wage initiated a recovery in Home Rail stocks, but the continued selling of mining shares raised more doubts concerning the financial stability of various market operators, and led to a weaker tone before the end. On Monday, although no hammerings had occurred as a sequel to the last settlement, rumour was active. Selling continued on a large scale, much diffused through the several departments of the market. United States and Canadian railways were pressed for sale. Rio Tintos and many foreign bonds were freely offered and declined in price. Our own Government stocks fell. Home Rails were adversely affected. Fears of the aggravation of the Morocco difficulty and reports of frost-bitten crops in Canada, discouraged all commitments for the rise, and the outlook at the end of business was far from promising. The next day, however, for no assignable reason, an improvement began. The pressure of sales mysteriously ceased. The Wall Street market, opening after three days' holiday, inaugurated a rally. Canadian railways followed suit, and although the recovery nowhere went very far, the change of tone was very perceptible. On Wednesday the movement gathered strength. The progress of the Moroccan conversations was considered reassuring. Reported runs on German savings banks were without influence. The whole railway market, including Home Rails, with American, Canadian and foreign, made a marked advance, which in the case of the former was both confirmed and augmented the following day, when the general improvement was assisted by rises in Mines and Rubber shares. Consols recovered the previous day's fall. Home Rails advanced, with the exception of Great Eastern, North London, Chatham 1st Pref., and Great Northern Preferred. The general improvement, however, was not maintained undiminished to the close of business, chiefly owing to a relapse of American shares in Wall Street.

On Friday, the tendency apparent at the close of business on Thursday was confirmed. A new interpretation of the somewhat vague reports current with regard to the diplomatic situation between France and Germany was made responsible for the further set-back. The evidence adduced before the Railway Commission was also brought in as a contributory cause. The real reason may have had nothing to do with either of these. It may have related solely to the unsettled pecuniary embarrassments of speculators committed to the rise. It is impossible to speak with confidence. Shrewd observers have opined that no enduring improvement is to be expected until some more failures have come to a

head. There is much to be said for this view; a hidden unacknowledged weakness frequently inhibits business more completely than a long series of bankruptcies. The declines embraced the whole list of active stocks in Home Rails, together with Mines, Rubbers, and Oils. American railways were irregular.

The movements of the week are set forth in the following table:—

RAILWAY RESULTS IN THE PAST HALF YEAR.

We publish on this and the next page our analysis of receipts, expenses and train mileage of the larger English railways and of the Great Southern and Western Railway of Ireland for the first half of the current year. These tables embrace comparisons with the immediately preceding corresponding period and also with the year 1909.

The figures in general, it will be noted, are very satisfactory, and were not, of course, affected by any of the labour troubles which arose after the half year ended. The activity in trade and the policy of co-operation between the companies bore good fruit. Of the companies dealt with it will be observed that the largest increase in gross receipts was that of £205,740 shown by the London and North Western. The greatest ratio of increase was, however, shown by the Great Central, with 4.72 per cent. All the twelve companies showed appreciable percentages of increase, and these were increases on increases, as shown by the gratifying comparison with the corresponding half of 1909. It will be noted that the second largest gross increase was that of the Great Western with £238,531, while the North Eastern came third with £218,433. The Great Western again occupies the premier place in receipts from passengers. As to freight traffic receipts, the commanding position of the London and North Western and the Midland, with their totals of £4,502,086 and £4,213,594, is again apparent.

In regard to expenditure, the increases under the head of maintenance of way show that there is no niggardliness in carrying on this most important work. The Great Eastern and the London and South Western show increases under this head of over 7 per cent. Though its total working expenses are not the largest on the list, the Great Western, determined to keep up its record for permanent way, spent more on that item than any other company. In reference to locomotive power, it was not to be expected that decreases in expense shown in some recent half years could continue in the face of rapidly expanding business, though in four cases the feat has been achieved, the greatest percentage of decrease being the 2.04 of the South Eastern and Chatham. It is peculiar to observe that the Great Central locomotive charges have increased by 8.35 per cent., while the number of miles run on that system have only risen by 0.66 per cent. Throughout the list traffic expenses show small increases except in the case of the South Eastern and Chatham, which has economised under this head as well as under locomotive power. As to total working expenses, all the lines except the Irish one show small or moderate increases, a fact which is not surprising in view of the business done.

From the table of train mileage it will be seen that the increases have been moderate, and that in regard to freight train mileage five of the companies are able to show small decreases. The fact is significant when the increased receipts in the same department are borne in mind. Of the total train mileages, even the greatest ratio of increase—that of the Brighton Company—is only 4.15 per cent. In reference to the receipts and expenses per train mile, a comparison of the two columns of percentages reveals a gratifying balance in favour of the receipts.

In summing up, we give the following table, showing how much it has cost each company to earn each £100 of revenue.

RATIO OF EXPENSES TO GROSS RECEIPTS.

HALF-YEAR ENDED JUNE 30, 1911.

	%
Great Central	65.36
Great Eastern	65.80
Great Northern	65.24
Great Southern and Western	58.04
Great Western	64.58
Lancashire and Yorkshire	59.48
London and North Western	62.87
London and South Western	65.96
London, Brighton and South Coast	61.92
Midland	62.01
North Eastern	64.21
South Eastern and Chatham	65.57

The important matter of rates and taxes is one to which attention is very frequently directed at half-yearly meetings, and we append a table for the half-year. It will be seen that no fewer than five of the companies are able to show decreases.

The most notable reduction is that for the London and South Western Railway, amounting to no less than 3.5 per cent., while the Midland comes a good second with 2.61 per cent. In the case of the increases, they are as a rule small, except that

of the Great Northern, which amounts to 4.68 per cent. The matter of rates is one to which the companies have paid great attention in recent years, and though they have no control over the amount of the rates per £1 of valuation, they have in very many cases succeeded in getting the valuations reduced.

RATES AND TAXES.

Company	Amount £	Increase or Decrease over 1910.	
		Amount £	%
Great Central	65,306	1,325	2.07
Great Eastern	158,463	447	0.28

Midland	218,755	5,812	2.61
North Eastern	228,427	2,571	1.14
South Eastern and Chatham	136,042	1,512	1.13

SOUTH AFRICAN RAILWAY EMPLOYEES.

A COMMISSION INVESTIGATING GRIEVANCES.

The question may be asked whether the Home Government derived from South Africa the idea of appointing a Commission to investigate the grievances of railwaymen. A Commission of six was appointed in July to discharge a similar task in relation to the 45,000 employees of the South African railways, three of the members of the Commission being delegates elected by the men. The Hon. J. W. Sauer, Minister of Railways and Harbours, speaking at the laying of the foundation-stone of the Railway Institute at Germiston, on July 8, remarked that when he became Minister of Railways and Harbours, and the first time he addressed a meeting in Johannesburg, he said that it appeared to him necessary, in order exactly to know the position of affairs, to appoint a commission to enquire into the grievances, or alleged grievances, of a large section of the railway people. At that time railway people were considerably agitated because of the non-publication of what was called the Truter Report. The report would have been published but for the fact that the previous Government had promised that it would be confidential, the object being to enable men to give evidence without fear of consequences. If it had been published, everyone would have realised that the reports which had been circulated were grossly exaggerated. A promise was then made that a commission would be appointed to enquire into the grievances of railwaymen. Mr. Creswell had stated that he and his two friends were entirely responsible for the Commission. He would say, however, that they had urged the appointment of the Commission, which was in course of appointment, and would sit in the course of a week or so, when railway people could state their grievances. He would issue a circular to the effect that no man who went to give evidence, seek redress, or bring grievances, should suffer for any charge he might make unless, of course, it was obviously malicious. (Applause.) He was glad to have that opportunity of getting rid of all real and substantial grievances. He believed, however, that most of the grievances that existed could be remedied, and that most of them would be remedied.

STRIKE SEQUELS IN THE COURTS.

From many parts of the country come reports of police prosecutions of individuals and members of mobs who committed unlawful acts during the strike, the charges ranging from intimidation to wilful damage. At Oldbury twenty-four men were charged "that they did, on August 20, together with divers others evilly disposed persons, unlawfully riotously assemble to disturb the public peace, and that they unlawfully riotously did make a great noise, riot, tumult, and disturbance, to the great terror and disturbance of his Majesty's subjects." The occurrence took place at a level crossing on the Great Western line at Langley Green, when troops had to be brought by special train from Birmingham to disperse the mob. The cases against all but three of the men were dismissed.

THE RAILWAY COMMISSION OF INQUIRY.

THE MEN'S CASE CONTINUED.

The Royal Commission of Inquiry regarding the Railway Conciliation Scheme continued its sittings at Westminster during the past week, Sir David Harrel in the chair. The terms of reference to the Commission are:

"To investigate the working of the Railway Conciliation and Arbitration Scheme signed on behalf of the principal railway companies and of three trade unions of railway employees at the Board of Trade on November 6, 1907, and to report what changes (if any) are desirable with a view to the prompt and satisfactory settlement of differences."

On Monday the hearing of evidence on behalf of the men was continued.

Mr. F. C. Fyde, a signalman in the employment of the South Eastern and Chatham Railway Company, and secretary of all the Conciliation Boards of that company except that representing the locomotive department, put forward a complaint of the difficulties and delays of getting board meetings. When the Central Board did meet on March 31, 1909, it adjourned until February 23, 1910, the chairman of the company undertaking that in the meantime nothing should be done as regarded rates of wages or hours of labour which would be detrimental to the men. That undertaking was not carried out. He next complained of the company placing proposals on the agenda of Central Board meetings which had never been before the men, of which no notice had been given, and which had never been presented to the Sectional Board. The men had to submit to the company putting down proposals and varying them at pleasure on any of the boards. These proposals were not put there for discussion. The company had no desire to discuss them. They were put there in the event of going to arbitration, and the company claimed the right to put them before the arbitrator. As a matter of fact, the company never did go to arbitration. He claimed that under the scheme notice should be given to the men of any reduction of wages or increase of hours. The company gave no notice.

SPECIFIC COMPLAINTS.

As an instrument of collective bargaining the scheme of conciliation was useless, simply because the company attacked individuals. He mentioned a number of specific cases in which he said the company had reduced the wages of employees. The company had created a new grade of porter-guards at 20s. a week to do the work previously done by guards at 22s. That, he contended, was practically cheating the men. In addition to correspondence, witness had five different interviews with the secretary, the general manager being present once, to discuss all these matters. They were unable to arrive at a settlement, and repeated requests for a Board meeting were refused.

By Sir T. R. ELLIS: His suggestion was that the company, by manipulation, had deprived the men of advantages which the agreements were intended to give them. He favoured the establishment of one Board for each railway and of election to it by grades, or groups of grades, but not by districts. He also favoured having a chairman, but was not prepared to give him the casting vote, owing to the difficulty of getting an unbiassed man.

Would you prefer to have an outside chairman who would give the casting vote if the two sides did not agree, or would you prefer to strike?—I should prefer the men to decide whether they should strike or accept the conditions offered. If in their efforts to work their part of it the men found they were obstructed, and the company declined to work their part, there was no option, he continued, but the stoppage of work. He agreed, however, that all the machinery for settling a dispute should be exhausted before a stoppage occurred.

If you were not satisfied with the decision of the Board, you would recommend a stoppage?—Yes.

By Mr. HENDERSON: If the Board failed to agree, the question should be referred back to the company and to the men for reconsideration.

Are you prepared to have it laid down that once the scheme has been entered upon there should be no cessation of work till a month from the time when the Board fails to come to an agreement?—Fourteen days or a month.

Would you give a month?—I should prefer fourteen days. Continuing, he said he was in favour of deleting from the rules of the Amalgamated Society of Railway Servants the one about offering arbitration before proceeding to strike.

ALLEGED INTIMIDATION.

Mr. GEORGE SPENCER, for 19 years in the employment of the

Midland Railway Company, is a member of the Conciliation Board, who has now left the Sectional Board, and the Chairman, the witness gave evidence before Lord Cromer on the arbitration proceedings in April, 1908. He knew Mr. Cecil Paget, the superintendent.

It has been suggested that I used some threat or used some language towards you that was calculated to intimidate you. Is that so?—Yes. Continuing, he said that on September 27 last year, when he was employed as a conciliator, Mr. Paget got up beside him on the engine and laid him on the ground. Mr. Paget said he thought that witness had let the secret out, and asked him if he was the man who went about making such meetings of railway men. He taxed witness with a statement he was alleged to have made, and witness challenged him to produce evidence of it, as he had no recollection of making it. Mr. Paget also said he had come to the conclusion that the witness was a big coward to leave the service. The witness told Mr. Paget that he was using his superior position to insult him, and Mr. Paget replied that the witness was a liar. He also said that he was simply speaking his mind, and added, "You are not worth more than 15s. a week. If I had my way I would not give you more than 12s. You and men like you are a disgrace to the company's service, and the sooner you are out of it the better."

By Sir T. R. ELLIS: What statement was it that he charged you with making?—That I was unfortunately employed by a railway company.

What was the evidence you gave before Lord Cromer which you think was the cause of this intimidation?—Proving that we had not sufficient time to get the engines in.

Why did you leave the company's service?—Owing to these remarks, I thought if I did not get another situation I should be discharged and be out of employment, and I had a wife and four children. So I got another job as soon as I could.

By Mr. HENDERSON: The subject of the arbitration was not mentioned in the conversation. The driver was present at the time. He had not addressed any public meetings for 12 months before Mr. Paget got on the engine-plate, and the only time he remembered speaking when reporters were present was in May, 1908.

DELAYS AND DIFFICULTIES.

Mr. CHARLES DEER, shunter, employed at the Great Eastern Railway Works, Stratford, and a member of the Conciliation Board, in reply to the Chairman, complained of the delay which occurred in the calling of meetings of the Sectional Boards on the Great Eastern Railway. The men's programme was presented to the company's officials on May 18, 1908, and the meeting was not held till October 15 following. When the Central Board met they failed to agree on any one of the proposals. The next difficulty was that they failed to agree as to an arbitrator. As a consequence, on March 19 a joint communication was addressed to the Speaker of the House of Commons and the Master of the Rolls, asking them to appoint an arbitrator. Lord Gorell was appointed. He was a stockholder in the Great Eastern Railway. That fact showed a great weakness in the scheme. Seeing, however, that Lord Gorell was an ex-judge and a fair-minded man, the men had no objection. When the award was issued it caused a vast amount of dissatisfaction.

ALLEGED MANIPULATION.

As soon as the award came into force the men found that the company were able by manipulation to make it work to the men's detriment, though Lord Gorell meant it to be an improvement. In the locomotive department some of the men suffered a reduction of as much as 10s. a week. The result was that the whole of the men were up in arms in connection with the business, and attempted without success to get a meeting of the Central Board. Many of the signalmen petitioned to be allowed to contract out of the award, and go back to the old conditions. It was laid down that the men in any of the boxes must be unanimous before they could be allowed to contract out. In one case this resulted in an attempt being made to shift a signalman away to another district.

The CHAIRMAN: Is it your suggestion that the company desired that the men should go back to the old system? That is so. The company wanted to take the man he had referred to and put him in a box where three men would be unanimous, and then to put another man anxious to work under the old conditions into the vacant place, and make three unanimous there. His whole experience throughout the meetings of the Conciliation Board had been that there was an entire absence of the spirit which the men had a right to expect.

By Sir T. R. ELLIS: It was easy for men to produce proof before the Conciliation Boards that, owing to the increased cost of living, they wanted increased rates of pay. If the companies said that owing to their financial position they could not agree to the men's demands, they should bring proof, and until they did that he was not prepared to believe them. He would not object

to have an outside chairman for a board fairly constituted, such chairman to decide questions when conciliation had failed.

By Mr. HENDERSON: The *personnel* of the National Board should consist of union officials and railway representatives in equal numbers. He did not approve of the National Board being constituted of people unconnected with the railways, as the railway industry could only be understood by railway men. Once the scheme had been entered upon, the executives of the unions should do all in their power to keep the men at work until all the processes had been completed. He thought that 14 days was a sufficient period to elapse after failure before the men ceased work.

Mr. WILLIAM COOK, engine driver on the London and North Western Railway, said that when the men's programme reached the Central Board it was referred without discussion to arbitration, and this disclosed one of the disadvantages of the scheme. The men who were going to arbitration should be allowed to state who their advocate should be. The award of the arbitrator had been rendered ineffective by the almost universal adoption of the trip system. He also contended that in the event of disagreement the matter should be referred to the local trade union, which should be at liberty to meet representatives of the company. There should be two representatives of the union and two of the company, with an independent chairman, whose decision should be binding. He would do away with boards altogether, and suggested something corresponding to a National Board.

TUESDAY.

Mr. WILLIAM COOK's evidence was continued on Tuesday. In answer to Mr. Henderson, he said that he was in favour of having an independent chairman for the suggested National Board. Members of the Board should be elected for 12 months; three years was too long a term. The men would have no right to cease work while negotiations were going on. He was also of opinion that any scheme made compulsory by law would not be acceptable to the men. Three months' notice should be required if either party wished to free itself from any machinery that might be set up.

By Mr. BURNETT: He believed that the whole of the men wished the conciliation scheme of 1907 to be swept away entirely.

SOUTH EASTERN RAILWAY CONDITIONS.

Mr. WILLIAM STEVENSON, a driver in the employment of the South Eastern and Chatham Railway Company, with 35 years' service, and a member of men's deputations for many years past, said that the scheme of 1907 was refused by the South Eastern and Chatham Railway locomotive men owing to the fact that it would do away with the mode of procedure which had up to then been successful. They had always been able to discuss whatever subject they wanted to discuss if necessary with the directors of the company. The scheme undoubtedly did interfere with the good feeling which had previously existed. Under it economy had taken the place of humanity. Among the features of the scheme objected to were the division of the railway into districts for electoral purposes, and the grouping of locomotive men with other grades. When the scheme was put into operation they found that the whole of their energies were taken up in trying to avoid being dragged into arbitration where they felt sure that they would lose instead of gain. The minority practically governed the majority. Instead of going through the process of electing delegates, they should have sectional boards elected by ballot, who would have the power to discuss locomotive questions with the railway officials, and agree among themselves upon some other tribunal. The enginemen on the South Eastern Railway enjoyed the best conditions to be found on any railway in England. By the method he proposed, better conditions could be obtained than by submitting the points to a Divorce Court judge.

By Sir T. R. ELLIS: Have you ever got to a point where the directors and you could not agree?—No. We have compromised.

Supposing there should be a case in which there could be no agreement, what would you say was to be done then?—It has never been like that yet.

It is like the schoolmaster's problem of an irresistible force coming into collision with immovable matter? (Laughter.)—Just so.

Continuing, he said he was in favour of the men being empowered to have union officials present at their deputations, and failing a settlement, two representatives of the men and two representatives of the company might sit, with an independent chairman possessing a casting vote. The policy of allowing one grade to manage the business of another grade had not tended towards a conciliatory spirit.

You would continue work if satisfied with your conditions, and not come out if other railways were not satisfied?—So far

as conditions are concerned, I agree; but the recent dispute was a different affair altogether, and it won't happen again.

You would do your best to prevent it happening again?—Yes; and I think the decentralising of affairs would have a tendency to do that.

By Mr. BURNETT: Did any enginemen at your system cease work during the recent dispute?—Yes.

How was that?—I am afraid that is rather a tight question. (Laughter.) They struck in answer to the orders of the joint executive.

THE ALLEGED MANIPULATION.

Mr. ROBERT THIRTE, an engine driver on the Great Eastern Railway with 27 years' service, and a member of the Conciliation Boards, stated that the limitation of the scheme of 1907 to questions of hours and wages was one of its greatest weaknesses. The company had revised and manipulated the duties of the men, so as to prevent them receiving the benefits which the award was intended to confer. He thought that if the scheme could be amended it would meet requirements. The difficulty of getting the interpretation of the award had been a very sore point with the men, while single arbitration had been a complete failure, and they had lost all faith in its impartiality. The award should have been definite, and not discretionary.

By Sir T. R. ELLIS: He favoured as a substitute for the present scheme the suggestions outlined by Mr. Fox. He did not think that the question of union and non-union men working together would ever lead to a stoppage of work. He agreed that men who would not accept the decision of the tribunal should not receive the union support, and that men who wished to accept it should receive the fullest possible protection. The proposed tribunal of five, including an independent chairman, should not sit permanently, but after having settled a dispute should be dissolved.

A COSTLY SCHEME.

Mr. HENDERSON pointed out that there were about 40 companies, and if they were to have separate tribunals for each grade on each company they were going to have a busy time.

WITNESS: Don't you think you are anticipating something which will not occur?

Mr. HENDERSON: All the companies' employees have grievances which may lead to setting up these boards?—Yes.

I have a fellow feeling in this, because you suggested that one member might be a politician?—Yes, one acquainted with labour questions.

That is coming very near home, because I am a Labour representative. If you are to have all these boards and apply to some of us to sit on them, you are piling on the work?—We will pay you the trade union rate of wages. (Laughter.)

You have made up your minds that you are going to pay the Commissioners?—Decidedly, if we appoint them.

Mr. HENDERSON said that there would be five men to be paid every time instead of one. Moreover, the one arbitrator considered the cases of all the grades, but now there was to be a court of five for each grade. He was not sure that the practical result was going to be more satisfactory to the men, and it might cost a great deal more.

Witness said that they had not anticipated any such result. They were of opinion that these tribunals would only be called into operation on very rare occasions. He still favoured his scheme.

GREAT WESTERN RAILWAY.

Mr. ALLEN DAVIS, Wolverhampton, an engine driver on the Great Western Railway, said that the 1907 scheme was never considered satisfactory by the locomotive men on the Great Western Railway, as it did not provide for trade union representation. The scheme had practically never been put in operation.

By Mr. HENDERSON: Since 1906-7 the men he represented had received greater facilities for bringing forward their grievances than existed previously, and the last settlement they arrived at conferred a greater advantage upon the locomotive men on the Great Western than any single previous settlement had done.

Mr. C. W. FITMASS, King's Lynn, an engine driver on the Great Eastern Railway, said that though the award gave the acting drivers and firemen an advance of pay, rearrangement of the terms of duty actually brought about in some cases a decrease instead of an increase.

WEDNESDAY.

Mr. ROBERT ANDERSON, a Great Central Railway engine driver, said that the locomotive men on that railway objected to the conciliation scheme of 1907, because it was nothing in advance of what they had previously enjoyed, because there was no official recognition of the union, and because it did not go far enough. The question of medical examination was not included, and this was a grievance which until settled was

bound to cause dissatisfaction. It was an injustice that a man should work 20, 30, or 40 years for an employer and then be cast adrift because he possibly had some slight physical defect. The company were allowed to work the men to death, and then the men could claim no compensation. He admitted, of course, that every man should be physically and medically fit who was in charge of a locomotive. He approved of Mr. Fox's suggestions.

Sir T. R. ELLIS: If the old scheme had been in force would there have been any reason for the recent stoppage of work?—You are asking me a hard question. Sooner or later there would, I think, have been a stoppage on all the railways of Great Britain.

Why? There are various reasons. One is "speeding up." I now often do practically as much work in one day as I used to do in three days thirty years ago. Previously if a minute or two was lost on a journey our explanation was accepted without any doubt being cast upon it, but now for a minute or two you want a correspondence clerk to accompany you in order to reply to what is sent down to you. (Laughter.)

You suggest that the companies have been in recent years putting more labour on the men than formerly without a corresponding increase in remuneration?—Yes.

Can you suggest anything by which the strike, which you say must have come some day, could have been averted?—Witness replied that the local officials should be approached in the first instance, and then, if the grievance was not settled, the men should meet the board of management in company with a trade union official. The next stage should be a joint Board composed of two representatives of the men, two of the company, and an independent chairman.

If the scheme suggested by Mr. Fox were put into operation would that prevent strikes in future?—I do not think, to speak honestly, that it will be possible absolutely to prevent strikes, but you can go a long way towards preventing them.

In reply to Mr. HENDERSON, he said that the enginemmen wished to have control of questions specially affecting themselves. He favoured the setting up of a separate court of five to deal with questions affecting each grade.

Answering further questions by Sir T. R. ELLIS the witness suggested that the four controlling trade unions could be linked together by some scheme of federation so that a general control might be exercised over all grades.

"HARASSING PIN PRICKS."

Mr. ISAAC BRASSINGTON, organising secretary of the General Railway Workers' Union, and formerly a porter and goods-checker on the Midland Railway, said that the men objected to periodical agreements because they had often found that after an agreement had been arrived at trade had improved, and men in other industries had obtained improved conditions, while their own conditions had been crystallised. All kinds of new grades had been created since the award, and the harassing pin pricks of the companies had largely led to the present trouble. His contention was that the settlements should be for an indefinite period and determinable at three months' notice. It was impossible for one arbitrator to understand the conditions of the whole of the grades. He also complained that the companies had manipulated and interpreted the awards. In saying that an agreement should be terminable by three months' notice he meant that the men should then be able, not necessarily to stop work, but to start agitating again for new conditions.

By Mr. HENDERSON: Sectional effort was going to answer its purpose in the negotiations with the companies, and it was the only method which would be adopted. If all the grades were to be brought together chaos would result.

Questioned about the length of notice which should be required before a strike should be permitted, witness said that when it was a case of industrial war he believed they should copy the methods of Parliamentarians in national wars and give no notice.

You ask this Commission to take steps to secure for all the unions official recognition? You are not prepared to give anything in return in the shape of a guarantee of continuity of labour?—Official recognition itself would give a guarantee of continuity of labour. Continuing, witness said he had never advocated strikes, though he was Machiavellian enough, when entered upon one, to be regardless of the means adopted to win.

I do not want to know whether you are unscrupulous or otherwise. Do you want a National Board consisting of two representatives on each side and an independent chairman?

WITNESS suggested that there might be three, or four, or five representatives on each side. The representatives of the men would act as advocates. Strikes took place because the

men asked the companies for something and got no answer. That sort of thing could not take place if they had official recognition of the unions. Asked whether the men ought to have the right to strike while conciliation proceedings were in progress, witness said he thought they ought. He could almost give a guarantee that such a thing would never happen, but, paradoxical as it might seem, if the men were deprived of the right to strike, that in itself would cause a strike.

Mr. RICHARD INGHAM, President of the Executive Council of the General Railway Workers' Union, and for twelve years an employee of the Lancashire and Yorkshire Railway Company, stated that the men he represented, chiefly goods workers, were disgusted at the agreement, both on account of its duration and of the trivial concessions. As an alternative to the existing machinery he urged recognition of the union. Matters not settled by this method should be referred to a National Board.

SIGNALMEN'S VIEWS.

Mr. SAMUEL CHORLTON, general secretary of the United Pointsmen and Signalmen's Society, joined in the complaint of waste of time before the conciliation machinery could be started. He contended that men elected to a conciliation board for three years should not be allowed to come to an agreement lasting beyond the term of office. He complained that the large majority of the representatives of a grade were debarred from representing it at the most important stage of the proceedings, as the six or eight men elected to the Sectional Boards were only represented by two on the Central Board. The Sectional Boards were a mere useless formality. They would like to see the whole scheme swept away, but if it was to continue they contended that the representatives of the men should be able to see the case through from beginning to end. He had been disgusted at the cheese-paring policy adopted by some of the railway companies as a consequence of what had been termed "concessions."

In reply to Sir T. R. ELLIS he said that his society had a membership of about 4,000. The total number of signalmen in the country was about 35,000.

THURSDAY.

Mr. WILLIAM BUTLER, signalman on the Lancashire and Yorkshire and North Western joint line, was the first witness called on Thursday. He also spoke to the disappointment felt by the men with the results obtained from the conciliation boards. Repeated applications for redress to local officials resulted only in official communications to the effect that the case was being considered. He was in favour of the proposal that grievances should be settled by sectional boards with independent chairmen having casting votes.

EVIDENCE FROM SCOTLAND.

Mr. WILLIAM CARRERAY, Ayr, a signalman in the employment of the Glasgow and South Western Railway, stated grievances of the men in his locality in regard to the working of the boards. The rural districts were inadequately represented, with the result that important centres got an advance of wages, but the rural districts did not. He also complained that the company failed to carry out the award. He considered that it was quite out of the question that the men elected to the boards for three years should make an agreement binding on their successors. An agreement might be made binding for twelve months, and then be determinable at three months' notice.

Mr. ARTHUR ANNAN, who for 24 years was a signalman on the Caledonian Railway, expressed objections to the boards as at present constituted, and complained of the excessive time required to get the boards to commence work. The machinery for settling disputes should be this: First of all a deputation should wait on the officials, then, failing a settlement, the same deputation, accompanied by the union officials, should approach the manager and the directors. After that the question should be referred to a board consisting of an equal number of representatives of the company and the men directly affected by the question, the proceedings being presided over by an outside chairman, who would, if necessary, have a casting vote. He also favoured the appointment of a panel of chairmen to be selected from.

Mr. JOSEPH TUNTON, Burton-on-Trent, a signalman on the Midland Railway, gave similar evidence as to the conciliation boards.

THE VIEWS OF MR. HUDSON.

Mr. WALTER HUDSON, member of Parliament for Newcastle-on-Tyne, stated that, in his opinion, the conciliation scheme of 1907 did not provide the necessary machinery for settling disputes. It took too much time, and was too cumbersome. The

expression, "the usual way," had been a serious bone of contention between the two sides, and it ought to be deleted. To work a scheme by sections would never give satisfaction as there was so much in common between the grades. They were not likely to arrive at an agreement in sections nearly so quickly or so amicably as they could do by the whole body of men dealing with the question as a whole. His experience led him to the conclusion that they must have a board which would incorporate the whole of the active railway men. Consequently he looked upon sectional boards as absolutely useless for arriving at any binding or lasting settlement. The Conciliation Scheme of 1907, even with the best spirit on both sides, had been very slow in working. No company had worked it in a broader or more amicable spirit than the North Western Railway, but even there the time occupied from setting up the boards to getting the arbitrator's decision was twelve months. The limited power of the boards condemned them root and branch. To confine the operation of the boards to hours and wages left out of consideration a multitude of things upon which they might have a dispute any day involving a strike. If the conditions of service were fixed this would prevent a great deal of trouble. On the North Eastern Railway they had in hand the question of codifying the conditions. Once completed, the men from top to bottom would know exactly their conditions of service. Such a codified condition was absolutely necessary on all the railways of the country.

AN ALTERNATIVE SCHEME.

Arbitration under the scheme was a failure. Arbitrators had often misapprehended the points at issue, and they dealt with matters that were not in the terms of reference to them. His alternative scheme would be to have one board for each railway, with 18 or 20 representatives of each side. He would give that board the fullest powers of dealing with questions affecting all the grades in the service and of going to arbitration if they desired, or of calling in a chairman. He would suggest that they should meet three times a year at least, at fixed periods, with power to call special meetings. By providing that in the initial stage grievances should be discussed by the men with their immediate superiors, they would secure that only cases of importance came before the board. He favoured the appointment of a chairman to sit during the proceedings. In the event of the board failing to agree on a general question, such as an all-round advance of wages, there should be the right of appeal to a national board composed of representatives of the companies and the trade unions.

THE CHAIRMAN: It has been represented here that a condition precedent to anything of this sort should be the federation of the unions more or less?—It must be that, I think. There should be no appeal to the national board unless there was a general demand by the employees of the company. It appeared to him that probably in the near future they might have to deal with the whole of the railways in a general sense when it came to a question of hours and wages.

Mr. Hudson then handed in statistics showing the results of the 1908 election of conciliation boards. It appeared that the number of votes recorded by trade unionists was 297,028, and by non-unionists 47,774. He could not say what proportion the total vote bore to the number of railway employees over 20 years of age in the kingdom.

THE NORTH EASTERN SCHEME.

In reply to Sir T. R. ELLIS, the witness described the working of the North Eastern Railway Company's system for settling disputes, and said that it was the best he knew of in railway life.

It was not sufficient to prevent the men coming out on strike recently?—The men were called out on strike by the four national committees.

Do you approve of a principle by which men can be called out in that way?—I think it was a great mistake.

He favoured the national board having the power to call in a chairman to settle a dispute, if they agreed to do so. In over a hundred cases in Great Britain, conciliation boards had agreed to that course. He did not favour the chairman having the deciding voice unless the two sides agreed that this should be so.

If the two sides could not agree and there was no determining power on the part of the chairman, what then?—I suppose the two sides must agree to some other course.

What is that course?—In the ordinary way of our industrial life, it would mean a lock-out or a strike.

Is it desirable to leave it in that way?—I do not think it is wise to go any further at the present time.

Is it desirable to leave whatever system of conciliation may be established in that way, so that at the end we have the prospect

of a lock-out or strike?—Yes, because, in my opinion, it is very remote.

By Mr. HENDERSON.—When he said that the recent policy was a mistake, he meant as it applied to the North Eastern Railway. The North Eastern scheme, with trade union recognition, had gained the confidence of the men.

Would you say that you have succeeded by the North Eastern system of grade sub-committees in overcoming the very difficulties and even dangers that other witnesses have said have arisen in connection with the 1907 scheme?—I should say we not only have overcome the difficulty in this direction, but we have never found the difficulty arise in full conference. Continuing he said that there was not one case on record of a complaint that all the other grades outvoted a particular grade. Matters requiring detailed inquiry should be referred to a sub-committee consisting of members of the grade concerned, with instructions to bring up a report. He did not think a strike should ever occur until the National Board had failed to agree, and he believed that very few cases, if any, would occur where the Board would fail to agree, knowing that the only alternative was the arbitration of a struggle. He would prefer a final court of three, chosen from panels of chairmen, employers', and employees' representatives, to the old method of arbitration.

Sir T. R. ELLIS pointed out that evidence had been given in favour of the settlement of questions by the grades immediately concerned. Would it not be more likely to work satisfactorily if a man were allowed to settle his grievances in the way he preferred than in the way others said he must adopt?

Witness: The majority should decide. I take it that all the workmen should be amenable to their own Executive.

But sometimes the men throw the Executive off their feet?—That is so.

It was not even in accordance with your wishes what happened recently, so that you had not a very firm hold apparently?—I was not consulted.

Perhaps you were not in a position of authority to entitle you to be?—In my opinion I ought to have been before they agreed to any national revolt.

FRIDAY.

Mr. C. W. SHIPLEY, York, a driver on the North Eastern Railway, and a member of the Executive Council of the Associated Society of Locomotive Engineers and Fireman, stated that he never knew of so much unrest on the North Eastern Railway as had existed since the conciliation scheme had been in existence, and he attributed a great deal of that to the disappointment of the men at the working of the scheme. They tried arbitration, but the award caused extreme disappointment, especially among the locomotive men. The men were in a state of revolt against conciliation and arbitration as a whole. He proceeded to detail some of the grievances in connection with the North Eastern conciliation scheme, but was reminded by the Chairman that that was not the scheme which the Commission were inquiring into. The witness said he was in favour of sweeping away both the existing schemes and of reverting to the old system of deputations going before the directors.

By Sir T. R. ELLIS: You say the workers should be paid before the shareholders. Do you think the public would be encouraged to find money for railway purposes if there was no reasonable prospect of getting any return?—I am of opinion that if trains cannot be run to pay labour adequately they should not be run at all.

Would you go so far as to say that you should be deprived of your employment altogether by stopping the railways if money could not be obtained for carrying them on? I do not know whether that view has suggested itself to you.—It has not in that light. I maintain that other economies could be effected.

It would be a misfortune if the railways had to stop?—I don't think they would stop for that. I think economies could be effected in other directions.

RAILWAY CLERKS' POSITION.

Mr. A. G. WALKDEN, general secretary of the Railway Clerks' Association, said that in 1907 the clerks protested against their exclusion from the Board of Trade scheme. The clerical staff were doubly interested in the question. They wanted facilities for remedying their grievances, and, further, they were usually called upon to perform manual labour in case of a strike. This they objected to very strongly on principle. The clerks had observed that the conciliation scheme had worked so badly that they had changed their minds and they did not now desire to come into it. They wanted, however, to have trade union recognition. In pointing out unsatisfactory conditions of service, he said that only 10 per cent. of railway clerks paid income

tax. They wished to have the option of access to any improved machinery that might be set up. They should be graded separately, and they should have facilities to go to arbitrat. He suggested permanent Government Committees to inquire into railway questions. He also favoured the setting up of a national board, whose chairman should have a casting vote. The clerks should have a representative on the board, and he was also in favour of electing outside members to the board. He was of opinion that whatever machinery was set up to bind the men against sudden cessation of work, it would be broken to atoms if the scheme was not worked in a fair and straightforward way. No law that the House of Commons could pass would prevent the men acting as they did last month if they had a similar accumulation of injustice.

Mr. E. A. OCKENDEN, a driver on the South Eastern and Chatham Railway, said that the conditions of the men he spoke for were so good that they had no need for the conciliation scheme.

The Commission adjourned till next week.

THE REPORT ON A GREAT WESTERN COLLISION.

SEQUEL TO A GUARD BEING LEFT BEHIND.

Lieut.-Colonel H. A. Yorke's report to the Board of Trade on the collision which occurred on July 15 at Clutton station, on the North Somerset branch of the Great Western Railway, states that an excursion train from Weston-super-Mare to Westbury was standing on the down loop line at Clutton when it was run into in the rear by a light engine which had been sent back to Pensford to fetch the assistant guard, who had been accidentally left behind at that place. At the time of the collision only the tank engine was attached to the train as the other engine had been sent back to Pensford to pick up the guard who had been left behind, and it was this engine which collided with the train on its return to Clutton. Colonel Yorke states that the train overlapped the platform at Pensford, and the front guard, Parsons, got down on to the ballast to prevent passengers in the front carriages, who were rather difficult to manage, from leaving the train, and also to persuade those who had alighted to reseat themselves. While so engaged the rear-guard gave him the usual hand signal that the train was ready to start, which signal it was Parson's duty to repeat to the fireman on the front engine, but before doing so he intended to regain his van. Unfortunately, the fireman on the assistant (or second) engine saw the rear-guard's hand signal. He therefore told the driver that the train was ready to start, and repeated the information to the fireman on the front engine. The two drivers then started the train while Guard Parsons was still on the ground some distance from his van, leaving him behind. After a short delay he was informed that a light engine would be sent back for him, and that his train would be detained at Clutton until he had rejoined it. There was a goods train at Clutton waiting for the excursion to pass, and Stationmaster Strickland decided to take the front engine off the excursion train and send it back to Pensford, detaining the excursion train at Clutton till the engine returned with Guard Parsons. As soon as the excursion train arrived at Clutton the driver of the front engine was told to return to Pensford for the guard. After the engine had started Signalman Gibbs set the points for the down loop upon which the train was standing, though he did not remember doing so. Driver Cole thought he had received all the necessary instructions as to the points and as to entering the up-loop before going to Pensford, but on his return did not observe a porter standing on the ground, and thought the points were lying in position for the up line. It was not till he felt the engine lurch in passing through the points that he realised he was being turned on for the down line. As the tail end of the train was only a short distance inside the loop points there was not time to stop his engine before he collided with it.

Colonel Yorke attributes the accident to the lack of a clear understanding between Signalman Gibbs and Driver Cole. Gibbs did right in sending the porter to the signal to pilot the engine into the station, but not mentioning it to Cole the latter thought he could enter the station and run round his train without stopping. Both men were to a certain extent to blame, one for not keeping the points lying for the up line so as to protect the train on the down line, and the other for not stopping at the signal until he had got a definite authority to pass it at danger. But (concluded the inspector) in both cases the fault was an error of judgment rather than anything more serious. The steam brake on the engine was out of use, and though this did not contribute to the accident, the engine was hardly in a proper condition to be attached to a passenger train, and the attention of the company might be drawn to this fact.

OBITUARY.

MR. E. B. THORNHILL.

The death of the late Mr. E. Bayliss Thornhill, C.E., at the age of 70, who for forty-seven years was connected with the engineering staff of the L. and N.W. Railway Company, from which he retired two years ago. He reconstructed Lime Street Station, built the Garston dock and many other important works. For seven years before his retirement he held the post of chief engineer, carrying out the widening of the track at Euston. The funeral took place on Saturday in Northwood Churchyard, the Rev. A. F. Thornhill, of Liverpool, being the officiating minister. In addition to the widow and members of the family the mourners included the following representatives of the L. and N.W.R. Company: Messrs. C. de J. Andrewes (solicitor), E. Woodhead (assistant engineer), R. Cooper (assistant-engineer), F. D. Workman, F. J. Paine, J. E. Berham, H. W. Berham, F. Evans, J. R. Reston, A. G. Smith, and R. A. Gillingham (engineers' department). There were also representatives of the Ruislip and Northwood Urban Council, of which Mr. Thornhill was a member. Amongst the numerous beautiful floral tributes were wreaths from the widow and members of the family, the staff at Euston, Mr. James Bishop (Secretary L. and N.W.R.), Mr. R. Cooper (L. and N.W.R.), Mr. C. de J. Andrewes, and the officials of the Urban Council.

MR. T. HURRY RICHES.

In his sixty-sixth year Mr. T. Hurry Riches, J.P., M.Inst.C.E., the locomotive superintendent of the Taff Vale Railway Company, died on Monday evening at Cardiff. Mr. Riches commenced life as an apprentice in the yard of the Taff Valley Railway, and on the completion of his indentures he served for some months as a marine engineer, subsequently winning a Whitworth scholarship and attending the Royal School of Mines. Next he became a foreman for three years under the trustees of the late Marquis of Bute, designing and building many bridges and roofs, and assisting in the supervision of all the engines, steamers, and dredgers engaged in the docks. Re-entering the service of the railway company as locomotive foreman, on the resignation in 1873 of Mr. B. S. Fisher, locomotive superintendent, he was appointed to the vacancy, and also took over the charge of the hydraulic machinery and the shipping appliances at the company's Penarth Docks, and also the carriage and wagon department. As locomotive superintendent Mr. Riches designed the coal tips at Penarth Dock, and he introduced several new types of locomotives, including the six-wheeled coupled, with tenders; six-wheeled coupled, with trailing radial wheeled (tanks); and the four-wheeled coupled, with leading four-wheeled bogie and trailing wheels (passenger tanks). He was president of the South Wales Institute of Engineers in 1901-2, 1902-3, and in 1908 was elected president of the Institution of Mechanical Engineers. In the same year he was chairman of the Mechanical and Engineering Section of the Franco-British Exhibition. He was past-president of the Association of Locomotive, Carriage and Wagon Superintendents of the United Kingdom; a member of the Iron and Steel Institute; a member of the British Association, of the Council of University College of South Wales and Monmouthshire, and in 1900 he was appointed Recorder for the International Railway Congress at Paris on the progress made in the designing of high-speed locomotives in the United Kingdom and the British Colonies during the previous five years. Mr. Riches found time to take part in public affairs at Cardiff, and the benefit which he himself had derived from the science and art schools led him to show great interest in technical education. He made it a condition of apprenticeship in the Taff Vale workshop that every boy should attend the Science School. Remembering the fact that friends of education had enabled him to take advantage of the School of Mines scholarship, he became the counsellor and when necessary the benefactor of the Taff Vale Railway apprentices, many of whom secured responsible positions in various parts of the world. In acknowledging the gift of an album from the Cardiff Technical Schools, he stated that the highest duty of men and women was to be useful to the world and not to use their education and ability for their own aggrandisement, but for the benefit of their fellow beings. His second son is the locomotive superintendent of the Rhymney Railway.

FORTHCOMING MEETINGS.

Sept. 10 (Wed.)	Great North of Scotland Railway	Hull (100)
Sept. 10 (Wed.)	Nottingham Suburban Railway	Hull (100)
Sept. 10 (Wed.)	Bury Port and Gwendreath Valley Railway	Hull (100)
Sept. 10 (Wed.)	Caledonian Railway	Hull (100)
Sept. 10 (Wed.)	Underground Electric Railways of London	Hull (100)
Sept. 20 (Wed.)	Ottoman Railway from Smyrna to Aidin	Hull (100)
Sept. 20 (Wed.)	Knott End Railway	Hull (100)
Oct. 4 (Wed.)	Canadian Pacific Railway	Montreal

had an increased expenditure amounted to £4,607 or only 27 per cent. The general revenue account of the railway, valued at the current rate of exchange, showed a profit of £7,704, against a loss of £7,670 in the previous year. The railway had thus been worked at a substantial profit viz., 77 per cent on the gross receipts. The Chairman drew particular attention to the fact that although they had carried a large amount of common car material during the year under review, the revenue account had been well balancing thereby; out of the £7,704 only £2,435 was represented by material carried, the whole of the remainder being accounted for by developments which had taken place in the revenue side of the account, a very satisfactory. As a result of the past year, the Government authorised the railway to purchase 100,000 axes and rolling stock, to make a special arrangement with the steel works for rolling stock, and certain other improvements in order to enable more effectively the rolling stock was to be charged against the revenue of the railway.

the Government's policy of stimulating the prosperity of the country. It is still necessary, however, to demand for Labour far more than it is getting. In respect of the contractors found it impossible to estimate the services of the number of men needed to complete the bridges within the expected time. Good progress was, however, made, and the Government had very much to be proud of. The work until April 30 next year, by which time the Government are enough to believe that the railway will be running between Bujumbura and San Borja. The only one, however, to be more than one-third of the total length of the railway. A considerable progress had been made in the work of the contractors and so on, it is the larger bridges were more difficult to construct, but much more rapid progress could be expected in the future.

As a result of the report, the services of Mr. Ambler as General Manager were no longer at the disposal of the company, and it had been determined in securing the services of Mr. A. L. Thompson, known as his successor. Mr. Thompson had long years of varied railway experience, particularly in South America, and during the short time he had been in charge of the company had made considerable progress in every respect of managing the company's affairs successfully, and in the interests of the stockholders. The difficulties in connection with the negotiations for the construction of the International Bridge over the river Uruguay had been entirely removed. Under an agreement entered into between this company and the North Western Uruguay Railway Company, the Quirahim International Bridge Co. had been incorporated on May 25 last. Messrs. Henson, Seaton and Henson, civil engineers to the bridge company, prepared new plans for the bridge, and these were despatched to Brazil and Uruguay for presentation to the respective governments, and their opinion was awaited their approval. As soon as the plans were officially approved steps would be taken to raise the necessary capital for the construction of the bridge, and both the North Western of Uruguay Railway Co. and this company confidently believed the conditions under which the subscriptions would be invited, and the security which the bridge company would be in a position to offer, would ensure the whole of the funds needed being forthcoming. Since the report had been issued a cable had been received stating that the Uruguay Government had approved the plans. The bridge question had been one of extraordinary difficulty to both companies, and they could now congratulate themselves

that the obstacles which appeared at one time to be insurmountable had been entirely removed, and all concerned were working in complete harmony to ensure the ultimate success of the construction of that necessary work. No doubt many of the shareholders were aware that the extension of the Midland of Uruguay Railway to the port of Fray Bentos was completed, and inaugurated for traffic in July last. The ocean mole at Fray Bentos, which was stated to provide a depth of water of 28 feet at all times, would provide accommodation for the largest ocean steamer trading to and from the River Plate. Provision had been made for trains to run right alongside the ships lying at anchor at the mole, and it was expected that one of the large ocean line of steamers would very shortly establish a regular service there. Thus, with the San Borja extension completed next year, the International Bridge in course of construction, and special facilities for regular and quick service by ocean steamers from Fray Bentos, that part of Brazil known as the "Misiones" district, hitherto isolated, would be practically in direct communication with both the new ocean port of Fray Bentos and the more generally known ports of Buenos Ayres and Monte Video. It was an indisputable fact that when rich countries were opened up by connections of that character the volume of trade increased by leaps and bounds, and they had every reason to believe from advices which had recently reached them that their district would prove no exception to the rule.

The district of S. Borja had up to the present only been reached by a long and tedious journey either by land or river, both of which vied with each other in discomfort during the journey. When this railway was opened the population of that district would be able to reach the towns of Itaquí and Uruguayana in a few hours, where before it took days. Owing to the isolation of the district, there had been practically no organisation of the orange trade, and only a limited quantity had found their way to Monte Video or Buenos Ayres, where there was a great and ever increasing demand for them. The general manager reported that arrangements could be made to deal with the whole of that traffic so as to bring it to the company's line. The district in question and adjacent thereto was also admirably suited for the cultivation of Yerbe Matte, which constituted the native drink of a large number, if not the whole, of the population of the United States of Brazil and the Argentine, and other parts of S. America.

Seeing that the district through which the railway traversed in the State of Rio Grande do Sul was the nearest to the Argentine, and that it would shortly be practically in direct communication with the cities of Buenos Ayres and Monte Video, there was no reason whatever to suppose but that an exceedingly large amount of Yerbe Matte would be produced in their district and transported by their railway. Then again, the trade in jerked beef in the Republics of Brazil and Argentina showed an ever increasing quantity. It was recently estimated that the number of cattle slaughtered for that purpose in the year 1908 was 740,000, and in the year 1910 1,233,200, an increase of over 50 per cent. in three years, and, notwithstanding the drought which existed during the current year the increase was practically maintained. As some of the best cattle slaughtered for that purpose were bred and reared within their district they expected a continuous increase in the traffic. The chairman stated that before he sat down he would incidentally refer to two questions. First, the 1893 bonds of the company, which, under the conditions of their issue, matured in November next. The directors had this matter under their consideration, and an announcement would shortly be made which it was thought would be satisfactory to the bondholders, but he was not in a position at the moment to make a definite statement thereon. The second question was the traffic for this year. It would be observed from the report that owing to the effect of the long drought on cattle, and the damage to agriculture by the plague of locusts, the receipts for the first three months showed a decrease. The traffic had since materially improved, and notwithstanding the indifferent conditions existing the total receipts for the first six months to June, 1911, showed an increase over last year of £766, but last year the carriage of construction material for the six months in question amounted to £2,547, as against £1,026 for this year, consequently the increase of traffic on the ordinary revenue account for the period in question was nearly £2,300, and if all went well he saw no reason but that the rate of increase shown last year would be continued this year and in the future, until their railway would prove itself, as several other Brazilian railways had done when coupled up and extended, a valuable revenue-producing concern for its shareholders.

The chairman concluded by moving: "That the directors'

report and statement of accounts for the year to December 31, 1910, as presented to the Shareholders be received and approved." This was seconded by Mr. H. R. Fainlin, and carried unanimously after a few questions had been answered by the Chairman.

The usual motion for the election of retiring directors and auditors having been carried the proceedings terminated with a vote of thanks to the directors.

GREAT NORTH OF SCOTLAND RAILWAY.

The half-yearly accounts to July 31, 1911, were issued on Saturday. Our usual analysis is appended.

CAPITAL.	
Total expenditure	£ 1,458,048
Total receipts (allocated as follows)	6,860,879
Ordinary stock*	£1,000,000
Deferred stock, No. 1	102,822
.. .. No. 2	397,399
Preference and guaranteed stocks	3,415,498
Debenture stocks	1,508,868
Loans	54,713
Sundries	318,016

Balance at debit of capital account £317,142

* Ordinary stock converted in terms of Acts 1897-8-9 into preferred converted ordinary stock, £1,295,133; deferred converted ordinary stock, £1,397,954.

The expenditure in the past half-year was £3,000, of which £1,747 was on lines open for traffic, etc., and £1,253 on working stock. Estimated further expenditure—in the current half-year, £10,000; in subsequent half-years, £150,000; total, £160,000. Capital powers and other available assets, less balance at debit of capital account, £167,003.

REVENUE.

Subjoined is an abstract of the revenue account for the half-year ended July 31.—

	1911.	1910.
Passengers, parcels, etc.	£120,133	£129,497
Goods, minerals, and live stock	111,761	112,342
Miscellaneous receipts	13,010	12,520
Gross receipts	£253,904	£254,359
Total expenditure	126,579	126,942

Balance to next half-year	6,234	5,504
Total	£132,828	£130,384

a At 3 per cent. per annum. b At ½ per cent. per annum.

The gross receipts for the past half-year show a decrease of £425, the expenditure a decrease of £363, and the net receipts a decrease of £62. The ratio of expenses to receipts is 49.85 per cent., against 49.91 per cent.

TRAFFIC, ETC.

Half-year ended July 31.	1911.	1910.
Passengers carried—total number	1,072,273	1,087,414
*Season-tickets	1,475	1,488
Mileage—Lines owned	332½	332½
.. Foreign lines worked over	4	4
.. Total	330½	330½
Train mileage—Passenger	749,071½	749,877½
.. Goods	329,747½	329,295½
.. Total	1,078,819½	1,079,143½

The report states:—"The working expenses per train mile are 25.89d., as against 25.96d., and on traffic receipts 47.10 per cent. as against 46.95 per cent. The traffic receipts are 53.59d. per train mile, as against 53.93d. per train mile in the corresponding half-year. In train mileage there is an increase of 2,676½ miles as compared with the corresponding half-year. In passenger mileage the increase is 2,194½ miles, and in goods mileage the increase is 482 miles. The directors regret to have to record the death of their valued colleague, Colonel George Smith Grant, of Minmore."

Killin Railway.—The report states that after providing for loans and other expenses, there is a balance at the credit of the net revenue account of £134.

Nottingham Suburban Railway.—The half-yearly accounts show gross receipts amounting to £3,564, as compared with £3,482 a year ago. The expenditure has been £2,022 (against £1,978), and the net revenue is £1,542 (against £1,504). Adding the balance from last account (£220) and the balance of interest guaranteed by the Great Northern Railway Company (£2,840), there is a balance available for dividends of £4,602. The usual distribution at the rate of $3\frac{1}{2}$ per cent. per annum is proposed, leaving to be carried forward £227.

Wirral Railway.—At the half-yearly meeting, held at New Brighton Station on August 28, Mr. T. H. Jackson, who presided and moved the adoption of the report, said that there had been a loss on the traffic between Liverpool and New Brighton owing to the fine weather and the boats being used more by the people. There had also been a slight loss between Seacombe and Liscard and Liverpool owing to the running of the Wallasey tramways. With the growth of the district and the increase of the traffic facilities, he hoped that loss shortly would be recovered. They had also suffered from the loss of receipts through their passenger traffic between the West Kirby

A RAILWAY HOTEL AT STRATHPEFFER SPA.

By many people the Highlands beyond Perth are looked upon as peopled by deer and other *feræ naturæ* or as private shooting preserves. That this is the case to a large extent cannot be denied—still, there are, outside of these, mountains and glens over which thousands of tourists and holiday-makers could disport themselves to their great enjoyment without let or hindrance. A move in this direction has been made by a syndicate of London physicians, who have established a spa in Strathpeffer at the foot of Ben Wyvis, and a little north of Inverness. The result has been that, thanks to the facilities granted by the Highland Railway, hotels are springing up everywhere, the most recent being the one built by the railway company at Strathpeffer Spa, which forms such a conspicuous object in the view below owing to its commanding position above the pump room seen under it. This will be found to be an ideal spot for sportsmen of all kinds, whether golfers, fishermen or others, and for tourists and holiday makers generally, whose natural love of mountain air will be encouraged in the novice and satisfied in the *cognoscenti*. The three railway companies which connect the whole of the Highlands have combined to effect this object by running circular

Highland Railway Hotel, Strathpeffer Spa.

lines and the Mersey Railway, but that was more than balanced in the local receipts on the Seacombe branch. The loss in receipts on goods and minerals traffic had been general. The total receipts for the half-year were £32,006, against £32,570, a decrease of £564. The expenses were £20,428, as compared with £20,134, an increase of £294. The profits amounted to £11,578, as against £12,442, a decrease of £864 on the preceding half-year. The sum of £5,886 was absorbed by dividends on the preference shares, £1,000 was applied to meet a dividend of $\frac{3}{4}$ per cent. per annum on the ordinary shares, and the balance of £1,350 was carried forward to the next account. Referring to the men who had withheld their labour without notice, the chairman said that, after his long association with the railway and their servants, it was a shock to him that they had joined the strike. The thanks of the directors were certainly due to those servants who remained loyal to the company, and prevented the isolation of Hoylake. The engine which kept the service going was driven by the locomotive superintendent's head man, and the stoking done by the superintendent himself, the deputy traffic manager guarding. He felt that all would join with him in expressing their obligation to those gentlemen and to the other loyal members of the staff. They would have to face certain losses in consequence of the strike. Next year they might show a better return, but in view of what had taken place he was not very hopeful.

tours at cheap rates for all classes of travellers. The journey, even if started in the South, will not be found very fatiguing, and if taken at night the glorious ride in the morning from Perth to Inverness while breakfasting in the cars will be a revelation to Lowlanders who dwell in stuffy, smoky, dusty and noisy cities. Through trains run over the short branch to the head of the Moray Firth, where the Railway Hotel, now called "The Highland," has been established. It is built of rough cast rubble stone, finished with red hewn stone window settings, and with a green slate roof, and covers an area of 200ft. North and South by 140ft., the length of the longest of three wings at the back of the main building. There is a wide verandah running the whole length of the western façade, and the entrance through a revolving-door is under it. Luggage goes in at a basement entrance, whence it is distributed by lifts to the private rooms accommodating 400 guests. Most of these rooms have a Southern aspect, from which fine views are obtained of the scenery for which the Strath is noted. All the usual lounge, coffee, and other saloons are liberally provided in this very modern and excellently-appointed establishment.

The Crystal Palace.—It is officially announced that the Crystal Palace will be offered to auction, by order of the court, on November 28 next, by Messrs. Knight, Frank and Rutley at the Estate Rooms, 20, Hanover Square, W.

RAILWAY NOTES.

A Canadian Contract.—The contract has been awarded for the construction of the new Inter-Colonial Railway terminals at Halifax, Nova Scotia, the cost to be \$1,000,000.

A North Wales Light Railway.—The Board of Trade has authorised the construction of a light railway in the parishes of Maenan, the Abbey, Caerhun, Dolgarrog and Trefriw in North Wales.

Contract for the Coventry-Foleshill Line.—Messrs. Holmes and King, of Liverpool, have secured the contract for the construction of the London and North Western Railway Company's loop line from Coventry to Foleshill.

John Mowlem and Co., Ltd., have secured the contract for the construction of the Edgware Road to Paddington underground railway, and also the extension from Charing Cross to the Embankment for the London United Electric Railways.

Scottish Railway Servants' Friendly Society.—The both half-yearly report states that the membership numbers 3,818, and the expenditure totalled £1,921. There is a net gain of £285, and a balance of £2,974 is carried forward. Forty-nine members emigrated.

Messrs. Royce, Ltd., of Trafford Park, have received an order to supply eleven electrical capstans of the "Royce" patent free bollard type with spurs, ten electrical jib cranes, and two electrical hoists and spurs for the Great Eastern Railway wharf and goods yard at Blackwall.

The Origin of Railway Tickets.—Now that over a thousand millions of railway tickets are issued annually it is interesting to learn that the inventor of the present system was permitted to give his invention a trial on his own terms of 10s. per mile of line on the Manchester and Leeds, now part of the Lancashire and Yorkshire Railway. The practice prior to this invention was for a passenger's name to be written on the ticket.

A Compliment to the N.B.R. Staff.—At the request of the chairman and directors of the North British Railway Co., Mr. W. E. Jackson, the general manager, has issued a circular expressing their gratification that during the recent labour dispute nearly the whole of the staff continued to perform their duties, thus avoiding inconvenience and loss to the public. The board express their high appreciation of this evidence of loyalty to the company and the public.

Shortcomings of Italian State Railways.—Of the sum of £72,000,000 authorised to be spent on new works and rolling stock by the Italian Government in 1905, over £32,000,000 has already been expended. Complaints are continually made, however, as to the congested state of the goods depôts and of the inconvenience arising therefrom. The British Consul-General at Florence reports that the only way effectually to remedy the present state of affairs would be the doubling of the tracks. The authorities state that they can only spend £600,000 a year for that purpose, and twenty years will elapse before urgent needs are satisfied.

Railway Companies and Manchester Traffic Regulation.—As the result of opposition by the railway companies and other organisations a considerable alteration was made in a proposal for central street traffic regulation in Manchester contained in a Bill promoted by the City Council. The measure, which was read a third time on August 8, now contains a provision that a local inquiry is to be made by a Home Office inspector into any such proposed by-law, that proper regard is to be given by the Home Office to through traction engine traffic, and that nothing in the regulations shall apply to any vehicle engaged in the delivery and collection of goods within one mile of the Town Hall.

Further Development of Fishguard.—The "Highland Warrior," recently constructed at Greenock for the Nelson line, called at Fishguard in order to embark passengers on her maiden voyage to South America. A special train left Paddington at 12.30 p.m. conveying about 150 passengers. Great satisfaction was expressed at the speedy and comfortable arrangements of the port, which was constructed as recently as 1906 by the Great Western Railway Company for the inauguration of the short sea route to Ireland. Since that time the vessels of the Cunard, Booth, and Blue Funnel lines have used the harbour regularly. Thus, in five years, Fishguard has become a port of call of the first importance.

North British Railway Insurance Society.—The report presented at the half-yearly meeting recently showed that the income was £7,911; expenditure, £8,913; deficiency, £1,002; balance from last half-year, £14,400, making the balance carried forward to next half-year £13,398. The number on roll was 386, the average payment for sickness £1 2s. 3½d. per case, against £1 2s. 0d. for the corresponding period, the

average number of days sickness in the half-year approximately 2.82, and the average payment 4s. 7½d. per member of the society. In proposing the adoption of the report, Mr. J. Lamond, who presided, stated that the most serious item was the amount paid for superannuation allowances, which now absorbed 17.2 per cent. of the total income, which was totally inadequate to meet the growing expenditure in connection with superannuation. He referred to the directors' undertaking to make good any deficit meantime, and said that they were hopeful that they would be able to formulate a scheme that would enable them, possibly, not to continue the superannuation allowance as they had been in the habit of paying, but at least as much as the contributions would allow. They had the promise that the company would favourably consider, after ascertaining what were their liabilities in other directions, whether they could or could not double the amount that the society could pay from the contributions paid by their members.

PERSONAL.

Scottish Engineers for Canada.—The Western District Office staff of the Caledonian Railway Engineering Department have made presentations to Messrs. Andrew T. Clark, B.Sc., C.E.; David Forgan, C.E.; and Kenneth J. R. Smith, C.E., on the occasion of their leaving the service to take up appointments on the civil engineering staff of the Canadian Northern Railway.

L. and N.W. Railway Staff Appointments.—In addition to the appointment of Mr. F. T. Kinsman, of Manchester, as chief outdoor goods manager of the London and North Western Railway, already reported, the following promotions have been made: Mr. C. Lowndes, assistant to the superintendent of the line, to be outdoor goods manager, Northern division, Manchester; Mr. L. W. Horne, London district superintendent, to be assistant to the superintendent of the line; Mr. G. N. Ford, assistant London district superintendent, to be London district superintendent; Mr. W. A. Ree, Wolverhampton district goods manager, to be outdoor goods manager, Birmingham.

An Exhibition of Patents. A permanent Exhibition of Patents is to be established in a central position in London, and will be open to the public all the year round. There will be no charge for admission. The prospectus may be had on application to the Administration Office, 105, Fleet Street, E.C.

A Mexican Railway Concession.—It is stated by a Mexican journal that Mr. W. P. Wood, of Mexico City, has obtained from the Government a concession for the building of a railway from Santa Lucrécia to Campeche, a distance of approximately 750 kilometres, the railroad being incorporated under the name of the Vera Cruz, Tabasco and Campeche Railway. British capital is said to have been advanced for the work of construction, and grading has begun.

BRITISH AND IRISH RAILWAY DIVIDENDS.

The following table shows the dividends on the ordinary stock (unless otherwise stated) announced so far by the leading English and Irish companies for the half-year ending June 30. In the case of the Scottish companies the dividends are for the half-year ended July 31. For purposes of comparison the dividends for the corresponding half of the previous year are appended:—

DIVIDEND ANNOUNCEMENTS.

(The date given in parenthesis is that on which the announcement was made.)

STAMFORD AND ESSENDINE RAILWAY.—At the rate of 3 per cent. per annum upon the ordinary shares and 14s. per cent. per annum on the Sibson extension shares.

NORFOLK AND WESTERN RAILWAY.—A quarterly dividend of 1½ per cent. on the common stock. The same rate of dividend was paid for the corresponding quarter last year.

MINNEAPOLIS, ST. PAUL, AND SAULT STE. MARIE RAILWAY.—A dividend of 3½ per cent. for the half-year ended June 30, on the preferred and common stocks. The same rate of dividend was paid for the corresponding period a year ago.

GLASGOW DISTRICT SUBWAY.—The directors recommend the full dividend on the 4 per cent. preference shares, carrying forward £1,633. A year ago the distribution on the preference shares was the same; £1,703 was carried forward.

ALABAMA, NEW ORLEANS, TEXAS AND PACIFIC JUNCTION RAILWAYS COMPANY, LIMITED, have announced the following dividends for the fiscal year ended June 30 last: New Orleans and North Eastern, Common stock 6½ per cent.; Alabama and Vicksburg, Common stock 7 per cent.; Vicksburg, Shreveport and Pacific preferred stock, 5 per cent. All dividends are the same as paid a year ago.

CALEDONIAN RAILWAY (September 5).—At the rate of 3 per cent. per annum will be paid on the 3 per cent. preferred ordinary stock, and ¼ per cent. per annum on the deferred, carrying forward £21,000. A year ago the dividends were at the same rates, and £18,152 was carried forward. The following is a list of the dividends in recent years on the deferred stock:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	1½	1½	nil.	nil.	1½	1½	1	1	1	1½	1½
2nd Half	1½	1½	nil.	nil.	1½	1½	1	1	1	1½	1½

Annual Rate

GLASGOW AND SOUTH WESTERN RAILWAY (September 5).—At the rate of 4½ per cent. per annum on the ordinary stock, being at the rate of 2½ per cent. per annum on the preferred ordinary stock and 2½ per cent. per annum on the deferred, carrying forward £10,627. A year ago the dividend on the deferred was at the rate of 1½ per cent. per annum, and £9,330 was carried forward. The following is a list of the dividends in recent years on the deferred stock:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	2½	1½	1	1½	1½	1½	1½	1½	1½	1½	1½
2nd Half	2½	1½	1	1	1½	1½	1½	1½	1½	2	2½

Annual Rate

NORTH BRITISH RAILWAY (September 7).—It was announced on Thursday that the full dividend would be paid on the preferred ordinary stock, and at the rate of ¾ per cent. per annum on the deferred ordinary stock, carrying forward £28,500. A year ago the full dividend was paid on the preferred ordinary stock, ½ per cent. per annum on the deferred stock, and £22,271 was carried forward. The following is a list of the dividends in recent years:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	1	1	1	1	1	1	1	1	1	1	1
2nd Half	1	1	1	1	1	1	1	1	1	1	1

Annual Rate

SAN PAULO (BRAZILIAN) RAILWAY.—A dividend for the half-year ended June 30 on the preference stock of 2½ per cent. (5 per cent. per annum), less income-tax, and on the ordinary stock of 5 per cent., being at the rate of 10 per cent. per annum, together with a bonus of 2 per cent., making 7 per cent. for the half-year, free of income-tax, and carrying forward £130,000. A year ago the dividend on the ordinary was at the same rate, with the bonus of 2 per cent., and £176,125 was carried forward.

The following is a list of the dividends in recent years:—

	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901
1st Half	14	14	14	14	14	12	12	12	12	12	10
2nd Half	12	12	12	12	12	12	12	12	12	14	10

Annual Rate

German Steel Rails for South Africa.—The report that the Union Government of South Africa has accepted a German tender of nearly £170,000 for steel rails is confirmed by the High Commissioner's office in London. Applications were invited from various parts of the world, including Great Britain, and the tender by a Dusseldorf firm was accepted as the lowest.

The Railway Club.—The first meeting of the 1911-12 session of the Railway Club will take place at the Club at 7.30 p.m. on Tuesday, September 12, when Mr. J. F. Gairns (Joint Editor of the Railway Magazine, and Editor of Railway Year Book) will read a paper entitled "Some Notes on Traffic Control." At the October meeting, to be held on Tuesday, the 9th, the President (Rev. W. J. Scott) will read a paper entitled "Modern Caledonian Engines."

A Convincing Reason

why the typewriter purchaser should select the

"REMINGTON"

has always been furnished by the unique Remington strength and reliability.

Eighteen additional reasons are furnished by the eighteen original improvements found in the latest Remington Models (Nos. 10 and 11.)

Let us send you descriptive booklet.

REMINGTON TYPEWRITER COMPANY,

100, Gracechurch Street, LONDON, E.C.

Telephone No. Avenue 5555 (4 lines).

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,

12-18, TAYLOR STREET, LIVERPOOL.

Ordinary " 2/6 "

Paddington Station, London.

The Grand Trunk Railway Company of Canada.

NOTICE is hereby given that the Ordinary Half-yearly General Meeting of the Grand Trunk Railway Company of Canada will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday, the 26th day of October, 1911, at twelve o'clock noon precisely, for the purpose of receiving a Report from the Directors, and for the transaction of other business of the Company.

Notice is also given that a resolution will be submitted to the Meeting to authorise the Directors to exercise the powers conferred by the Grand Trunk Act, 1911, as amended by the Grand Trunk Amendment Act, 1911.

Notice is also given that the Transfer Books of the Company in London will be closed from Saturday, the 23rd day of September, to the day of Meeting, both days inclusive.

By order,
ALFRED W. SMITHERS, Chairman.
H. H. NORMAN, Secretary.
Dashwood House,
9, New Broad Street, London, E.C.,
15th September, 1911.

H.H. The Nizam's Guaranteed State Railways Company, Limited.

THE Directors of the above Railways are prepared to receive tenders for the supply of 76,000 Transverse Steel Sleepers with Corrugated Clips, and 167,200 Steel Keys for same, as per specification to be obtained at the Company's Offices for the sum of Five Shillings, which amount will not be returned.

Tenders should be addressed to the Secretary, marked "Tenders for Sleepers," and should reach him not later than noon on Thursday, the 21st September, 1911.

The Directors do not bind themselves to accept the lowest or any Tender.

By order of the Board,
M. T. WALKER, Secretary.
Offices of the Company,
263, Winchester House,
50, Old Broad Street, London, E.C.
Dated 6th September, 1911.

South Indian Railway Company.

THE South Indian Railway Company, Limited, are prepared to receive Tenders for the supply of Bridgework (Four Spans of 100ft., about 255 tons).

Specifications and forms of Tender may be obtained at the Company's offices.

Tenders, addressed to the Chairman and Directors of the South Indian Railway Company, Limited, marked "Tender for Bridgework," must be left with the undersigned not later than 1 o'clock p.m. on Wednesday, the 27th September, 1911.

The Company are not bound to accept the lowest or any Tender.

A charge, which will not be returned, will be made of 20s. for each copy of the specification.

Copies of the drawings may be obtained on payment at the office of Robert White, Esq., M.I.C.E., Consulting Engineer to the Company, 3, Victoria Street, Westminster, London, S.W.

By order,
NEVILLE PRIESTLEY,
Managing Director.

Company's Offices,
91, York Street,
Westminster, S.W.,
15th September, 1911.

Bombay, Baroda, and Central India Railway Company.

THE Directors are prepared to receive up to noon on Tuesday, 3rd October, Tenders for the supply of:—

1. Steel Fish-plates.
2. Dog Spikes.

Tenders must be made on forms, copies of which, with specifications, can be obtained at these offices on payment as follows for:—(1) 5s. each, and for (2) 10s. 6d. each (which will not be returned).

The Directors do not bind themselves to accept the lowest or any Tender.

C. CROMMELIN,
Secretary.
Offices, Gloucester House,
110, Bishopsgate, London, E.C.,
14th September, 1911.

THE DEPRECIATION IN BRITISH RAILWAY STOCKS.

We wonder if the labour leaders and other people responsible for the general unrest in the labour world understand even in the remotest degree the damage to the credit of the railways which has resulted from their latest efforts? A strike which lasted two days, and which was entered upon in an illegal way, involved a loss in railway receipts of about £500,000 sterling, and a depreciation in the price of railway stocks which has already amounted to many millions sterling. These are hardly circumstances which can be considered altogether conducive to the improvement of the railway industry, the betterment of the conditions of the workers, or even the advantage of the public, and yet the agitators mainly responsible are by no means awakened to a sense of their responsibilities. Even while the Government inquiry into the merits of their claims is being conducted, they do not hesitate to use threats which, to put it mildly, are very harmful to the interests of those whom they seek to benefit. During the earlier part of this year some measure of confidence in the position of British railway securities was being restored by the recovery in gross revenue and improvement in dividends declared for the first six months. Probably, too, little account has been taken of the fact that even with this improvement in the financial conditions of the industry there was still a very great deal of leeway to be made up. From the point of view of the unfortunate proprietors it is quite clear that no account whatever has been taken of the damage to hundreds of thousands of small investors which has resulted from the labour onslaught. After all, the average holder of British railway stocks is by no means wealthy—indeed, the list includes insurance companies, savings banks, provident societies and even trade unions, who represent the interests of many thousands of small capitalists. Even the Amalgamated Society of Railway Servants itself is not an inconsiderable proprietor of railway securities. The want of confidence which is the prevailing feature of the present position is thus widespread in its disastrous effects, and for the most part hits most severely those who are least able to bear the loss. In the following table we show the highest prices of the current year of the leading Railway Ordinary Stocks, also quotations at the present time and the extent of the fall:—

Stock.	Highest, 1911.	Present Price.	Fall.
Caledonian Def. ..	29	19½	9½
Great Eastern Ord. ..	79½	94	15½
Great Central Pref. Ord. ..	37½	23½	14
Great Northern Def. ..	57½	43	14½
Great Western Ord. ..	136	118	18
Hull and Barnsley Ord. ..	74½	55	19½
Lancashire & Yorkshire Ord. ..	104½	91½	12½
London & North Western Ord. ..	151	132½	18½
London & South Western Def. ..	59	43	16
London, Brighton & S. C. Def. ..	113½	91½	22
Midland Def. ..	79½	66	13½
North Eastern Ord. ..	139	124	15
North British Def. ..	36	25½	10½
South Eastern Def. ..	59½	43	16½

In the case of London and North Western Ordinary Stock alone a depreciation during the current year of eighteen points represents a money loss in market values of over seven-and-a-half millions sterling in the Ordinary

Capital of that railway alone. We trust that in presenting the company's side of the case for higher wages, etc., losses such as these will not be altogether overlooked, especially as over and over again it has been pointed out that if the claims of railwaymen are to be met in a liberal spirit (as everyone hopes they may be) the position of the companies themselves must also be strengthened. Not the least hopeful feature of the recent temporary settlement arrived at was the promise of assistance to the companies given on behalf of the Government. It is a great mistake to suppose that the average railway proprietor demands or even desires exorbitant dividends. What he really requires is some assurance that dividends will be maintained on a reasonable level, and that he will be free from the shocks and general sense of distrust which have been the principal characteristic of investments in British railway stocks for a number of years past. The yield on Home Railway Ordinary Stocks on the basis of the last dividends is higher than on any previous occasion in their history, simply because of the deep-seated distrust to which we have referred and lack of confidence in the future. Surely it is not beyond the capacity of the railwaymen and the Government to find some way out of the present difficulties which shall above everything else restore mutual confidence in their dealings. In no other way can the interests of any section be safeguarded in the future, and no settlement of an enduring character can be hoped for without that necessary condition.

THE ROYAL COMMISSION.

On Thursday began the penultimate stage of the Railway inquiry. We are now hearing the companies' side of the question, and a different complexion is given to certain events which have been made the occasion of many complaints from the trades unions. But before referring to this part of the case it may be remarked that on Tuesday and Wednesday evidence was given by non-society men. Ten non-unionists went into the witness chair, most of whom were of that type of which Englishmen, and railway men in particular, may be proud—being independent, self-reliant and clear thinking. It was very apparent that none of these men had any need for a union to fight their battles. They could state their own case and plead their own cause, and probably win it, without any outside aid. It must be admitted that their evidence was not altogether favourable to the railway companies. It was found that most of them had grievances of their own against the conciliation scheme, and when the men came to be examined by Mr. Henderson, their case against trades unions was considerably weakened. There was, however, an advantage in all this, in that it showed that they had not been coached by the companies. Among these non-unionists was a goods guard—the first of that grade to give evidence. It is also instructive to note that among all the witnesses called by the unions there has not been one from the grades that come in touch with the travelling public—no passenger guards, ticket collectors or platform porters, nor any from that numerous band—the platelayers. There is so much of noteworthy interest in Mr. Walker's evidence on Thursday and yesterday that it is difficult in this brief space to select what points to comment upon. As remarked above, a different version is given to some stories that, as originally told, left a disagreeable taste in the mouth. There was, for instance, the six men who, it was alleged, had been unfairly treated in the matter of eye-sight. Some of these were still at their old occupations, possibly in happy ignorance of the fact that they were being held up as martyrs to a railway company's tyranny. One man had been given a lighter job at his own request, and another had been given a gratuity and pensioned off. These, by the way, are answers to the North Western "victims." Possibly a similar version may be heard of those on other lines. Then it appears

that Sir Edward Fry did not rule out questions of high rates and bonuses, but said that he would not consider their abolition—quite a different proposition from varying the amounts. As to mileage, it seems that this question was discussed before the arbitration, but he did not mention it in his award because he proposed no change. We are glad to find that the railway companies have alternative proposals. While Mr. Walker said in reply to Mr. Henderson that he spoke for the London and North Western only, we may assume that in this respect he is voicing the opinions of the other companies. These proposals are referred to elsewhere in this issue, so we need not mention them here, and it is undesirable, while the subject is under the consideration of the Royal Commission, that they should be discussed. But we may, without any offence, express our pleasure that the companies are prepared to do something to amend a scheme which was formulated with some haste and which its authors cannot claim has been the success that was hoped for. It is true that Mr. Walker has accepted the principle of recognition before the arbitrator, but he claims that when before the arbitrator the matter is out of the company's hands. At other points there is an unhesitating opposition to the unions playing any part, and Sir Charles Owens ably pointed out that the designs of the unions, if realised, would make them superior to Parliament. No patriotic citizen can contemplate such a possibility without deep anxiety. The tyranny of the unions is already severely felt, and the community must be protected from their further encroachments.

THE CHEAP EXCURSION.

We are now approaching the end of what to many railway companies has been a very busy excursion season. Favoured by a gloriously fine summer, excursion trains with low fares have carried great numbers of passengers, and week-end and other reduced fares by ordinary trains have been very largely taken advantage of. There is no doubt that many officers of railway companies believe that it is financially advantageous to run special trains at very low fares to seaside and country resorts, but there is room for difference of opinion on the subject. It is true that if a company gets a long train crowded with passengers, the receipts even at a low fare per head can be shown to exceed the immediate cost of running the train. Regarded from this standpoint, it may be said that the railway is there, that the carriages and locomotives are in existence, and that it is well to utilise them as much as possible. The only expenses reckoned from this point of view appear to be the wages of the driver, the stoker, and the guard, and the price of the coal for the locomotive. It is the better practice to take into account a proportion, according to train miles run, of the general expenses of the railway—including in this maintenance of way and stations, traffic expenses, and all general charges. If these are included it will be found that excursion trains are not always run at a profit even in fine summer weather, and that some may be run at considerable loss. Moreover, it is always well to try to see ourselves as others see us; the application of that saying in the present case is for the railway companies to ask themselves what the public think about these cheap excursions as compared with the ordinary fares which they have to pay. A man goes by a cheap excursion train to the seaside, say for a day or three days or a week. In proportion to the distance the fare is absurdly cheap, fine rolling stock is provided, and sometimes even restaurant cars. Not long afterwards he has to travel on business, his journey being perhaps approximately the same length. He has to travel by an ordinary train and pay the ordinary fare. He finds that this ordinary fare is, perhaps, three or four times as much as he had to pay for his excursion ticket. Is it surprising that he should begin to ask questions? He says to himself that the excursions must pay,

because otherwise the companies would not run them. If they pay, then the companies must make enormous profits out of the ordinary fares. Then he is aggrieved. He will not stop to reflect that the ordinary train is not crowded with passengers like the excursion train, and that if excursion fares were charged on ordinary trains to all sorts of places those trains would not be crowded. In these days of labour troubles, increasing wages bills, and so forth, the railway companies cannot afford to let the erroneous notion get abroad that their ordinary fares are excessive. A kindred point which might be reconsidered is connected with week-end tickets. If a man wishes to take a return ticket on a Friday evening or a Saturday morning to some place for which cheap week-end tickets are issued, he cannot get the advantage of the cheap fare if he returns on the Saturday evening. For that boon he must not return till the Sunday or the Monday. There is no doubt that such a restriction is very irritating to passengers, because there is no apparent reason for it. In present circumstances the companies would probably be well advised to reconsider the subject of cheap excursions, and either somewhat increase the fares or diminish the number of such trains. A great deal has now to be taken into view besides the mere question whether such trains pay their running expenses. Between now and next spring there is ample time to look into the subject in all its bearings.

Weekly Traffic Summary.

The traffic receipts for the week ended September 10, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,495,455, which was earned on 21,521 miles, being at the rate of £115 19s. 1d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,403,698, with 21,467 miles open, or £111 19s. 5d. per mile. There was thus an increase of £91,757 in the receipts, an increase of 54 in the mileage, and an increase of £3 19s. 8d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £39,566 (or £1 14s. 11d. per mile) in the passenger receipts, and an increase of £54,938 (or £2 9s. 8d. per mile) in the receipts from goods traffic. The aggregate decrease of the thirty-four railways for ten weeks in the passenger receipts has been £57,532, while the aggregate decrease in the goods traffic was £327,359. The aggregate receipts of the fifty-two railways for ten weeks (July 2 to September 10) amounted to £24,471,913, in comparison with £24,913,848 in the corresponding period of last year—a decrease of £441,935.

A LESSON IN RAILWAY NATIONALISATION.

The Paris correspondent of the *Morning Post*, telegraphing on Monday last, says :—Under State management the Western Railway has become a byword. It is not only that the service is intolerably bad. The taxpayer is beginning to discover that its working expenses are intolerably high. The nationalisation of this line, which was forced through the Senate by M. Clemenceau three years ago, has proved a disastrous bargain. For 1912 its deficit is estimated at £2,040,000, an increase of nearly £1,000,000 on the deficit of 1911. When the line was under the control of the company the amount that it had to demand from the State, in virtue of its debenture guarantee, was, during the last ten years of that control, less than £600,000, with the single exception of 1908, when, owing to exceptional circumstances, it reached £1,080,000. On an average, therefore, the loss made by the line is, as the *Temps* points out, four times as great under the control of the State than under that of the company. The fact is that the net profits of the line are steadily decreasing, owing to the increase of working expenses, which have leapt up from 67 per cent. of the takings during the last year the line was worked by the company, to 82 per cent. for 1910. The Minister for Public Works attributes a great part of this increase to the wages account, which, since 1908, has increased by 40 per cent., and he adds that this item will weigh even more heavily in coming years.

The Bank return this week shows the central institution in a still stronger position than before. Gold and bullion were received from abroad to the amount of £654,000, and £353,000 came in from the provinces, while the active note circulation contracted £382,000. The Reserve is, consequently, £1,389,000 higher at £31,539,000, which is a million more than at the corresponding date of last year. Public Deposits have advanced by the insignificant amount of £13,000. Other Deposits are £2,395,000 up, Other Securities having risen by £1,033,000. In Government Securities there is no change, the changes between them are so evenly balanced that the ratio of Reserve to the liabilities of the Bank remains unaltered; but the fact that the stock of coin and bullion is more than a million pounds higher puts the Bank in a better position to withstand a drain upon its resources, such as is suggested to some minds by the appearance of weakness in Berlin, Paris, New York, and at home, simultaneously. The symptoms have not been very serious up till now so far as London is concerned, but there is no telling what may develop when all the principal centres of the financial world are affected at once. Usually they can, and do, come to each other's assistance, so much so that such assistance has come to be counted upon and needed, and if this resource is not available a serious condition may ensue. It is fortunate the Bank of England is well prepared. The rise in Other Securities from the very low level of recent weeks means that the Bank is now doing a big business in discounting. Money remains relatively abundant. The fall in the Paris cheque during the week has been accompanied by no great increase in rates for loans and discount. In fact, the London money market is healthy and unperturbed.

On the Stock Exchange the condition of things cannot be so favourably described. It is true that another disastrous account has come to an end, and the settlement has been concluded without the exhibition of any failures. Neither did payment of differences bring about any perceptible hardening in rates for loans. So the resources of the market have proved sufficient to withstand a strain of considerable intensity, which is satisfactory as far as it goes, especially when it is remembered that very large issues of new stocks of every kind for many months have left a large undigested residuum as an extra load to carry. There was hardly a single stock, home or foreign, in the active list of which a heavy fall was not recorded during the last account. In Home Rails Brighton Deferred fell 6; South Eastern Deferred, $5\frac{3}{4}$; Midland Deferred, $4\frac{1}{2}$; and no fewer than five of the active stocks fell between 3 and 4 points. Among American and Canadian railways the declines were on the same scale, and it was only in South American rails that any rises to speak of were recorded. The latter were favoured as being out of the area of anticipated trouble. The record of the week is a monotonous iteration of shrinking values, based upon fears of war on the Continent, danger of strikes at home, and uncertainty of outlook in the United States. The markets never got away from the influence of these factors, which waxed and waned in turn. When one was temporarily disposed of another immediately rose up, and it is hardly worth while reproducing the alternations. Saturday was a very bad day, Berlin being in trouble. On Monday it was supposed that, with help from Paris, that difficulty was over, but a slight recovery of prices in the morning was not long maintained, most markets became irregular, and remained so during the next two days, when, after a rally in Americans, collapse again ensued, which turned a slow washing away of prices of Home rails into a further sharp fall. The individual merits of the several railways were quite lost sight of in the consideration of the general conditions affecting them.

The statement that no failures were brought to light by the last settlement requires the qualification that one case of inability to meet obligations was disclosed on Friday. The case was of small importance and had no influence on the markets. Prices fell from other causes. Consols, which at the beginning of the recent declines had been supported to some extent by the operations of the Government broker, fell away in the absence of further buying on Government account. There were rumours of weakness from over-trading in Glasgow. Paris was unsettled and the source of some anxiety. The meetings of railway servants in this country convened for Sunday next were treated as likely foci for further disturbances in the carrying trade. Home rails were accordingly weak in common with other markets. South American railways did not escape the general decline. The chief, if not the only, exception was afforded by the American market, by which the quotations for Canadian railway stocks were sympathetically and favourably affected.

The movements of the week, as set out in our usual list, show a unanimity in falls it has seldom been our province to record.

DIVIDEND ANNOUNCEMENTS.

FORESTAL LAND, TIMBER AND RAILWAY.—An interim dividend of 3 per cent., less income-tax, in respect of the profits of the year ending December 31, 1911, on the 750,000 preference shares has been declared.

THE OTTOMAN RAILWAY (FROM SMYRNA TO AIDIN) COMPANY.—A dividend of 8s. per ordinary share for the half-year ended June 30, carrying forward about £25,000.

ISLE OF MAN RAILWAY.—An interim dividend at the rate of 5 per cent. per annum for the half-year ended June 30 on both the ordinary and preference shares, the same as a year ago.

CAMMELL LAIRD AND COMPANY.—The directors have declared an interim dividend of $2\frac{1}{2}$ per cent., being 2s. 6d. per share, on the preference shares, less income tax.

CANADIAN GENERAL ELECTRIC COMPANY.—The directors have declared a quarterly dividend of $1\frac{1}{4}$ per cent. on the common stock, being at the rate of 7 per cent. per annum, and a half-yearly dividend of $3\frac{1}{2}$ per cent., being at the rate of 7 per cent. per annum, on the preference stock for the six months.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, September 13, compared with that for the previous week, shows the following changes:—

Halifax Railway Terminals Contract.—The contract has been awarded for the construction of the new Intercolonial Railway terminals at Halifax, Nova Scotia, the cost to be \$1,000,000.

THE RAILWAY COMMISSION OF INQUIRY.

THE CASE FOR THE NON-UNION MEN.

The Royal Commission appointed to inquire into the working of the railway conciliation boards resumed its sittings on Tuesday, Sir David Harrel in the chair, when the case for the men connected with trade unions was concluded, and non-union railway servants were afterwards examined. The reference to the Commission is in the following terms:—

"To investigate the working of the railway conciliation and arbitration scheme signed on behalf of the principal railway companies and of three trade unions of railway employees at the Board of Trade on November 6, 1907, and to report what changes (if any) are desirable with a view to the prompt and satisfactory settlement of differences."

CARTERS' GRIEVANCES.

Mr. THOMAS DITCHFIELD, general secretary of the Mersey Quay and Railway Carters' Union, stated that the membership of his union was about 7,000, of whom about 500 were employed by railway companies in the Liverpool district. He was not in favour of the conciliation scheme of 1907, preferring the old system under which the men laid their grievances before the officials. Under the Great Northern Railway award the carters were worse off than they were before. Formerly they received twenty-eight shillings a week and pay on an increased scale for overtime. After the award they did not get the same amount of overtime, as the hours worked under the standard time in one week were set against the hours worked overtime in another week. Another unsatisfactory feature of the Great Northern award was the working of the shift system. The Lancashire and Yorkshire award was even more unsatisfactory, and led to the strike in Liverpool. Under the shift system they brought the men out in the morning and kept them out at night, without paying overtime. The carters were grouped in a sectional board, but the board had been of no use. As an alternative to the present scheme he urged that there should be recognition of the union, and that the same methods should be pursued as they carried out in negotiations with the Master Carters' Association. This practice was to commence by correspondence, and then if necessary to arrange for a deputation to meet some of the employers. The men were opposed to arbitration. They desired the preservation of their right to strike. His union had to act in accordance with the rules of the Federation of Transport Workers, and an agreement come to by his union would be of no use in a matter taken up by the Federation.

By the CHAIRMAN: You ask that you should have the right to tear up an agreement in sympathy with other workers in another business altogether?—That is so. Being members of the Federation we are bound by it.

By Sir T. R. ELLIS: He thought the Amalgamated Society of Railway Servants and other organisations were going to be incorporated into a national federation with the object of assisting one another and not allowing the railway companies to do as they liked with the men. It was the railway companies who had been causing all the mischief for years and years.

Do you think that if the grievances of the railway men are fairly dealt with the people of this country will allow the Transport Workers' Federation to paralyse the work of the country?—I do not think they would because it would not be needed.

All you want to do is to see that you are dealt with fairly?—Yes.

Is your view of being dealt with fairly that you should be conceded everything you ask?—Yes. (Laughter.)

WITNESS subsequently said, however, that they were ready to make concessions. He said that he was not in favour of strikes and would prefer any other method of arriving at a settlement. He would agree to the right to strike being suspended for the purpose of trying another method. He suggested that first of all the men, accompanied by the union officials, should approach the employers, and that failing an agreement a board should be set up with an outside chairman to give a casting vote if necessary. In order to give the award a fair trial he was prepared to let it be in force for two years. The right to strike should be suspended during that time provided the scheme was worked fairly.

Mr. BURNETT suggested that it would be difficult for the Commission to draw up any conciliation scheme to suit the witness.

The WITNESS thought it was possible. The scheme should not allow understrappers on the railways to do as they liked with the men.

COMPLAINTS REGARDING DEPUTY OFFICIALS.

Mr. R. H. STOFORTH, a member of the same union, and an employee of the Lancashire and Yorkshire Railway Company at the time of the strike, asserted that the strike in Liverpool was caused by the tyranny which several of the deputy officials exercised unknown to their superiors. He was in favour of the recognition of the union and the abolition of the conciliation scheme.

By Sir T. R. ELLIS: It was worth while doing something to avoid strikes, but they could not place reliance on the companies. At the same time he was convinced that the companies had been ignorant of the deprivations of their servants by the companies' officials.

VIEWS OF NON-UNIONISTS.

The Commission then proceeded to hear evidence from railway servants who are not members of any of the trade unions. The first of these witnesses was

Mr. ALFRED BREATHWATE, a signman on the Midland Railway at Elstree, with 26 years' service, who said he considered that the conciliation scheme had failed to realise the anticipations of its founders. The agitation which led to the formation of the Boards was artificial, being the creation of the leaders of the A.S.R.S. rather than expression of any dissatisfaction on the part of railway signmen. He could only speak for that grade. The scheme was the outcome of the action of the Amalgamated Society in presenting an ultimatum to the railway companies that they must henceforth recognise the union. Previously the men had always approached the company by petition and had obtained valuable concessions in that way. The time was inopportune in 1907 for making demands on the companies, because at the time trade was on the decline.

NON-UNIONISTS NOT CONSULTED.

He complained that the non-union signmen did not know what demands were being made in their name. They did not hear of what was called the national programme until after the conciliation boards were formed. He criticised the action of the society in pressing for arbitration in 1908 when trade was depressed. The award came into force in May, 1909, and on the following Sunday, for the first time in 20 years, the signal-box in which he worked was closed. By turning a handle they could put the box out of operation, and might lock the door and go home. The result was that every man belonging to the box lost £10 a year owing to the action of the society. The same thing occurred at many other signal boxes. There was no doubt that the company felt, as a large majority of the men felt, that the demands of the society did not really represent the feelings of the signmen. If the men were allowed to approach the companies on their own account there would not be the same amount of agitation as there was now. The companies felt, rightly or wrongly, that the agitation was a product of the society, and that was why they approached the Conciliation Boards in the way they did. The reliance placed on the boards had destroyed individual effort.

By the CHAIRMAN: You say that a deputation of the company's servants is more likely to influence a board of directors than a trade union official?—Yes. They would be the men who had the grievance and could be questioned by the directors.

NO VICTIMISATION.

You say the charges of victimisation brought against the companies are grossly exaggerated?—Yes. I have never known a case of victimisation for ventilating grievances, and I think the charges are very much exaggerated. We are not worried in any way, and are treated well, and have no cause for complaint in that direction. Continuing, he urged that the directors and chief officials of the companies should use their power more. They had left too much in the past to subordinates who were often over zealous.

By Sir T. R. ELLIS: A large majority of signmen were not members of a union. He did not think the demand for recognition was reasonable. The majority of men were not in favour of it. If the unions were recognised every man would have to join the unions, which would be a distinct infringement of the liberty of the subject. He did not want to be forced to join a union. His main objection was that of having to pay money every week. He thought it was quite as easy to control non-union men in the way of preventing them striking, as it was to control union men. He favoured some system of Conciliation Boards, but held that no agreement should be binding for more than twelve months. He had remained on duty during the recent trouble, and was not inconvenienced by pickets. He was inclined to say that trouble, where it was caused, was due to hooligans rather than pickets. In regard to the chance of getting concessions, the scheme had tied their hands for five years.

By Mr. BURNETT: The vast majority of signmen were not in sympathy with the agitation that led to the recent strike.

CONTRACTING OUT.

Mr. FREDERICK SMITH, a non-union signalman on the Great Eastern Railway, complained of the inability of the non-union men to obtain from the union representatives information as to what took place on the sectional and central boards. It had been said that Lord Gorell's award was being misinterpreted as regarded the signalmen's conditions, but he could get no information on the subject. He therefore went to the district superintendent and learned that when the signalmen in a box were unanimous the company would allow them to contract out of the award. He told others of this, with the result that 336 out of 363 men made an application to be allowed to do so. Witness also became responsible for a petition signed by 200 signalmen. In spite of these facts their representatives on the Conciliation Board opposed contracting out, with the result that there was great dissatisfaction. He wrote to the general manager, telling him how disappointed the men were, and the general manager promised to receive a deputation, but said that the Board had decided not to allow contracting out. The company were willing, he explained, to allow them to do so, but the men's representatives would not agree. Witness complained that the men's representatives ignored the majority. Since the recent election, when the representation was changed, they had got back to the old conditions, and so far as the signalmen were concerned the matter had ended satisfactorily. The non-union men, although in the majority, were not organised, and were like a crowd in the hands of a few police. They were practically helpless in the hands of the society's organisation. Non-union men were dead against recognition, and his experience was that recognition did not even satisfy the union men.

By Sir T. R. ELLIS: If trade unionism were carried out properly it would be a grand thing, but so many extreme Socialists got at the head of affairs that they spoil the whole concern. He did not contemplate forming a union of non-union men not to be dominated by Socialists. He preferred individual action. Questions should be settled by a sectional board with an independent chairman.

Mr. BEALE: We are told that when employees go before the board they are afraid of going too far for fear of prejudicing their position?—I say that is rot, absolute rot. (Laughter.) Continuing, he said that the recent strike was the outcome of the matters in dispute having gone before an arbitrator. The men did not want arbitration, but their representatives drove them to it.

"A DIABOLICAL CONSPIRACY."

Mr. GEORGE LANKESTER, a guard on the Great Eastern Railway, opposed the recognition of the union officials. Trade unionism had quite changed in character in the last few years, owing to the fact that the extreme Socialists had captured the official positions and used them to further their own principles. For instance, the Socialists were boasting of the glorious triumph they had achieved in the recent strike by bringing the four unions into line and thus obtaining power to paralyse the trade of the country. Only recently 4,000 men met at Darlington and decided that after a certain date they would refuse to work with non-unionists, which witness regarded as a diabolical conspiracy. Witness favoured one board being formed for each railway, and urged that strikes should be made illegal.

By Sir T. R. ELLIS: It was the policy of the A.S.R.S. to keep up the unrest on the railways, as trade unionism flourished on it. If recognition were granted it would lead to more intimidation of the non-union men. He objected to trade unionism on principle.

Mr. A. G. CACKETT, a signalman on the South Eastern and Chatham Railway, protested against the recognition of the unions. He did not believe in the A.S.R.S. officials.

WEDNESDAY.

SOME PRACTICAL PROPOSALS.

The evidence of non-union railway servants was continued.

Mr. W. C. MESSENGER, Dovercourt, passenger guard, and chairman of the sectional board of the superintendents' department of the Great Eastern Railway, put forward the proposal that all grievances should be tabulated once every six months in a signed petition, which should be brought before the board by men appointed by their comrades, so that the directors might have the information given them first hand. He proposed that the grievances should be tabulated at general meetings of the sections concerned, and that deputations of three or five should be selected at these meetings. If the deputation failed to secure satisfaction he favoured having recourse to the sectional boards, with a final appeal to a court of arbitration, the decision being binding on both parties. The central boards should be abolished, as they only acted as an additional cause of delay. He specially urged that the directors should be approached first. He did not want the grievances to go through the subordinate officials.

By Sir T. R. ELLIS: When he urged that the directors should be approached first he meant that they should be approached on questions affecting generally the hours and wages of the employees. There were minor questions which could be dealt with by the officials. There were grievances on his line, and they were largely brought about by the arbitration award. The men also complained that the pay was very low. They were, however, very fairly treated in regard to promotion, and fines had practically disappeared. His chief reason for not being a member of the union was that he had made other provision for days to come. Generally he had been able to present his own case, and on most occasions he had been successful. He worked during the recent strike, and was not inconvenienced by pickets.

FACILITIES FOR NON-UNION EVIDENCE.

By Mr. HENDERSON: Had anyone suggested that you should give evidence?—The secretary of the Great Eastern Railway mentioned the matter to me, and said he thought that someone should come to the Commission as a non-union man.

Was any suggestion about expenses made when the secretary spoke to you?—No.

None whatever?—I asked the question if expenses might be allowed me, but nothing was suggested to me.

It was on your own initiative that you raised the question of expenses?—I did.

May I ask what the reply was?—The reply was that it would be put before the superintendent for his consideration.

Has he had a reply from the superintendent?—Yes. The reply was that I should have full facilities for doing what I required.

Mr. JOHN SPENCER, passenger guard on the Midland Railway, stated that he had seen 41 years' service. He expressed satisfaction with the conciliation scheme of 1907 and the procedure under it. The union men took the arrangements for the conciliation boards into their own hands, and the non-union men were not allowed to have anything to do with them and not allowed to serve. If any change was made in the conciliation scheme he would favour going back to the old system.

STRIKING WITHOUT REASON.

By Sir T. R. ELLIS: Very few men in his section struck. He knew of men who came out at St. Pancras and asked each other what they had struck for. (Laughter.) They didn't know why.

And you don't know?—No, I don't. I believe the great grievances are that the scheme takes too long to work, and that they want the officials recognised. Personally he was perfectly satisfied, and did not believe the company had violated the conciliation scheme in any way.

"A VERY LAME TALE."

The WITNESS, at the close of his evidence, asked to be allowed to make a statement with regard to the complaint of intimidation made against "our revered superintendent, Mr. Paget," by a previous witness (also named Spencer), who alleged that Mr. Paget got on the footplate of his engine, taxed him with saying that he was "unfortunately" employed by a railway company, and called him a liar and a coward. "I think," the witness said, warmly, "that it was a very lame tale for Spencer, the fireman, of Derby, to come forward and tell you that he was not exactly satisfied with the way Mr. Paget spoke to him on the footplate."

The CHAIRMAN: Were you there?

WITNESS: No. (Laughter.)

Mr. HENDERSON: Would you not prefer that Mr. Paget should come and tell the story himself?

WITNESS: Yes.

Mr. HENDERSON: We would; I am very anxious that he should come.

The CHAIRMAN: You can only express your opinion; you do not know the facts.

WITNESS: I think it was a very lame tale.

NORTH WESTERN MEN.

Mr. C. W. JESSE, a passenger guard on the London and North Western Railway, expressed the view that the conciliation scheme was slow, and needed speeding up. He would abolish the central boards and retain the sectional boards with independent chairmen. On the North Western Railway the unionists and non-unionists were practically equal in numbers, and they should be equally represented on the boards. No case of intimidation of men who wanted to work had come within his experience. It had not been suggested to him by any official of his company that he should give evidence.

Mr. G. PRESTON, Wigan, a London and North Western Railway signalman, said he was satisfied with the working of the conciliation scheme. If it was decided to make any change he would favour a return to the old method. He only gave evidence as representing himself, and he had not been approached by the company's officials.

A NON-UNIONIST AND ORGANISATION.

Mr. J. H. WRIGHT, a Great Northern Railway goods guard,

stationed near Nottingham, said that he was a non-unionist. He complained that since the Conciliation Board scheme of 1907 came into force the men had been unable to have an occasional day off or get an extension of the annual five days' leave as they formerly could.

The CHAIRMAN: To what do you attribute the change?

WITNESS: To the Conciliation Boards and the introduction of time and a quarter for overtime. The company said that if they were to pay rate and a quarter they could not grant any leave. He complained that the machinery was too slow. He proposed the abolition of the sectional boards and the formation of one board for each company with a national board in addition. He was agreeable to the representatives of the men on the national board being chosen by the executives of the unions. He thought the executives would get the best men. The Government should select the chairmen of the central and national boards. He was certain there was a better chance of carrying out an agreement with organised than with unorganised labour.

FREE WILL A DIVINE GIFT.

Mr. H. JOHN, Reading, a signalman on the Great Western Railway, said that the recognition of trade unions in connection with railways would mean the majority bowing to the minority. An attempt was being made to sacrifice on the altar of recognition the free will of the majority of railwaymen, which was a gift from the Creator. Recognition was inconsistent with the safety of the public. They would have dissension and strife in the trade union world. He pictured the results of having an Associated Society driver and an Amalgamated Society fireman on the same engine.

The CHAIRMAN: Is your case that they would argue on the engine?

The WITNESS: Yes, decidedly. Human nature would turn to subjects of controversy. He had worked with three trade unionists in the same box, and nobody but himself knew the unhappiness of his life and the petty tyranny he was subjected to. They refused to speak, and he had to work in an atmosphere of dead silence. As regarded the conciliation scheme, it suffered from an overdose of trade unionism. He urged the abolition of all boards, because they were nothing but a battle-ground of oratory and power. Each company should stand by itself. Representatives should be elected by the men and meet the officials three times a year in a divisional council. If they failed to agree they might have recourse to arbitration. The arbitrator should be able to tax either side with the costs, and the employees should be taxed with a compulsory levy if necessary.

Mr. ALBERT SEAGER, a goods porter on the Lancashire and Yorkshire Railway, and a member of the Amalgamated Society of Railway Servants, said that the company had violated the settlement arrived at. The Conciliation Board scheme had failed because it had not taken into consideration the increased cost of living. The feeling of the goods porters of Liverpool, whom he represented, was that when a grievance existed a deputation from the men, accompanied by the union officials, should conduct negotiations with the company, and, failing a satisfactory settlement, should "down tools and have a holiday." The employers would never meet the working man in a conciliatory spirit. Recognition of trade unions he regarded as essential.

At the close of the witness's evidence the CHAIRMAN said the Commission did not for the present propose to take further evidence from non-unionist employees, and they did not think that further applications from that class need be forwarded, a large number having already been received. The Commission might hereafter call evidence from such further source as they thought desirable, but their next step would be to hear witnesses from the railway companies.

THE CASE FOR THE COMPANIES.

THURSDAY.

Much interest was developed when the Commission resumed on Thursday, as the case for the railway companies was now to be opened. The first witness called was

Mr. HERBERT ASHCOMBE WALKER, assistant to the general manager of the London and North Western Railway Company. He began his evidence by explaining the events which led up to the conciliation scheme of 1907. He presented a memorandum explaining the working of the scheme in connection with the London and North Western Railway, and said that the facts recorded in the document showed that the company used every possible endeavour to expedite the formation of the Conciliation Boards and to facilitate the reference of matters to those boards and thence to arbitration. Everything possible had been done to ensure the smooth working of the scheme,

and to carry out not only the letter but the spirit of the award of Sir Edward Fry, which was to apply from April 1, 1906, to January 1, 1913. In regard to seven points in the award differences arose, and they were referred for interpretation to the arbitrator. On every one of these Sir Edward Fry supported the company's contention.

REPLY TO TRADE UNIONISTS.

Proceeding to deal with some of the evidence given on behalf of the men who were members of trade unions, Mr. Walker said that Mr. Williams had complained of the heavy expense thrown on the Amalgamated Society of Railway Servants by the scheme, but he had omitted to inform the Commission that the companies in the first instance offered to bear the whole cost. This was most strenuously opposed by the Society. The company in January of this year again offered to pay the wages and expenses of any members of the Conciliation Boards. Mr. Walker then traversed the contention of Mr. Bellamy that the recent strike was brought about by the delay in dealing with grievances. He attributed the unrest to an entirely different cause. The demands brought before the Conciliation Boards were of the nature of a block programme, very far-reaching in character. The programme held out hope of most extravagant conditions of service, and if it had been carried out it would have cost his company £600,000 per annum. Sir E. Fry's award resulted in substantial concessions, costing the company £70,000 per annum. The scope of the national all grades programme was so extravagant that the award of the arbitrator only represented about a tenth of what the Amalgamated Society had been encouraging the men to ask for, and the result was that the men were disappointed. It was only natural, therefore, that the union leaders should cast about for arguments to show that the scheme had failed. He believed that if the Conciliation Boards had been on their inception free to deal with the applications which had their origin in the local needs of the stalls on different lines the result would have been more satisfactory, but the action of the unions made this impossible.

THE UNIONS' SMALL MEMBERSHIP.

There were 378,000 adults engaged in the manipulation of traffic and eligible to become members of one or other of the four societies for men. The total membership, however, was only 106,027. It was admitted that 5,000 of these were ex-railway men, so that the membership was but 27 per cent. of those eligible. Even if the men's figures were taken it was only 37 per cent. Mr. Fox did not represent 50 per cent. of the locomotive men as he had claimed, but only 30 per cent. The men were quite willing to get every advantage and concession out of conciliation, but if they failed by this means to get their demands granted they were not willing to submit the matter to arbitration, but wished to be free to call a general strike without putting themselves in the false position that they had occupied in connection with the recent dispute. That was hardly reasonable. The companies made a very large concession in 1907 in accepting arbitration, thereby parting with the control of wages and hours. They believed that in return they had got a safeguard against strikes at least for the duration of the scheme. There was strong objection to the proposal now made for a national board of conciliation. There were thirty large railways and many small ones. Even if each of the large railways had a representative he would have only one vote even when proposals relating solely to the employees of his company were being considered. The competitive business still represented a large proportion of the traffic, and it had never previously been suggested that any railway should submit to the settlement of matters between them and their servants by a board consisting largely of their competitors.

A DOMINATING POSITION FOR THE A.S.R.S.

He asked the Commission to contrast this position of insignificance into which any one company would sink with the dominating national position into which the preposition would put the Amalgamated Society of Railway Servants. The Society would control the men's vote, and would undoubtedly use their position as a means of pushing forward the "all grades programme." It was quite conceivable that the companies' side of the National Board might be prepared to grant some concession to the men, but that the other side would reject it simply because it clashed with one of the items of the "all grades programme." Apart from having an actual majority of seats and controlling the men's vote the trade unions would be the one power that would be universal—co-extensive with the operations of the board. A National Board would make for anything but peace in the railway world. He most emphatically denied Mr. Fox's statement that the general method adopted by railway companies was to punish men first and to hold inquiry after.

He then dealt with the allegations of Mr. J. H. Thomas, M.P., that men were unfairly disqualified from passing the eyesight test. He produced medical evidence in support of the companies' action. He felt sure that the members of the Commission would realise that the question of the eyesight of the men was a very serious matter in the working of the traffic, that any relaxation of the methods adopted might have very serious results, and that the matter was one with which there must be no interference whatever.

THE RAILWAY CLERKS.

In regard to the evidence of Mr. Walkden on behalf of the Railway Clerks' Association, he denied that clerks were coerced into doing work appertaining to the traffic staff. No man gave any such assistance except of his own free will. At a meeting of officers representing various headquarter departments, which was held on the Saturday morning during the strike, several of them stated that they were being inundated with offers of assistance from their clerks. It was therefore resolved to ask any volunteers to meet in the large meeting room at Euston at noon that day. Witness was present at the meeting, and could safely say that a more enthusiastic gathering of clerks had never taken place at Euston. The large meeting room was packed to its utmost, and all grades expressed their willingness to take up any work the company thought they could do at any station throughout the line. He was satisfied that the whole body of clerks, with few exceptions, wanted nothing whatever to do with trade union officials, and were quite content to leave their position in the hands of their immediate heads of departments. It must be understood that a large amount of the work done, especially in the offices of the various heads of departments, was more or less of a confidential nature, and it was certain that non-unionists would have to be chosen for such work.

RECOGNITION OF UNIONS.

There was no doubt that the main object for which recognition was sought was to provide a means of increasing the membership of the unions by forcing non-unionist workers to join, and from the point of view of the unions this was necessary in order to place the union officials in a position to bring about a general stoppage of work if at any time their demands, however unreasonable, were not acceded to. The witness quoted at length from speeches of the men's leaders to show that immediately on recognition coercion would be employed to force men into the unions. Several of the men's witnesses had stated to the Commission that if recognition were conceded it would go a long way to prevent strikes. Facts were dead against that, for if there was one railway where the men were in a state of continual unrest and out of the control of their leaders it was the North Eastern, the only railway of importance that had conceded recognition of the unions. The most serious effect of recognition would be the lowering of the standard of discipline throughout the railway service. The maintenance of discipline among men connected with the working of the various lines was quite as important as in the army, navy, and police. Without a high standard of discipline the safe working of a line would be jeopardised. The entire responsibility for discipline must rest with the companies. The witness proceeded to argue that there were reasons that did not apply to other industries why railway companies should not recognise trade unions. In no trade were discipline and strict obedience to orders more necessary. Railway men were largely employed in single units, or small bodies, each having to assume a certain amount of responsibility where necessary. The conditions of work varied enormously. Perhaps the best argument which could be used to illustrate the difference between railways and other trading concerns was the position brought about in the event of a strike. He pointed to the public hardships and paralysis of industry caused by a railway strike, and said that in hard times other firms could close their works, but railways had to be kept going regardless of the relation between expenses and receipts.

IMPROVEMENT OF CONCILIATION SCHEME.

He was of opinion that the procedure of the Sectional Boards was much too formal, and he would not object to an extension of the number of Conciliation Boards, so that more of the grades could be directly represented. The present system of appointing separate arbitrators for each company was not satisfactory, and he suggested the appointment of five standing arbitrators to be nominated for a year at a time—one for Scotland, one for Ireland, and three for England, say, one for the lines south of the Thames, one for the Northern lines running into London, with perhaps the Lancashire and Yorkshire and the Cheshire lines added, and the third

for the provincial lines. To these arbitrators all matters found incapable of settlement at Sectional Boards should be referred.

By Sir T. R. ELLIS.—The differences which he would refer to this tribunal would be rates of pay and hours of duty, but nothing else. He did not think there were other differences likely to lead to a stoppage, and those could be settled without reference to the Sectional Board. His company could not be a party to any arrangement that would bring under the scheme anything but hours of duty and rates of pay.

THE MEANING OF RECOGNITION.

To his mind the meaning of the word "recognition" as asked for by the trade unions was this. It was an undefined something which railway companies were asked to concede with a view to enabling trade unions to coerce non-unionists to join their societies, so as to be in a position to dictate terms to the railway companies, and, if necessary, to declare a strike with every possibility of success. Having once got that position by sheer weight of numbers, it was not difficult to forecast that the trade unions would use their power ruthlessly, regardless of any arrangement they had entered into with the railway companies, regardless of the inconvenience to the public, and the danger of the food supply being cut off; regardless of the interests of the empire at large and the safety of the nation. Any form whatever, no matter how it was wrapped up, would have the result of putting the trade unions in the position that the companies feared. It must be remembered that two-thirds of the men employed by the companies were not unionists, and their interests had to be considered. The companies had to prevent their being forced into the unions, which would be the direct result of any form of recognition. It was not so much the unions he objected to as the officials.

That they are agitators who are bent on mischief?—I would not put it as far as that, before this Commission at any rate. (Laughter.) He added that he had never had to deal with trade union officials personally. Events had showed that the trade union leaders had power for evil—to call a strike—but not for good—to prevent one.

By Mr. HENDERSON: He did not consider that the conciliation scheme was a failure. It had failed in one respect, but the companies were satisfied with it as a whole. He admitted that the fact that the award of the arbitrator had cost the company £70,000 a year was a proof that the men had a certain case, but it did not show that they had a case for pressing the national all-grades programme.

What offer did you make to the men by way of redress for their grievances?—We were not prepared to make any because we were satisfied that they would take the residue of their demands to the arbitrator. The witness read extracts from the proceedings at board meetings to show that the men declined to withdraw any part of their demands. He was opposed to recognition in any and every form.

You do not mean merely the form of recognition which you have described as coercion?—They are synonymous to my mind.

Are you so determined in your hostility to every form of trade union recognition that if it could be demonstrated to you that recognition would secure the very opposite effect to what you anticipate in the railway world you would still continue your hostility?—You are asking me to give an opinion of what cannot possibly be. Continuing, he said he could not see how recognition would act as an instrument of peace.

You are not guided in that statement by experience except the conclusions you have drawn from the North-Eastern?—It is quite sufficient for our purpose.

Mr. HENDERSON said he thought he might be allowed to draw conclusions from other trades.

WITNESS remarked that he was quite sure that Mr. Henderson would draw his conclusions.

Mr. HENDERSON: I think that throughout this Commission I have tried to act fairly.

WITNESS: I quite frankly admit that.

Mr. HENDERSON: I do not think you should charge me with having the one fixed position.

WITNESS: I did not say that.

Would you agree that having regard to numbers there are fewer disputes in the trades where recognition has been fully conceded than in the trades where recognition has been withheld?—I really cannot answer that question. The witness further remarked that he could not say whether, if the unions showed that they had a majority of the men, the companies would be prepared to grant recognition. The various unions already tried to undermine discipline, and recognition would only encourage acts against discipline.

FRIDAY.

Mr. H. A. WALKER continued his evidence, and said that men suspended after an accident pending the result of an inquiry received their pay.

Mr. HENDERSON referred to a remark by witness in his evidence in chief that the A.S.R.S. paid benefits to suspended men, though they had only heard one side, and asked if it was fair to complain of the organisation doing that when the company denied them the facilities of obtaining the other side from the only source from which it could be obtained.

WITNESS: We do not admit that they have anything to with the matter. The question of punishment is one between us and the men, and our point is that the society has nothing whatever to do with the matter.

You are complaining of the Amalgamated Society paying the benefit?—I am complaining not so much of their paying the benefit as of their trying to undermine discipline on the railways.

Have you taken conference with the other railway companies before you prepared this evidence you have put in? I don't think that is a proper question to ask.

Do you decline to answer it?—Yes.

If your amendments were accepted *in toto* it seems we should have one board, and that, failing an agreement, we should go to arbitration?—That is so.

Supposing a local deputation on any class of grievance failed to get satisfaction, would they be in a position to take the case from the local official to the board of directors in preference to going to the extended sectional board?—They would.

You seem to be very strong about the men being capable under all this machinery of presenting their own case?—I have a very great respect for railway men. I believe they are as intelligent as any body of men in the country, and I am satisfied they are quite capable of stating their own case.

You propose that the existing practice under which the men's side of the Conciliation Board are free to choose as their advocate before the arbitrator a man who is not an employee of the company should form part of the express terms of the scheme. Would you admit that that was partial recognition?—No. The matter has passed out of the hands of the company. I am not prepared to grant the right to the men to bring in an outsider at any point of conciliation. The scheme is divided into two sections; the first part conciliation, the second part arbitration. As far as conciliation is concerned, it must be conducted between the company and its employees without any outside interference of any sort. When it gets to arbitration it is a different matter.

CAUSE OF THE STRIKE.

By Mr. BURNETT: He did not believe that the recent strike occurred on the question of recognition. The men got out of hand and went on strike "on their own." The unions had to follow their lead.

Mr. HENDERSON read the following notice issued by the general manager on the London and North Western Railway:

To all concerned, London and North Western Railway.—I am desired to make it known to the staff generally that if any men in any of the departments wish to give evidence before the Royal Commission now sitting, the company will pay their wages during the time they are absent from duty for the purpose, will allow reasonable expenses, and also grant free passes.

WITNESS: That applies not only to non-unionists, but to unionists as well, and is part of the policy we have always carried out.

THE LONDON AND SOUTH WESTERN RAILWAY.

Sir CHARLES JOHN OWENS, general manager of the London and South Western Railway, said that during the fourteen years in which he had occupied his present position his relations with the staff, from top to bottom, had been of the most cordial and happy nature. The concession made by the railway companies in agreeing to the formation of Conciliation Boards had, in his judgment, never been fully realised. It meant neither more nor less than the taking of the dividend-earning powers of a capital of about thirteen hundred millions out of the hands of its proprietors and placing it at the mercy of arbitration. This was an enormous sacrifice in the interests of peace. It was contrary to common sense to suggest that after making such an enormous concession the companies would endeavour to upset what they had done by seeking improperly to evade the responsibilities put on them by the scheme. While he would not comment on the charges brought against the various railway companies, he desired to point out that no charge of any sort had been brought against the L. and S. W. Railway Company. Therefore there could have been no pos-

sible justification for the attempt made to call out the men on the South Western Railway. In calling out the men on the South Western Railway he considered the unions were guilty of a breach of the spirit as well as the letter of the conciliation scheme. The feeling of the South Western staff was one of satisfaction without any conciliation scheme at all. They wanted to maintain their opportunities of going direct to their officers and directors with any complaint. The companies might in future feel it necessary to organise the non-union men in their own defence as well as that of the men. The whole of the resources of the A.S.R.S. were used in order to return their own nominees, and in that he considered there was a distinct breach of the spirit of the conciliation scheme.

ABILITY OF THE MEN.

He had been surprised at the ability with which the men had put their case before the directors, and on the last occasion upon which a deputation waited on the board the men displayed such conspicuous ability that witness recommended their promotion. In comparing the cost to the Amalgamated Society in connection with the Conciliation Scheme on the South Western system—viz., £225, with other companies which had exceeded £3,000, it must be borne in mind that while the South Western men were ready to discuss or withdraw their demands, in the case of other companies the men insisted on going to arbitration on the whole national programme. Had the men of all companies been allowed to approach the matter in the conciliatory manner adopted by the South Western men, no doubt an enormous part of the expenditure would have been saved.

NO RECOGNITION.

Regarding the question of recognition of the unions, he had the strongest objection to any such proposal. An important objection, but yet a minor one in comparison to others, was the fact that the men were divided over at least four different societies, and if recognition were given to one it must necessarily be given to all. For the moment the societies were united, but strained relations might exist again as they had existed before. Another objection was that the societies did not represent the majority of the employees. On the South Western system he would be exaggerating to say they represented ten per cent. Union recognition would be followed by an attempt to compel all the men to join, and the steps that were being taken by the unions at the present time to increase their membership constituted a national danger. As chief of the South Western he considered it his duty to take every step he could to prevent the South Western staff from becoming victims of trade union tyranny. Another fundamental objection to recognition was that in more than one recent case the unions were unable to control their men.

A NATIONAL DANGER.

But a point of great national importance was the question of sympathetic strikes. What was being sought by the Trade Union Congress now was such a federation of the unions as would enable them to bring out the whole of the men in the unions throughout the country in the event, say, of a dispute in the Colonies. The whole of the industries of the country were to be brought to a standstill, the people were to be deprived of their food, and the country rendered powerless. The logical working out of the position taken by the Trade Union Congress as regards sympathetic strikes would put the trade unions in a position of power not inferior, but probably superior, to that of the Imperial Parliament itself. It was a most dangerous and serious thing to allow such power as that to get into the trade unions.

TO FACILITATE CONCILIATION.

To obviate the difficulties alleged to have occurred in the working of the Conciliation Scheme, Sir Charles submitted the following proposals:—

1. That a petition signed by 25 per cent. of the men in any one section into which a railway is divided for the purpose of the election of sectional boards shall be deemed a demand on the part of the men for a revision of terms of service.
2. That a reply acceding to or declining such demand shall be given by the company within one calendar month after its receipt, but that for the purpose of this rule August and September shall not count.
3. That if the men be not satisfied with the reply, the Sectional Conciliation Board shall meet within one calendar month, subject to the proviso in the preceding rule.
4. That should the Sectional Board fail to arrive at a settlement, the question to go forthwith to an arbitrator with assessors at the request of either party.
5. That if, after an arbitrator has given his award, any difference of opinion has arisen with respect to its meaning,

the difference, if it cannot be settled by the Sectional Board, be referred back at once to the arbitrator for his decision.

6. That the scheme be understood to cover all grades of men except clerks, mechanics, and artisans and dock labourers, and to embrace all rates of pay, whether ordinary wages or payment for trip or piecework.

7. That, as a means of avoiding disputes as to whether the company or the men were giving adequate effect to the decisions of a Board or an award of an arbitrator, either side be empowered to refer the point to an arbitrator, with assessors, whose decision should be final.

8. That an obligation be placed on the companies and the men to respect the terms of a decision of a Board, or an award of an arbitrator, and not to declare a lock-out or strike upon any matter the subject of an agreed decision, or an award, or pending the proceedings herein set out for the settlement of differences.

By Sir T. R. ELLIS: He would not agree to questions of discipline and management being left to anyone but the company, unless it were divested of all responsibility for safe working. In his long experience as general manager he had only three or four appeals from the men as to the justice of the decisions of their superior officers.

TO MAKE STRIKES PENAL.

Sir T. R. ELLIS asked how the witness would prevent a stoppage of work in case the arbitrator's decision was not observed?—You could only do it by making strikes penal. I should advise some form of legislation which should recognise continuity of work on railways in the public interest. You should demand the same loyalty from railway servants to the public as you demand from your soldiers and sailors.

It would want an Act of Parliament. In what direction would that go?—It should be fine or imprisonment on the same lines practically as in New South Wales. Continuing, he said that every industry upon which the life and wellbeing of the population as a whole depended should be dealt with by special legislation.

Do you suggest any alteration in the law with reference to picketing?—Distinctly. I advocate the entire cancelling of the provisions of the law which permit of so-called peaceful picketing. It is an infringement of the liberty of the subject.

The Commission adjourned till Monday.

NATIONAL ELECTRICAL MANUFACTURERS' ASSOCIATION.

The Council of the above Association announce that the proposals for the reorganisation of the work of the Association, which have been in contemplation for some considerable time, and with the details of which members are already familiar, have now been successfully carried through and will shortly be carried into effect.

They include the alteration of the title of the Association (which will in future be known as the "The British Electrical and Allied Manufacturers' Association, Incorporated"), the appointment of a new Secretary giving his whole time to the work of the Association (*vice* Mr. F. O. B. Hawes, resigned), and of a larger working staff; the leasing of commodious offices in a central position; and certain necessary amendments of the constitution of the Association to meet the new conditions, including the revision of the qualifications for members, associate members, and associates; and the alteration in the bases of subscription and voting powers.

The new Secretary of the Association is Mr. D. N. Dunlop, who is already well known to the industry as the energetic sales manager of the British Westinghouse Company's Supply Department, manager of the Publishing Department, and superintendent of the Printing Bureau, at Trafford Park, Manchester.

Mr. Dunlop, who was unanimously elected at the meeting of the Council held on the 7th inst., has been empowered as from that date to begin the reorganisation of the Association for its new activities, the present Secretary's time being entirely engaged in connection with the forthcoming Electrical Exhibition. Mr. Dunlop, whose appointment dates from January 1, 1912, will, we are sure, have the hearty goodwill and co-operation of every member of the industry.

The present Council of the British Electrical and Allied Manufacturers' Association, and in particular Mr. Nalder (Chairman), and Mr. Longbottom (Vice-Chairman), are certainly to be congratulated on their success in bringing members to realise the position of advantage which they occupy, and the immense importance of the work which by their united efforts can be done to enhance the British electrical and allied industries. In wishing the Association all success, we earnestly commend it to the attention of every manufacturer who has not yet joined.

CHINESE REVOLT AGAINST RAILWAY POLICY.

A revolt, which broke out in the province of Szechuan, in Western China, has spread into the eastern provinces during this week. The trouble arose out of opposition to the Government's railway policy, and dates back to the conclusion of the Hukuang railway loan last May. Six million pounds were borrowed by the Pekin authorities from an international group of British, German, French, and American financiers, and with the money the Government intended to buy out the shareholders of the proposed great trunk line across China from Szechuan to Hankow and thence to Canton. The scheme is resented in various parts of the Empire as anti-national and as tending to the eventual partition of China. An edict issued at Pekin, on Tuesday, deprecates the attitude of the Szechuanese, recounts the Government's efforts to avert losses on the part of the railway shareholders, and denounces the agitation, which, it declares, is not entirely due to the Government's railway policy, but savours of revolution.

"TILLING STEVENS" PETROL ELECTRIC OMNIBUSES.

As a result of the successful running of the new "Tilling-Stevens" petrol-electric omnibuses in London service, Messrs. Tilling have decided to adopt that type for all their future omnibuses, and are constructing a fleet to replace their present horse vehicles. Messrs. Tilling have designed the chassis and body, which are being built at their works at Peckham. The electrical transmission is supplied by Messrs. W. A. Stevens, Limited, of Maidstone. An agreement has been entered into between the two companies in which Messrs. Tilling have secured the sole rights of use and sale of the "Stevens" patent electrical transmission for use in omnibuses and mail vans in the Metropolitan Police area, Messrs. Stevens to have the sole rights of manufacture and sale of the complete "Tilling-Stevens" petrol-electric chassis outside the Metropolitan Police area, and also inside the Metropolitan area, for vehicles other than omnibuses or mail vans. The same construction will be adopted in the chassis for use either inside or outside London. The "Tilling-Stevens" petrol-electric vehicles are the result of exhaustive experiments carried over a period of four years under public service conditions in London. The first vehicle, which is still in service in excellent condition, has run over 120,000 miles. As the new vehicle has been designed by the oldest established motor omnibus company in London to meet the latest requirements of the Metropolitan Police, it possesses all the essential qualifications for success, and its extreme silence, smooth running, flexibility and ease of control, together with low cost of upkeep due to the substitution of a flexible electrical transmission for the gear box, should appeal to the travelling public as well as to the operating engineer.

French State Railways Budget.—In the Budget for 1912 credit for the State railways amounts to 344,292f. The deficit of the Western State line is estimated to show a total of 66,000,000f., being a large contrast as compared with the deficit of the year 1911, amounting to only 24,051,000f.

Jarrah Fencing.—An illustration of the use of the famous Australian wood for fencing and gates for railway lines is given in a booklet issued by Millars' Karri and Jarrah Co., Ltd., Pinners' Hall, Old Broad Street, E.C. This wood requires neither paint nor creosote for its preservation, and it does not readily absorb moisture. For station buildings its ornamental appearance enables it to be used without paint.

Electric Locomotive Developments.—An electric locomotive turned out by the Maschinenfabrik Oerlikon is described as the first demonstration that with single-phase alternating current the highest requirements of existing and projected lines can be satisfied, without exceeding the Continental standards with regard to axle pressure, and without standing behind steam driving so far as regards regular working capacity. It is from the designs of the engineer Thormann, and is an alternating-current locomotive of 2,000 h.p. capacity, 13,000 kg. tractive force, and working at a pressure of 15,000 volts and 13 to 17 periodicity. It is thus larger than that built last year by the A.E.G. for the same line; than that built for the Simplon Tunnel by Brown, Boveri and Co.; than that built two years ago for the Pennsylvania Railway, and also than the goods locomotive built for the Italian State Railways. It is to be run on the Spiez-Lötschberg-Simplon line.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Sept. 18 (*Mon.*).—**Burry Port and Gwendreath Valley Railway** (Half-yearly), 5, Gray's Inn Square, W.C., at 3.
- Sept. 19 (*Tues.*).—**Callander and Oban Railway** (Half-yearly), 58, Bath Street, Glasgow, at 5.30.
- Sept. 19 (*Tues.*).—**Caledonian Railway** (Half-yearly), 30, George Square, Glasgow, at 1.30.
- Sept. 19 (*Tues.*).—**Glasgow and South Western Railway** (Half-yearly), 30, George Square, Glasgow, at 12.
- Sept. 19 (*Tues.*).—**Underground Electric Railways of London** (Half-yearly), Electric Railway House, Broadway, Westminster, at 3.30.
- Sept. 20 (*Wed.*).—**Horncastle Railway** (Half-yearly), 9, Lindsey Court, Horncastle, at 12.
- Sept. 20 (*Wed.*).—**King's Lynn Docks and Railway** (Half-yearly), Alexandra Dock, King's Lynn, at 1.
- Sept. 21 (*Thurs.*).—**North British Railway** (Half-yearly), 25, Waterloo Place, Edinburgh, at 12.30.
- Sept. 26 (*Tues.*).—**Ottoman Railway from Smyrna to Aidin** (Half-yearly), Winchester House, Old Broad Street, E.C., at 12.
- Sept. 27 (*Wed.*).—**Highland Railway** (Half-yearly), Inverness Station, at 1.
- Sept. 29 (*Fri.*).—**Knott End Railway** (Half-yearly), 1, Walbrook, E.C., at 3.
- Sept. 29 (*Fri.*).—**Lanarkshire and Ayrshire Railway** (Half-yearly), 186, West George Street, Glasgow, at 2.30.
- Oct. 4 (*Wed.*).—**Canadian Pacific Railway** (Annual), Montreal.

(Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. Telephone, 2948 Gerard. Telegraphic address, Altimetry, London.)

GREAT NORTH OF SCOTLAND RAILWAY.

The half-yearly meeting was held in the company's offices in Aberdeen on Tuesday, Sir David Stewart presiding.

The CHAIRMAN, in moving the adoption of the report and accounts (an abstract of which appeared in last Saturday's RAILWAY TIMES), said that the results of the working of the railway had been of a satisfactory character. After meeting all charges and the preference dividends there remained a balance of £25,105, which admitted of a dividend at the rate of 3 per cent. per annum on the preferred converted ordinary stock, and $\frac{1}{2}$ per cent. per annum on the deferred converted ordinary stock, absorbing a sum of £18,871, and leaving £6,234 to be carried to next half-year's accounts. He referred to the loss which the company had suffered by the death of Colonel George Smith Grant, of Minmore. Colonel Grant was elected a director in 1904, and he always gave faithful service to the company, commending himself to his colleagues by his exceedingly attentive and amiable manner, so that his death was much lamented. The board had kept down the capital expenditure during the last half-year, spending only the small sum of £3,000—£1,747 on lines open for traffic and £1,253 on working stock. During the half-year they raised by loans at the rate of $3\frac{1}{2}$ per cent. per annum the sum of £21,481. The estimate of expenditure on capital account for the current half-year was £10,000.

The revenue from passengers, parcels, and mails for the half-year was £120,133, as compared with £120,467 in the corresponding period of last year. The decrease of £1,050 in passenger receipts was disappointing, in view of the fact that the weather was exceptionally good during the spring months, and it was difficult to account for it. Doubtless the long period of fine weather before the end of the half-year had the effect of greatly increasing the travelling on bicycles, which would make the ordinary traffic suffer, and they lost a considerable sum by the inclement weather at the Aberdeen July holiday. Again, the road traffic in motors was now greater than ever. Almost every fishing and shooting tenant in the company's district possessed his motor. Many motored all the way from the South to their summer quarters. Thus the only part of their traffic which the company got was their servants and luggage, much of the latter of which was sent by goods train for cheapness. The number of tourists was considerably fewer in July this year than usual, the Coronation festivities, the Royal visit to Edinburgh, and the Glasgow Exhibition having had the effect of preventing them travelling to the North of Scotland in the usual numbers; but the directors were hopefully looking forward to an excellent autumn tourist traffic. The receipts from merchandise traffic and from minerals and live stock were £111,760, as compared with £112,341—a decrease of £581. The decrease in agricul-

tural produce carried locally was attributed chiefly to the wet, cold summer of 1910, the yield of oats and barley being much less than was at first anticipated. During the half-year there was a considerable increase of through goods traffic, made up of general merchandise from the South, whisky to the South, agricultural produce from and to the South, and of coal for distilleries. The decrease in live stock was in sheep. The trade in sheep had for some time not been quite so good. Miscellaneous receipts were up, but telegraph wayleave by itself was going down. The Post Office had for some time past been transferring their wires from the company's posts and placing them along the roads, thus removing the maintenance of wires from the railway company to the Post Office, and thus depriving the company of a small but hitherto sure revenue. The hotels and refreshment rooms had done well during the half-year, and their management continued to give satisfaction to the public. Considerable alterations and improvements had been made on the Station Hotel. The road motor cars also showed an improvement. These cars were no burden on the undertaking.

In regard to expenditure, there had been an increase of £740 in maintenance of way, works, and stations, a little more relaying and repairing having been carried out, and more money spent on repairing roads, bridges, signals, and fencing. Locomotive power was down £250. The cost of locomotive coal was less by £578, due mostly to a smaller consumption consequent upon a reduction in the weight of their passenger trains. The traffic expenses had decreased £380, and this decrease would have been greater had it not been for an increase of £395 in the cost of repairs and renewals of wagon covers, ropes, etc., owing to more covers having been dealt with during the half-year with a view to getting the stock into an efficient condition and to a greatly increased cost of raw materials. The total of the expenditure was £120,579, being 51.22 per cent. on traffic receipts as compared with 51.20 per cent. a year ago.

One matter which was likely to affect them in future was the National Insurance Bill. If it passed in anything like its present form a large additional burden would be placed upon railway companies in common with all employers of labour, and the cost to this company for invalidity alone, it was estimated, would amount to no less than £1,625 per annum. Unlike other employers of labour, railway companies would have themselves to bear this burden, as they were in the unhappy position of not being able to increase their charges to meet these added responsibilities. Regarding the railway troubles in England, he was happy to state they did not affect this company, except that doubtless a good number of tourists were deterred from coming to Scotland by the dislocation and uncertainty of the train service. They had very good reason to believe that their staff would have remained manfully at their work, and their attitude had been much appreciated by the directors. The scheme of conciliation which was set up in 1907 as to rates of pay and hours of labour should provide a satisfactory method of settling all disputes without resorting to strikes, and he had pleasure in stating that all matters of difference between the company and their employees were amicably settled at meetings of the sectional boards without resorting to the central board, not to speak of arbitration. If the machinery of these boards could be improved, by all means let it be done, but it was essential that in any settlement a period of time should be given in which both sides would be at peace and be able to carry on their respective parts in the working of the railways.

Mr. ANDREW BAIN (deputy-chairman) seconded the motion, and it was agreed to.

The retiring directors were re-elected.

CALEDONIAN RAILWAY.

The report of the Caledonian Railway for the half-year ended July 31, 1911, is summarised below:—

CAPITAL.	
Total expenditure	£102,207,079
Total receipts (allocated as follows)	60,185,734
Ordinary stock	£18,400,034*
Deferred ordinary stock, No. 1	2,508,020†
Deferred ordinary stock, No. 2	270,666‡
Preferred and guaranteed stocks	23,794,591
Debenture stock	11,450,024
Premiums, etc.	3,983,793

Balance at debit of capital account £1,721,330

* Of this amount, £13,987,080 has been converted into £13,987,080 preferred converted ordinary stock (3 per cent.) and £13,987,080 deferred converted ordinary stock. † Entitled to participate, *pari passu*, in all ordinary dividends above 7 per cent. ‡ Entitled to participate, *pari passu*, in all ordinary dividends above 9 per cent.

The expenditure during the half-year amounted to £33,292 on lines open for traffic, £12,052 for land and compensation in connection with lines authorised but not yet under construction, and £101 on Portpatrick and Wigtonshire Joint

Railway, less a credit of £421 on Forth and Clyde Navigation. Estimated further expenditure—In the current half-year, £45,000; in subsequent half-years, £264,000; total, £309,000. Capital powers and other available assets, less balance at debit of capital account, £317,029.

REVENUE.

The revenue account shows the receipts for the half-year ended July 31 to have been as under:—

	1911.	1910.
Passengers—First-class	£66,889	£66,266
„ Third-class	584,201	570,236
„ Season-tickets	61,914	61,486

„ „ Goods	3,188,143	3,172,244
Total	8,044,547	7,877,062

* Including mileage run for other companies.

The report states:—“Excluding the trains run for other companies, the earnings per train mile of the passenger traffic are now 47.72d. compared with 47.87d. for the corresponding period of last year; and the merchandise and mineral traffic receipts per mile are 99.35d. compared with 98.29d. The cost of maintenance and renewal of the permanent way and works is £230,699, being at the rate of £483 per mile per annum. The amount charged for the repair and renewal of the rolling stock is £237,867, being at the rate of 7.10d. per train mile run. The construction of a goods shed, offices, and relative works on the site of the existing Aberdeen goods station has been commenced.”

GLASGOW AND SOUTH WESTERN RAILWAY.

We summarise below the half-yearly accounts to July 31, 1911, which were issued on September 8:—

CAPITAL.

Total expenditure	£19,407,608
Total receipts (allocated as follows)	18,653,879
Consolidated stock	£6,106,270*
Preference stock	7,030,080
Debenture stock	4,467,350
Premiums, etc.	1,050,179

Balance at debit of capital account £753,729

* This is the amount actually received, and has been converted into—Preferred ordinary, £6,106,270; deferred ordinary, £6,106,270.

The expenditure during the half-year amounted to £8,234, viz., on lines open for traffic, £8,239, less a credit of £5 on subscriptions to other companies. Estimate of further expenditure on capital account—In the current half-year, £5,710; in subsequent half-years, £62,515; total, £68,225. Capital powers and other available assets, £96,909.

REVENUE.

The revenue account for the half-year ended July 31 shows the receipts to have been as under:—

	1911.	1910.
Passengers—First-class	£27,236	£26,149
„ Third-class	292,769	278,497
„ Season-tickets	35,791	35,238
Mails	8,771	8,771
Parcels, horses, etc.	69,702	65,517
Merchandise (less cost of coll., etc.) ..	268,866	259,586
Live stock	14,259	13,752
Minerals	195,955	194,595
Rents	30,777	29,078
Transfer fees	266	204
Wayleave—telegraph lines	1,275	1,313
Mileage and demurrage	<i>Dr.</i> 1,975	<i>Dr.</i> 2,244

Total receipts £943,692 .. £910,456

The expenditure on revenue account for the same period is detailed below:—

	1911.	1910.
Maintenance of way, works, etc. ..	£82,572	£80,996
Locomotive power	151,706	154,303
Carriage and wagon repairs	52,896	47,766
Traffic expenses	162,496	156,767
General charges	24,414	23,138
Law charges	5,771	4,492
Parliamentary expenses	1,494	789
Compensation—Passengers	2,621	2,877
„ Goods	842	851
Rates and taxes	24,299	23,637
Government duty	2,145	1,757
Steamboats	20,106	17,213

Total expenditure £531,362 .. £514,586

The net revenue account and the proposed appropriation of balance available for dividend may be summarised as follows:—

	1911.	1910.
Balance from previous half-year	£9,830	£9,198
Net earnings	412,330	395,870
Sundries	894	1,051
Total	£423,054	£406,119
Prior charges	130,921	131,550
Renewals—reserve fund	12,000	11,000
Preference dividends	124,481	124,481
Dividend on preferred ord. stock	76,328a	76,328a
Dividend on deferred ord. stock	68,696b	53,430c
Balance to next half-year	10,628	9,330

Total £423,054 .. £406,119

a At the rate of 2½ per cent. per annum. b At the rate of 2½ per cent. per annum.

c At the rate of 1½ per cent. per annum.

The gross receipts for the past half-year show an increase of £33,236, the expenses an increase of £16,776, and the net

receipts an increase of £16,400. The ratio of expenditure to receipts is 56.30 per cent., as against 56.51 per cent.

TRAFFIC, ETC.			
Half-year ended July 31.			
	1911.	1910.	
Passengers—First-class	252,139	253,194

* Including mileage run for other companies.			

The report states:—"The Provisional order submitted to and approved by the shareholders at a special general meeting held on May 2 last has been passed by the Commissioners acting under the Private Legislation Procedure (Scotland) Act, 1899, and it is expected that the Confirmation Bill will receive the Royal Assent on the re-assembling of Parliament in October next."

NORTH BRITISH RAILWAY.

We give below our usual analysis of the half-yearly accounts. The report for the six months ended July 31, 1911, was issued on Monday.

CAPITAL.			
Total expenditure	490,700,399		
Total receipts (allocated as follows)	67,888,033		
Ordinary stock	£12,000,821		
Ordinary preference stock	9,578,330		
Preference & guaranteed stocks	27,579,007		
Debenture stocks	19,117,329		
Loans	1,094,435		
Premiums	1,551,168		
Balance at debit of capital account	1,812,390		

The expenditure in the half-year was £168,320, viz., £20,433 on lines open for traffic, £149,398 on lines in course of construction, £227 on subscriptions to other railways, £10,000 on conversion of stock, less a credit of £17,702 (£2,230 on working stock, and £15,466 on steam vessels). Estimated further expenditure. In the current half-year, £227,875; in subsequent half-years, £225,540; total, £453,415. Capital powers and other available assets, less balance at debit of capital account, £535,819.

The revenue account for the half-year ended July 31 shows the receipts to have been as follows.—

REVENUE.			
	1911.	1910.	
Passengers—First-class	£60,966	£60,476	
.. .. Third-class	614,993	605,943	
.. .. Season-tickets	97,352	65,858	
Parcels, horses, carriages, etc.	157,100	158,033	
Mails	17,151	17,151

Live stock	41,528	42,941	
Minerals	797,252	771,304	
Union Canal	790	944	
Rents of Property	55,593	50,750	
Transfer fees	950	947	
Mileage of carriages and wagons	7,400	5,452	
Total receipts	£2,487,078	£2,491,498	

The expenditure on revenue account for the same period was as under:—

	1911.	1910.	
Maintenance of way, works, etc.	£237,914	£235,448	
Locomotive power	415,066	414,601	
Carriage and wagon repairs	149,034	138,870	
Traffic expenses	426,793	426,947	
General charges	43,362	41,041	
Law charges	2,567	3,360	
Compensation—Passengers	4,545	4,876	
.. .. Goods	4,585	3,788	
Forth and Tay Ferries	21,554	22,133	
Working other lines	Cr. 5,422	Cr. 5,260	
Parliamentary expenses	1,369	1,398	
Rates and taxes	58,950	60,387	
Government duty	4,397	4,351	
Union Canal expenses	1,049	1,201	
Total expenditure	£1,365,673	£1,353,813	

The net revenue account and the proposed appropriation of the balance available for dividend may be summarised as follows:—

	1911.	1910.	
Balance from previous account	£25,997	£20,511	
Net earnings	1,121,435	1,107,983	
Sundry credits	41	100	
Total	1,147,473	1,128,594	
Prior charges	374,594	379,343	
Reserve for maintenance and contingencies	10,000	10,000	
Reserve for North Dock	7,450	7,943	
Preference dividends	6,915	7,015	
Dividend on preference for 1910	11,793	14,623	
Dividend on deferred ord. stock	45,913	52,097	
Balance to next half-year	28,429	27,859	
Total	£1,141,920	£1,158,390	
* A. & B. = 1000, C. = 100, D. = 10, E. = 1, F. = 1/10, G. = 1/100, H. = 1/1000.			

The gross receipts for the past half year show an increase of £25,580, the expenditure an increase of £11,860, and the net receipts an increase of £13,720. The ratio of expenses to receipts is 54.91 per cent., as against 54.99 per cent.

TRAFFIC, ETC.			
Half-year ended July 31.			
	1911.	1910.	
Passengers—First class	821,670	823,310	
.. .. Third-class	18,150,737	17,869,147	
.. .. Total	18,972,407	18,692,457	
Season-tickets	28,997	27,123

Mileage—Lines owned	1,241½	1,241½	
.. .. Partly owned	28½	28½	
.. .. Leased or rented	40½	19½	
.. .. Lines worked	67	67	
.. .. Foreign lines worked over	127½	127½	
.. .. Total operated	1,504½	1,504½	
.. .. Union Canal	32	32	
Train mileage* Passenger	4,759,091	4,721,499	
.. .. Goods	4,309,276	4,592,913	
.. .. Total	9,110,397	9,084,412	
* Including steamers, also train mileage of lines worked.			

The report states:—"The receipts from passenger traffic are £11,035 and from merchandise £14,334 higher than in the corresponding half-year, while mineral, live stock and parcel receipts have decreased by £4,052, £1,413, and £933 respectively. Miscellaneous receipts exhibit an increase of £6,600. The receipts per railway mile have yielded £1,820.81 as against £1,815.48 for the corresponding half-year. The receipts per train mile for passenger trains are 46.82d. as against 46.50d., and for goods and mineral trains they are 83.22d. as against 82.67d."

HIGHLAND RAILWAY.

The half-yearly accounts to July 31, 1911, were issued on Monday. Our usual analysis is appended:—

CAPITAL.			
Total expenditure	£7,295,776		
Total receipts (allocated as follows)	7,068,137		
Ordinary stock	£2,504,383		
Preference stock	2,088,800		
Debenture stock	2,217,879		
Premiums	152,015		
Parliamentary grant	45,000		
Balance at debit of capital account	£107,030		

The expenditure during the half-year amounted to £21,921, on lines open for traffic (less a credit of £241 on working stock). Estimated further expenditure—In the current half-year, £9,745; in subsequent half-years, £4,845; total, £14,590. Capital powers and other available assets, less balance at debit of capital account, £821,048.

REVENUE.			
Subjoined is an abstract of the revenue account for the half-year ended July 31:—			
	1911.	1910.	
Passengers, parcels, etc.	£167,398	£164,935	
Goods, minerals, and live stock	97,105	99,114	
Miscellaneous receipts	4,147	3,978	
Total receipts	£268,620	£268,027	
Total expenditure	154,356	154,212	
Net receipts	£114,264	£113,815	
Balance from last half-year	11,296	10,297	
Total net revenue	£125,530	£124,112	

	1911.	1910.
Prior charges	£48,072 ..	£47,609
General renewal fund	1,500 ..	1,500
Preference dividends	45,437 ..	45,437
Ordinary dividends	*22,438 ..	*22,438
Balance to next half-year	8,083 ..	7,128
Total	£125,530 ..	£124,112

* At the rate of 1½ per cent. per annum.

The gross receipts for the past half-year show an increase of £593, the expenses an increase of £144, and the net receipts an increase of £449. The ratio of expenditure to receipts is 57.46 per cent., as against 57.53 per cent.

TRAFFIC, ETC.

Half-year ended July 31.	1911.	1910.
Passengers carried (total number)	1,055,450 ..	1,053,734
Mileage—Lines owned	485 ..	485
Foreign lines worked over	7½ ..	7½
Lines worked	21¼ ..	21¼
Total	513½ ..	513½
Train mileage—*Passenger	842,496½ ..	846,904½
Goods	513,603¼ ..	506,895¼
Total	1,358,069¾ ..	1,353,799¼

* Including tr. in mileage of lines worked.

The report states:—"The traffic receipts per railway mile, exclusive of worked lines, have yielded £537.27, as against £536.41 for the corresponding half-year. The receipts per train mile for coaching traffic have been 48.40d., as against 47.43d.; and for merchandise, mineral and live stock traffic 45.79d. as against 47.57d. The proportion of working expenses to traffic receipts has been 55.69 per cent., as against 56.58 per cent. last year. During the half-year 4,124½ more train miles were run. In addition to the replacement of an old four-coupled engine during the half-year by a new six-coupled express passenger engine, five new boilers for the large goods engines have been charged to the revenue of the half-year. The Highland Hotel, Strathpeffer, has been completed, and was opened on June 15. During the half-year 5½ miles of the line have been relaid with heavier steel rails, the whole cost having been charged to revenue."

OTTOMAN RAILWAY.

The total expenditure on capital account to June 30, 1911, amounted to £4,444,025, whilst the receipts were £4,592,447, namely, shares £20 each, 994,340; 6 per cent. preference shares, £300,000; debentures, 6 per cent. (re-payable 1907), £1,500; debentures (due 1910), £100; debentures, 5 per cent. (due 1935), £9,600; 4 per cent. debenture stock, £1,889,992; 5 per cent. debenture stock, £1,393,815. Revenue employed in reduction of 4 per cent. debenture stock for sinking fund reserve, £3,100.

The revenue account shows a gross revenue of £139,420 (in comparison with £115,039 for the corresponding half of 1910), a total expenditure of £65,549 (in comparison with £53,709), and a net profit of £73,871, which, with £54,083 from last account, and £2,764 sundries, was applied as follows:—Interest on debentures and debenture stock, £72,885; reserve for renewal of wagons, £3,250; dividend on 6 per cent. preference shares, £9,000; dividend, 8s. per share, £19,887; balance to next account, £25,606.

The report states:—"The construction of the extension of the railway beyond Dinair was actively resumed as soon as the country had recovered from the heavy snowstorms of February last, and it is anticipated that a further 22 miles will be opened to traffic in time to carry this season's produce. The traffic prospects of the current half-year are regarded as unusually favourable. Figs promise a large crop, although somewhat later in coming forward than usual, and cereals, both in the upper and lower districts of the railway, are expected to prove more abundant than last year."
