CORDOBA CENTRAL RAILWAY COMPANY.

The 25th ordinary general meeting of shareholders in the Cordoba Central Railway Co., Ltd., was held on November 22, at Winchester House, Old Broad Street, E.C., the Rt. Hon. Lord Farrer (chairman of the company) presiding.

The SECRETARY (Mr. N. Strzelecki, F.C.I.S.) having read the notice convening the meeting, and also the auditors' report,

The CHAIRMAN said: This is the first occasion upon which I have had the pleasure to address the proprietors, as I only joined the board in April last, the directors having been good enough to nominate me to a seat consequent upon the resignation of Mr. Weigall, your former chairman, who had occupied that position for eleven years. At the same time Mr. J. Van Raalte, who had been a director for sixteen years, resigned his seat. Both of these gentlemen felt a desire, on account of their advancing years, to take a less active part in the common round and daily task which railway administration implies, so that the board had no alternative but to accept their resignations, which they did with much regret in April last. I feel sure you will all desire that I should, on your behalf, thank them for their attention to the interests of the company in the past, and to express the hope that we may long have the pleasure of seeing them at our annual meetings in the future, and of having their valued support. (Hear, hear.) I would point out that this is the first time that we present accounts made up for one completed year to June 30, the accounts submitted at the last meeting having covered a period of 18 months. As the separate figures for the year previous to that which we have now met to consider do not appear in the accounts hitherto published, we have had them compiled for the purpose of comparison, and they are now shown in the present accounts. Taking both sections of your railway together, there was an increase in gross receipts of £107,010, or 12 per cent.; the expenses increased by £48,077, or 7.75 per cent., leaving a net increase of £58,333, or 22.22 per cent. Of the total increase in gross receipts, passenger traffic contributed £20,945, and goods traffic £100,913, but there was a decrease in sundry receipts of £15,027. Although the working expenses show an increase of £48,077, the rate of expenditure to gross receipts decreased from 70.52 per cent. to 67.83 per cent. The increase in locomotive transport expenses accounts for £10,000 of this total increase, consequent upon the increased cost and larger consumption of coal, and the greater volume of traffic dealt with. The cost of repairs and renewals in the case of the Central Northern Section would have been some £18,000 higher but for the suspension of debits in reduction of the 15 years suspense account, for the reason given on pages 4 and 5 of the report. With regard to our fuel bill, whereas in the case of the original line (taking the cost of coal and wood together), the increase was £7,000, in the case of the Central Northern Section the increase was over £19,000. This is partly explained by the fact that on the Central Northern Section, wood has in the past provided the bulk of the fuel, but coal is now superseding wood, as the timber forests which existed along the Central Northern Section have become exhausted, and, up to a certain point, coal is now found to be cheaper for our purposes. Owing to the failure of the last cereal harvest, freights from this country to the Argentine have for some time been

about 100 per cent. higher than when we last met, and send their freight rates with the prospect of a return freight, and rates of passenger fares were raised. The opening of the Buenos Ayres extension to through goods traffic has already commenced to prove a great benefit to our line, enabling us to secure a traffic which was hitherto out of our reach. As time goes on we may be large developments in this connection. As you are aware, the extension railway is not yet fully opened to traffic. This is due, not up to the present the traffic of the line has been restricted, as the construction of the terminal works at Buenos Ayres naturally hampers the movement of traffic, but we are informed that the terminal station in Buenos Ayres and the work of entrance are so far finished as to enable the line to be opened to through passenger traffic about January 1, 1912. It will be some time before we shall be able to lay out the goods yards, as the process of consolidation of dredged material with which the yard is filled is somewhat slow, but they are to be utilised as quickly as practicable. Goods traffic is at present dealt with at the goods yards in docks 3 and 4. With the completion of our direct connection with Buenos Ayres we commence a new era in our history. We must bear in mind that we now work and control the traffic of a trunk line of 787 miles, connecting the cities of Buenos Ayres and Tucuman with branch lines extending to 438 miles, or, in all, 1,225 miles of line. To develop the system north of Rosario without a direct independent connection with Buenos Ayres—the capital of the Argentine, and by far its most important business centre—was necessarily a slow task, hampered with many difficulties. Now that an efficient access to, and terminal facilities in, Buenos Ayres are provided, all classes of the company's business with the interior must progress at a rate which would be otherwise impossible. The trunk lines we work with their important terminals at the large cities of Rosario, Cordoba, Santiago and Tucuman—are well placed for the accommodation of the traffic from branch lines, and although we have no intention of advising you to embark upon any extensive and hazardous scheme of extensions covering a number of years ahead, we will proceed quietly and judiciously to develop your prosperity, and so to maintain your interests. You will see from the report that the net receipts of the extension railway for the twelve months amount to £75,179, and the net rental derived from the letting of the administration building in Buenos Ayres is £15,517, giving a total income for the year of £90,696. The linseed and maize crops on the extension line were a complete failure last harvest, so this result is about up to expectations for that year, but the cereal crops in that railway's districts are, so far, very promising this year. Considerable progress has been made with the important new works and improvements, and the greater part of these should be finished by June, 1912. The total amount spent, and to be spent, is estimated at £1,538,000, of which £995,000 is for account of the Central Northern Section, and £543,000 for account of the original line. As explained and approved at previous general meetings of the company, a portion of these amounts is repayable by revenue over a period of years up to 1923, the amount so repayable by the original line being estimated at £120,000, and by the Central Northern Section at £250,000. Up to June 30, 1911, the total credit by revenue in reduction of these figures was £32,365, the debits to revenue having been graduated in order to make the charge lighter during the earlier years than in the later years, when the full benefits from the expenditure will be enjoyed. When these works are completed, and more especially our new workshops, we should be in a position to deal far more economically with traffic, and to effect considerable savings in the cost of repairs by reason of the facilities provided. As is usual on all railways, the first result of an increase in traffic is a request for more rolling stock—a request which directors, as a rule, can receive with equanimity. Last year we placed orders for 35 locomotives, 450 wagons, 20 passenger coaches, and 20 brake-vans, but at the date of closing the accounts, only 50 of the wagons had been taken into service, and, consequently, the amounts paid out for hire of rolling stock were very large. As we tell you in the report, the further development of traffic in sight, consequent upon the opening in the near future of the Buenos Ayres extension to through passenger traffic, and the development which is taking place in the company's own district, makes the provision of still further rolling stock imperative. We have lately placed an order for 42 passenger coaches, and shall shortly have to place another order for locomotives and wagons. We feel that a *bona fide* demand for more rolling stock is the most healthy sign of progress that any railway can show, and that to stint any really necessary material could not be justified, since such additional stock, in normally good times, always far more than earns the interest on the capital required. The amount we still have to raise to complete all the works

contemplated, and to provide for this additional rolling stock is estimated at £550,000, and as £350,000 of that sum is required for account of the Central Northern Section, the holders of the income debenture stock have been requested to give their consent at the meeting to follow this one to the release of the balance—namely, £200,000 second debenture stock Central Northern Section. As the income debenture stockholders are entitled to attend and vote at general meetings of the company, I have no doubt that there are a good number of income stockholders in my present audience. I venture to anticipate that they, having heard what I have just said, will not withhold their consent to such a necessary expenditure. It is not proposed to issue more than about one-half of the £200,000 second debenture stock during the present financial year, and, as the issue would not be made until January next, the additional interest charge to be borne by the section and debited in the current year's accounts will amount to some £3,000 or £4,000 only. In pursuance of the policy announced by the directors in December, 1909, we propose, after transferring £10,458 to reserve, and making up the dividends to 5 per cent. on the preference and ordinary stocks, to carry forward the balance of the net revenue of the Original Line—namely, £42,200. The reserve fund of the Original Line is thus raised to £73,928, and with the £42,200 carried forward there will be on hand £116,128 of undistributed revenue. The balance of net revenue of the Central Northern Section suffices for the payment of a dividend of 2 per cent. on the income debenture stock, and leaves £6,070 to be carried forward to their credit. The dividend now recommended compares with £3 10s. per cent. paid for the 18 months ended June 30, 1910, which was equivalent to £2 6s. 8d. per annum, but inasmuch as the net revenue for that period benefited to the extent of £60,961 from the proceeds of the sale of rescission bonds received from the Argentine Government in commutation of their guarantee, the actual rate of interest on the income debenture stock derived from traffic earnings was then about 21s. per cent. per annum only. As we have received numerous enquiries from income debenture stockholders as to why the interim dividends of 1 per cent. made on the income stock for nine years past have been discontinued, I wish to explain that the rescission bonds, out of which such interim payments were made, came to an end in June, 1910, and that, consequently, until the earnings of the Central Northern Section show a further improvement, the payment of interim dividends on the income debenture stock cannot be continued. In January last we made an issue of £500,000 second debenture stock (Original Line) towards the cost of the new works and improvements being carried out on that line, to pay for new rolling stock, and to finance the Buenos Ayres Extension Contract and Interest Guarantee. To complete these works and pay for the additional rolling stock required for account of the original line, it will be necessary to issue the balance—namely, £200,000, of the £1,000,000 second debenture stock (original line) created, but this operation can be delayed for a time.

Now I daresay you would like to know how we have progressed since June 30 last, the date of our accounts already in your hands, and I will therefore give you the following figures: From July 1 to October 30 the gross receipts amount to £405,038, an increase of £29,719; the expenses show an increase of £23,146 and the net receipts an increase of £6,573. I have already explained how it is that our coal cost us so much more than usual last year, and this has since become accentuated, freights having again risen. For our last twelve months' supply the average rate of freight was 16s. 3d. per ton, as compared with 12s. 3d. per ton for the previous twelve months, an increase of 4s. per ton; since March last we have had to pay as much as 21s. 9d. per ton, and as the coal then, and since, shipped is now being used and charged out, our locomotive transport expenses are, consequently, higher. Wages in the Argentine are, and have been, on the upward grade—an experience not confined to that country. We have experienced a good sugar harvest this season, which fact has been reflected in the receipts of the Central Northern Section since July 1, and the latest advices we have with regard to the coming cereal crops are wholly favourable, as the following cable, which we have just received, will show:—"Crops in excellent condition and prospects for coming harvest are excellent. Reaping of linseed expected to commence next week. Wheat early in December. Outlook generally is very favourable. Owing to a succession of heavy rains, entrance works Buenos Ayres extension have been seriously delayed, and it will not be possible to open line to through passenger service before January 1, 1912." As we tell you in the report, Mr. Munro, after acting as our general manager for 22 years, felt a desire to take up a less arduous position, and during his recent visit to this country the board decided to accept his resignation, to take effect upon the appointment of a new

manager. This arrangement was come to in March last, but it is only recently that the board were able to fix upon a suitable successor for the post. Our new manager, Mr. Robert Stuart, has had wide experience of Argentine railways, and not only constructed, but managed for some years, our North West Argentine extension, from which we derive much of our most valuable traffic. We have had the advantage of his presence in London, and he is now well on his way to the Argentine, fully alive to the requirements and policy of our metre-gauge group of railways and of our wishes. I now beg to move:—"That the report of the directors and the statement of accounts now presented be and they are hereby received and adopted," and after this has been seconded I shall be glad to answer any questions which you may desire to ask.

Mr. G. W. HOGHTON seconded the motion, which was carried unanimously.

Mr. WALLER HENTY moved that the Rt. Hon. Lord Farrer and Mr. Follett Holt be elected debenture stockholders' directors.

Mr. G. W. HOGHTON seconded the motion, which was agreed to.

The CHAIRMAN then moved that Mr. Philip Norman be re-elected a shareholders' director.

Mr. G. W. HOGHTON seconded the motion, which was also agreed to.

The CHAIRMAN next proposed that Mr. E. B. T. Studd be re-elected a director as representing the debenture stockholders.

Mr. RICHARD POPKISS seconded the motion, which was agreed to.

Mr. W. H. SKEEL then moved that the retiring auditors (Messrs. Turquand, Youngs and Co.) be re-appointed for the ensuing year at the remuneration of £125.

Mr. ATKINSON seconded the motion, which was agreed to unanimously.

Mr. HARRISON asked if any information could be given with regard to the Extension. Those who were inside knew all about matters, but it would be a grain of comfort to those outside if they could know that this company was about to do something in the way of conserving their interests.

The CHAIRMAN said that negotiations were proceeding at the present time. It was rather a complicated matter, but the proprietors might rest assured that the directors were devoting a great deal of attention to the question, but at the present moment the negotiations were not advanced sufficiently to enable him to give any more information. Mr. Holt, who had recently returned from the Argentine, assured the directors that the Extension was likely to earn good traffic for the company.

Mr. M. VAN RAALTE said he should like to thank the Chairman for the way in which he had laid the whole position of the company before them. He had not the slightest doubt himself that they would receive excellent traffics from the Extension, but, of course, they were dependent largely upon the cereal crops. As regarded the future of the line, he was of the same opinion as he had been all along—namely, that they had a very fine property. He hoped the new manager who had gone out would work in every way as the present board wished, and he had not the slightest doubt he would do so. No doubt he would have some difficulties at the beginning, because there were always some people who raised objections, but at the same time he had not the slightest doubt that everything would be settled in a satisfactory manner. (Hear, hear.) As regarded the future of the Extension, he had not the slightest doubt that it would be a good one, and if only some arrangement could be made between the Cordoba Central and the Extension debenture-holders, he believed everything would work harmoniously. He concluded by moving a vote of thanks to the chairman and directors.

A shareholder seconded the motion, which was unanimously approved.

The CHAIRMAN said that it was always a great pleasure to hear Mr. Van Raalte on South American railways, and he thought they would all go away happier knowing that that gentleman held a good idea as to the future of the undertaking. He desired to thank him very much for his remarks. Personally, he (the chairman) was quite a tyro in this matter, but he believed that Mr. Houghton was the only person who understood every figure connected with the company, and he was sure that with his able advice they would all do the best they could for all parties in connection with this complicated piece of machinery.

The proceedings then terminated.

INCOME DEBENTURE STOCKHOLDERS.

This meeting was held immediately at the close of the ordinary general meeting; the Right Hon. Lord Farrer (chairman of the company) presided.

The SECRETARY, Mr. N. STEZLECK, F.C.I.S., called the meeting to order and convened the meeting.

The CHAIRMAN: Gentlemen, at a general meeting of the income debenture stockholders, held on February 26, 1908, a resolution was passed sanctioning and consenting to the creation by the company of £1,200,000 5 per cent. second debenture stock (Central Northern Section) ranking as a charge upon the Central Northern Section in priority to the income debenture stock. It was, however, stipulated that not more than £200,000 of such second debenture stock should be issued without the previous consent of a resolution passed by a simple majority at a meeting of the income debenture stockholders. An issue of £200,000 of the stock was made in 1909. The purposes for which capital it was the proceeds were the improvement of the permanent way by laying down rails, and an additional number of sleepers were required for purchase of land at Alta Cordoba, and the erection and equipment thereon of new workshops; the erection of new and stronger bridges at various points on the section where the old bridges were too light to carry the heavier locomotives then being put into service; and the construction of branch lines, &c. Since then, however, further expenditure, to a considerable amount, has been found to be necessary, the most important required being for rolling stock. To meet all the demands of the management in this particular connection £270,000 in all is to be spent. Important alterations of, and additions to, the works originally contemplated have been found to be necessary to enable the management to deal with the growing traffic of the section. These may be summarised under the headings of new stations, further improvements to the permanent way, fencing and the installation of a system of block signals (both ordered by the Government). The estimated cost of all these works is, in round figures, £995,000, towards which we have so far provided £645,000, leaving £350,000 still to be provided. Of the total of £995,000 an amount of £250,000 is repayable by revenue over a period of years terminating in 1923, but nearly all the cost must first be financed out of capital. The income debenture stockholders are, accordingly, now requested to give their consent to the issue, as and when required, of the balance—namely, £600,000—of the second debenture stock (Central Northern Section, of which about half only is required for present purposes, or will be issued during the current year. I would here like to mention that the late general manager, Mr. Munro, tells us in his last report that the improvements of the permanent way carried out have been of immense benefit to the line, and had they not been effected it would have been impossible to haul the traffic of the past twelve months without incurring exceedingly heavy increased maintenance charges. The new workshops, which it is expected will be completed by June 30 next, will enable the company to deal much more expeditiously and economically with repairs than has been possible for a number of years, as the present workshops are now quite inadequate for the purpose. Large sums have had to be paid for the hire of rolling stock, much in excess of the interest payable on the capital required for the purpose of new stock, and the lack of adequate facilities for the handling of traffic at the large terminal stations has also added considerably to the working expenses. I think I may, therefore, safely assure you that the interest on the additional capital, as disbursed, and which you are now asked to release, will be more than met by the resulting economies in expenditure, and the board have no hesitation in recommending the income stockholders—who have four representatives on the directorate—to give the necessary sanction. I do not know that I can usefully say more on the subject, but if any stockholders desire information on any particular point I will endeavour to supply it after the resolution, which I am now about to move, has been seconded. I beg to move:—"That this meeting of the holders of the income debenture stock (Central Northern Section) of the Cordoba Central Railway Company, Limited, hereby sanctions and consents to the issue by the company of 5 per cent. second debenture stock (Central Northern Section) to an amount in excess of £600,000, but not exceeding £1,200,000."

Mr. G. W. HOUGHTON seconded the resolution.

Mr. SCOBEL asked if the chairman could tell them about the item of £6,070 carried to the credit of debenture holders on the making up of the accounts. Would the chairman tell them what sum was carried to their credit in the previous year?

Mr. BOOR said a great many Argentine proprietors had been somewhat alarmed at the enormous capital outlay which was going on from time to time in these railways. They all recognised that progress was the essence of success, and that in order to secure progress it was necessary to spend capital; but what he wanted to ask the board, was that capital being expended to the best purpose? He mixed a good deal with people from the Argentine, and he had heard a good many warning notes sounded by them with regard to excessive expenditure

and that they were afraid of money in the Argentine. Argentine railway proprietors. He thought it might not be out of place, before he proposed the additional capital, to draw attention to the fact that there was no ground for the reports about, not concerning this company's line in particular, but other lines, that expenditure on Argentine railways was on a never-ending scale, and that it would be a very long time before that expenditure would meet with reward. As a holder of income debenture stock, he went into this company, as an investor, to find that it was more or less of a speculative nature. The stock was then very fairly low, and for the first year or two they had had to go away with a very small dividend as compared with what they used to have, but, according to the returns now issued, it would be seen they were on the up-grade. It was not a big up-grade, but, still, the line showed a progressive character. It did not represent a very big margin from which to pay the interest on the debenture stock which came in front of the income debenture stock. He had a very high opinion of the board, and he was simply letting them know what the proprietors heard outside as to what was going on. With regard to the question of management, he did not desire to criticise the management, but he did know from Argentine traders that the railways out there, and especially those of the older type, were managed in such a way as not to create a demand for traffic. The home railways had been through a very serious crisis, and the managers of the English railways had entirely altered the conditions of working. Here a trader had only to write to the manager and receive a courteous reply at once. He did not know whether it was right or wrong, but he was told that the English railways in the Argentine adopted the attitude which was originally adopted by the English railways—namely, "I am the king of the castle, you can take it or leave it, as you like." Now, with this proposed large increase of capital, what they wanted to see was progressive management. He did not wish to lay stress upon the fact, but merely desired to draw attention to the point, and he trusted that if any one of the directors should be going out to the Argentine, he would give special attention to the question of management. He desired to support the board in every respect, and he fully realised that the proposed issue was necessary. He thought that, as compared with other companies, the working expenses of this company were rather high, and he trusted that the directors would give this matter their attention.

The CHAIRMAN said he was sure he was speaking for the whole board when he said that the proprietors might rest assured that the question of economy in capital expenditure was one which the directors had thoroughly at heart, and they were as fully alive as any proprietor could be to see the capital account was not in debit. At the same time, it must be understood that the railway must have fresh capital, and as to that capital being expended properly, he only wished they could have had the pleasure of introducing Mr. Stuart, their new manager, to the proprietors on this occasion, because he was sure that the shareholders would be satisfied that he was a man who would thoroughly attend to the question of economical management.

Mr. HOUGHTON said with regard to the question of carry forward on the Central Northern Section, that the balance carried forward last year was £2,307 as against £6,070 to be carried forward this year.

The resolution was then put and agreed to unanimously.

The proceedings then terminated.

Bengal Doonars Railway.—The interim report for the half-year ended June 30, 1911, states that the gross earnings amounted to Rs.5,28,000, an increase of Rs.18,120 compared with the corresponding period. Working expenses were Rs.2,16,111, an increase of Rs.21,610; net earnings (less Indian income-tax) Rs.3,01,740, a decrease of Rs.3,393 (in sterling £20,316, a decrease of £226). To this sum of £20,316 must be added £9,266 brought forward from the previous half-year, and £100 from interest and exchange adjustment, making a total of £29,682. The preference dividend paid in August last absorbed £7,200, leaving a balance of £22,482. From this amount the board have declared an interim dividend on the ordinary stock of 2 per cent., leaving £14,482 to be carried forward. The coaching receipts increased by Rs.8,171 and the goods receipts by Rs.12,001, as compared with the corresponding period of 1910. The working expenses were, however, higher than in the previous year, more having been spent on renewal of sleepers and in making good the damage caused by floods; heavier repairs to the carriage and wagon stock were also necessary. The result has been a small reduction of Rs.3,393 in the net earnings. The earnings for the current half-year have up to date been satisfactory.

MADRAS AND SOUTHERN MAHRATTA RAILWAY.

The 55th ordinary general meeting of the proprietors was held on Wednesday, November 22, at the offices, 91, York Street, Westminster, S.W., Col. Sir William S. S. Bisset, R.E., K.C.I.E. (chairman of the company) presiding.

The SECRETARY (Lieut.-Col. H. Bonham-Carter, R.E.), having read the notice convening the meeting and the auditors' report,

The CHAIRMAN, in moving the adoption of the report and accounts, said:—

GENTLEMEN,—The funds for additional capital outlay advanced by the Secretary of State since our fresh contract commenced amounted on June 30, 1911, to £1,301,373, which amount, under a special provision in our contract, ranked for participation in the division of surplus profits. To repay these advances and provide for further capital outlay, the board propose to make during next year, or as soon as convenient, an issue of debenture stock, and, as mentioned in the report, we ask for the authority of the stockholders to make this issue. I shall return to the subject later on. The principal works in progress on which expenditure was incurred during the half-year were, on the broad gauge section, the extension of the workshops at Perambur, and the strengthening of bridges and permanent way, the total outlay on these and other minor works amounting to Rs.4,49,833; also Rs.10,52,055 were spent upon rolling stock, including the half-year's expenditure on 17 engines, 85 carriages and brake vans, a steam crane, and other items. On the metre gauge section, expenditure on works was incurred on the Kanivehalli Manganese branch, and on the strengthening of permanent way and on other minor works, the outlay on these items being Rs.2,19,734; while Rs.3,87,912 were spent upon rolling stock, including expenditure on 17 additional engines, 52 bogie carriages, 50 brake vans, 336 covered goods wagons, 19 water tanks and minor items.

GROSS EARNINGS.

The gross earnings of the company's and State lines for the half-year ended with June, 1911, were almost the same as the corresponding period, there being a slight increase of Rs.39,839. The working expenses were Rs.43,625 less and the net earnings Rs.83,464 more. The gross earnings amounted to Rs.1,71,94,082, of which the broad gauge lines contributed Rs.1,00,03,925, and the metre gauge lines Rs.71,90,157. The coaching traffic on the company's and State lines shows a decrease of Rs.1,21,845. On the broad gauge there was an increase of nearly 5 per cent. in the number of passengers carried in the upper classes and an increase of nearly 2 per cent. in receipts; and in the third class an increase of 79,435 or 1.13 per cent. in numbers, and Rs.5,314 or .17 per cent. in receipts. These increases, as explained in paragraph 16, were absorbed by a falling off of other items of traffic, mainly parcels. On the metre gauge there was a decrease in the upper classes of 3 per cent. in the number of passengers carried, and an increase of 1.4 per cent. in the receipts, while in the third class there was a decrease of 340,625, or 5.88 per cent. in the number and Rs.1,19,773 or 5.68 per cent. in receipts. The passenger traffic on both sections, especially on the metre gauge section, was prejudicially affected by a serious epidemic of plague which prevailed throughout a considerable extent of the country, and this cause fully accounts for the fall in our passenger receipts. The prevalence of plague over a large extent of country not only prevents pilgrims attending periodical gatherings, but also results in the public generally travelling less to and from and through the affected districts. Turning to the goods traffic on the broad gauge, general merchandise produced Rs.49,23,247, against Rs.48,22,490, an increase of Rs.1,00,757 or 2 per cent., while on the metre gauge lines the receipts from general merchandise were Rs.44,23,498, against Rs.41,19,847, an increase of Rs.3,03,651 or over 7 per cent. Taking both sections together the increase was Rs.4,04,408. With the favourable harvests of the past season we might ordinarily have expected even better results during the half-year, but owing to the late rains in 1910, the crops, and especially the cotton crop, were late in coming into the market, with the result that a very considerable traffic, which in ordinary seasons would have been handled before June 30, was not received until after the closing of the half-year. The effects of this are reflected in the returns for the month of July, which show a very substantial increase over the corresponding period of 1910. Of the commodities carried for the public, grain and pulse has the most important bearing on our goods receipts, as this traffic contributes more than one-fifth of the total earnings under "general merchandise." In the half-year under review there was a falling off of just over two lakhs in receipts from food grains, owing to smaller quantities having been imported into

districts which in the previous year had to purchase supplies owing to the failure of their own crops.

WORKING EXPENSES.

The cost of working the company's and States lines during the period amounted to 53.17 per cent. of the gross earnings as against 53.55 per cent. in the corresponding half of the year 1910, a decrease of .38 per cent. On the entire system, which includes seven more or less important railways worked by the company, the working expenses during the half-year amounted to Rs.1,04,24,237 or 53.24 per cent. of the gross earnings, as compared with Rs.1,05,71,027 or 53.52 per cent. for the corresponding half-year, a decrease of .28 in the percentage. The main factors contributing to this result are reduced charges for carriage of coal and stores for the railway; smaller expenditure on coal, due to a lighter train mileage and more favourable rates; reduced charges in connection with the interchange of stock with other railways, the result of revised rates introduced from January 1, 1911; and smaller compensation payments, which were somewhat exceptional in the first half of 1910.

NET REVENUE.

On page 29 of the report, the net revenue account for the half-year shows the company's share of the net earnings to be Rs.21,33,031, which, after deducting the guaranteed interest paid to stockholders on July 1, 1911, leaves a balance of Rs.8,20,531, or equal at 1s. 4d. per rupee to £54,702 to be carried forward towards the company's share of surplus profits for the year 1911. From the Mysore State Railways, the company's share of the profits for the first half of the year 1911 has been already received and remitted home, realising £2,274.

FORECAST OF THE RESULTS OF THE CURRENT HALF-YEAR

I now turn to the prospects of the current half-year, which I am sure you will agree with me are satisfactory. From the forecast of the results which our agent has just telegraphed home, we learn that he anticipates that the gross earnings of our own line will be Rs.1,50,00,000, and the working expenses Rs.91,20,000, leaving net earnings of Rs.58,80,000. After deducting interest charges, etc., the company's share of the surplus is estimated at about Rs.1,75,000. For the previous corresponding half-year you will doubtless remember the company's share of the net earnings just fell short of the guaranteed interest. From the Mysore State Railways the agent expects the company's share of the surplus profits to be about £1,700, which, added to the amount received for the first half of the year, gives the total of, say, £4,000. If these estimates be realised, as we think they will be, the company's share of the divisible net earnings for the year 1911 will be about £66,000 from the company's lines, or, including the Mysore State Railway, say, £70,000. The stockholders' revenue account will thus, we expect, be credited with £70,000 in the accounts for the present and ensuing half-years, and with this prospect the board feel that they will have your approval to the proposal made in the report that a dividend of 2 per cent., or at the rate of 4 per cent. per annum, be paid on January 1 next in anticipation of the results of the year.

PROPOSED ISSUE OF DEBENTURES.

I now come to the proposed issue of debentures referred to in the last paragraph of the report. As mentioned in my opening remarks on the capital expenditure, the Secretary of State's advances to June 30, 1911, amounted to £1,301,373, and the expenditure for the current half-year will probably bring up this figure to not far short of 1½ millions by December 31, 1911. To repay these advances and provide for further capital outlay the board ask for powers to issue debentures or debenture stock to an amount not exceeding £3,000,000, having ascertained that the Secretary of State will agree to such an issue, if it be found practicable, on terms which it would be prudent to sanction, having regard to all the interests involved. The Secretary of State has moreover agreed to credit to the undertaking in each half-year a sum equal to the guaranteed interest paid on the average amount, if any, held by him during each half-year as the unexpended proceeds of an issue of such debentures for the purposes of the undertaking, so that whatever sum is raised in excess of the immediate requirements for capital expenditure, the undertaking will only be charged with the interest on the actual amount expended. (Hear, hear.)

GENERAL.

A breach, 300 feet in length, occurred on the north east line on October 16, owing to the very heavy rain which fell on that and the previous day. We hear from our agent that ten and a half inches were recorded at Ongole in 36 hours, and that the rainfall was still heavier further inland, as much as 17 inches falling 18 miles further west. Through communication was interrupted, and the mails and passengers had to be trans-

A vote of thanks to the company's agent and staff in India was proposed by the CHAIRMAN, seconded by Mr. GEORGE HENDERSTON, C.I.E., and carried unanimously, and with a vote of thanks to the chairman and directors, the proceedings terminated.

BENGAL AND NORTH WESTERN RAILWAY.

The fifty-fifth half-yearly ordinary general meeting of the proprietors was held on Tuesday, November 21, at the offices, 237, Gresham House, Old Broad Street, E.C., Col. T. GRACEY, C.S.I., R.E. (chairman of the company), presiding.

The SECRETARY (Mr. J. Lightfoot) having read the notice convening the meeting and the auditors' report to the shareholders,

The CHAIRMAN said: Gentleman,—Before beginning the business of the meeting, I am sorry to have to report to you the great loss the company have sustained in the death of Mr. Rawlins, our solicitor, who has been connected with the company since its first inception. Mr. Rawlins always gave the most careful attention to the business of the company, and your directors have lost in him a trusted friend and adviser.

You will, I suppose, take the report as read. The past half-year has been very prosperous, the gross earnings of the open system having been Rs.1,02,36,000, or about 6 lakhs more than in the corresponding period of 1910. On the other hand, the working expenses have been about Rs. 2½ lakhs more, so that the net earnings of 64½ lakhs show an improvement of 3½ lakhs. Your share is nearly 34 lakhs, or 3 lakhs more than in 1910.

The increase in the gross earnings is fairly evenly distributed between passengers and goods. The number of passengers carried, as compared with the same half of 1910, show an increase of about 700,000, almost entirely confined to the lowest class, whilst the increase in the tonnage of general merchandise carried has been about 70,000 tons, due to a better season. The statement given at the bottom of page 4 of the report shows the very remarkable improvement in the passenger traffic since 1900, the open mileage having increased by 75 per cent., whilst the number of persons carried has increased by 100 per cent., and this has been almost entirely in the lowest class. The number of first-class passengers carried is, if anything, decreasing; the second-class shows very little improvement, and the slightly larger numbers carried in the intermediate class do not justify the accommodation that is provided for them in the trains. The statistics published by the Railway Board show that for each hundred seats provided in the trains on your railway, on the average less than 2 were occupied in the first, about 5 in the second, 10 in the intermediate, and 45 in the lowest class. It is therefore obvious that it is useless to provide so much upper-class accommodation, and that one of the classes should be abolished. The conditions are much the same on your railway as on the Robilkund and Kumaon Railway; the poorer passengers must be carried at rates varying from $\frac{1}{8}$ to $\frac{1}{4}$ of a penny per mile, and the richer passengers will not pay extra for the superior accommodation provided for them. The position is, in fact, much the same as in England, where most of the large railways are abolishing the second-class.

When I addressed you at this time last year, I told you that the rains of the previous season had been over-abundant, and that considerable damage had been done to the embankments and bridges of the railway. A large portion of the damages has been repaired out of current revenue, which accounts for the large excess in the expenditure under maintenance, whilst the decreased outlay in locomotive expenditure was due to the price of coal being lower. On the whole, the railway was worked for the very low percentage of 37 per cent. of the gross earnings.

Last rains were everywhere light, and in some places insufficient, and consequently the floods caused no damage. Unfortunately, however, we have to make a diversion of the line, about 12 miles in length, just above Sonapur, where the Ganges has been steadily cutting in upon the railway for a good many years back. The plans and estimates for this diversion are now being prepared, and the work will cost a good deal of money. Provision is being made for this expenditure, and the prospects of the current half-year are satisfactory. There is every prospect of your getting your usual dividend and bonus when we next meet.

No doubt you will have seen in the papers that we made proposals to the Government for improving the position of your staff in India. Those proposals were intended to make better provision for the whole of the company's staff on retirement after long service, and involved an increased contribution by the company to the Provident Fund, and a grant of half a month's pay on retirement for each completed year of service to every member of the staff who had completed 15 years' service or over. The Government have approved of the latter proposal for the inferior and subordinate staff, but have excluded the superior staff from the benefits given. The question of making increased grants to the Provident Fund is still under their consideration. We shall continue to urge on the Government that the full benefits that we have proposed to give the staff should be granted in full, as the rise of prices about which you all hear so much nowadays is even greater in India than in England.

We hope that the four large bridges which we have in hand will be completed before the end of the current working season, and that we shall then have a full staff available for pushing on with the construction of the Thawe-Captainganj extension of your own line, and the Somastipur-Khagaria extension of the State line, on both of which some progress has been made.

The Board have deputed Mr. Izat and myself to go to India and endeavour to settle some outstanding disputes with the Government of India. We shall, of course, also take the opportunity to inspect your railways.

I will now move:—"That the report of the directors, dated November 11, 1911, together with the audited statement of accounts and balance-sheet for half-year ended June 30, 1911, be and they are hereby received, approved and adopted."

Mr. LEONARD L. COHEN: I beg to second that resolution.

The CHAIRMAN: If any gentleman wishes to ask any questions I shall be very glad to endeavour to answer them.

Mr. E. WINMILL: I should like to draw attention to an item in the locomotive expenses under the heading of "unclassified and miscellaneous." The amount is about one-sixth of the whole of the expenses in that department. It would be interesting, I think, if we knew how much of that is what is called "unclassified." The remark I just made will have reference to the number of locomotives shown—90 passenger, and 232 goods. Looking to the joint revenue account on page 11, the goods receipts appear to be about 10 per cent. higher than the coaching receipts, and we appear to have about 150 more engines for goods than for passengers. It would be as well, I think, to have the mileage of both classes. It is rather a general thing in most railway accounts—certainly in England—to give the two classes. I think the report is very satisfactory, and the board are to be congratulated upon it.

The CHAIRMAN: In regard to the unclassified expenditure, under that head is included the cost of the carriage of coal on our line. The cost of fuel, as shown in the accounts, is the cost delivered on our own line. The whole movement of the coal on our own line is debited to the locomotive department by book entry, and is shown in the accounts as "unclassified expenditure." The accounts are prepared exactly in the form which is laid down by the Government. We have no power to alter them. In regard to the engines, most of them are used for mixed trains, and most of the passengers are carried in mixed trains. The 90 passenger engines are only used on our main line. The others are run with goods and passengers. The fast passenger trains require special passenger engines, and the others do not.

The resolution was then put to the vote, and carried unanimously.

The CHAIRMAN: I will further move:—"That the payment of a dividend for the half-year ended June 30, 1911, on the ordinary stock be at the rate of £3 10s. per cent. for the half-year, free of Indian, but subject to English income-tax, and the same is hereby sanctioned and authorised to be declared."

Col. Sir Wm. BISSET, K.C.I.E., R.E.: I have much pleasure, gentlemen, in seconding that resolution.

The resolution was put, and agreed to *nem. con.*

Mr. E. WINMILL: I shall be very pleased to propose a hearty vote of thanks to the staff for their services. I don't know whether it is usual to include the board in the vote, but I think we are indebted to the board for their excellent management of our line during the past period we are considering. The accounts, too, on the whole, I think are very satisfactory indeed. They must have entailed a great deal of ability and energy on the part of our board. (Hear, hear.)

Col. H. L. MITCHELL: I have much pleasure in seconding the resolution.

The resolution was put, and carried with acclamation.

The CHAIRMAN: That, gentlemen, concludes the business of our meeting.

The proceedings then terminated.

Bolivar Railway.—Mr. W. Keswick, presiding at the ordinary general meeting, held in 1, Broad Street Place, E.C., on Tuesday, said that the result of the year's operations could not be regarded as other than satisfactory, and showed that the property was one of increasing value. The increase in earnings had taken place without any very material addition to expenditure. The earnings for the first four months of the year now current showed an increase over the corresponding period of last year of £4,629. It was proposed to extend the line for about thirty miles to San Felipe, at a cost of from £2,200 to £2,500 per mile. It was also proposed to make a start with developing the resources of the property by pushing forward the cultivation of products for which they could find a market. The report was adopted, and a dividend of 5 per cent. on the preference shares was declared.

INTEROCEANIC RAILWAY OF MEXICO ACAPULCO TO VERA CRUZ.

The 24th ordinary general meeting of the Society was held on Monday, November 24, at Windsor House, 10, Rue de la Paix, E.C. 4. Mr. Arthur Hill (conductor of the choir) presiding.

The SECRETARY (Mr. N. Szolucki, E.O. USA, member) read the notice convening the meeting and the report of the Secretary.

£8,741,000. Since December 1913, however, the price of oil has fallen considerably, and during the last month of the year it was at its lowest point since 1911. The average price paid for oil by the railway has been 16s. 6d. per ton, compared with 20s. 6d. in 1913. As regards the cost of the coal burnt, the quantity used to produce electricity has increased from 1,000 tons in 1913 to nearly 1,500 tons in 1914, but as the coal burned is of a better quality than in 1913, the amount required has not increased so much as the increase in quantity would lead one to expect. I am confident that we have more than enough of the supply of all fuels for next year 1914; the domestic demand being sufficient, according to our calculations, for our requirements up to June of 1915, after which it is expected that any additional quantity required will be obtainable from the Mexican oil districts at reasonable prices. More than half of the locomotives have already been converted from coal burning to oil, and the remainder will be finished by the end of this year. The cost of transport with oil as fuel will be considerably lower than with coal, and as our coal bill last year amounted to some £122,000, the economy should be substantial. Our latest advices are to the effect that the political situation in Mexico has improved, and that complete tranquillity will shortly be restored. General traffic prospects are favourable; the crops are reported to be in excellent condition, and we may look for a substantial increase in traffics as soon as normal conditions are established. (Hear, hear.) From July 1 to September 30, the latest date to which we have received the complete figures, the gross receipts show an increase of £55,000, whilst the net earnings have decreased by £3,830. This is accounted for by the fact that during those months revenue has been debited with the £6,000, the balance of the expenditure incurred in repairing the damage caused during the disturbances. I now beg to move :— "That the report of the directors and statement of accounts now presented be, and they are hereby received and adopted." After that has been seconded I shall be glad to answer any questions that any of the shareholders may wish to put.

Mr. H. T. HODGSON seconded the motion, which, in the absence of questions, was carried unanimously.

The CHURMAN then moved: "That the best thanks of the proprietors be accorded to Mr. E. N. Brown and his staff in Mexico for their able management of the company's property."

Mr. J. B. CORBRAY seconded the resolution, which was unanimously agreed to.

Mr. G. W. HOCHSTETTER then proposed :—"That Mr. Arthur Hill be, and he is hereby re-elected a director of the company." He remarked that the chairman devoted a great deal of time and attention to the affairs of the company.

Mr. H. T. Hodges seconded the motion, which was unanimously approved.

Western Railway of Havana. Mr. J. Wight T. Ald, residing at 21, North Street, General Reading held in River Plate House, E.C., on Wednesday, said the meeting was called to consider a scheme for the merging of the company's interests with those of the United Railways of Havana. They might have indulged in a policy of frustration; they could have worked out a scheme of invasion of the yards served by the United Railways. The directors felt that they could not honestly recommend such a course. Having very carefully considered and dismissed as uneconomical and undesirable a programme of counter invasion, they had endeavoured to bring about some form of working agreement which would permanently avoid the clashing of interests. Looking at the matter all round, they concluded that fusion of interests was preferable to a working agreement. The assimilation of interests and the working of the two railways under one control must make for increased efficiency, and result in considerable economies. No resolution was necessary at that meeting. Only individual assent was required, and the directors had intimations of assent to the extent of £700,000, out of a share capital of £1,100,000. Several shareholders expressed their approval of the scheme.

ARGENTINE NORTH-EASTERN RAILWAY.

The accounts for the year ended June 30, 1911, show that gross earnings amounted to £293,023, as compared with £245,534 for the previous year, and working expenses £104,758, against £149,281, leaving a net profit of £128,265, computed with £105,253. The receipts show an increase of £47,489 arising from passengers, goods, oranges and live stock. The increase in working expenses—viz., £24,477, arises from the additional mileage due to the larger traffic, and to the opening of the extensions, but the percentage of expenses to receipts has been reduced from 57.13 to 36.23. The increase in profit is £23,012. The balance of the net revenue account includes interest on the Government bonds, etc., and £4,289 brought forward from the previous year. After deduction of the 5 per cent. interest on the A debentures and A debenture stock, and the application of £10,000 to the renewal fund, there remains a balance of £76,965, out of which the directors have been able to declare the full 5 per cent. upon the B debentures and B debenture stock, payable on the 24th inst., less income-tax leaving the amount of £27,354 to be carried forward.

The report states:—"The branch from San Diego to Goya is complete. The Mole at Goya is now in course of construction. The extension to Posadas was provisionally opened for traffic as far as Apóstles in August, 1910, and on May 1, 1911, also provisionally, as far as the terminus at Posadas. The first ferry boat (named the "Roque Saenz Peña," after the President of the Argentine Republic), designed for the eventual train-ferry work at Posadas, has sailed for the Argentine. The staging for the running of the trains on and off the ferry-boats is in the process of construction. The newly-opened extension to Posadas is already giving results that promise well for the future. The southern extensions consist of (A) a line, about 85 miles in length, from Concordia, the present southern terminus, to Concepcion del Uruguay, a port at which ocean-going steamers load and discharge; and (B) a branch, about 60 miles in length, from Concordia westwards to Villa Federal in the interior of Entre Rios. Work on the Uruguay extension was started in July—rails and other material have been shipped. Bridgework, locomotives, coaches and wagons have been ordered. This expenditure necessarily will involve the raising of additional capital. With this object, an extraordinary general meeting will be convened shortly, when the estimates shall have been further considered in detail."

BRITISH COLUMBIA ELECTRIC RAILWAY.

The report of the directors for the twelve months to June 30, 1911, states that the gross receipts show an increase of \$1,323,028, or 43 per cent., and the net earnings, including income from investments and subsidiaries, and after charging renewals, show an increase of \$369,521, or 34 per cent., over the preceding year. From June 30, the close of the financial year under review, up to September 30 last, there has been a still further increase in gross earnings of \$401,783, or 45 per cent., and in net earnings of \$63,282, or 17 per cent. The following charges have been made against the revenue account of the year, namely:—Provision for renewals maintenance (from which £32,022 has been deducted for adjustments and expenditure on renewals during the year), £76,136; amount written off old steam plant, £10,000; amount added to capital amortisation fund, £2,183. The net profit for the year, after making the above deductions, amounts to £281,126, making, with the balance brought forward from last year of £5,607, a total of £286,733. After deducting for interest on debentures and debenture stock to June 30, 1911, £82,671; dividends already paid on the 5 per cent. cumulative perpetual preference stock for the year ended June 30, 1911, £35,000; on the preferred ordinary stock for the year ended June 30, 1911, £42,000; and on the deferred ordinary stock for the six months to December 31, 1910, £32,000; there is available for further distribution and reserves, £95,062. From this the directors have decided to recommend the payment of a dividend on the deferred ordinary stock at the rate of 8 per cent. per annum for the six months to June 30, 1911, making 8 per cent. for the year, absorbing £32,000; to transfer to reserve fund £56,472; and to carry forward to next account, £6,590. There has been deducted from the reserve fund the sum of £20,862, representing the difference between the net amount realised by, and the par value of, £600,000 4½ per cent. debenture stock, issued in March last, and there has been added to the reserve fund £53,994, representing the premium on £600,000 new capital, less expenses, issued in November, 1910. After the transfer now recommended by the directors as above, the reserve fund will amount to £337,000. During the year the company has increased the track mileage from 141 to 233 miles, and the number of cars from 427 to 647. The number of passengers

carried during the year was 46,541,448, an increase for the year of 12,064,644. The number of lamps in use at June 30, 1911, was 563,542, an increase for the year of 124,227. A satisfactory feature of the year's business is the growth of the revenue received from the new suburban lines. Considerable progress has been made with the construction of the dam at Coquitlam, an undertaking which is the largest of its kind in Canada. This dam, when completed, will be 60 ft. high and contain about 554,000 cubic yards of earth work, and by its means the level of Coquitlam Lake will be raised 60 ft., rendering 54,000 million imperial gallons of water storage available for power purposes. The enlargement of the tunnel between Lake Coquitlam and Lake Buntzen, which has been in progress during the last two years, has been successfully completed. This tunnel, 12,775 ft. in length, originally had a cross sectional area of about 81 square feet, and has been enlarged to 172 square feet, thus increasing its capacity three times. It is now possible to bring up the power at Lake Buntzen to upwards of 70,000 h.p., which will be available to meet the rapid growth of the demand in Vancouver. There is at present being installed at the power house a third 10,000 h.p. water wheel, which it is hoped will be ready for operation in December, bringing the capacity of the plant at the power house up to 42,000 h.p. Plans are now being prepared for a large extension of the power house and the provision of two new 15,000 h.p. turbine units. In addition, the company have in progress an extension of the auxiliary steam plant, which has been provided for temporary breakdowns on the transmission lines, bringing the capacity of the steam plant up to 12,000 h.p. Plans have now been filed with the Government for the construction of plants for the utilisation of the company's water powers at Lillooet and Jones Lake, Chilliwack. The board have a carefully considered scheme for the provision of power to meet the requirements of the company in future years. On Vancouver Island the installation of a water power at Jordan River has been satisfactorily completed, and there should shortly be available a sufficient quantity of power to meet the increasing demands of the City of Victoria, and district. The company has commenced the construction of a line of about twenty miles in length from Victoria through the fertile Saanich Peninsula, and it is generally expected that this line will considerably augment the growth of the undertaking in Victoria, which, during recent years, has been making rapid strides. During the year the directors have received, with great regret, the resignation of Mr. Francis Hope, for many years secretary of the company in London and assistant general manager in Vancouver. Mr. Hope served the company during the whole period with great devotion and ability, and has resigned his post for family reasons.

Buenos Ayres and Pacific Railway.—At an extraordinary meeting in Winchester House, E.C., on Monday, a resolution passed at a previous meeting was confirmed. It alters the memorandum of association so as to allow of the company acquiring, constructing and using waterworks.

Central Railway of Chubut. The receipts for the year ended June 30 were £34,838, and the net profits, including £10,315 brought forward and £473 interest, were £28,143. A balance dividend of 4 per cent., less income-tax, is proposed, making 6 per cent. for the year, and leaving £11,102 to carry forward.

Cartagena (Colombia) Railway.—At an ordinary general meeting, held in Salisbury House, London Wall, E.C., on November 9, Mr. Frank Dodd, who presided and moved the adoption of the report, referred first to a balance of £17,832 at debit of profit and loss account. He said that the accounts were for eighteen months instead of twelve. Had they been for twelve months the accounts would have presented a much more favourable appearance, because they would not have been compelled to take in the accounts the bad part of the period of eighteen months, and there would have been no such debit to profit and loss. With regard to the declaration of a dividend, at the time the dividend was declared they had every reason to believe they would be in the receipt almost at once of a sum of £36,920 which was then due from the Republic of Colombia under the subvention. Unfortunately, there was a revolution in that country, with the result that the Government were short of money. Up to that time the Government and its representatives had fully admitted their indebtedness under the subventions, and it was not until they had failed to raise money by loan, that—as he believed, merely to gain delay—they raised the question that as the subventions had not originally been submitted to Parliament they were illegal, and that it would be necessary to go to Parliament to get a Bill passed which would legalise the subventions and give the necessary authority for the payment. He understood that steps were being taken to legalise the subventions and that the money would be paid. At the end of October the sum owing was £73,600. The report was unanimously adopted.

LONDON AND SOUTH WESTERN SMOKING CONCERT.

SIR CHARLES OWENS AND MR. HUGH DRUMMOND ON THE MEN'S LOYALTY.

A smoking concert in connection with the London and South Western Railway employees was held on Thursday, November 16, at the Brunswick Institute, Vauxhall, when there was a large company present, the spacious hall being well filled. Sir Charles Owens, the retiring general manager, presided, and among others present were: Mr. Hugh Drummond, chairman of the L. and S.W. Railway; Sir William Portal, Bart., deputy chairman; Mr. Dugald Drummond, chief mechanical engineer; Mr. W. Bishop and Mr. Glyn Smith, solicitors; Mr. A. Malby, goods manager; Mr. J. Smeal, assistant goods manager; Mr. S. E. Marsh, goods superintendent; Nine Elms; Mr. W. Shortt, assistant engineer; Mr. A. W. Szlumper, district engineer; Dr. Archer, the company's medical officer; Mr. W. R. Edwards, St. John Ambulance Association; and Mr. W. Buckmaster, hon. secretary S.W. Institute and S.W. Centre. During the evening Sir Charles Owens presented the challenge shield and medals for ambulance work, and also the challenge cups and other prizes were presented to the winners of the respective cricket, cycling, football, rifle and swimming club competitions.

At the close of the presentation of the prizes, Mr. Kent said: On behalf of the committee of this club, I have great pleasure in thanking Sir Charles Owens for coming here to-night and presiding over these proceedings, and also for presenting the prizes. As this is the last occasion and the last function at which he will preside as general manager of the London and South Western Railway I take this opportunity of thanking him on your behalf for the interest he has always taken in the club, and to offer him your sincere congratulations upon his retirement. With these few remarks I ask you to endorse the vote of thanks to our chairman for presenting the prizes. (Loud applause.)

Sir Charles Owens, on rising to respond, was greeted with prolonged acclamation, and musical honours. He said:

I thank you from the bottom of my heart for the very kind reception you have given me to-night, and I can tell you this, that the greatest support I have had during the fourteen years I have been general manager of this great company has been the fact that I had some little place, at any rate, in the affection and regard of my fellow-workers. (Hear, hear.) It has been a matter of great satisfaction to me to see that several of the organisations, which I have had a considerable hand in starting, have arrived at such a very successful stage. I am delighted at the success of the ambulance work, and I may tell you that we have on the South Western Railway no fewer than 2,000 men qualified to render "first-aid" in case of accident. I can tell you further that of that 2,000, no fewer than 800 have not been satisfied only to pass through the first examination, but have passed their second and third, and are entitled to wear the medallion of the Society. I want to see still more men come forward and join the ambulance classes. I want to see that for two reasons. I take it that every man in this room is or hopes to be at the head of a household, and I can say that there is no better accomplishment for one at the head of a household than to have such knowledge as to enable him in the case of accident in the household to deal efficiently with the injured one and save him from as much suffering as possible. And there is another point. We have long gone past asking the question, "Am I my brother's keeper?" We have learned in these days that we are, and what I say more particularly to those engaged in our traffic work, especially those who have qualified in ambulance work, is that you do not know when the moment may come when you will be able to render assistance to one of your mates. No matter how hard the work you have to do, you will be a hundred times repaid in the knowledge that you have been able to alleviate the suffering of one of your fellow men. (Applause.) It has been seen what splendid work some of our men have done, but that is nothing at all compared with the great work your ambulance centre is carrying on, for figures tell me that during the past twelve months no fewer than 1,144 accident cases were attended to by members of the centre.

I am very pleased indeed that our shooting club is so successful. We have three clubs on the South Western Railway. There are in the London Club 85 members, in the Exeter club 30, and in the Eastleigh club 113. The Eastleigh club has been started only a few months and has 113 members, and I want to say that if Eastleigh can do that in a few months, then "Wake up, London!" There was the Metropolitan Rifle Competition. That had been fought for this year, and up to the present three teams have been met by the South Western Railway.

They have had a tussle with the War Office and they have

beaten them. They have had a tussle with the General Post Office (Savings Bank department) and have beaten them, and they have met the Post Office (Mount Pleasant depot) and they have beaten them. (Applause.) There is only one other team which remains undefeated, and so we ought to congratulate our London club upon its very high efficiency. Earl Roberts thought it worth his while to come down to Clapham Junction and open our splendid range there, and I shall always stick to the opinion which I have expressed here before, that if a man is not prepared to qualify himself to defend his country that man has no right to ask for a vote in the administration of his country. (Applause.) I ask you to think over that. I want to thank my good friend, Mr. Buckmaster, for all the arduous work he has done in connection with this club.

I cannot thank you too much for the kindnesses you have always shown me during my time as general manager. I have been proud all my life to be a South Western man, but in August last I was more proud than ever. (Loud cheers.) I was in a distant part of Norway when I got news by Marconigram of what was transpiring in London. I said, "Happen what will, I have not a second's anxiety about the South Western Railway men." I can tell you, gentlemen, the South Western Railway men have secured the admiration of the whole civilised world, and if ever a board of directors and a general manager had good cause to be proud of their colleagues, the London and South Western board and general manager have that cause. Let me say this, that if I had been asked what was the highest testimonial you could give me upon my retiring, I should turn to the splendid loyalty of the general workers of the railway at the time of strife and stress and say, "That is the highest possible testimonial that you can bestow."

Mr. Hugh Drummond then addressed the company. I only want, he said, to say one or two words to-night. I want to say them to-night because I think that during the whole year this is the most representative gathering that we have. We meet from all parts of the system, and we can exchange our views and we can also participate in the encouragement derived from the distribution of the prizes which go all over our system. If you have been looking forward to this meeting I can assure you that I have been also, and although I have not been presented with a prize I consider I won one of the greatest prizes of all, because in August last I got your confidence. A year ago I had the honour and pleasure of addressing to you a few words. I told you then that without your help I could not run the railway, and when the stress came in August last I felt perfectly happy because you told me you would help me, and I know your word is as good as your bond. I have always been proud of the company, but to-day I am more proud of it than ever. (Applause.) I have received letters of congratulation from all parts of the country, so you may well be proud of your position. I take this opportunity of giving you my sincere, hearty and grateful thanks for the way in which the South Western Railway men have shown the world that they are happy and contented. (Loud applause.) Why is it? Because we understand each other; and I believe we do. I am not going to ask you to renew what you said you would do last year, because I do not think there is any necessity for it, because I believe that if the time should come that you are not happy you will come and tell me so. (Hear, hear.) I can assure you, I can give you my word of honour that whatever you may say, you will receive sympathetic and cordial assistance from every director and officer of this railway. (Applause.) I am proud of my position and I am proud of you, and I thank you most heartily and most sincerely for the way you stuck to the board of directors during the time of stress. I know perfectly well of the difficulties that you had against you. You had all sorts of things to contend with—such things as that "you would get less work and double pay"—(laughter)—and so on, but you believed and had confidence in the directors and your chief officers, and God help me, that trust will never be misplaced. (Prolonged acclamation.) Sir Charles Owens has been a kind and true friend to you and to me, and I take this opportunity, when we are gathered together from all parts of the system, to thank him most heartily for the ever-ready help I have received at his hands. Although he presides over you to-night for the last time as general manager, I hope this is by no means the last time we shall see him amongst us. (Applause.) I am sure we all wish him—he looks very well, he does not look as if the South Western work has been a hard effort, and I hope that I shall look half as fit as he does at his age—we wish him long life and happiness. (Cheers.) I see here an old friend and namesake, Mr. Dugald Drummond. What did he do in the time of stress and trouble? He did not take the trouble to come back—(laughter)—he stayed up in Scotland, and after the trouble was over came back quietly and said he knew it was all right. One word more. A thing which has

THE ONLY REAL trouble is in finding of a successor to Sir George. I was very anxious to get a South Western man, and I felt for our sakes and for yours as well, that I should like to get the best man in the country. And I believe I have found him. The matter has given me most anxious thought, and I believe Mr. Walker is not a South Western man, we must very soon reach him to be very much South Western, and then we shall have an administrator who has been through every grade of railway work, and a man who will do his best for all grades of the company. (Hear, hear.)

PARLIAMENTARY.

QUESTIONS IN THE HOUSE OF COMMONS.

Owner's Risk in Ireland.

On Tuesday, 14th inst., Mr. Joyce (Limerick—Nat.) asked the Vice-President of the Department of Agriculture (Ireland) whether his attention had been called to the complaints made by Irish traders against the Irish railways companies, owing to the manner in which they met the traders on the question of owner's risk, and the conditions laid down by them when dealing with those matters; whether he was aware that the English and Scotch railway companies had amended their owner's risk conditions, so that in case of damage the onus of disproving negligence or misconduct on the part of the railway companies rested now with such companies instead of, as hitherto, on the senders proving it, while the Irish companies declined to grant those concessions; and, as this entailed hardships on the Irish traders, would the Department take the matter up with the view of compelling the Irish companies to assimilate their rules in this respect to those of the English and Scotch companies, and so give Irish traders a fair chance of competition.

Mr. Burrell (Chief Secretary for Ireland), who replied, said: The answer to the first part of the question is in the affirmative. The Department of Agriculture have already made representations on this subject to the Irish railway companies, who, however, have declined to alter the owner's risk conditions in force on their lines. They have also been in communication with the Board of Trade on the subject. In the absence of individual cases in which consignors have suffered through discrepancy of treatment, the Department are not in a position to determine whether further action is open to them.

Proposed Bills of Lading for Railways.

On Wednesday, Mr. Charles Bathurst (Wilton—Lib.) asked the President of the Board of Trade whether, in view of the hardships sometimes suffered by farmers by the non-delivery to them by a railway company of the approximate quantity of grain or other goods alleged to have been delivered to the company, he would consider the advisability of introducing legislation to substitute for the usual consignment note a bill of lading for land, as well as for sea, carriage, which besides being quasi-negotiable would be in the hands of the consignee, a document of title, and impose upon the carrier the obligation to deliver the goods in accordance with the particulars contained in the bill, and to the amount described therein.

Mr. J. M. Robertson (Parliamentary Secretary to the Board of Trade) replied: The conditions of carriage by rail and carriage by sea are very different, and the President of the Board of Trade is not sure of the expediency of adopting the system of bills of lading in respect of traffic conveyed by land. More especially does it seem doubtful whether negotiable bills of lading are desirable in case of traffic by rail.

Vacuum Lock for Railway Coaches.

On Monday, Mr. William Thorne (West Ham, S.—Lab.) asked the President of the Board of Trade whether his attention had been called to the existence of a patent vacuum lock for railway coaches, namely, Connor and Norwood's, which was patented in 1907 and 1908, whether he had been informed of the result of the Board of Trade examination of the same; and whether the Board had power to enforce the adoption of any invention that was proved satisfactory in the service of the railways.

The Chief Inspecting Officer of railways made an answer to the question referred to in March last, and was reported to Mr. Connor certain points in which the vacuum lock was found to be unsuitable for railway purposes. The Board of Trade has no statutory power to enforce the adoption of any invention, even if it is deemed satisfactory.

The Adkins Lewis Transit System.

On Tuesday, Mr. Thorne asked the President of the Board of Trade whether he had read the report upon the Adkins Lewis

system of rapid continuous transit; and whether the Government would consider the advisability of constructing such a system through the East End of London with a view to providing a remedy for the ever-increasing overcrowding of trains.

Mr. Buxton: The Board of Trade are acquainted with the principle of the system referred to, which requires all passengers to enter and leave the cars whilst in motion. No railway constructed on this system is in actual working in any country, and considerable practical experience would be necessary before sanction could be given to the opening of a line of this description for the public conveyance of passengers.

The Position of Railway Clerks.

On Tuesday Mr. Wardle (Stockport—Lab.) asked the President of the Board of Trade whether he had received an application to arrange for the appointment of an arbitrator, in accordance with clause 4 of the terms of settlement of the railway dispute signed at the offices of the Board of Trade on August 10 last, to deal with the case of the clerks who petitioned the Lancashire and Yorkshire Railway Company on September 30, 1910, to institute and publish a definite scale of salaries, based upon the standard rates now obtaining in the postal service; whether he was aware that no scale of any kind had yet been published to the staff by the company, in accordance with the practice of other railway companies, and the recommendation of the recent Royal Commission on Railway Labour Questions; and whether he was taking such steps as may be necessary to get the dispute dealt with by arbitration.

Mr. Buxton: After the report of the Royal Commission had been issued the Board of Trade were asked to appoint an arbitrator to deal with the case of the clerks in question, but in the circumstances it would not seem feasible to make such an appointment unless the railway company agreed to this course.

Mr. Wardle also asked the President of the Board of Trade whether he was aware that although the clerks employed by the Metropolitan District Railway Company presented a memorial on October 12, 1909, appealing for payment for Sunday duty on a basis similar to that in operation under other railway companies, this company had refused to meet the request of their clerks, and had not yet granted them an interview with the directors, although such an interview had been pressed for since the memorial was presented five years ago, and the public were frequently given to understand that railway board-room doors were always open to staff deputations who wished to discuss their grievances with the directors; and whether he was arranging for this case to be dealt with by arbitration in accordance with clause 4 in the terms of settlement of railway disputes signed at the offices of the Board of Trade on August 10 last.

Mr. Buxton: The Board of Trade have received representations on this matter, and they understand from the railway company that the managing director has twice seen the clerks' representatives. As regards the latter part of the question, I may point out that the settlement of August 10 last applies only to companies that adopted the Railway Conciliation and Arbitration Scheme of 1907, of which the Metropolitan District Railway was not one.

The Insurance Bill and Railway Officials.

In the House of Commons, on Monday, a long debate took place on an amendment affecting railway clerks, moved by the Chancellor of the Exchequer to the first schedule of the National Insurance Bill. This schedule sets out the classes of employment to which the sickness and invalidity part of the Bill will apply, and it also specifies the exceptions, or cases where the Bill is not to apply. The proposal of the Chancellor of the Exchequer was to add to the list of exceptions employment as a clerk or otherwise in the service of a railway or other company when the Insurance Commissioners certify that the terms of employment secure sickness or disablement benefits not less favourable than those under the Bill. The discussion took place on a proposal to alter the amendment so as to make it apply to all companies and to large firms, whether incorporated or not, but this extension was rejected, and the Government proposal was adopted in the following form: "Employment as a clerk or other salaried official in the service of a railway or other company, or of a Joint Committee of two or more such companies, when the Insurance Commissioners certify that the terms of employment are such as to secure provision in respect of sickness or disablement, on the whole, not less favourable than the corresponding benefits conferred by Part I. of this Act, and the person so employed is a member of a superannuation fund established by Act of Parliament for the benefit of persons in such employment."

WINTER TRAFFIC INDUCEMENT.

On December 1 the North Eastern Railway Company will institute a two months' experiment with the object of increasing long-distance travelling. It will take the form of third-class day return tickets at single fare for the double journey, and fortnight return tickets at single fare and a half for the double journey. The lowest fare will be 2s. 6d. The tickets will be issued daily for ordinary trains at nearly all North Eastern stations. There are a few exceptions, however, principally of those stations connecting with other companies' lines. The day return tickets will be available for the day of issue only, and for any ordinary passenger trains except a few main line trains to and from York and Newcastle. The fortnight return tickets will be available by any ordinary passenger train, and for return on any day up to the fifteenth day including the day of issue. The issue of third-class cheap Saturday tickets and ten-day and 17-day tickets will be suspended during December and January.

AUSTRALIAN RAILWAY CONTRACTS.

Messrs. Griffiths and Co., have secured a contract for new railway construction in one of the Australian States. The amount involved approximates two millions sterling. Further contracts for railway developments in other States in Australia are now being considered, for which the same firm have tendered.

The Railway Commissioners of Victoria have accepted the tender of Elder, Smith and Co., for the supply of a large number of steel rails for use on Victorian lines. The rails are to be manufactured in England. The order consists of 150 miles of 80 lb. rails and 10 miles of 100 lb. rails, and the charge will be £160,000.

Orders for 40 "DD" engines have been placed by the Victorian Railway Commissioners with Beyer, Peacock and Co., England, and the Baldwin Locomotive Works, America, the total cost being £185,220. Two motor trains have also been ordered from the United States.

THE EFFECT OF SMOKE ON RAILS.

The Lord Mayor of Manchester, on Tuesday, presided at a smoke abatement conference at Manchester Town Hall. There were 65 delegates present, representing different parts of Great Britain. Mr. Gordon Harvey, M.P., president of the League, presiding. Mr. J. W. Graham submitted the rough draft of a Bill to be introduced to the House of Commons by the president, Mr. Gordon Harvey. The principal proposal was the formation of a Smoke Department at the Local Government Board and the appointment by that Department of smoke inspectors.

In the course of a paper giving the results of observations in Leeds, Professor Cohen said that he was indebted to the chief engineers of the Midland and Lancashire and Yorkshire Railways for observations carried out systematically during the last 17 years, showing the marked effect on rails produced by corrosion from the atmosphere of towns as compared with those in the country.

COMPENSATION FOR A COAL COMPANY.

In the King's Bench Division of the High Court of Justice on Thursday, Mr. Justice Scrutton gave judgment in the case of the Lancashire and Yorkshire Railway Company v. the Haigh Moor Coal Company. The defendants worked a coal seam under the Barnsley branch of the plaintiffs' railway. The plaintiffs had served a notice on the defendants to discontinue working the seam, and they paid to the defendants as compensation two sums of £1,498 19s. 6d. and £538 15s. 6d. Defendants gave receipts, but to these added a proviso reserving rights said to be conferred upon them by Sections 80 and 81 of the Railway Clauses Act, 1845. Subsequently, on the strength of that provision, the defendants claimed further compensation for alleged losses caused by the severance of the continuous working of the seam. The matter was referred to an arbitrator, Mr. W. E. Garforth, who awarded the defendants additional compensation, amounting to £3,500, with costs against the railway company. The latter now claimed a declaration that prior to the reference to arbitration the defendants had been fully compensated, that the arbitrator had no jurisdiction to make the award, and that such award be referred back to the arbitrator.

Mr. Justice Scrutton said that the proviso added to the receipts given for compensation money originally received by the defendants must be taken into consideration. He had come

to the conclusion that the plaintiffs were not entitled to the declaration which they claimed, and that the defendants were entitled to the enforcement of the award. There would, therefore, be judgment for the defendants for £3,500, with costs.

PERSONAL.

Mr. Hart, district locomotive superintendent at Waterford, has been entertained at dinner and presented with a gold watch on his transfer to Limerick. To Mrs. Hart a gold bracelet was given.

Mr. F. H. Hiley, who has been promoted to the post of divisional goods manager for the Northern district of the North Eastern Railway, has been presented by the Hull staff with a gold cigarette case.

Mr. G. Smith, manager of the Midland Railway, Western Australia, who has been appointed Commissioner for Railways in Tasmania, has been voted £1,000 by the directors in appreciation of his services.

Mr. G. Murray Smith, the new chairman of the Midland Railway Company, had a warm welcome from the employees at Derby on the occasion of his visit to present the awards annually made to members of the staff in connection with ambulance instruction. One-seventh of the staff, or 10,318 men, are now qualified to render first aid, and it is hoped to increase their usefulness by re-examination.

Alderman Russell, of Richmond, Yorkshire, has been presented with a gold watch by the townspeople for services rendered during the late railway strike, when he assisted in driving the train down from Richmond to Darlington, which kept the connections going. In returning thanks, he said he was very pleased to do what he could for the town and the company by whom he was employed. He had been there for some 45 years now. He had been called a "black leg," being a non-union man.

Mr. G. H. Claughton, chairman of the L. and N.W.R. Co., speaking at the jubilee banquet of the Birmingham Chamber of Commerce, said that a reckless spirit of strikes was abroad. A great deal was being said about the necessity of outside interference with the internal concerns of the railways. If they wished to do right by their men—and they did wish to do right—how could they willingly accept outside interference, except so far as was advised by the Report of the Royal Commission? Surely it was not too much to ask that the leaders of the men should be men in their own employment. He would ask them to repudiate the idea of victimisation of those who tried to improve the conditions of the men—an object absolutely right in itself. Such victimisation could not be either the practice or the policy of the honourable and straightforward men who were to be found on the North Western board and on the management also.

Mr. Morgan B. Williams was, on November 17, at Swansea, presented by the directors and shareholders of the Rhondda and Swansea Bay Railway Co. with a silver epergne, purchased with the sum of 100 guineas voted at the half-yearly meeting, in recognition of his 30 years' services to the company as a director and chairman. Mr. G. Deer, the new chairman, made the presentation, and the Earl of Jersey, as an old colleague, wrote that no money's worth could represent the value of Mr. Williams's services. Mr. Williams, who is 87 years of age, feelingly returned thanks, and remarked that during his experience as engineer in the construction and management of railways in this country, in France, in Germany, in Italy, and in Russia, he had been brought in close contact and sympathy with the working and labouring classes, upon whose industry and contentment the peace and prosperity of the nation would always largely depend. It was to be hoped that the time was not far distant when, by reasonable and mutual concession between capital and labour, the disastrous strikes and lockouts would be avoided.

Funeral of Mr. F. J. Dunn.—The remains of the late Mr. Fred J. Dunn, late general manager of the North London Railway, who retired in 1909, were interred on November 17 at Hford. Amongst those present were the following retired officers: Mr. John Hyde, secretary; Mr. H. J. Pryce, locomotive superintendent; Mr. A. Flanders, estate agent; Mr. J. Gilmour, cashier; Mr. A. J. Rowberry, assistant superintendent; Mr. W. Fielding, police superintendent. The following also attended: Mr. G. N. Ford, traffic superintendent, N.L.R., and district superintendent, L. and N.W.R.; Mr. W. Thomas, chief of expenditure department, L. and N.W.R.; Mr. G. Keary, district superintendent, G.E.R.; Mr. A. Moore, police superintendent, G.E.R.; Mr. A. Wood-Hill, engineer, N.L.R.; and a large number of present and retired employees.

RAILWAY NOTES.

New Railways for Mexico.—Efforts are to be made to complete in six years the new National South Eastern Railway of Mexico, which will connect the United Railways of Yucatan with the central national lines, and will complete a continuous trunk line from El Paso and Laredo, in the northern part of Mexico, to Merida, in Yucatan. The cost is estimated at over three millions sterling.

A London-Glasgow Record.—On Monday last the London and North Western Railway accomplished a record run. A cinematograph firm lost the Scotch express at Euston, and chartered a special to Glasgow. The first 158 miles to Crewe was covered in 150 minutes, and from Crewe to Carlisle, 146 miles, in 150 minutes. The complete run to Glasgow averaged practically 60 miles an hour.

The Closing of Invergarry Light Railway.—The North British Railway Company have made an offer to the Fort Augustus Railway Company for their undertaking, which was closed on November 1, but the latter have not seen their way to accept. A meeting of the local committee formed in connection with the matter has asked the County Council to take steps to induce the companies to refer the question to the arbitration of the Board of Trade.

The Proposed East Lothian Coal Railway.—Sir R. Mackie, the representative of Leith Council on the Leith Dock Commission, favours the scheme for the new railway introduced by the coalmasters. If the line is sanctioned by Parliament, he states that it would put an end to any idea of a competing dock at Cockenzie or neighbourhood, and would enable the coal trade, which was capable of much further development, to be carried on in a much more expeditious way than at present.

Additions to the P. and O. Fleet.—The latest addition to the P. and O. liners is the "Ballarat," which, on November 18, began to run in the branch service to Australia by way of the Cape. She is one of two similar ships built by Messrs. Caird, of Greenock, the other being due to start on her maiden voyage on June 13 next. They are of 11,100 tons register, and, in addition to accommodating 1,100 passengers each, will be capable of carrying about 11,000 tons of cargo, including 5,000 tons of frozen produce.

Railways and the Leather Trade.—A conference has been held at the Railway Clearing House between the general goods managers of the railway companies of the United Kingdom and the United Tanners' Federations, the latter seeking better and more economical conditions for the traffic of the leather trades. It is understood that the managers expressed their willingness to accept some of the suggestions of the federations.

Pennsylvania Standard Road Bed.—By beautifying its road bed and station grounds the Pennsylvania Railroad is effecting material economies and at the same time securing what is declared to be an ideal road bed. Apparently, American railwaymen are learning some useful lessons from their inspection of railways in this country. Grassy banks sloping smoothly down to the tracks will, a Pennsylvanian enthusiast says, mean the saving of thousands of dollars now spent on maintenance of way. "Water," said a prominent American railroad official, in a recent lecture, "is the greatest enemy of the road bed. Water flowing down unsodded slopes causes erosion, washing dirt and stones into the ditches and choking the drainage." That it is worth while to emphasise these facts goes to show that American railways are still some distance behind British lines in matters of upkeep. It was, in fact, not until the summer of 1905 that the Pennsylvania adopted the present improvement in order to reduce the cost of maintenance, as well as to travel safer and more agreeably. A committee of engineers prepared plans for what is now termed standard road bed, which requires a ditch of 10½ ft. wide on each side of a four-track road, and the bottom of the ditch must be 3½ ft. below the level of the top of the ties. That means there must be a decided slope from the lowest part of the road bed to the bottom of the ditch.

Delhi Umballa Kalka Railway.—At the annual meeting, held in Gresham House, Old Broad Street, London, on Wednesday, Mr. Alexander, who presided, stated that the gross revenue had been Rs.27,43,860, compared with Rs.24,31,869 in 1910, and Rs.21,33,750 in 1909, and was the largest revenue the company had ever earned in any one year. The increase had occurred in both passenger and goods traffic. The board had been able to recommend an addition of 1 per cent. to the dividend, making, with the bonus, 8 per cent. for the twelve months. The report was adopted.

ABRIDGED PROSPECTUS.

No Part of this Issue has been or will be Underwritten and No Payments for Promotion of the Company will be made.

THE SUBSCRIPTION LIST OPENS ON NOVEMBER 29TH AND CLOSES ON DECEMBER 4TH, 1911.

THE HADLEY ENGINEERING COMPANY, LIMITED.

Incorporated under the Companies (Consolidation) Act, 1908.

CAPITAL**£250,000.**

Divided into 150,000 6% Cumulative Preference Shares of £1 each and 100,000 Ordinary Shares of £1 each.

Subscriptions are invited for the following:—

120,000 Preference Shares and not more than 12,000 Ordinary Shares (as explained below) payable as follows:—			
ON APPLICATION	..	..	5/-
ON ALLOTMENT	..	..	5/-
ON FEBRUARY 5th, 1912	..	..	5/-
ON APRIL 5th, 1912	..	..	5/-
Total	..	..	£1

Payment may be made in full on allotment, interest at the rate of 4% per annum being allowed on the proportion so paid in advance.

The Cumulative Preference Shares will be preferential both as to dividend and capital, and in the event of the Company being wound up for purposes of reconstruction or otherwise, 25 per cent. of any surplus assets, after payment of the par value of the Preference and Ordinary Shares, will be allocated to the Preference Shares in proportion to the amount paid or credited as paid on their holdings. Subscribers for the Preference Shares shall have the right to apply at the same time for Ordinary Shares amounting to not more than 10 per cent. of the Preference Shares for which they subscribe. Dividends on the Preference Shares will be payable half-yearly, and the first dividend will be calculated to June 30th, 1912, from the date when the respective instalments are due. Interest at the rate of 6 per cent. per annum will be charged on instalments in arrear.

No Debentures can be issued without the sanction of a majority of the holders of the Preference Shares at a meeting called for that purpose.

MORDEY AND DAWBARN, 82, Victoria Street, Westminster, S.W.

SECRETARY (pro tem.) AND REGISTERED OFFICES.

W. S. CLARKE, 1 and 2, Great Winchester Street, London, E.C.

The Company has been formed to acquire and combine several kindred manufacturing businesses hitherto carried on respectively by—

- (1) Joseph Sankey and Sons, Ltd., at Hadley, near Wellington, Shropshire;
- (2) Thomas Tilling, Ltd., Peckham, London, S.E.; and
- (3) W. A. Stevens, Ltd., of Maidstone.

The businesses to be acquired comprise—

- (1) The manufacture of the patent steel wheels and detachable hubs, steel bodies, panels, and other parts for motor vehicles, and various products now carried on by Joseph Sankey and Sons, Ltd., at Hadley, Shropshire, together with certain patent rights and licences for wheels and hubs.
- (2) The manufacture now carried on by Thomas Tilling, Ltd., at their Peckham Works of the Tilling-Stevens Chassis for Motor Omnibuses and Mail Vans.
- (3) The manufacture now carried on by W. A. Stevens, Ltd., Maidstone, of the Stevens Patent Electric Transmission Equipment for Motor Vehicles, together with certain patents in connection with the same.

The amalgamation will enable the Vehicles to be built rapidly and at a low cost.

For this purpose it has been arranged to acquire from the first-named Company the Freehold of the extensive modern Works at Hadley, near Wellington, Shropshire, comprising an area of more than 33 acres, of which nearly five acres are covered by a range of excellent light workshops fitted with electric power, and its own electric generating station, a very full equipment of machinery and tools, railway sidings into various parts of the Works, and a canal dock, the whole being admirably adapted for the proposed business. Particulars of the Works and a valuation thereof will be found in the report of Mr. W. M. Mordey, M.Inst.C.E., M.I.E.E., of the firm of Messrs. Mordey and Dawbarn, Consulting Engineers, which is given in the full prospectus.

The new Tilling-Stevens Petrol-Electric Chassis is the result of a prolonged and exhaustive series of practical trials by Thomas Tilling, Ltd., and Mr. W. A. Stevens, the inventor of the electrical transmission equipment. As a result of their experience with this combination, a public service of omnibuses so fitted has been established in London by Thomas Tilling, Ltd., on the route from Turnham Green to Peckham, via Shepherd's Bush, Charing Cross, and Westminster Bridge. This service is partly worked by a number of these Tilling-Stevens Petrol-Electric Omnibuses, which have already run more than 200,000 car-miles in a continuous, practical and successful manner.

Messrs. Tilling report as follows:—

"Having satisfied ourselves by exhaustive trials that the Tilling-Stevens Petrol-Electric System is the most satisfactory one for motor omnibuses in London, we have decided to adopt it as our standard. We are now constructing at our works a considerable number of these vehicles, the petrol-electrical generating and transmission equipment for which is being manufactured for us by W. A. Stevens, Ltd., of Maidstone, with whom we have also entered into a contract for a further large supply of these equipments. We have consented to such contract being taken over by the Hadley Engineering Company, Ltd., as soon as formed, and undertake to give an order to that company for the supply, as quickly as possible,

of 100 of these omnibuses complete, and we have arranged that we will place all future orders for such vehicles with the said Company."

Mr. Frost Smith, M.I.M.E., M.I.A.E., whose experience of the practical working of commercial motor vehicles is probably unequalled, reports as follows:—

"From seven years' experience of the operation of motor omnibuses I am strongly of opinion that the Tilling-Stevens Petrol-Electric System undoubtedly shows a considerable saving over any gear-driven vehicle. It is simpler to control, and the elimination of the clutch and speed gear, with their many attendant complications, removes the main cause of wear, and prevents abuse and damage by careless drivers. The system is easy to learn, and any driver after a few hours' practice is able to pass the tests of the Licensing Authorities."

Mr. Mordey, in his Report, also deals with the qualities of the Tilling-Stevens System.

Sankey's Patent Steel Motor Wheels are rapidly being adopted by the leading manufacturers of motor cars in consequence of their superior strength, facility of cleaning, and (when fitted with the Sankey Patent Detachable Hub) quickness and ease of replacement. Steel motor-car bodies, panels, and other motor parts, made by Messrs. Sankey in these works, are largely used by motor-car manufacturers.

Amongst the other manufactures established at these Works is that of patent special "high rib" stamped steel structures for reinforced concrete work under a five years' exclusive contract with the owners of the patents on a satisfactory commercial basis.

The present turnover of the Hadley Works is at the rate of about £60,000 per annum, and is rapidly increasing. This business, together with the two others to be taken over and the orders in hand, ensures the Company from the start a large amount of profitable work, and a great and important field for development in all branches of engineering for which the Works are so well adapted.

It is confidently anticipated that the combined businesses will from the first yield a sufficient profit to pay the dividend on the Preference Shares now offered, as well as a substantial dividend on the Ordinary Shares.

The estimated net profit for the first year is £20,000, of which the dividend on the Preference Shares will absorb £7,200, leaving £12,800 for dividend on the Ordinary Shares and Reserve.

The amount proposed to be issued will provide ample working capital for the present business and for a considerable increase in the same.

An agreement dated 13th November, 1911, has been entered into between the Vendors, namely, Joseph Sankey and Sons, Ltd., Thomas Tilling, Ltd., and W. A. Stevens, Ltd., and William Arthur Stevens of the one part, and C. H. Nevill, as Agent for the Hadley Engineering Co., Ltd., whereby the latter Company agrees to purchase from Joseph Sankey and Sons, Ltd., their Freehold premises at Hadley, together with the workshops, offices, cottages, and other buildings thereon, and the plant, machinery, tools, fixtures, fittings, and office furniture, together with the patent rights and Licences in the Sankey Wheels and Hubs, for a sum of £105,000, payable as to £25,000 in cash, as to £30,000 in fully paid Ordinary Shares of the Company, and as to the balance of £50,000 in fully paid Preference Shares of the Company or in cash, or partly in such Shares and partly in cash at the option of the Directors. Also the stock of materials at cost, the stock of finished articles at 20 per cent. under the selling price, and the work in progress at cost plus 10 per cent. In consideration of the sum of £12,000, payable as to £11,000 in cash and £1,000 in fully paid Ordinary Shares, W. A. Stevens, Ltd., and W. A. Stevens agree to sell to the Hadley Engineering Co., Ltd., the stock, plant, machinery and tools, patterns, drawings, specifications, and models of the manufacturing business now carried on by them at Maidstone, together with all the patent rights and patents in connection with the same, in the name of the said W. A. Stevens, Ltd., and W. A. Stevens, together with the sole rights in any improvements, whether patented or not, of W. A. Stevens, Ltd., or W. A. Stevens, in connection with petrol-electric vehicles.

In consideration of the sum of £5,000, payable in fully paid Ordinary Shares of the Company, Thomas Tilling, Ltd., agree:—

- (1) To hand over to the Company all drawings, designs, specifications, models, patterns and jigs connected with the said business.
- (2) To place all future orders for such vehicles with this Company (a first order of 100 such vehicles having already been so placed, subject to the formation of the Company).
- (3) To sell to the Company at cost any surplus parts or material suitable for such manufacture, and any machinery or tools suitable for use in the said business, subject to a deduction at the rate of 5 per cent. per annum on the original cost of such machinery or tools.
- (4) To communicate to the Company without charge, other than patenting expenses, if any, particulars of any improvements, whether patented or not, of which Thomas Tilling, Ltd., may become possessed, in connection with the vehicles of the type in question. The Company to have the free use of such improvements.
- (5) They will not, at any time, manufacture petrol-electric chassis or vehicles of the Tilling-Stevens type or on the Stevens principle.

The information necessary to comply with the requirements of the Companies (Consolidation) Act, 1908, is given in the full prospectus, copies of which, together with forms of application and copies of the report by Mr. W. M. Mordey, and of the pamphlet on "Tilling-Stevens" Omnibuses, and Sankey's Patent Steel Motor Wheels can be obtained from the Bankers, Brokers, or Solicitors, or at the Registered Office of the Company.

Copies of the Memorandum and Articles of Association, Agreement for Sale, and the various Reports may be inspected at the offices of the Solicitors and at the Registered Office of the Company at any time during business hours.

This abridged Prospectus is inserted for information only, and applications for shares must be made on forms of application accompanying the full Prospectus.

BEARER CERTIFICATES FOR BRITISH RAILWAYS.

To many investors it may appear a matter of indifference whether the securities of British railway companies are transferable by transfer deed, subject to the *ad valorem* duty of $\frac{1}{2}$ per cent. or whether they are transferable by delivery and free from any such charge. As a matter of fact, however, every stockbroker knows that the prevailing unpopularity of British railway securities is to a not inconsiderable extent due to the fact that almost every security in that group is exposed to the transfer duty referred to. On the other hand, all manner of Foreign Government bonds, American railroad bonds and shares, most Canadian securities and a great many Foreign railway stocks escape the *ad valorem* duty of $\frac{1}{2}$ per cent. because they are in the form of "bearer" securities. The objections to the present system have been rather emphasised during the current year, when so many other influences of an adverse character have arisen. During the early part of this year a very considerable interest on behalf of Continental investors was taken in many leading British railway stocks, but such interest was limited by the fact that investors abroad do not understand the necessity of paying a heavy stamp duty, as they are unaccustomed to such charges on their own investments. The leading railways in this country are almost as well known to people on the Continent as to ourselves, and particularly such lines as the Great Eastern, South Eastern and Chatham, and Brighton. The stake of Continental investors in these and other English railways is already considerable, but there is no doubt it would be widened very materially if the system of "bearer" certificates became more general. It may be said that there is no reason why a railway company should bear the initial cost of transforming its securities into bearer form. This argument is not sound, however, for it is a matter vitally affecting the credit of the companies, and it restricts the freedom of market in them. We may point out, for example, that if an investor puts, say, £1,000 into London and North Western Ordinary Stock, the broker has first of all to deal at a comparatively "wide" price, the jobbers' "turn" being probably about $\frac{1}{2}$ per cent.; the commission is relatively high because it is a registered stock; and, finally, the Government stamp duty of $\frac{1}{2}$ per cent. on the money has to be paid. On a corresponding investment in, say, an American railroad bond or share, the price quoted would be a "closer" one, the commission will be considerably less, and there is no Government stamp duty to pay at all. This unfair discrimination against a leading class of home securities is, in fact, bad for all concerned. The absurd argument is sometimes put forward that a low price for railway stocks is of no concern to the investor. This leaves out of account the fact that the companies require to raise more money from time to time, and low prices imply that their interest charges are correspondingly increased. Moreover, in the ordinary course of affairs, most investors are compelled at one time or another to appear in the market as sellers, and a low price means an unsatisfactory basis for realisation. For our part, after a close study of the question, we fail to understand

NORWICH LIFE UNION OFFICE, NORWICH.

why our leading railways have not many years ago realised the advisability for adopting the system of "bearer" stocks. We do not suggest for one moment that the many holders who prefer to retain their stock in registered form should be compelled to accept "bearer" stock. The system should be purely voluntary; but the option should be given to convert from registered into bearer stock at all times, and free of expense to the stockholder. Some few of our railways have already acquired the necessary Parliamentary powers, and we note that the Great Eastern, in its notice of Bill for next Session, includes a proposal to adopt bearer stocks. Among the companies which possess such powers at present are the Tilbury, District and Metropolitan, and no doubt in the next year or two the system will extend considerably.

RAILWAY SCHEMES FOR NEXT SESSION.

The time has now expired for the publication required by the standing orders of Parliament of notices of all private Bills to be promoted in next session. Abstracts of most of the notices relating to railway Bills appeared in our last issue, and in the present issue will be found summaries of the remainder. The total number of railway Bills of which notice has been given is 23, as compared with 26 a year ago. While the number of applications has slightly fallen off, it cannot be said that there is any compensation in the importance of the schemes taken over all. Most of the leading companies have Bills of the omnibus variety, embracing, indeed, numerous objects, but few of them of outstanding importance. Perhaps even more than usual extensions of time are a prominent feature. It is, of course, not surprising that in the state of tension and uncertainty as regards labour which has now been acute for several months, the railway companies have not been eager to bring forward important new schemes. Even the Welsh railway companies, who so often have determined fights before Parliamentary Committees, seem to contemplate a quiet Parliamentary year. One of the chief features in a general survey are the proposals for developing electric railways in London. A few years ago there was a great deal of this kind of work, but of late comparatively little. The main proposal of the sort is that of the London and North Western Railway Company, in conjunction with the London Electric Railway Company, for providing, in connection with the authorised Watford to Euston electric line, a band of electrified railways from the city round the north and west of London and a junction with the Baker Street and Waterloo Railway, which will enable electric trains to run through between the North Western main line and the "Bakerloo." This scheme was outlined at some length in a recent issue. Other electrification schemes are those put forward by the Great Eastern Company for the East London Railway, and by the Metropolitan Company for a new electric line from Rickmansworth to Watford, and a connecting line with the Great Western near Shepherd's Bush. The former proposal was expected, as an arrangement for the purpose between the lessee companies was announced some time ago, but the Metropolitan proposal is more of a surprise. A paragraph was circulated in the newspapers over a week ago to the effect that the Central London Railway Company had decided to seek powers to construct an electric loop line through some of the western outskirts of London. Official notice of such a Bill has, however, not been published, and the scheme will not be brought forward in the coming session. Among other proposals the Great Central Company seek to vest the undertaking of the Barton and Immingham Light Railway Company in the Humber Commercial Railway and Dock Company. The Great Eastern Company propose many local developments, and the same may be said of the Great Western Company. Both the Great Western and the Midland suggest some railway construction in Glamorganshire, in which locality

several short lines are also proposed by Welsh companies. Legislative sanction is being sought by the Midland Company for the acquisition already agreed upon of the London, Tilbury and Southend Railway. The only Bill which seeks to incorporate a company for the construction of railways is the Lothian Railways Bill. The proposed lines will connect various collieries with the port of Leith. Out of the total number of proposals, three are Scotch applications under the Private Legislation Procedure Act, and may possibly be dealt with locally. On the whole the Parliamentary proceedings of next year on railway bills, while certain to provide much interesting discussion, can hardly prove to be exciting.

TRUE CONCILIATION.

There is no doubt that in too many cases the causes of the so-called "Railway Unrest" are a want of common sense on the part of both parties to the conflict. There are many cases of unreasonable demands made by the men and of unnecessary hardships suffered by them, both of which are remediable by the exercise of some of those faculties which are supposed to be characteristic of the Britisher. A love of fairplay is one of them. Where a rule has been made by a management it should be enforced so as not to have an injurious effect on poorly paid men working long hours—a kind of hitting below the belt. Any such effect should be remedied at once, or the injury will rankle in the mind of the sufferer and thereby prepare the ground for that dangerous seed "chronic discontent." This seed, if not eradicated at once, grows into a upas tree which, when tapped, yields a poison destructive of everything that makes life worth living—good fellowship, friendly understandings and general content. One of its fruits is the general strike, with all its distressing consequences. It is by constant intercourse with the rank and file under them that managers and superintendents will not only get to the bottom of any grievance, but will also prevent the men's immediate superiors from developing inconsistent or tyrannical methods. By thus keeping in close touch with his subordinates an atmosphere of friendliness and sympathy would be created such as was so remarkable in some cases during the recent strike. This state of things having been established, the risk of unreasonable demands on the part of the men diminishes almost to vanishing point, and even should such demands be put forward the task of meeting them to everyone's satisfaction becomes an easy one. Men in responsible situations are often so hard-worked nowadays that any close intercourse with their men is not within the range of possibility; but there is nothing to prevent the appointment of a special officer, whose sole duty it would be to travel all over the system and to discover any causes of discontent at their inception and before they had time to develop into a real grievance. Such an officer should be a thorough gentleman, a man of the world, and of experience in dealing with all sorts and conditions of men; he should also be fundamentally acquainted with the economic laws governing commercial undertakings, and with the pecuniary position of his own, and thus be able to discuss matters as one who knows what he is talking about. A man possessed of all this knowledge, allied with common sense, would require and would be worth a large salary, for he would save not only much money but a great deal of wear and tear of both the men's and their masters' brains, temper, and general health. Above all, he would prove an excellent and most efficient antidote to the peripatetic, professional agitator.

Lights on Vehicles.—The Commissioner of Metropolitan Police has issued a notice calling the attention of railway companies, carriers, tradesmen and other persons concerned to the provisions of the Lights on Vehicles Act, 1907, and to certain lighting by-laws in force in Middlesex and Essex. The requirements are cited, and notice is given that the Act and by-laws will be strictly enforced.

The announcement that tenders would be received for £3,500,000 Treasury bills on December 4 was not expected in the market, particularly as the Government had replenished its resources the week before. Indeed, the exigencies of Government finances in these days are seldom fully allowed for in the money market. The enormous expansion of national expenditure has brought about alterations in conditions which are not always fully realised, and still less often are they allowed sufficient weight in the conduct of business from day to day. The money market is a field of quick decisions, and men, the organisation of whose minds have been attuned to a different condition of things, are apt to be betrayed by their very proficiency into false judgments, the oldest heads being most at fault. The rise in rates for money and discount has again been marked. However, the state of the foreign exchanges has remained favourable, and £523,000 has been received, on balance, at the Bank from abroad, owing to bars imported. A trifle of £35,000 in coin was required for the provinces, while the active note circulation expanded by £231,000. Thus the Reserve rose £257,000 to £27,075,000, or nearly two and a half million above the level of the corresponding date in last year. Public Deposits declined by £690,000, and this permitted Other Deposits to advance, in spite of small reductions in Government and Other Securities. Private Deposits are now £40,618,000—a rise of £932,000 making them a million sterling higher than they were this time last year, so that the increase in the market rates may be ascribed as much to what is coming as to what has come. The Bank's holding of bills maturing in December is variously estimated as three, four and five millions. In any case it will tax the resources of the market to take them up, and

renewals on a large scale are to be expected. The ratio of Reserve to the liabilities of the Bank is not greatly affected by the changes noted, the alteration being but a quarter point to the good.

The condition of the money market has, naturally, not been a stimulus to the stock market, though there are no particular grounds for saying it has been the reverse. Politics have been the abiding influence, and that influence is now an influence favouring inaction. After so many shocks and emotions as the last few months have occasioned, and the official confirmation that has been given this week of the imminence of war during August last, both investors and operators are inclined to pause and take a rest while the situation clears itself. Possibly, with the New Year, a new spirit may be infused into the markets, following upon a new and more cheerful outlook after the Christmas holidays, but there are few indications of better business supervening on this side of that festivity. It was noticeable that on the day Sir Edward Grey was announced to deliver himself on the position of our foreign relations prices were put up in anticipation that the effect would be so reassuring as to bring the public into the market in a strong buying humour. But although the speech was satisfactory—and, indeed, fully met the best anticipated of it—the public did not respond in the manner expected, and the advance in prices was not maintained. These changes were particularly manifested in Home rails, which also were unaffected by the discussion of increases in rates and fares now contemplated. The excellent traffic receipts which came to hand were equally without effect. Neither did the opening of a new account, after the close of one of nineteen days, fully answering to the evil reputation popularly ascribed to such, have any favourable influence. The markets have been dull, with a tendency to become duller.

The events of the week offer no great interest. Last Saturday Home rails were heavy, there was little business in foreign rails, and Americans declined. Canadas were rather better, and improved again on Monday, when a smooth carry-over and hopeful anticipations of Sir Edward Grey's speech caused a spurt in Domestic securities. Home rails advanced and Consols also, the latter chiefly on option buying, but the next day, in the absence of support from the outside public, most of the advance was lost, and Wednesday brought further declines for the same reason. The settlement disclosed one small failure, which was without effect. Americans began well, but fell away later. The traffic receipts of British railways were uniformly good, and even the North Eastern line now shows an increase on the half-year, but nothing served to stimulate prices. A rise of 1½ in Brazil Railway common stock was conspicuous. The following day like conditions prevailed. In spite of a favourable Bank return, dullness was general. Perhaps the firmest feature in the market was in Argentine rails, but there was little business doing.

On Friday the opening of business was as cheerless as ever, but before the close in anticipation of the decision of the directors of the railway companies to meet the representatives of the men's unions to discuss the finding of the Royal Commission, there was a sharp improvement in the prices of Home rails, and fractional rises were recorded all down the active list, without the support of any business to speak of. The rise in London North Western was 1½. American rails were flat. Canadas also fell, but Trunks rose slightly. Among the Argentine stocks Buenos Ayres Pacific rose ¾. It was stated that a Peruvian loan was about to be made at 5½ per cent., and Peruvian Corporation stocks benefited in consequence.

Weekly Traffic Summary.

The traffic receipts for the week ended November 26, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,143,569, which was earned on 21,521 miles, being at the rate of £99 12s. 1d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,030,112, with 21,467 miles open, or £94 11s. 4d. per mile. There was thus an increase of £113,457 in the receipts, an increase of 54 in the mileage, and an increase of £5 0s. 9d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £36,749 (or £1 13s. 3d. per mile) in the passenger receipts, and an increase of £73,331 (or £3 7s. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-four railways for twenty-one weeks in the passenger receipts has been £221,909, while the aggregate increase in the goods traffic was £379,712. The aggregate receipts of the fifty-two railways for twenty-one weeks (July 2 to November 26) amounted to £49,628,407, in comparison with £49,057,367 in the corresponding period of last year—an increase of £571,040.

DEATH OF SIR FREDERICK SCOTTER.

The death occurred on Monday last of Sir Frederick C. Scotter, who in December last succeeded to the baronetcy on the death of his father, Sir Charles Scotter, chairman of the London and South Western Railway. Sir Frederick, who was 43 years of age, became a member of the Stock Exchange in 1890, and was senior partner of the firm of Mortimer, Scotter and Co. Sir Frederick was chairman of the Midland and South Western Junction Railway and a director of the North Cornwall Railway and of the Anglo-Continental Supply Company. He was the only son of Sir Charles Scotter, and he married in 1894 Maria, daughter of Mr. W. Quartley, and widow of Mr. W. Bryce.

RAILWAY LABOUR POSITION.

THE COMPANIES AGREE TO MEET THE MEN'S REPRESENTATIVES.

UNION EXECUTIVES' REPLY.

NO REFERENCE TO ACCEPTANCE OF THE COMMISSION'S REPORT.

An important decision was reached yesterday (Friday) afternoon by the council of the Railway Companies' Association, representing the leading railways in the country. The meeting was held at the offices of the London and North Western Railway, at Westminster, and about thirty companies were represented. The proceedings were private and lasted from 2.30 p.m. until 4 o'clock.

It was unanimously decided to accept the invitation of the Government to meet the representatives of the men in pursuance of the resolution adopted in the House of Commons.

It is understood, however, that this concession of the directors depends upon the complete acceptance of the Railway Commission's report by both sides, and that this is in keeping with the terms of the invitation extended to the railway companies by the Government.

In a letter of the Board of Trade to both sides, enclosing the resolution of the House of Commons, the following passage occurred: "The Board of Trade will be prepared, on the understanding that the findings of the Royal Commission are accepted in principle and in substance, to invite representatives of the various parties on whose behalf the Agreement of August 19 was signed, to meet together for the further purpose stated in the resolution."

MEETING OF UNION OFFICIALS.

At Unity House, Euston Road, the headquarters of the Amalgamated Society of Railway Servants, yesterday morning, the members of the four railway unions' executives attended for the consideration of important business, among which was this question of a joint conference. Mr. A. Bellamy presided, and there was a full attendance.

Strong arguments, it is understood, had been placed before the men in support of the proposal that they should bind themselves to accept the report.

The conference terminated at 7 o'clock, when Mr. J. E. Williams stated that the following letter had been sent to Mr. Sydney Buxton, president of the Board of Trade:—

"DEAR SIR,—The letter received from the Board of Trade, dated November 25, by the signatories to the settlement of August 19, and enclosing a resolution passed by the House of Commons on November 22, was considered by the Joint Executive Committee at a meeting to-day and the attached resolution was adopted."

(Signed) J. E. WILLIAMS.
A. BELLAMY.
J. H. THOMAS.
A. FOX.
T. LOUTH.
S. CHORLTON.

The resolution was as follows:—

"That this meeting of the joint executives, having carefully considered the Board of Trade's letter of November 25th and the resolution of the House of Commons of November 22nd, resolve to accept the invitation to meet the representatives of the railway companies to discuss the best mode of giving effect to the report of the Railway Commission."

In the discussion in the House of Commons last week, the Prime Minister stated that the Government could take no part in any conference except on the basis of acceptance of the Report. The resolution passed by the House of Commons read:—"That in the opinion of this House a meeting should take place between the representatives of the parties on whose behalf the Railway Agreement of August, 1911, was signed, to discuss the best mode of giving effect to the report of the Royal Commission, and that this House asks the Government to use its good offices to bring both sides into a conference without delay."

On Tuesday next all the ballot papers issued to the members of the unions must have been returned. The questions put to the men are:—

- (1) Are you in favour of accepting the Commission's report?
- (2) If not, are you in favour of withdrawing your labour in support of recognition and a national programme?

ELECTRIC LOCOMOTIVES FOR TUNNEL WORK.

The use of separate electric locomotives for drawing trains of ordinary cars on electric railways is now common in America. Electric motor cars, which also carry passengers, are the rule where the whole of a route is worked by electric traction, but the number of cases is increasing where part of a trunk steam railway line is worked electrically, either on account of long tunnels or because of traffic density. In such cases the trains of passenger cars are hauled by steam locomotives over one part of their journey and by electric locomotives over the other part. In the design of these electric machines the history of

remaining three for combination passenger and light freight service.

The electrified zone extends from Hoosac Tunnel Station, Mass., to North Adams, Mass., a distance of 7.92 miles, of which 4.75 miles are within the tunnel. The central zone of the tunnel has an almost level track 1,200 ft. in length, with an ascending 0.5 per cent. grade up to this level track from both the East and West Portals.

The passenger locomotives were designed to handle trains having a maximum weight of 730 tons, inclusive of steam and electric locomotives, and to maintain a schedule time of 14 minutes between East Portal and North Adams. The loco-

Electric Locomotive for Hoosac Tunnel.

the steam locomotive as regards the position of the centre of gravity is repeating itself. In the earlier electric locomotives the centre of gravity was always kept low by the motors being either mounted round the driving axles or carried alongside of them. The Pennsylvania Railroad tunnel locomotives were the first great departure from this practice, for in them the centre of gravity was very much raised by mounting the motors practically on the top of the under-frame. The same feature characterises five electric locomotives which have been built for

motives for freight service were built to handle heavy freight trains having a maximum weight of 2,000 tons, including both steam and electric locomotives, and are required to accelerate this tonnage on the 0.5 per cent. grade in the tunnel.

The underrunning gear consists of two massive trucks. They are known as 2-4-0 articulated trucks, and have 63-in. wheels. Each truck has two driving axles constituting a rigid wheel base of 7 ft., and a pilot axle arranged to swing radially on the Rushton truck principle. The truck side frames follow the general design of the cast steel frames for steam locomotives, except that they are outside of the wheels. These frames are joined at each end by a cast steel box section girder of sufficient strength to care for the stresses involved in bumping in freight service. The bumper girder at each end of the locomotive is equipped with an M. C. B. coupler mounted with a Westinghouse friction draft gear.

The adjacent bumper girders at the mid-length of the locomotive are joined by a draw bar with a pin connection at each end. The eye in this bar is elongated at one end, and the length of the bar is so arranged that it is impossible for the bar to be subjected to compression under severe bumping conditions. The three wheels on each side of each truck are equalised together. The longitudinal stability of the trucks is provided by the method of mounting the cab which is supported by eight spring-loaded friction plates, two plates resting on each end of the truck. This relieves the truck centre pins of all the weight. This method of supporting the cab interposes two sets of springs in series between the rail and the cab and gives an exceptionally easy riding cab. To relieve the cab from possible pulling and bumping strains the centre pin of one truck is arranged with longitudinal clearance. This truck can not only rotate, but can also move longitudinally relative to the cab.

In the interior of the cab a long raised deck is built along the centre line which covers the motors and serves as a stand upon which the control apparatus is erected. The central arrangement of the equipment, with the numerous side windows, affords excellent light and ample room for inspection and overhauling.

Each motor is bolted rigidly to the truck frames and each is so arranged that it can be lifted by a crane after the cab has been removed, or it can be taken out through a driver drop pit. The procedure in such a case requires first the dropping of the drivers with their quill and their removal. The drop pit jack is then placed under the motor and lifts its weight off from the frame. The construction is such that the motor feet rest on the truck frame through bridge blocks; thus after the weight is carried by the jack, these can be removed and the motor dropped directly into the pit. This method of mounting the motors gives the highest centre of gravity possible with the motor connected to the axle by a single reduction gearing.

Cross Section of Electric Tunnel Locomotive.

the newly electrified Hoosac Tunnel on the Boston and Maine Railroad, though in other respects these machines are quite distinct. These locomotives haul not only passenger and goods trains through the tunnel, but also their steam locomotives. The fires of the latter are banked so as to avoid the pollution of the tunnel atmosphere. Each electric locomotive has four geared motors and twelve wheels, and it is designed for operation with alternating current at a pressure of 11,000 volts. Two of the machines are used for heavy freight service, and the

Like the New Haven Railroad locomotives, the motors drive through a flexible connection to the drivers, the arrangement being as follows: Around each driving axle there is a hollow axle or quill which carries at either end a large circular casting having six arms projecting out between specially designed spokes of the wheel centres. Each of these arms is bolted to one end of a large helical spring, the other end of which is secured to the wheel centre. This circular casting also acts as a centre for the large gear rim, which is secured to it in such a manner that the drive on the rim which comes directly from

MISSOURI PACIFIC RAILWAY.

The illustrations below show one of 50 "Mikado," or 2-8-0 locomotives, constructed by the American Locomotive Company for the Missouri Pacific Railway. These engines use superheated steam at 170 lbs., and develop a tractive effort of 50,000 lbs. The boiler is comparatively small owing to weight limitations, but is particularly well designed to take full advan-

Goods Engine for Missouri Pacific Railway.

the pinions mounted on either end of the armature shaft is transmitted through ten small helical springs. In addition to giving a flexible drive this construction also permits each wheel complete individual freedom in negotiating track inequalities. The weight of the quill and its attached parts is carried in large bearings, forming part of the motor frame, having removable caps below to permit the convenient dropping of the quill with the drivers.

Each locomotive is equipped with four Westinghouse 315 h.p. air-cooled motors and Westinghouse non-automatic unit switch

tage of the type of locomotive. This feature is noticeable in the depth of the throat plate, which is 26 1/2 inches below the barrel and is carried up at an easy angle, tending to assist free circulation into it from around the bottom of the combustion chamber and barrel of the boiler. This gives liberal space above the grates and by the insertion of a 30-inch combustion chamber gives an opportunity for more complete combustion before the gases enter the tubes.

The firebox is 66 in. inside diameter, giving a side plate which flares outward somewhat at the front end. The back

Goods Engine for Missouri Pacific Railway. End Elevations and Cross Sections.

control. The gear ratio for the freight locomotives is 22 to 91, and for passenger locomotives 34 to 79. The former have a continuous tractive effort of 49,000 lbs. at 21 m.p.h., and the latter a tractive effort of 12,000 at 37 1/2 m.p.h. The total weight of each locomotive is 200,000 lbs., distributed to give 48,000 lbs. on each driving axle.

Railway Motor Delivery Vans.—The London and South Western Railway employ six motor vans for goods and parcels delivery in Bournemouth.

Quarterly Statistics of Accidents.—The number of persons killed and injured on railways in the United Kingdom in the course of public traffic during the three months ended June 30, 1911, is reported by the Board of Trade, as follows:—Killed, 239, against 212 for the corresponding period; injured, 1,803, against 1,651. Of the number killed 112 were trespassers (including suicides), against 100 for the corresponding period.

head, however, is made smaller and the plates are gradually brought in at the top, the inner firebox plates narrowing about 9 inches on the centre line of the boiler and the covering plate. The use of a combustion chamber in connection with the Schmidt high degree superheater reduces the tube heating surface to 2,614 sq. ft.; this would seem to be very small for a boiler and locomotive of this size, but it has been found that the combustion chamber is more valuable for evaporation than would be an equivalent length of flues, and this, taken in connection with the economy and capacity given by the superheater, which is at least 50 per cent. more valuable than an equal space filled with flues, fully explains this condition, and there is little doubt but what this boiler will be equal to any reasonable demand.

The customary steam-pipe design of the builders has been followed in this case. The front end of an extended piston rod is carried, as usual, on an enclosed guide, supported by the

cylinder head and buffer beam. The standard guide for the valve-stem cross-head, which is adjustable for wear, has been used, and in all other particulars the locomotive follows the well known designs of the builders. For the accompanying illustrations we are indebted to the *American Engineer*.

The general dimensions, weights and ratios are given in the following table:—

GENERAL DATA.	
Gauge.....	4 ft. 8 1/2 in.
Fuel.....	Bituminous coal
Tractive effort.....	22,100 lbs.

RAILWAY ENTERPRISE.

"The Line for Winter Travel," its cross-country expresses, and the fact that express trains are vestibuled and include breakfast, lunch, and dining cars, are the features of this season's publicity work of the Great Central Railway.

Christmas on the Riviera at cheap fares is a seasonable offer by the Great Eastern and Chatham Railway. The tickets will be available from December 22 to January 30.

Throughout London and suburbs the hoardings display great posters, the most prominent lines indicating that there are forty trains daily from Euston and Broad Street to Birmingham, and that "there is no quicker way."

The good train service provided by the Great Eastern Railway to Clifton-on-Sea and Southcliff has resulted in those resorts becoming the place of residence for an increasing number of people who have business connections with London, while others may make winter visits of long duration. The journey by express restaurant car trains occupies an hour and forty-five minutes. Breakfast is served on the morning trains, and on Saturdays there is a midnight supper train.

The Brighton Railway Company are announcing that by their Royal Mail Route, *via* Newhaven, Dieppe and Rouen, a special 15 day excursion to Paris, Rouen and Dieppe will be run from London by the express day and night services on Thursday to Sunday, December 21 to 24. Friday to Tuesday tickets will be issued to Dieppe by the day and night services from London on Friday to Monday, December 22 to 25.

The Midland Railway's Christmas excursion bookings from St. Pancras will commence on December 21 and be continued up to the 26th. The field covered by these bookings includes all parts of the Midland counties and the North of England, Scotland, and many parts of Ireland, notably Belfast and the North *via* Heysham. Passengers travelling long distances will

Rails for the Australian Trans-Continental Railway. The Commonwealth Government contemplates making heavy purchases of rails next year for the railway to be constructed from Kalgoorlie, Western Australia, to Port Augusta, South Australia, and already offers have been made by American manufacturers. Although a bonus is being paid by the Government to the new ironworks at Lithgow, New South Wales, the supply of rails from this source will be far short of the requirements for the line of 1,063 miles. The revised estimate of the total cost is £4,045,000, including £1,012,000 for rails and fastenings, £84,000 for bridges and culverts, and £315,000 for rolling stock.

be accommodated by tickets available for various periods up to 17 days. The Friday to Tuesday week-end tickets will be issued as usual, but will be available for an extra day *i.e.*, to enable the holders to return Wednesday. Saturday to Monday tickets will also be issued, but will be available for return on Tuesday, a day later than usual. The company have given notice that they will not be able to accept general horse and carriage traffic for conveyance by passenger trains on Saturday, December 23, nor provide saloons, reserved compartments or seats on that date. On Christmas Day the train service will be the same as on Sundays, with a few exceptions notified on special bills. On Bank Holiday, December 26, many of the ordinary train services will be suspended, as shown in the company's time-tables, and additional trains run as announced in special bills.

Grand Trunk Pacific Progress. It is interesting to note the progress that is being made by the Grand Trunk Pacific Railway. The lines at present in operation are:—Fort William Northwest *via* Winnipeg, Saskatoon; Edmonton, and Edson to Fitzhugh, 1,472 miles; Prince Rupert to Copper River, 100 miles; Canora *via* Yorkton and Melville to Regina, 151 miles; Toileld Alta to Mirror, 70 miles. There is also a total mileage of about 900 on other sections of the Eastern Division which is in partial operation by construction trains. The following lines are under construction—Fitzhugh Alta to Copper River, 618 miles; Regina Sask. *via* Moose Jaw Northwest, 93 miles; Regina Sask to International Boundary, 90 miles; Young to Prince Albert Sask, 120 miles; Olan to Battleford Sask, 50 miles; Mirror Alta to Calgary, 124 miles; Biggar Sask, south west, 50 miles; Alberta Coal Branch, 60 miles.

BRITISH COLUMBIA ELECTRIC RAILWAY CO.

The 15th ordinary general meeting of the British Columbia Electric Railway Company, Limited, was held on Thursday last at the Liverpool Street Hotel, London, E.C., Mr. R. M. Horne-Payne (chairman of the company) presiding.

The SECRETARY (Mr. M. Urwin, A.C.A.) read the notice convening the meeting and the auditors' report.

The CHAIRMAN then said that he thought the accounts were so plain that they did not require any explanation from him. During the past six months he had received a number of letters and enquiries on the wider subject of the general prosperity and future prospects of the company, and from them he gathered that there were two or three points on which shareholders would like information. A certain number of paragraphs, copied from the Vancouver newspapers, had appeared in the English press respecting the negotiations which were started by the council of Vancouver city with a view to inducing this company to agree that the dates when the city of Vancouver first had the right to purchase the railway within the old original city limits, and the dates when it and the other neighbouring municipalities, or boroughs as they would call them in this country, had the right to purchase certain parts of this railway surrounding the old city, should be made the same. The subject had already been dealt with in the report, and the shareholders had already been told that these negotiations failed in spite of a very real desire on the part of the directors to meet the wishes of the Mayor and Corporation and the citizens of Vancouver in every possible way, mainly because some of the representatives of the city wished to introduce into the bargain conditions which would have given to the city council a right to unduly intervene and control the service given by this company. The directors were satisfied that this would have led to constant disputes, and to a thoroughly unsatisfactory and uneconomical service. The directors fully recognised the right of the council to voice the interests and the complaints of the public as regards the service the company gave, and they at all times welcomed and paid the most careful attention to any representations they made and would always take it as an act of kindness on the part of the councillors, as representatives of the people and in touch with public opinion, if they would let the directors know when any dissatisfaction existed, but between this and actually giving the council a share in the right and responsibility of spending the company's money there was a wide difference. The directors wanted to meet the needs and advance the interests of the cities they served in every way possible. He truly believed that they had done this for the past 15 years in a more liberal spirit than any other company on the North American Continent. They had not spared either energy or money in their efforts—they had spent \$25,000,000 on the task—but they could not part with the right of freely deciding for themselves how their money was to be spent, and how interest was to be earned upon it. The old city of Vancouver covered only a comparatively small part of the greater city or group of municipalities, commonly spoken of as Vancouver. Just

as the old city of London was surrounded by the municipalities of Westminster, Kensington, Holborn, Poplar, Southwark, Lambeth and the rest, so the original city of Vancouver was surrounded by North Vancouver, Hastings, Burnaby, South Vancouver, Point Grey and others. The company's rights to operate the railway outside the old city's limits were in some cases perpetual, and in no case for less than 36 years still to run. The Corporation of Vancouver had the right in 1919, and at the end of each successive five-year period, to buy most of the railway property within the old city limits on the conditions set forth in the report. Whether they would exercise that right or not for many years to come was not known. If they had the right to-day, they undoubtedly would exercise it, because the advocates of municipal ownership of public utilities were just at present very numerous and very loud-voiced in Canada. Personally, he held the opinion that the city would not buy in 1919 or for many years, because he believed that by 1919 the ratepayers in some of the eastern cities of Canada, who were now experimenting in municipally-owned electric undertakings, would have had such a lesson that Vancouver ratepayers would not be anxious to follow in their footsteps. Already, he knew of at least one city in the east where the inhabitants were waking up to an unpleasant suspicion that, in consequence of municipal ownership, their rates were likely to go up by leaps and bounds, that they had already paid out huge sums, were called upon to pay double and treble the sum originally estimated, and had very little to show in return, and that, moreover, they were paying three times over for their public utilities, once in the direct charge and twice over again in the shape of increased rates. He did not think Vancouver would want to buy out the city lines in 1919, but whether they did or not would not be a matter of vital importance to the company, because he believed that by 1919 there would be six or eight municipalities surrounding the old city, each as populous as the old city was to-day, and he believed that instead of serving a population of 250,000, the railway would be serving a population of between 450,000 and 550,000. He thought, moreover, that in the long run they would be glad that the recent negotiations with the city came to nothing. They would have involved the company in a large loss of revenue for seven years, in some gain of revenue for the next 14 years, and in an enormous loss for the remaining 17 years. To turn to another less satisfactory subject, he felt he must refer to the somewhat irregular and inadequate service which prevailing conditions compelled the company to give in Vancouver City during the past spring and summer, and which had been the source of many complaints. The difficulties in the way of handling the traffic which their managers had to face had been immense, and, he regretted to say, caused them so much worry, and put such a strain on them, as to threaten to seriously impair their health. Those difficulties had not been due to any lack of foresight on the part of the directors or managers, and if the Vancouver public could realise how immensely difficult and unforeseeable the position was, they would have accorded the company very great praise. The trouble arose from the unprecedented rapidity with which the city grows, and from its great prosperity. It had three immediate causes:—Firstly, the rapid growth of business, which was shown by the increase in gross earnings from £478,000 in 1909 to £900,000 in 1911, and which made it utterly impossible for the management to keep pace with the work and to re-arrange the organisation fast enough to meet constantly changing conditions. Secondly, although they had spent close on \$800,000 in new rolling stock it was utterly impossible to purchase it and get deliveries fast enough to meet the extraordinary demand during the summer season. Thirdly, the Corporation of Vancouver had been carrying out a very extensive programme of street improvements, and he doubted whether there was ever a time in the past year when the track was not torn up and traffic consequently impeded at at least four or five points simultaneously. As soon as possible after the management reported these troubles three of the directors, at great personal sacrifice, went out to Vancouver to investigate the matter, and amongst other steps taken they added to the management two highly qualified and experienced men, who were now taking their full share of the work and responsibility. The increase in business was still going on at the same marvellous pace, but they were now better organised to meet the strain, and he hoped that the public would be well served in the future, and that complaints would cease. There was one other point that perhaps he had better mention as a matter of precaution. Just at present it seemed possible that during the next twelve months they might be compelled by their competitors to fight for some of their business by reducing some of the charges for light and power. There was no sound reason for this, as the charges were already exceedingly low,

considering local conditions, and if their competitors would only show a reasonable amount of patience there would be plenty of good business at remunerative prices for all. They would not be the aggressors, but if it pleased their competitors to try and steal the company's business by selling light and power below the cost of production, they could not sit still and allow them to do so, but would meet cut by cut, strong in the knowledge that it was only a small portion of their business that could be affected, that the company could produce power at a lower cost than they could, and that the company had large financial reserves accumulated to meet just such a contingency. The shareholders might rest assured that it was only a passing condition which could be only temporarily of a serious nature, and that at the worst it was unlikely to cause them more injury than possibly to prevent their adding to the reserve fund for a year or two at the outside. He had now had the pleasure of being chairman for 14 years, and looking back over that period it was amusing to think how for the first ten years he used to carefully tell them that there was a country called Canada, that was bounded on the one side by the Atlantic and on the other side by the Pacific Ocean, and that it was a rich country, full of natural wealth. They were one of the early pioneer companies of Canada, and in those days they had to explain things very carefully. That had long ceased to be necessary and instead he had for the last three years warned them lest too much and an over-enthusiastic knowledge of Canada should lead them to fall an easy prey to the unscrupulous promoter. He now wanted to take this opportunity of giving them another warning. Canadian finance had up to the present remained exceptionally sound and exceptionally clean, and comparatively few unsound enterprises had been floated on this market, but a year or two ago several utterly wild schemes were unfortunately taken up in this country, and the time was now about due for them to come to grief. If two or three Canadian ventures failed to pay their interest and go into the bankruptcy court, they were not to let it affect their judgment of other enterprises, they were not to be scared into selling their securities and shares in any other Canadian companies simply because a few rotten, ill-conceived ventures came to grief. Judge each undertaking on its own merits. There had been a number of ill-advised promotions in the past, and London was at present inundated with wild proposals from Canada, especially in connection with land and town property. They should be careful, but certainly Canada offered the best opportunities for investment in the whole world. Very few mistakes had been made in the past, and with ordinary business precaution there was nothing to fear for the future, and they could go on investing money in the country with safety and profit.

The CHAIRMAN then moved:—"That the balance-sheet as at June 30, 1911, and the revenue account for the year ended that date, together with the reports of the directors and auditors thereon be and are hereby received and adopted."

This was seconded by Mr. E. M. HARVEY, and carried unanimously.

Mr. G. P. NORTON moved the resolution for payment of dividends, which was seconded by Mr. J. BURNES, and carried unanimously.

The resolutions for re-election of retiring directors and auditors and a vote of thanks to the general manager and staff were duly proposed, seconded, and unanimously carried.

Mr. HAROLD G. BROWN moved:—"That the best thanks of the meeting be given to the general manager, officers, and staff in British Columbia for their loyal and successful efforts on the company's behalf." He said: I should like to tell you that I was in Vancouver this year for over two months, and came into very close personal touch with the general manager and all the chiefs of our staff out there, and I can say from personal knowledge that we have a staff which is as zealous in the interests of the company as it is possible to get. I am sure you could not get any people who would serve you more loyally and zealously than those who are now serving the company in British Columbia. (Applause.)

Mr. T. BLUNDELL BROWN: I have very great pleasure in seconding the resolution, and in confirming every word that Mr. Harold Brown has said. The members of the staff are personally known to me also.

The resolution was carried unanimously.

Mr. DUNCAN ROBSON proposed the re-election of Messrs. Norton, Feasey and Slade as auditors in this country, and of Messrs. Helliwell, Moore and MacLachlan as auditors in British Columbia.

Mr. JOHN COATES, in seconding the resolution, said: I should like to take the opportunity of thanking the chairman for his very able address. As one who has had an experience of about sixteen or seventeen years in the city of Ottawa in the supply

of light, heat, and power, I should like to assure you that there need not be the slightest fear of the threatened competition in Vancouver to which the chairman has alluded. The company is splendidly equipped for a great fight, and can fight with anyone. I can speak from personal experience, because I knew the place when it had 25,000 inhabitants, and now, I suppose there are over 100,000. I have been going there every year, and know it thoroughly. The money spent by the company has been remarkably well spent, and only spent in such directions as would give a productive power. I saw a note in some paper the other day referring to the great expenditure of capital by this company. Perhaps you will not mind my just mentioning that I do not think the directors have spent a £5 note more than necessary; in fact, I think they have been on the conservative side in many respects. As you know, where progress ends decline begins. They have simply kept pace with the growing demand of Vancouver, which, as Mr. Brown has said, is going forward by leaps and bounds. I never saw anything like it, and those who have never been to British Columbia cannot conceive anything like it. Therefore, I think we owe a very special vote of thanks to the directors. They deserve our hearty congratulations for the successful way in which they have managed the business. (Applause.)

It was then proposed by Mr. G. P. NORTON:—"That the capital of the company be increased to £4,000,000 by the creation of 800,000 new shares of £5 each."

This was seconded by Mr. E. M. HARVEY, and carried unanimously.

It was then proposed by Mr. T. BLUNDELL BROWN, and seconded by Mr. J. BURNES:—"That article 104 of the articles of association of the company be amended by adding at the end thereof the following words, viz.: In the case of share or stock certificates or debentures or debenture stock certificates the seal of the company may be affixed in the presence of any one director, and every such instrument shall be signed by one director and countersigned by the secretary or registrar or some other person appointed by the directors for that purpose."

This was carried unanimously.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY.

CAPITAL.

The half-yearly accounts to June 30, 1911, show that the capital stock stands at £2,000,000, as provided in the Bombay, Baroda and Central Indian Railway Act, 1900, but further capital has been provided by the issue in October, 1908, of £1,000,000 3½ per cent. debenture stock, under the option vested in the Secretary of State, towards covering the advances made by him for capital purposes since January 1, 1906. The interest payable on this debenture stock, and also that on further advances made by the Secretary of State for capital outlay, form additional charges against the net earnings of the combined system before division of the surplus earnings between Government and the company. The capital expenditure during the half-year for the combined system was Rs.45,48,794, and the previous expenditure since January 1, 1900 (including the stores and suspense increase since that date, Rs.51,51,433) amounted to Rs.4,08,30,687, equivalent to £2,722,440.

REVENUE.

The results of working for the half-year on the combined system (the Bombay, Baroda and Central India Railway and the Rajputana-Malwa Railway) were as follows, compared with the corresponding period of 1910:—Gross earnings, Rs.2,00,20,414 (against Rs.2,81,26,251); expenditure, Rs.1,40,70,502 (against Rs.1,30,81,087); net earnings, Rs.1,49,40,912 (against Rs.1,50,44,264). The percentage of expenditure to gross earnings was 48.52 against 46.51. Coaching traffic shows an increase of Rs.1,87,124 on the Bombay, Baroda and Central India Railway, and of Rs.6,85,443 on the Rajputana-Malwa Railway; goods traffic, an increase of Rs.27,344 on the former railway and of Rs.6,877 on the latter; sundries, a decrease of Rs.32,917 on the Bombay, Baroda and Central India Railway, and an increase of Rs.16,837 on the Rajputana-Malwa Railway; and telegraph, an increase of Rs.790 on the former and a decrease of Rs.335 on the latter. The increase of Rs.1,87,124 in the coaching traffic of the Bombay, Baroda and Central India Railway is chiefly in the intermediate and third-class passenger traffic, due partly to a larger number of Hindu marriages and partly to large attendance at fairs, and to the favourable condition of trade. The increase of Rs.6,85,443 for the Rajputana-Malwa Railway is chiefly in the third-class passenger traffic, to the extent of 1,133,654 in number and Rs.5,79,862 in receipts, this being also due to a general revival of trade consequent on the good monsoon of 1910, and to an increased number of Hindu marriages. There were also small increases under other

classes of passenger traffic, and an increase of Rs.45,575 in the receipts from carriage of parcels. Of the increase of Rs.27,344 in goods traffic on the Bombay, Baroda and Central India Railway, Rs.8,724 was in general merchandise, and Rs.18,181 from carriage of live stock. On the Rajputana-Malwa Railway there was a decrease of Rs.1,87,542 in general merchandise, the chief items of falling off being raw cotton, gram, pulse, and oil seeds, but this was more than covered by increases under railway materials, coal for the public, and for the locomotive department, and carriage of live stock, the result being the small net increase of Rs.9,877.

NET RESULTS.

The net earnings for the first half of 1911, to be carried forward towards the yearly total of net earnings in which the company shares when in excess of Rs.200 lakhs plus interest charges in respect of additional capital provided since January 1, 1906, amount to Rs.1,49,40,912 or Rs.1,03,352 less than in the corresponding period in 1910. The interest chargeable for the half-year on capital provided as above amounts to Rs.7,31,890, as compared with a charge of Rs.6,47,486 for the corresponding period. The net result of the half-year is therefore Rs.1,87,765 below that attained in the corresponding period of 1910. In the current half-year, however, the gross earnings of the system up to November 18 amount approximately to Rs.177 lakhs, as compared with Rs.160 lakhs in the corresponding period of last year. The final distribution of the assets of the old company was made on November 7, by the payment of a dividend at the rate of 6s. 4d. per £100. The Secretary of State for India has proposed a revision of the company's contract in view to the inclusion of the Nagda-Muttra Railway in the company's system, and prolonged negotiations on this subject are now drawing to a close. The directors now propose to enter into an agreement with the Secretary of State for this purpose. In reply to an invitation from the Secretary of State for India the board have deputed the chairman to proceed to India to take part in a consultation to be held early in January next in regard to important matters affecting the company's administration. At the close of this duty Sir William Bisset will inspect the company's system, and the important works of strengthening the road and the reconstruction of bridges which are now in active progress.

TRAFFIC, &c.

The total length of railway forming the system worked by the company at the end of the half-year was *3,132.29 miles, of which 832.15 miles was on the 5½ ft. gauge, 2,168.30 miles on the metre gauge, and 131.84 miles on the 2½ ft. gauge. The number of train miles run was 2,302,203 on the broad gauge and 3,768,001 on the metre gauge, as compared with 2,287,007 on the former and 3,729,358 on the latter in the corresponding period of 1910. On the combined system the gross earnings per train mile, compared with the first half of 1910, were Rs.4.71 (against Rs.4.67), whilst the expenditure was Rs.2.20 (against Rs.2.17) per train mile, and the net earnings Rs.2.42 (against Rs.2.50) per train mile. The total number of passengers carried on the combined system was 22,640,970 (against 21,059,917), while the total weight of goods handled was 3,473,543 tons (against 3,145,422 tons).

* This does not include the open mileage of the Nagda-Muttra Railway, 239.35 miles, as this railway does not at present form part of the company's system, but is being worked for the Government on the basis of actual expenses.

GREAT INDIAN PENINSULA RAILWAY.

The report for the half-year ended June 30, 1911, completes the eleventh year under the contract of 1900. The result admits of a dividend for the year of 11s. per cent. on the stock of the company, in addition to the guaranteed interest. The gross receipts of the half-year were Rs.4,13,59,333, a decrease of Rs.1,41,355, and the expenditure Rs.2,20,69,108, an increase of Rs.19,82,837. The net revenue was Rs.1,92,90,225, a decrease of Rs.21,24,192. There was an increase of Rs.3,71,625 in coaching receipts, equal to 3.26 per cent., and a decrease of Rs.3,77,268 in goods receipts, equal to 1.84 per cent.

The total mileage of the undertaking worked by the company at June 30, 1911, was 2,901.51, together with 62.07 miles of foreign lines over which running powers are exercised. The only alteration during the half-year was a reduction of 0.04 miles in the length of single line, due to adjustments on re-measurement.

YEARLY RESULTS.

The general results for the year to June 30, 1911, as compared with those for the previous year (excluding State lines), show gross receipts Rs.7,83,32,403, against Rs.6,88,71,665 (decrease, Rs.5,30,222), and expenditure, Rs.4,04,18,143, against Rs.3,90,00,071 (increase, Rs.38,18,071). The net revenue was

Rs.2,79,14,260, against Rs.3,22,71,594, or a decrease of Rs.43,57,333. After deducting the total interest charges, Rs.2,36,95,357, the surplus of net revenue is Rs.42,18,903, which is divisible between the Government and the company, the company's one-twentieth share being Rs.2,10,945. Adding thereto the amount of Rs.86 for adjustment in respect of the year 1908-9, and deducting Rs.5,495 for Indian income-tax, there remains Rs.2,05,536 at the disposal of the company. This sum has been remitted to England, producing £13,747, which with the balance of £883 brought forward from the previous account plus interest to September 30 last, makes a total of £14,630. Out of this sum the directors propose that a dividend of 11s. per cent., amounting to £14,162, be declared and paid to the stockholders in addition to the guaranteed interest of the half-year, leaving a balance of £468, exclusive of interest on deposit which will become due on December 31 next.

The report states:—"Under maintenance of way, works and stations, the increase was due principally to heavier expenditure incurred on renewals on ordinary maintenance account and in connection with relaying the Ghauts and other portions of the line with 100-lb. rails; increased outlay on reconstruction of the Tapti bridge and strengthening of girders; repairs to banks and fences; improving the approaches to certain important bridges between Gwalior and Agra; and to increased expenditure on repairs to station-buildings, yards and stall quarters. The higher locomotive expenditure was due chiefly to increased running expenses, owing to increased mileage; to more material drawn for renewal of engines; and to heavier repairs executed. The increase in carriage and wagon expenses was attributable chiefly to the heavier nature of the repairs undertaken to meet traffic requirements in connection with the Delhi Durbar. The extension of the locomotive shops at Jhansi is now completed. Good progress has been made in the construction of the new carriage and wagon shops at Matunga, but much remains to be done before the work of this department can be wholly removed from the Parel shops. Some of the new shops are already finished, and are being utilised as far as possible. As very great pressure on the resources of the railway was expected in getting the traffic in and out of Delhi during the assemblage in December for the Coronation Durbar, exceptional arrangements had to be sanctioned early in the year. The new works required were chiefly additional lines and sidings on the Agra-Delhi Chord line to give relief to the Delhi Sadr station. The Government is also providing a permanent and direct connection between the company's station at Delhi and the Southern Punjab and Delhi-Umballa-Kalka railways as an integral part of the Agra-Delhi Chord line. This is an important connection quite apart from Durbar requirements, as it will enable this company to pass traffic from and to the North Western State railway system without the necessity of entering the Delhi Central station as heretofore. Most of the smaller bridges up to 30 feet span are now finished, and are up to full standard required. Forty miles of 82-lb. rails have been replaced by rails of 100-lb. section, and the rails taken out have been laid on the Itarsi-Nagpur line; the re-laying on the Bhoire and Thull Ghauts with 100-lb. rails has been completed, and about 12 miles of the main line below the Ghauts have also been similarly treated. The reconstruction of the double line bridge over the Tapti river, near Bhusaval, has been pushed with great success, and reflects much credit on Mr. John Graham, the bridge engineer. One line of rails was brought into use during the half-year under report, and the second line has since been completed and handed over to traffic. The completion of this bridge is of great importance, and will much facilitate the solution of the difficult traffic problems connected with the Coronation Durbar at Delhi. To the great regret of his colleagues, the Right Hon. Sir Andrew R. Scoble, K.C.S.I., has, on account of the state of his health, resigned his position as chairman and director of this company. He first joined the board in 1878, and retired in 1886 on appointment as legal member of the Council of the Governor-General of India. He rejoined the board in 1893, and in the following year was elected chairman of the company, which position he has occupied continuously for 17 years. His intimate knowledge of the company's interests, his sound judgment, combined with the tact and ability which he displayed, will make his loss severely felt. The directors have elected Colonel F. Firebrace, the managing director, to take his place as chairman, and to fill the vacancy on the board they have elected Mr. James F. Finlay, C.S.I., formerly a member of the Council of India. He had previously held the important office of Secretary to the Government of India in the finance department, and more recently was the member for commerce and industry in the Viceroy's Executive Council. After 50 years of continuous service with the company, Mr. J. I. Berry is at the end of this year resigning the office of secretary. For some 30 years Mr. Berry was the company's accountant, and rendered marked

service in systematising the accounts and regulating the necessary details. For the last ten years he has filled the office of secretary, and has rendered much valuable assistance to the directors. As a mark of their appreciation of his long and excellent service, the directors propose to give Mr. Berry a bonus of £500—£200 to be provided out of surplus profits and £300 out of the revenues of the undertaking. As Government sanction to the latter portion is necessary, the approval of the Secretary of State for India has been sought."

SOUTHERN PUJAB RAILWAY.

CAPITAL.

The expenditure on capital account to June 30, 1911, amounted to £3,214,934, while the receipts were £3,186,229, viz.:—ordinary stock, £1,000,000; 4 per cent. cumulative preference stock, £1,500,000; 4 per cent. cumulative preference shares, £186,229; and 3½ per cent. debenture stock, £500,000, leaving a debit balance of £28,705. The capital expenditure during the half-year amounted to £147,095, of which £8,989 was on the main line and Kaithal branch; £875 on the Ludhiana extension; £83,231 on the Sutlej Valley Railway, and £54,000 on lines in course of construction (Jullundur Doab Railway). The estimated expenditure during the current six months is £149,000.

REVENUE.

The earnings during the half-year ended June 30, 1911, on the main line and Kaithal branch, from coaching traffic were Rs.8,15,996 (against Rs.7,43,378), from goods traffic Rs.16,44,784 (against Rs.14,67,932), and from sundries Rs.8,295 (against Rs. 9,137). After making certain adjustments, the gross receipts amount to Rs.24,93,741, as compared with Rs.23,43,080 during the corresponding period of 1910. The working charges (at 52 per cent. of the gross receipts) were Rs.12,96,745 (against Rs.12,18,466), and the net earnings Rs. 11,96,996 (against Rs.11,24,683). On the Ludhiana extension, the earnings during the same period were:—From coaching traffic, Rs.3,44,790 (against Rs.3,32,671); from goods traffic, Rs.2,14,033 (against Rs.1,63,279); and from sundries, Rs.2,008 (against Rs.1,049). After making certain adjustments, the gross receipts on the Ludhiana extension amount to Rs.5,67,822, as compared with Rs.5,02,442 during the corresponding period of 1910. The working charges (at 52 per cent. of the gross receipts) were Rs.2,95,267 (against Rs.2,61,270), and the net earnings Rs.2,72,555 (against Rs.2,41,172). On the Sutlej Valley Railway the earnings during the half-year to June 30, 1911, were:—From coaching traffic, Rs.2,12,991; from goods traffic, Rs.76,948; sundries, Rs.2,353. After making certain adjustments the gross receipts on the Sutlej Valley Railway amount to Rs.2,71,918. The working charges (at 52 per cent. of the gross receipts) were Rs.1,41,397, and the net earnings Rs.1,30,521.

NET REVENUE.

The net revenue was £106,630. After reserving £27,577, being the balance of the share of surplus profits due to the Secretary of State for the half-year, there remains £79,053, to which is added £90,315 brought forward, making £169,368 at the disposal of the company.

DIVIDEND.

The dividend on the £1,500,000 preference stock at 4 per cent. per annum for the half-year ended June 30 last was paid on September 1 out of revenue, leaving the sum of £139,368. The board recommend the payment of an interim dividend on the ordinary stock for the half-year at the rate of £6 per cent. per annum, which will absorb £30,000, and leave £109,368 to be carried forward.

SOUTH INDIAN RAILWAY.

The report for the half-year ended June 30, 1911, was issued on November 24. The accounts show that total revenue earnings for the half-year ended June 30, 1911, were Rs.1,25,14,613 (£834,307), against Rs.1,12,30,256 (£748,683) in the corresponding half of 1910, showing the very large increase of Rs.12,84,357 (£85,624), or of 11.44 per cent. Of this amount Rs.88,07,846 (£587,190) was contributed by the old metre gauge section, showing the abnormal increase of 14.32 per cent. over the corresponding half of the previous year; and Rs.37,06,767 (£247,118) was contributed by the broad gauge section, showing an increase of 5.14 per cent. over the corresponding half of the previous year. All these are record figures. The working expenses for the half-year were Rs.60,84,379 (£405,625), or 48.62 per cent. of the earnings, as against Rs.59,84,753 (£398,983) in the corresponding half of the previous year. The increase in the expenses was therefore Rs.99,626 (£6,642). This was partly due to the extra work

caused by the increased traffic and partly to increases under renewals. The expenditure under the latter is likely to be heavy during the next few years, but this was anticipated and provided for in the valuation of the property when the new contract was agreed to. The net earnings for the half-year amount to Rs.64,303 (£428,682), showing an increase of Rs.11,84,731 (£78,682), as compared with the corresponding half of the year 1910.

The coaching receipts have increased by Rs.3,64,687 (£24,272), the goods traffic by Rs.9,65,540 (£64,370), while the miscellaneous receipts decreased by Rs.45,270 (£3,018) resulting in the increase in the gross earnings of Rs.12,84,357 (£85,624).

Under clause 25 of the revised contract of December, 1910, surplus profits are calculated on the business of the entire year instead of as hitherto on the business of each half-year, and are payable in the month of July following the year in which they are earned. During the years 1911, 1912, and 1913, however, the Secretary of State has guaranteed that the surplus profits shall not fall below one-half per cent. per annum, and has agreed to pay this sum in advance in two half-yearly instalments at the same time as the guaranteed interest. There will consequently be a distribution to shareholders on January 1, 1912, of 2 per cent. for guaranteed interest and guaranteed surplus profits.

The capital outlay upon the open line during the half-year was Rs.12,44,146 (£82,944), of which Rs.8,39,592 (£55,973) was expended on additions to rolling stock, Rs.60,232 (£4,015) on the Pamban Reef works, and the balance in strengthening and improving the line and increasing the facilities for working traffic.

The length of State line worked by the company on June 30, 1911, was 1,395 miles. In addition, the company works the following lines:—Pondicherry Railway, 7½ miles; Karaikkal Railway, 14½ miles; Tanjore District Board Railway, 103½ miles; the Travancore branch, 158½ miles; and Shoranur-Cochin Railway, 64½ miles, making the total length of line worked 1,604½ miles.

BENGAL-NAGPUR RAILWAY.

The half-yearly report, covering the six months ended June 30, 1911, states that the amount of capital raised to December 31, 1910, was £19,783,522. During the half-year this has been increased by advances under the Secretary of State's contracts with the company relating to the extensions amounting to £127,514, making the total capital raised to June 30, £19,911,036. In addition, the Secretary of State has made other advances to the company to the extent of £4,437,872. The capital expenditure during the half-year was mainly on the construction of the Nagpur Chindwara line, on the provision of additional rolling stock, and on improvements to the main line and to the workshops at Khargpur. Comparing the figures for the half-year with those for the corresponding half-year of 1910, while the gross earnings have increased by Rs.10,91,886, there was an increase of Rs.11,55,662 in working expenses, so that the net earnings have decreased by Rs.63,770, or .60 per cent. The increase in the working expenses is due to more work having been done on strengthening bridges than in the corresponding half-year of 1910; and to a larger expenditure on repairs to locomotives, on reboiling of engines, and on repairs to coaching and goods vehicles; the increase under this head is the result of the restrictions placed on expenditure on repairs in the preceding year. The proportion of working expenses to gross receipts has been 40.14 per cent. compared with 45.51 per cent. in the corresponding half of 1910. The total number of passengers carried increased by 451,308, or about 6 per cent., while the amount received increased by Rs.4,22,037, or about 9 per cent. The increase in number and amount was almost entirely in third class; the other classes showed very small variations. "The directors have to announce with much regret the death of Mr. C. M. M. Rawlins, of the firm of Messrs. Clarke, Rawlins and Co., who had been the company's solicitors since its formation. They also have to report that Mr. Robert Miller, who has been the managing director since the company's formation, has expressed a wish to vacate that position, retaining, however, his seat on the board. The directors accepted his resignation of the office of managing director with regret, and have appointed Mr. John Manson, lately the company's agent in India, to be a director, and also to be managing director. The stockholders will be asked to pass a resolution confirming his appointment, as a director. The vacant post of agent in India has been filled by the appointment of Mr. George Cochrane Godfrey, deputy manager, who has been in the company's service since 1895."

LIGHTING OF INDIAN ROYAL TRAIN.

We are indebted to the British Thomson-Houston Company for the accompanying illustration of the generator set which with a marble switchboard panel has been supplied by them to Messrs. Turner, Hoare and Co., of Bombay, for the lighting installation of the Royal train to be used by their Majesties while travelling in India. This set is placed in one of the cars of the Royal train, from which all other carriages will be lighted. The special train was built to the designs of Mr. H. Kelway

Humber, M.V.O., for the use of Lord Curzon, and was adapted for the journeys made by King George when Prince of Wales.

The electric lighting is a 4.8 kw., 25-32 volt generator, direct coupled and mounted on combination base to a paraffin engine. The marble panel for controlling this set consists of a combination generator and accumulator panel, which is equipped with the necessary instruments, rheostat, cut-outs, switches, and charging and discharging switch. The entire train consists of ten carriages.

DIVIDEND ANNOUNCEMENTS.

VERA CRUZ (MEXICO) RAILWAYS.—A dividend of 6 per cent. on the preference shares for the past year, setting aside £2,000 for depreciation on steamers and carrying forward £787.

UNION PACIFIC RAILROAD.—The accounts for the year ended June 30 show a decrease of \$1,244,984 in gross receipts, and an increase of \$3,068,724 in working expenses, leaving \$35,711,126 as net revenue. Dividends amounting to 10 per cent. have been declared on the common stock.

Cannon Street Hotel.—The Cannon Street Hotel, the social rendezvous of a past generation of City men, is to be practically reconstructed, redecorated and brought up-to-date. The Great Hall—the largest in the City—in which so many distinguished men have spoken, is to be transformed into a palace of white and gold. The Pillar Hall, too, is to undergo a like change. The dark corridors are to be made light, rich carpets are to be laid, every bedroom is to be refurbished, and the City is to be provided with an up-to-date hostel. The whole ground floor is to be re-arranged, a handsome new restaurant and grill room constructed, and entrances from the station and the front made. On the first floor ladies are to be provided with a large and commodious cloak-room. Masonic lodges are to be specially considered. A magnificent masonic temple, to be built on the top of the Great Hall, has been planned. A couple of lifts will make the temple easily accessible. The works will shortly be put in hand at the instance of the South Eastern Railway Company, who have taken over the management of the hotel.

L. AND N.W. CHAIRMAN AT CREWE.

Mr. G. H. Cloughton, chairman of the London and North Western Railway Company, speaking at Crewe, on Sunday, to the men employed by the company, said he had been accused of "living and moving in a feudal age, and knowing nothing of the modern democratic and labour spirit." He denied it. He began his life as a workman with his weekly board to pay, and had inherited nothing. For the last quarter of a century he had been intimately mixed up with the working classes in the Black Country. He took that opportunity of thanking the men of Crewe for the lead they had taken in trying to come to an understanding in the great labour differences that were in front of them. Trade unions, as unions, had a great province, and he had the greatest respect for their leaders. But if they had a great province, he and the directors of the North Western Railway had a great duty, and, whatever happened—he knew there were faults on both sides—it was their duty to rectify those faults, and not allow the house to be divided against itself. It was not an easy problem to strive to do their duty between employer and employees, but Crewe men had made the first move towards that duty. The directors had also a duty to their shareholders, who were not all wealthy men. The bulk of them only had a few shares, but it was their money which had created the railways. Having taken those risks, they were certainly entitled to their share of the profits. They must do nothing to shake the financial credit of English railways. The capital of English railways was equal to the National Debt, and if they stopped their expansion they would stop the stream of capital, which would be extremely dangerous and would end in nobody being better off. The directors had a duty to the line also. He had travelled all over Europe, and there was nothing equal to English railways in regard to comfort. Under the State system passengers were treated more as trespassers, with rules galore to follow, but in England, owing to competition, passengers were treated more as guests.

THE QUESTION OF INCREASING EXCURSION FARES.

Mr. Sam Fay, the chairman of the Managers' Conference of the Railway Clearing House, contradicts the statements published during the week to the effect that the Conference has been sitting this week to determine a revision of existing railway fares.

The ordinary fares will remain untouched, and the increases will be spread over "special facilities." These increases will not press heavily upon the travelling public. Short duration excursion tickets will remain practically untouched, but an increase of about 10 per cent. may be expected upon week-end tickets. Some week-end fares may be abolished altogether. The excursion tickets covering from three to 21 days may suffer an increase of 5 per cent. The principle adopted has been that of giving first attention to the most recent innovations. The effect is, therefore, to place the public in the position that they were ten or twelve years ago, when the week-end system first became popular. In no case will the increased fares affect the Christmas holidays. Another rumour is that contract tickets will be advanced by 10 per cent.

FURTHER WAGES CONCESSIONS.

It was announced on Thursday that the North Eastern Railway Conciliation Conference has agreed upon a readjustment affecting the platelayers' terms, giving an immediate advance of 1s. per week to over 1,100 men.

The Lancashire and Yorkshire Railway Company have decided to grant further increases to their staff. By an improvement in the scales of pay to goods shunters, foreman passenger shunters, and passenger shunters, a large number of men will receive an advance of 1s. per week. The rates of pay of the passenger excessmen have also been increased by 2s. per week. The above advances are in addition to other advances granted to the lower-paid grades by the company quite recently, such as their goods porters, platform and parcel porters, lampmen, and point cleaners, and some of the outdoor staff in the locomotive, carriage and wagon, and permanent way departments.

Bolivar Railway Co.—At the extraordinary general meeting held on Wednesday, the following resolution was passed as a special resolution:—"That the regulations contained in the printed document which has been submitted to the meeting and, for the purpose of identification, subscribed by the chairman of the meeting, be adopted as the regulations of the company in substitution for and to the exclusion of the existing regulations thereof."

IRISH COMPANIES AND THEIR EMPLOYEES.

In the House of Commons on Monday, Mr. Nannetti (Dublin, College Green—Nat.) asked the Prime Minister whether in any steps taken by the Government to induce the railway directors and the leaders of the railway servants to come together with a view to settle the unrest in the railway working of this country, consideration would also be given to the state of affairs existing between the railway directors and their employees in Ireland with a view to the reinstatement of the hundreds of employees who had been victimised since the issue of the recent Commission's report by the directors of the various companies in that country.

Mr. Asquith: The suggested meeting would be solely concerned with the recommendations of the recent Royal Commission.

Mr. Nannetti asked whether the Prime Minister would take notice of the state of unrest that existed in Ireland and do his best to allay it, so as to prevent anything of the nature of the unfortunate dispute that took place in Ireland a few weeks ago.

Mr. Asquith: Any representations made on the subject will be considered.

Sir E. Carson (Dublin University—U.) asked whether the Prime Minister would give a day to discuss the Irish railway matter.

Mr. Asquith: That depends on how widespread the desire is for such a debate, and on how much time we have at our disposal.

NEW RAILWAY SCHEMES.

It is stated that a railway is to be constructed in order to develop the anthracite coal fields along St. Bride's Bay, and so convey the produce to Milford docks for shipment. A local journal refers to the scheme "as the beginning towards breaking down the monopoly of the Great Western Railway Company."

Brampton Council having asked the North Eastern Railway Company if they were in a position to proceed with the construction of the light railway, in order to avoid a repetition of the inconvenience which was so keenly felt during last summer, the general manager has replied that the solicitors were waiting to hear from Lord Carlisle's solicitors.

Application is to be made to the Light Railway Commissioners for an order to authorise the construction of a railway ten miles in length, beginning with a junction with the L. and N.W. Railway at Conway Station, and proceeding along the Conway Valley, crossing the valley from the centre of Trefriw, passing over the river, and terminating with a junction with the L. and N.W. branch railway a short distance below Llanrwst Station. The engineer's estimate of £75,000 is inclusive of land and works. It is proposed to raise the capital from local authorities, the Treasury, the L. and N.W. Railway Company, and others. It is stated that the L. and N.W. Company run a motor omnibus through the district.

VOLUNTEER POLICE FORCES.

On Tuesday, Mr. Wedgwood (Newcastle-under-Lyme—Lib.) asked the Home Secretary whether the formation of a volunteer police force by some private organisation to interfere in the case of a strike had been brought to his notice, whether the Home Office had been consulted at all as to its formation or regula-

tions, and what steps His Majesty's Government intended to take to stop volunteer police in uniforms attempted to interfere with workers in the carrying out of their lawful functions.

Mr. McKenna (Home Secretary): The Home Office was informed of the proposal to organise this body, but has not been consulted, and it consulted would not have undertaken to supply advice as to its formation and regulations. If the volunteer police should interfere with the pickets in the exercise of their lawful rights the pickets will be entitled to protection as in the case of any other form of unlawful interference.

Mr. Wedgwood: Is the right hon. gentleman aware that his ruffians have been sent out by the officers saying that life preservers will be served out, and that the ringleaders of the pickets are to be made for at the first opportunity?

Mr. McKenna: If there is any breach of the law I assure my hon. friend that he will find the police authorities resolute in putting a stop to it.

Mr. O'Grady (Leeds, E. Lab.): In view of the fact that these men are purposely armed with bludgeons to break people's heads, and thereby commit a breach of the peace, can the Home Office intervene in the circumstances?

Mr. McKenna: Wild statements are very frequently made, and it would be impossible in the case of every wild statement of this kind for the Home Office to intervene. I have already stated that the Home Office has no responsibility, and would in any case refuse my responsibility in regard to the so-called voluntary police.

ACTIONS AGAINST RAILWAY COMPANIES.

His Honour Judge Grainger has given his considered judgment at Southwark County Court in an action in which the South Eastern Railway Company was sued for damage done to theatrical property stored at the cloak room at Herne Hill Station. Plaintiff, a music-hall artist, deposited eight packages, and four days afterwards a thunderstorm burst over South London, which the company contended amounted to a tempest, and under the conditions contained on the ticket relieved them from liability to plaintiff's goods, which were damaged by water. His Honour said that the definition of a tempest in the dictionary was "a very violent storm, an extensive current of wind rushing in great velocity and violence, and commonly attended with rain, hail, or snow." Taking the description given by witnesses of the storm, his Honour thought it amounted to a tempest and relieved the railway company from liability. He would, therefore, give judgment for the defendant company, with costs, and grant leave to appeal.

The Lancashire and Yorkshire Railway were defendants in an action heard before Judge Ruegg at Birmingham County Court on November 28. A music-hall comedian named Soles, after performing at Blackpool, consigned a basket containing clothes, etc., to Birmingham, paying od. for the package as personal luggage. The consignment was lost in transit, and he sued for £20, which he regarded as its value. The company objected on the ground that the contents of the basket went as passenger's personal luggage, and were not so in fact.

His Honour observed that did not entitle the company to lose luggage, and Mr. Armstrong, defendants' solicitor, admitted that, but said it deprived plaintiff of the right to complain. The articles, he contended, were for use in plaintiff's profession.

His Honour, remarking that he had hitherto consigned his wig and gown as personal luggage, expressed his determination to take no risk in future. Eventually Soles enumerated the articles worn off the stage, and these being admitted as his personal luggage, he was awarded a verdict against the railway company for nine guineas.

LIST OF APPLICATIONS MADE TO THE LIGHT RAILWAY COMMISSIONERS IN NOVEMBER, 1911, FOR LIGHT RAILWAY ORDERS.

TITLE.	COUNTY.	PROMOTORS.	ENGINEERS.	MILE-AGE.	motive power.	Gauge ft. ins.	AGENTS.

7 Transfer of the Quarry Bank Light Railway Order, 1903.

TILLING-STEVENS OMNIBUS.

REMARKABLE FIGURES FOR WORKING COSTS.

At the invitation of Messrs. W. A. Stevens, Ltd., of Maidstone, a large number of gentlemen interested in road traction attended a demonstration of the Tilling-Stevens petrol-electric omnibus in Kingsway, London, on Monday, November 20. The vehicle used for the demonstration had been in regular service for about four months, and had between 8,000 and 9,000 miles to its credit. This fact added somewhat to the value of the demonstration, as the engineer in charge was able to give some interesting details as to the behaviour of the machine under various parts of the chassis, and took advantage of the numerous appreciation of the opportunities for closely examining the various parts of the chassis, and took advantage of the numerous trial runs through the heavy traffic of Kingsway and Holborn, in order to witness the ease with which the vehicle was controlled, and to satisfy themselves of the absolute freedom from shocks at starting, which is a special feature of this system.

At the luncheon which followed the demonstration Mr. Richard Stephen Tilling occupied the chair, and in proposing the toast, "The Motor 'Bus Industry,'" gave some interesting details of the progress of the motor 'bus, and referred with some pride to the fact that his firm were the first to give a regular and reliable service of motor vehicles on the London streets. After having had considerable experience with various types of purely petrol vehicles, he said, his company were prevailed upon some four years ago to give a trial to the "Stevens" electric system in conjunction with a petrol engine, and from the first this

Tilling-Stevens Petrol Electric Omnibus.

proved to have the elements of success. After a most exhaustive trial, during which the vehicle ran many thousands of miles, so satisfied were they of the economy of the combination that they decided to place an order for a considerable number of omnibuses fitted with this type of the petrol-electric system. Just at this time, however, the new police regulations came into force and quite upset their plans, for it was generally agreed by the majority of automobile engineers that it was impossible to get down to the new weight, $3\frac{1}{2}$ tons, and include the Stevens electrical equipment. Fortunately, both their own engineers, Mr. Frost-Smith and Mr. Stevens, thought otherwise, and they applied themselves so determinedly to their task that the present type of vehicle was evolved, which is unquestionably a vast improvement upon the older vehicle in every respect. Indeed, so satisfied were they with the behaviour of the new type both with regards to its running and working costs that they have decided to make it their standard, and, in addition to those already in hand, have placed an order for a further 100, which, with vehicles already in hand, would make 130 omnibuses in London public service by the end of 1912.

Mr. Duff, one of the joint managers of the London General Omnibus Company, in replying to the toast, emphasised the necessity for each operating company to standardise their vehicles, and pointed out that a mixed fleet, such as the London General Omnibus Company were now running, entailed the maintenance of a stock of something like 16,000 spare parts. It was mainly on account of this unsatisfactory condition that his company had decided to keep to their B type of 'bus, which he was pleased to say was giving them complete satisfaction.

In proposing the toast of the visitors, Mr. Stevens took the opportunity of thanking all those who had shown such a keen interest in the developments of his system of electric drive, and paid a warm tribute to Mr. Frost-Smith for the whole-

hearted assistance he had given him from the beginning of their association. He admitted that they had had a difficult task to reduce these weights to the extent necessary to comply with the new police regulations, without in any way reducing the strength and efficiency of their vehicle. Some idea of the difficulties of the situation would be gathered, he said, from the fact that for four months Mr. Frost-Smith and his draughtsman were at work before the present design of chassis was evolved. He had every confidence in the vehicle his hearers had seen that day, and was pleased to inform them that his company had decided upon manufacturing developments of considerable magnitude. They were removing their works from Maidstone to a large factory at Hadley, near Wellington, premises admirably suited for their purpose, where it would be possible to meet whatever demand was likely to be made for their vehicles.

Professor Unwin and Mr. Louis Brennan briefly replied, and Colonel Crompton proposed "The Operating Engineers."

Mr. Percy Frost-Smith in reply gave some valuable figures with regard to the working of the various types of 'buses. He said that the original Tilling-Stevens 'bus had run for nearly four years, and had some 116,000 miles to its credit at an average cost of 9.2d. per mile. The average working cost of their various gear driven vehicles worked out at 10.528d. per mile, while the earning capacity did not exceed 11d. per mile; it was, therefore, obvious that this was not a very profitable business. Turning, however, to the latest type of Tilling-Stevens 'buses, he said that a very much better showing was possible. By keeping very careful observation on the new 'buses, some of which had now been running about six months, they had demonstrated that with an annual mileage of 35,000 miles they could be operated for under 7d. per mile. This figure did not include, however, depreciation, but owing to the nature of their combination this could be safely spread over 10 years, so that an outside figure of 7 $\frac{1}{2}$ d. would be ample to include everything. The great saving in their type of vehicle was in maintenance. In the old type of 'bus this amounted to 3.3d. per mile, and necessitated an expensive night staff, while the maintenance of the new vehicle only came to 1.25d. per mile. There was a further saving on practically every other heading, and he specially wished to emphasise the proved reliability of the petrol-electric vehicles and the ease of inspection, etc.

After a few remarks from Mr. Ellison, of the Eastbourne Corporation, Mr. Mordey commented upon the excellent characteristics of the petrol-electric combination as seen in the Tilling-Stevens system. He supported Mr. Frost-Smith with regard to depreciation, and pointed out that however formidable the idea of a complete power-station on wheels was in theory, in practice it was nothing of the kind, and that the working of the electric drive was in very great contrast to anything at all possible with a gear driven vehicle.

PERSONAL.

Lord Willoughby de Broke has been elected a director of the Isle of Wight Central Railway Company.

Mr. A. E. McCloskey, of the British Post Office, has completed his report on the re-organisation of the telegraphs on the Bombay Baroda and Central India Railway.

Mr. W. B. Scott, new Vice-President and general manager of the Union Pacific Railway, started life as a messenger boy for the Grand Trunk Railway at Hamilton, Canada.

Mr. Philip Dawson on Friday next, at 9 p.m., will read a paper at the Royal Automobile Club, entitled "London to Brighton in 45 minutes by Electric Train." The lecture will be illustrated by lantern slides and cinematograph films.

Mr. G. Bury, the new vice-president and general manager of the Western lines of the Canadian Pacific Railway, has been in the company's service since 1883, when he became a clerk in the purchasing department.

Mr. F. H. Dent, the general manager of the South Eastern and Chatham Railway, was taken ill while at the distribution of prizes at the company's school at Ashford last week. He returned at once to London, and underwent an operation for appendicitis. We are pleased to hear that he is making satisfactory progress towards recovery.

Mr. Oliver Bury, who, as already reported, has been elected chairman of the general managers' conference for the year 1912, has been general manager of the Great Northern Railway since July 1902. Mr. Bury, who is 50 years of age, began his career in the engineering and locomotive department of the L. and S.W. Railway, and he afterwards secured an appointment on the Coleford and Monmouth Railway. For six years he acted

RAILWAY NOTES.

is general manager and chief engineer of the Entre Rios Railway, and was next appointed general manager of the Buenos Ayres and Rosario Railway. Seven years ago, in conjunction with Lord Farrer and Major Le Briton, he prepared a report upon the working of the Egyptian State Railways, to meet all their reasonable demands. (Applause.)

Mr. T. P. Reay, who has succeeded Lord Airdale as chairman of Messrs. Kitson and Co., Ltd., of Airdale Foundry, has been connected with the firm for 52 years. On November 25 the employees, numbering nearly 2,000, presented Mr. Reay's twin sons with handsome gifts to mark their coming of age. Both are employed in the works.

MEXICAN RAILWAY COMPANY.

The Mexican Railway Company, Limited, has issued the following estimated revenue statement for the month of October:—

	Month of October, 1911.	1910.	Inc. or dec.	July 1 to October 31, 1911.	1910.	Dec.
Gross receipts ...	\$690,100	\$646,400	+ 43,700	\$2,646,700	\$2,839,800	\$193,100
Expenses ..	333,600	357,800	- 24,200	1,276,000	1,457,700	181,700
Net earnings ...	\$356,500	\$288,600	+ 67,900	\$1,370,700	\$1,382,100	\$11,400

GRAND TRUNK RAILWAY COMPANY OF CANADA.

The Grand Trunk Railway Company of Canada has issued the following statement for the month of October:—

Grand Trunk Railway Company of Canada.

	Month of October, 1911.	1910.	Inc. or dec.	July 1 to Oct. 31, 1911.	1910.	Inc.
Gross receipts...	\$709,500	\$668,100	+ 41,400	\$2,834,300	\$2,481,300	+ 353,000
Working expenses	522,150	479,000	+ 43,150	2,083,150	1,775,600	+ 307,550

Electrical Plant for Melbourne Goods Depot.—A proposal is under consideration by the Railway Commissioners to expend £25,000 on additional electrical plant for Melbourne goods yard and shops.

Sequel to the Reduction of G.I.R. Assessments.—Reduction of railway assessments, consequent on the activity of the Great Eastern Railway, has led the Ongar Guardians to appoint a valuer to reassess several large properties in the union area.

Date of Opening Cork City Railways.—It has been decided provisionally that the new railway and the sidings on the quays should be opened on December 18, but in case anything occurs to prevent it, it is certain that a regular service will be in operation on January 1.

Proposed Minister of Power for Ontario.—Sir James Whitney has announced that, if he is returned, he will create a Power Department for Ontario in charge of a Minister of Power, who will superintend the development of hydro-electric schemes in this province.

Railway Companies and Dundee's Railless Trolley Car Scheme.—In reply to letters from the North British and Caledonian Railway Companies drawing attention to the report that Dundee Council contemplated installing electric trolley cars without having obtained Parliamentary sanction, the Council has stated that the necessary powers were obtained in the Corporation's Order of 1907, and that the sanction of the Board of Trade has been obtained.

Road Motor Service Precedes a Light Railway.—A few years ago the North Eastern Railway Co. instituted a road service for the transport of farm produce and heavy goods from Tollerton and Brandsby. This service has given such an impetus to the trade of the locality, that the company intend to apply to the Light Railway Commissioners at the next session for sanction to allow them to construct a light railway from Hasby to Brandsby, a distance of ten miles.

Messrs. F. Rowlands and Company, Stirling Works, Sheffield, send us a folder showing the results of tests on a titanium treated bessemer steel rail, as compared with tests on a standard open hearth steel rail. The wear on the rails for a given period is shown by drawings of the rail heads, and full particulars are given, so that the comparative results are clearly seen. Messrs. Rowlands will forward a copy of the folder to anyone interested on request.

Scottish Rates Raised.—The Caledonian and Glasgow and South-Western Railway Companies intimate that the through rates between Glasgow and other Scottish stations on the one hand and stations on twelve Irish railways have been advanced, as from the 1st prox., by amounts varying from 5d. to 1s. 3d. per ton. This has been necessitated by the increase in rates for the sea portion of the journey intimated by the shipping companies.

COMPANY NOTICE.

The South Indian Railway Company.

NOTICE is hereby given that the next Ordinary General Meeting of the South Indian Railway Company, Limited, will be held at the offices of the Company, 91, York Street, Westminster, S.W., on Wednesday, the 6th day of December, 1911, at 2.15 p.m., for the purpose of receiving the Directors' Report and Statements of Accounts for the Half-year ended 30th June, 1911, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Saturday the 16th, to Saturday, the 30th day of December, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants, payable on and after the 1st January next, will be forwarded to the Proprietors on the 30th December.

By order,
NEVILLE PRIESTLEY,
Managing Director.

Company's Offices,
91, York Street,
Westminster, S.W.

East Indian Railway.

DEFERRED ANNUITY HOLDERS.
HOLDERS OF ANNUITY CLASS "D."

NOTICE is hereby given that the Sixty-fourth Half-Yearly General Meeting of the East Indian Railway Company will be held at the offices of the Company, 28/30, Nicholas Lane, Lombard Street, London, E.C., on Wednesday, the 13th day of December, 1911, at One o'clock p.m. precisely, in conformity with the terms of the Company's Deed of Settlement and the Acts regulating the Company.

By order,
C. W. YOUNG,
Secretary.

Nicholas Lane,
London, E.C.,
28th November, 1911.

Great Eastern Railway Company.

REDEMPTION OF MORTGAGES (COMMONLY CALLED LAING'S) BY APPLICATION OF SINKING FUND.

NOTICE is hereby given that in accordance with the terms of issue of the above-named Mortgages, a meeting of the Holders thereof will be held at the offices of the Company, at Liverpool Street Station, on Tuesday, the 2nd day of January, 1912, at 12 o'clock noon precisely, for the purpose of selecting by means of the drawing provided for in the terms of issue, the Mortgages to be paid off at the rate of 120 per cent., to such an amount as will be equivalent to the amount of the sinking fund for that purpose in the hands of the Company. The Mortgages selected by means of such drawing at the said meeting of the holders thereof will be paid off on the 9th January, 1912, at a premium of 20 per cent. on being presented duly receipted to the Secretary of the Company, and from that date all interest on such Mortgages will cease, and the Mortgages will be cancelled.

By order,
CLAUDE J. HAMILTON, Chairman.
P. LOMAS, Secretary.
Liverpool Street Terminals,
London, 1st December, 1911.

The Grand Trunk Railway Company of Canada.

NOTICE is hereby given that the Transfer Books of the Company, so far as regards the Five per Cent. Perpetual Debenture Stock (Grand Trunk Borrowed Capital) and Perpetual Four per Cent. Consolidated Debenture Stock, will be closed from Saturday, December 16th, 1911, to Saturday, January 13th, 1912, both days inclusive.

Warrants for the interest accrued to December 31st, 1911, will be forwarded on January 13th, 1912, to all Proprietors of those Stocks registered on the books of the Company on December 16th, 1911.

And notice is also given that the Transfer Books of the Company, so far as regards the Five per Cent. Perpetual Debenture Stock (Great Western Borrowed Capital) and the Four per Cent. Perpetual Debenture Stock (Northern Borrowed Capital), will be closed from Wednesday, January 17th, 1912, to Wednesday, January 31st, 1912, both days inclusive.

Warrants for the half-year's interest to January 31st, 1912, will be forwarded on that date to all Proprietors of those Stocks registered on the Books of the Company on January 17th, 1912.

By order,
H. H. NORMAN,
Secretary.

Dashwood House,
9, New Broad Street, London, E.C.,
December 1st, 1911.

The Buenos Ayres Great Southern Railway, Limited.

NOTICE.

THE Directors of the Buenos Ayres Great Southern Railway Company, Limited, hereby give notice that the Register of Debenture Stock will be closed from Friday, the 5th proximo, to Friday, the 22nd proximo, both days inclusive, for the purpose of preparing the interest warrants for the half-year ending 31st December, 1911.

By order of the Board,
A. GIET,
Secretary.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,
12-18, TAYLOR STREET, LIVERPOOL.

Telephone: 1198 Royal. Telegrams: "Brakeblock. Liverpool."

COMPANY NOTICES.

The Grand Trunk Railway Company of Canada.

NOTICE is hereby given that the estimated earnings of the Wellington Grey and Bruce Railway for the half-year ending 31st December, 1911, applicable to meet interest on the Bonds, will admit of the payment of £3 9s. 7d. per £100 Bond, and that this payment will be applied as follows, viz:—14s. 7d. in final discharge of Coupon No. 56, due 1st July, 1898, and £2 15s. on account of Coupon No. 57, due 1st January, 1899, and will be made on and after the 1st January, 1912, at the offices of the Grand Trunk Railway Co., 203, Dashwood House, 9, New Broad Street, London, E.C. The Coupons to be left three clear days for examination.

H. H. NORMAN, Secretary.
London, 9th December, 1911.

The Grand Trunk Railway Company of Canada

WELLINGTON GREY AND BRUCE BONDS.

At the semi-annual Ballot for November 1911, the following Wellington Grey and Bruce Bonds were drawn, and will be paid at par at the offices of the Grand Trunk Railway Company in Montreal, Canada, or at 203, Dashwood House, New Broad Street, London, England, on 1st January, 1912, that is to say, Bonds numbered:—

23	193	356	363	395	419	507	534
656	858	891	946	1001	1285	1344	1494
1633	1714	1894	2002	2570	3101	3255	3381
3536	3963	4149	4541	5018	5114		

In all £3,000.

Holders of the Bonds will take notice that the interest will cease on and after 1st January next.

H. H. NORMAN, Secretary.
London, 9th December, 1911.

The Bengal-Nagpur Railway Company Limited.

NOTICE is hereby given that the Fiftieth Ordinary General Meeting of the Bengal-Nagpur Railway Company, Limited, will be held at the Company's Offices, 132, Gresham House, Old Broad Street, in the City of London, on Tuesday, the 12th of December, 1911, at half-past Two o'clock in the afternoon precisely, for the purpose of transacting the ordinary general business of the Company required to be dealt with at such Meeting, which includes receiving the Directors' Report and Audited Statements of Accounts and Balance Sheet to 30th June, 1911, and the Auditors' Report thereon; and also to approve and confirm the appointment of Mr. John Manson as a Director of the Company.

The Interest Warrants will be posted on Monday, the 1st January, 1912.

By Order of the Board,
J. MANSON,
Managing Director.

132, Gresham House,
Old Broad Street,
1st December, 1911.

North Staffordshire Railway.

NOTICE is hereby given that the Register of Transfers of the Three per Cent. Consolidated Debenture Stock of this Company will be closed from Thursday, December 21st, 1911, to Friday, January 5th, 1912, both days inclusive.

By Order,

R. E. PEARCE.

Secretary.

Stoke-on-Trent,
6th December, 1911.

TENDERS INVITED.

The South Indian Railway Company, Limited.

CARRIAGE FITTINGS, ETC.

THE South Indian Railway Company Limited, are prepared to receive Tenders for the Supply of:—

1. Carriage Fittings, comprising Wrought Iron and Steel, Hardware, Glass, Screws, and Sundries.
2. Locomotive Engines and Tenders, Standard Passenger Type (Metre Gauge).
3. Springs (Laminated, Volute, and Helical).

Specifications and forms of Tender may be obtained at the Company's offices.

Tenders, addressed to the Chairman and Directors of the South Indian Railway Company, Limited, marked "Tender for Carriage Fittings," or as the case may be, must be left with the undersigned not later than One o'clock p.m. on Wednesday, the 20th December, 1911.

The Company is not bound to accept the lowest or any Tender.

A charge, which will not be returned, will be made of 20s. for each copy of specification No. 1, 40s. for each copy of No. 2, and 10s. for each copy of No. 3.

Copies of the drawings may be obtained on payment at the office of Robert White, Esq., M.I.C.E., Consulting Engineer to the Company, 3, Victoria Street, Westminster, S.W.

By order,

V. F. DE BROE, M.I.C.E.,
for Managing Director.

Company's Offices,
91, York Street,
Westminster, S.W.,
8th December, 1911.

Norwegian State Railways.

COMPETITION PLANS.

COMPETITORS are hereby invited to send in Suggestions, with Plans, for carrying into Drammen the Christiania-Drammen Railway, with a junction station in Drammen for the Christiania-Drammen, Drammen-Randsfjord, and Drammen-Skien Railways, together with a scheme for harbour accommodation.

Further particulars about the competition can be obtained from the Chief Engineer of the extensions of the Christiania-Drammen Railway, Munkedamsveien 62, Christiania.

On payment of 20 krone, all the documents relating to the competition can be obtained from the Chief Engineer.

The competing plans must be delivered to the Chief Engineer by 12 o'clock noon on March 15th, 1912.

ADMINISTRATION OF THE NORWEGIAN STATE RAILWAYS.

Christiania,
November 30th, 1911.

Debenture Stock will be closed from the 25th December, instant, to the 13th January, proximo, both days inclusive, for the preparation of the half-yearly interest warrants, which will be forwarded to the holders of 3½ per Cent. Debenture Stock on the 13th January, 1912.

J. I. BERRY, Secretary.

Company's Offices,
48, Copthall Avenue, London, E.C.,
8th December, 1911.

POSITION VACANT.

London—India Office

BY Order of the Secretary of State for India in Council. Required, for service on the North Western State Railway of India, an Assistant Carriage and Wagon Superintendent.

Age: About 25 years.

Qualifications: Good general and technical education and sound knowledge of applied mechanics and materials used in shops.

Experience: Pupillage or apprenticeship in Carriage and Wagon or Locomotive Department of a British Railway or in Carriage Shops of large rolling-stock builders, with about three years' experience, in each case, in the Carriage and Wagon Department of a Railway Company in responsible charge as an assistant.

Terms: Three years' engagement in first instance; free first-class passage to India; initial salary, 300 to 400 rupees per mensem, according to age and qualifications; promotion subject to Government of India rules.

Medical examination before appointment.

Letters of application, with copies of testimonials, should be addressed to the Director-General of Stores, India Office, Whitehall, London, S.W., not later than 20th December, 1911.

Candidates should give a short record of their career, stating age, whether married or single, the names of firms, etc., by whom they have been employed, and the length of such employment (dates must be given).

W. G. BUTLER,
Director-General of Stores.

India Office,
Whitehall, London, S.W.,
4th December, 1911.

WANTED—Railway Officer for higher position on leading South American Railway. The age of applicants should not be less than 28 nor exceed 35 years. An indispensable qualification will be the possession of a general all-round railway training. Commencing salary £1,000 per annum. Apply by letter, with particulars of experience and testimonials, if any, to "J. L. L., c/o Street's, 30, Cornhill, London.

BRITISH RAILWAY ENTERPRISE.

A discussion on British railway enterprise recalls the traditional essay on snakes in Ireland—there are none. British railway enterprise has, in fact, been killed by exacting requirements of the Government and the public, combined with advancing expenses of all kinds and particularly in wages and materials. A reference to the annual statistical summary issued by the Board of Trade will show that new issues of capital for railway extensions have gradually fallen in the last few years to almost vanishing point. The programme of legislation for next Session gives further evidence of the lack of such enterprise. Not merely is there no desire on the part of established companies to enter into new extensions, but there is a positive difficulty in the way of financing even those works which they have already undertaken. Most of our large companies have considerable overdrafts on capital account which they are able at present to finance in the form of temporary loans, etc., but which they could not readily liquidate by the issue of new capital. As for the incorporation of new railways in any shape or form, anyone who put forward such a proposal would, under present conditions, raise doubts as to his sanity. If it could be said that railway enterprise the world over was in a similar inanimate state the case of British railways would require no special explanation, but it is a well-known fact that railway extensions in such countries as Argentine, Mexico, Canada, and elsewhere, are proceeding at an unprecedented rate. It cannot even be suggested that all possible railway development in this country has been undertaken, although it may be admitted that the geographical scope for extensions is gradually becoming more limited. But what of electrification of London lines, etc., and development of many agricultural districts, which are considerably lacking in railway facilities? There is now plenty of scope for the profitable development of capital if the capitalist could be encouraged to supply the necessary funds. It will be observed that the only important schemes of electrification now being devised in connection with London railways are the electrification of the East London and of the North London, together with the loop line between the North Western main line and the London Electric railways. In one case the North Western is providing the comparatively small amount of capital required, not only for its own part of the scheme but for the North London Company also, the latter company being unable to raise the funds of its own accord at reasonable rates. In the case of East London the six leasing companies are providing between them the still smaller sum which will be necessary to carry out electrification. Anyone who impartially surveys the treatment received by the railways on all hands during the last few years will not wonder at the present state of things. What he will be surprised at is that no effort is made in the public interest to remove a danger which threatens the commercial development of the country. The railway system of any great industrial country cannot be allowed to stagnate or be starved in the matter of provision of capital without the country itself suffering in the long run. If it can hardly be expected that this point of view will be realised by the short-sighted

labour agitator unfamiliar with commercial affairs, it must at least appeal to the responsible heads of the Government, and to our railway companies. If the Government itself has not realised this aspect of the railway problem, it is undoubtedly the duty of railway administrators to put the case before the Government. The present conditions in the railway world are mainly what Parliament has made them, for on every hand the companies have to comply with Government requirements, and during the present year their control of their own business in connection with labour matters has been practically taken out of their hands. Small as the return is upon railway capital at the present time, we believe it to be adequate if any sort of guarantee or even assurance were given that it could be regarded as likely to be maintained. Yields of 5 per cent. and upwards upon such securities as London North Western Ordinary Stock are without precedent in the history of this country, and we are satisfied that the return itself would appeal to investors readily enough but for the doubts necessarily raised regarding the continuance of such dividends. The present labour troubles and other difficulties which afflict the railways and all who are associated with them, may now, we hope, be patched up, but most people are satisfied that no lasting settlement of these difficulties can be arrived at until the railway problem is approached in some broader spirit. When our leading statesmen have done wasting their time with the gimcrack schemes of party politics they will perhaps be prepared to consider a question which concerns the vitality of the country, and not merely its commercial prosperity but, as recent events have shown, its national existence.

THE RAILWAYS OF INDIA.

From their very inception the railways of India have been a fruitful source of controversy. This has raged especially round the financial difficulty experienced in providing sufficient funds to construct, equip, and maintain them so as to meet the urgent demands of the country. It cannot truly be said that this difficulty has ever been tackled with the necessary courage and determination. When railways were first started the State had to guarantee substantial interest on the sums found by private companies, and although the necessary land has always been made over free of charge, the cost per mile of the heavy broad-gauge lines was very great. The country was practically unknown at the time in this connection, labour was poor in quality and therefore dear, and the Government insisted on fully ballasting the lines, on putting up high level platforms, and on the erection of palatial station buildings, all of which added enormously to the prime cost. After a time, and as is not unusual with public bodies, the State thought they could avoid contractors' profits by doing the work themselves, and could save enormously by taking a slice out of the centre of the road and narrowing the gauge from 5 ft. 6 ins. to one metre—on branch and subsidiary lines. This expectation was not fulfilled, and the hundreds of changing places now existing and ever increasing are, and will always be, a standing example of the evils attending a break of gauge. Gradually the guaranteed lines, which had been controlled by amiable sappers and staff corps men, reverted to Government, who then had no further use for those so-called consulting engineers. These officers were attached to different provinces, and in course of time learnt sufficient to make them useful intermediaries between the Public Works Member of Council in India and the agents or managers of the private lines whose working and expenditure they looked after and checked. When the agency fell into the hands of Royal Engineers, under the direct State working, this state of things proved unworkable, as the consulting engineers were often junior in rank to the managers they were supposed to control. All this time the construction of new lines and the equipment of old ones was carried out

without any fixed policy, except that funds were only provided when they could be spared from other State requirements—frontier expeditions and so forth. In 1902 Lord Curzon appointed a special commissioner, the late Mr. Thos. Robertson, to report on the situation and to make suggestions. His report was a most valuable one, but most of his suggestions involved additional expenditure, and therefore but few of them could be carried out. The Railway Board, to take the place of the former consulting engineers, was one of them; owing, however, to most of the Board's proposals also involving the provision of large sums of money, which were not available, they were not encouraged to develop any broad lines of administrative policy, and were perforce restricted to meddling, more or less, with matters of detail. This led to the appointment of Sir James Mackay's committee, which reported in March, 1908, after hearing many opinions from eminently capable men. The committee itself was composed of the best men available, and they stated, with confidence, that no limit could be assigned to the amount that could be remuneratively devoted to the expansion and development of the Indian railway system; that 100,000 miles of railway (as against the present 40,000) would ultimately be found necessary and reproductive. The lines on which the working of the Railway Board might be improved were laid down—still all causes of friction have not been eliminated, as the conference called for January 12 next would seem to indicate. Sir James Mackay, now Lord Inchcape, will again preside, and will no doubt be able to protect Sir T. R. Wynne from the onslaught of the solid phalanx of company officials. All this, however, will not help to raise the twelve million pounds which have repeatedly been asserted to be the minimum requirement of the railways in India. It would really seem as if the suggestions made by Sir Henry Kimber, at the meeting of the South Indian Railway Company, provide the only possible route to be trodden towards raising the amount of the available funds from the totally inadequate eight and a half millions now sanctioned—to this figure it has been reduced by the one million allotted to the Durbar—to the minimum amount indispensable for the proper industrial development of the British Empire's brightest jewel.

A LESSON IN NATIONALISATION.

The continuance of the lamentable condition of affairs in connection with the Western (State) Railway of France is well worthy of the attention of all who either advocate or oppose the nationalisation of railways in this country. Prior to the year 1908 the only railways in France which were owned by the Government consisted of a few short lines which had been under private ownership in a more or less bankrupt and inefficient condition, and they were taken over by the State, in the absence of any arrangement for their acquisition by more powerful companies, in order that a better public service might be obtained. In the year mentioned, however, the French Government decided to make a bolder plunge and acquired the Western Railway, a large and important system, but one which was not giving satisfaction to certain sections of the public. A political agitation had arisen, and it was largely for political reasons that the railway was acquired and worked by the State. In the three years which have followed, its career has been one long disaster, and it now stinks as badly in the nostrils of the railway world as did, say, the State railways of Italy a few years ago. Whether from a spirit of penuriousness or from the muddle and inefficiency so often associated with the conduct of business undertakings by the State, the rolling stock, permanent way, and so forth, of the Western Railway have not been maintained in good condition. Indeed, it is to the condition of the permanent way that one or more of the terrible accidents which have marked the State control of this line are

attributed. The traffic arrangements also are unspeakable. The subject was once more discussed in the French Chamber on Monday last, when M. Georges Berry, referring to the disorders at the St. Lazare terminus last week, when 10,000 suburban passengers were held up outside the station, complained that accidents alternated with demands for fresh credits. The amount, he said, was now twice as much as was demanded last year. M. Chéron declared that estimates for the railway were made without serious investigation. He also stated that the Committee of the Chamber would spare no efforts to check the rising tide of supplementary expenses. The management lacked order and method. The delays in the train service were so frequent and prolonged that station masters were obliged to feed belated passengers. The trade of an entire region was being paralysed. M. Berry made another statement in which he declared that the Government would in the end be forced to give up running the Western line and to turn to the neighbouring railway companies to help it out of the difficulties in which it had placed itself. This declaration, of course, raised protests from the Socialist members, but there can be no doubt of its wisdom. The movement for nationalising the railways in this country is at present not a very active one, but it is being fomented by Socialists, some Radicals, and a section at least of the Labour party, so that if the present British Government remains in office a good deal may be heard on the subject before very long. The pot may, in fact, boil over should the present negotiations between the railway companies and their employees result in further difficulties and possibly in strikes. It therefore behoves everyone concerned in the efficient working of the railway system of the country to spread a knowledge of the evils which would result from nationalisation. There is no analogy whatever between Great Britain and some of the countries where State railways are alleged to be a success, and there is no country where the change would be more difficult or less beneficial. Even in regard to countries where national railways are proving fairly satisfactory, it will often be found on examination of their accounts that figures put forward as "surpluses" or "profits on working" are really only the difference between gross receipts and working expenses, and that when allowance is made for interest on the capital which has been borrowed there is a steady loss. During the past few years the British Government has been multiplying lavishly the number of State officials and of State employees generally, but all such objectionable multiplication would be thrown into the shade if the railways were taken over and worked by the State. Efficiency, discipline, control, public safety and just rates and fares would all be matters of much less certainty than they are now. The national debt would be doubled, and the difficulty of earning interest on the vast sums borrowed would be enhanced by the constant agitation of three-quarters of a million of State railway servants for higher wages and shorter hours. Those who are interested will find that the more they look into the subject the greater do the obvious difficulties and dangers become. To avoid these the public require education on the subject, and that education can be largely assisted by railway directors themselves in disseminating true views on the facts.

Forty Trains Hourly on the District Railway.—As the result of structural alterations, costing over £250,000, the District Railway have made their up and down tracks between Chiswick Park and Hammersmith independent. This improvement will, on the authority of Mr. Blake, the general superintendent, render it possible for the company, on Monday next, to institute a world's record for public transit facilities. A service of forty trains per hour is on that date to be inaugurated between the Mansion House and Earl's Court, and great acceleration will be made in the service to Ealing, Turnham Green, Hounslow, South Harrow and Richmond. The number of trains now running each way to Turnham Green is 200. In future it will be 270.

Money has been in good demand during the week, and rates of interest have hardened perceptibly. Were it not for the fact that gold from the mines is coming freely into the Bank, greater stringency would, undoubtedly, have appeared before this. Fortunately, the foreign exchanges are, on the whole, rather favourable than the reverse, and in spite of withdrawals for several quarters the net influx to the Bank during the week was £552,000. More exports destined for Uruguay have taken place since the publication of the Bank Return, which still further accentuates the position indicated by that exhibit. As there shown, the requirements of the provinces for coin took £803,000, and there was a trilling increase in the active circulation of note accounting for £66,000. Thus the Reserve came down £317,000 to £26,758,000. Public Deposits are lower by £675,000, and a decrease was made in Other Securities of £1,422,000. The latter is, probably, a temporary change. Meanwhile Other Deposits declined £1,071,000 to £39,547,000—a level which leaves the resources of the market much depleted. An increase upon this figure is a fairly safe prediction for next week, and the movement is quite likely to be accompanied by a further rise in rates for money and discount. Government deposits were the same. As the result of all changes the proportion borne by Reserve to the liabilities of the Bank increased rather more than a point, and is now 52½ per cent.

The stock markets have not been very active during the week. The shadow of foreign politics has not yet entirely passed away, in spite of all the official pronouncements that have been made. It must be remembered that among the members of the Stock Exchange are included men

of almost every nationality, and Germany, in particular, is well represented. The tendency in business circles in that Empire was to place a favourable interpretation on the outcome of the recent diplomatic struggle, and a bull campaign was initiated in Berlin on the strength of it, but the movement has not prospered because in other circles the outcome is there regarded with different eyes. These changes have left very appreciable traces upon the record of prices quoted in our own markets. Their influence has been felt the more because the determination of price has lain so much in the hands of professional and quasi-professional operators, the investing public being but little concerned in the business going on. The latter are, no doubt, still deterred, to some extent, by the uneasy feeling which is always experienced upon realisation that a serious peril has passed exceedingly close, but, to a greater extent, by an uneasy consciousness that labour troubles are brewing in nearly all the great industries of the country. In former disputes settlement has generally concluded a labour difficulty, but in the recent disputes the so-called settlements appear to settle very little. The discontent remains unabated, boding early renewal of the same struggle.

Fluctuations of prices during the week illustrate the working of these several causes. Last Saturday, things being, apparently, as bad as they were ever likely to become, professional operators seemed to have decided to make a demonstration of the importance and value of Home Rails. The quotations of a dozen or more stocks in the active list were raised one point. Saturday morning lends itself very well to a manoeuvre of this kind, because the amount of business being done is never great—on this particular day it was smaller than usual—the advance was also made in Argentine railway stocks. The news that Persia had rejected the Russian ultimatum was without influence. The upward demonstration was continued at the re-opening of business on Monday, but did not last through the morning. The abstention of the public was too marked to be neglected, and, though some prices were maintained, the movements on the day presented a preponderance of falls, as far as Home Rails were concerned. The Argentine lines, being subject to different conditions, attracted most of the investment going on, and improved their advance of the previous day. Consols declined, and went lower again the following day, when business became very slack indeed. All the glow went out of the Home Rail market, and prices fell throughout the list. On Wednesday the House found plenty of time to discuss the German Chancellor's speech, but got little good out of it. Home Rails were as heavy as ever up till the middle of the afternoon, when a study of the traffics recorded, sustained by reports of favourable progress in the conference of the Coal Conciliation Board at Westminster, led to a partial recovery. Again, however, prices were, on the whole, lowered during the day. Consols were $\frac{1}{8}$ down at 77. The next day they fell a further $\frac{1}{8}$, and took the rest of the market with them. All British Government stocks were lower. Internationals were weak. There were numerous falls and no rises in Home Rails. Americans gave way. Argentine railways showed many declines. The excellent statistics of our foreign trade for November had no effect. Canadas fell, and Trunks and Mexicans were almost the only examples of firmness in the market. On Friday the decline continued, but was less general. Consols remained without change, but there were falls in other Government stocks. Foreign and International bonds showed some weakness, and Japanese stocks declined. There was little change in either foreign or Colonial railways, but Americans were again depressed. Home Rails rallied on the strength of rumoured developments at the meeting between the representatives of the directors and employees. Brighton Deferred rose $1\frac{1}{2}$, Great Central Preferred $1\frac{1}{2}$, South Eastern Deferred 1, and there were many other advances

of smaller amount. It is quite likely that to-morrow may see another demonstration like that of Saturday last. Favourable factors are certainly not difficult to discern.

The movements of the week are set forth in the following table:—

Weekly Traffic Summary.

The traffic receipts for the week ended December 3, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,181,972, which was earned on 21,521 miles, being at the rate of £101 7s. 9d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,045,554, with 21,467 miles open, or £95 5s. 9d. per mile. There was thus an increase of £136,418 in the receipts, an increase of 54 in the mileage, and an increase of £6 2s. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £40,855 (or £1 17s. 2d. per mile) in the passenger receipts, and an increase of £90,161 (or £4 3s. 1d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-four railways for twenty-two weeks in the passenger receipts has been £262,764, while the aggregate increase in the goods traffic was £469,873. The aggregate receipts of the fifty-two railways for twenty-two weeks (July 2 to December 3) amounted to £51,810,379, in comparison with £51,102,921 in the corresponding period of last year—an increase of £707,458.

G.N.R. Employees as Special Constables.—For some time past batches of Great Northern railwaymen have attended at Clerkenwell Police Court to be sworn in as special constables. On this line, as on others, loyal members of the staff have been receiving instruction in duties other than those they customarily perform.

THE ROYAL COMMISSION CONFERENCE.

DIRECTORS AND UNION REPRESENTATIVES MEET AT THE BOARD OF TRADE.

The Board of Trade, on Monday last, issued the following letter to Mr. G. H. Claughton, chairman of the London and North Western Railway Company, and Sir W. Guy Grant, general manager of the Midland Railway, and to Messrs. J. E. Williams, A. Bellamy, J. H. Thomas, M.P., A. Fox, T. Lowth, and S. Chorlton, the representatives of the railway employees' trade unions:—

Gentlemen,—I am directed by the President of the Board of Trade to acknowledge the receipt of your letter of December 1, and with reference thereto I am to enclose a copy of a letter which they have received from the signatories of the agreement on August 19 on behalf of the railway employees (or companies).

I am accordingly to suggest that a meeting on the terms of the letter from the Board of Trade of November 25 should take place at the offices of the Board of Trade on Thursday, December 7, at eleven o'clock.

The Board of Trade, as signatories of the agreement, have appointed the Chief Industrial Commissioner, Sir George Askwith, to attend the meeting on their behalf.

Mr. Buxton desires me to add that he hopes to have the pleasure of receiving the representatives of the parties immediately before the meeting.

I am, gentlemen, your obedient servant,

H. Llewellyn Smith.

THE FIRST MEETING OF THE CONFERENCE.

The delegates to the conference arrived at the Board of Trade offices shortly before eleven o'clock on Thursday morning, and were received by the President of the department, Mr. Sidney Buxton, in his private room. The meeting lasted nearly three hours, members of the conference separating at 1.45. It is understood that during the morning the recommendations of the Royal Commission were discussed, a disposition to come to an agreement if possible being shown by both sides. Proposals by each side were made with a view to adopt a scheme on the lines of the recommendations of the Commission. It was decided to resume the joint meeting at five o'clock in the evening, and, in the meantime, each side held a meeting. A number of union representatives visited the House of Commons on leaving the Board of Trade offices. The evening meeting lasted until half-past seven, when the following official statement was issued:—

Representatives of the railway companies and of the men were received by Mr. Buxton, President of the Board of Trade, who was accompanied by Sir Hugh Llewellyn Smith (Permanent Secretary) and Sir George Askwith (Chief Industrial Commissioner), at 11 o'clock to-day, in the President's private room.

At the conference, which immediately followed, there were present, on behalf of the railway companies, Mr. G. H. Claughton, chairman of the London and North Western Railway Company, Sir Guy Grant, general manager of the Midland Railway Company, and Mr. Sam Fay, general manager of the Great Central Railway Company, accompanied by Mr. H. A. Walker (assistant general manager of the London and North Western Railway Company), and Mr. W. Clower (of the Midland Railway Company).

On behalf of the men there were present Mr. A. Bellamy (president), Mr. J. E. Williams (general secretary), and Mr. J. H. Thomas, M.P., assistant secretary of the Amalgamated Society of Railway Servants, Mr. A. Fox (general secretary of the Associated Society of Locomotive Engineers and Firemen), Mr. T. Lowth (general secretary of the General Railway Workers' Union), and Mr. F. Chorlton (general secretary of the Signalmen and Pointsmen's Society). Sir George Askwith, accompanied by Mr. I. H. Mitchell and Mr. J. O. Bell, of the Board of Trade, was also present.

On the motion of Mr. G. H. Claughton, seconded by Mr. J. E. Williams, Sir George Askwith was appointed chairman. The conference sat from 11 a.m. to 1.15 p.m., and from 5 p.m. to 7 p.m., and was subsequently adjourned until 11.30 the following morning. The report of the Royal Commission formed the subject of discussion.

AN ADJOURNMENT UNTIL MONDAY.

The conference sat yesterday (Friday) until shortly after 4.30 p.m., when the following official statement was issued:—

The conference resumed this morning under the presidency of Sir George Askwith, at the offices of the Board of Trade and sat from 11.30 to 1.30, and from 2.45 to 4.30. The same representatives were present as on the previous

day. At the close of the meeting, which was occupied again in discussion of the report of the Royal Commission, the sitting was adjourned until 2 p.m. on Monday.

THE EMPLOYEES AND ACCEPTANCE OF THE REPORT.

Some comment has been occasioned by the fact that the railway men's joint executives, in notifying the Board of Trade on Friday last of their acceptance of "the invitation to meet the representatives of the railway companies to discuss the best mode of giving effect to the report of the Railway Commission," made no reference to the condition imposed by the Board of Trade—i.e., that the findings of the Commission are accepted in principle by both sides. The companies' representatives, on the other hand, as will be seen from our last issue, accepted the invitation on the understanding set forth in the communication from the Board of Trade. While in some quarters a fear is entertained that a door has been left open for another repudiation by the unions, it is held elsewhere that the wording of their reply implies acceptance of the report. If doubt had been entertained upon this point by the Board of Trade their secretary would, no doubt, have taken steps to clear the matter up before arranging for the conference.

A Labour correspondent refers to the matter thus:—"The companies were insistent at first that the men should give an unqualified pledge to accept the findings of the Commission as finding. The men's leaders were reluctant to give such an unqualified pledge. They were willing to agree to an undertaking that they would recommend their members to accept the findings, subject to a satisfactory understanding being arrived at regarding some points that are obscure in the report. In the opinion of the men's leaders it is unreasonable to expect unqualified assent to a document the meaning of which is not yet clearly understood by the parties."

THE POSITION AMONG THE UNIONS.

On Tuesday last the time expired for voting upon the two questions submitted to members of railway trade unions by the joint executives, namely:—

- (1) Are you in favour of accepting the Commission's report?
- (2) If not, are you in favour of withdrawing your labour in support of recognition and a national programme?

Each union had organised the poll of its own adherents, and undertook to do the counting itself. At the close of that operation a meeting of the joint executives was expected to take place to put the totals together and to decide on future action.

It is taken for granted that the result of the ballot will show a large majority in favour of a strike, and the question arises, based upon what has happened before, whether the members of certain unions will not take action regardless of the decision of their executive representative. Such a course may end only in the speedy humiliation of the men to the accompaniment of the permanent loss of their situations, as was the case in the late strike in Ireland.

Another question is—are the joint executives bound to accept this decision of the men as final and take the necessary steps to declare a general strike? The spokesmen of the more aggressive section of the men declare that the executives have no option but to bow to the decision of the ballot. A Labour correspondent states "that this is not the view taken by the majority of the men's responsible leaders. Their contention is that the ballot is in no sense a referendum. It was decided on in order to show clearly what was the feeling of the men on the question of accepting the report. Whatever the result may be, the executives still retain their executive power, and it is for them to say in what way the vote will be interpreted. Except under circumstances of extreme provocation they will not pay any attention to a majority in favour of a strike, as it is well known they are reluctant to renew the struggle just now."

The same correspondent says that if "an understanding is reached at the conference it will undoubtedly include an undertaking that in the event of the companies making certain concessions to induce the railwaymen's leaders to accept the report as the basis of permanent peace the latter will feel themselves bound to use their authority to suppress any unauthorised strikes of the men. The funds of the unions will, of course, not be placed at the disposal of the men striking against the wishes of the leaders."

S.E. AND C. DIRECTORS "SICK OF CONFERENCES."

Mr. Cosmo Bonser, Chairman of the South Eastern and Chatham Railway, speaking on Wednesday evening at the annual smoking concert of the London district of the railway at the Cannon Street Hotel, said he did not believe for one moment there was such a feeling of dissatisfaction among the railway workers as was sometimes made out. During his life he had always acted up to the policy of sticking to a bargain after

having entered into it, whether he got the worst of it or not. From that they would understand that the board was sick of what was called conference and settlements. They did not believe in them in a Government Office. He believed most strongly in meeting their men face to face, and arguing with them any grievance which they felt they were labouring under.

LONDON TO BRIGHTON IN FORTY-FIVE MINUTES.

THE FUTURE OF RAILWAY ELECTRIFICATION.

In a paper bearing the above title, read last night at the Royal Automobile Club, Pall Mall, by Mr. Philip Dawson, the author said, "Since I was called in eight years ago to advise the L.B. and S.C. Railway Co. regarding the advisability of electrifying a portion of their railway, such great progress has been made that the profitable field of railway electrification has been enormously extended, so that it would seem very difficult, if not impossible, for any conscientious railway board at present to limit definitely the extent to which electric traction may, in the near future, become desirable. As regards the question of the desirability of electrification, there is a much more general consensus of opinion amongst railway men of the present day than existed four years ago, when I read my last paper at the R.A.C.; but, unfortunately, there appears to be a very wide diversion of opinion in this country as regards the best system to be installed, although on the Continent of Europe a thorough study of the whole question has resulted in a practical unanimity of the leading railway authorities on this vexed point. There are only two tried systems generally under discussion, namely, the so-called continuous current, or what in America is called the direct current, and the single phase alternating current system. The continuous current, as at present generally applied on the underground railways of London, on the Southport branch of the Lancashire and Yorkshire Railway, and on the Tyneside branch of the North Eastern Railway, consists in the use of continuous current at a low pressure of 500 to 600 volts, the current being conveyed to the moving train by an insulated third rail, and being, in many instances, in consequence of Board of Trade requirements, returned to the generating and sub-stations by an insulated fourth rail, as on the District and Metropolitan railways in London. The other system which has so far been successfully installed both on the Continent of Europe and in the United States is the single phase system, and it is this which has been employed on the electrification carried out on the L.B. and S.C. Railway. Practically all engineers who have given the matter serious attention are apparently agreed that for anything except purely urban work, with a very frequent train service and many stops, the only system which can be economically installed to deal with long distance or goods traffic is the single phase alternating current. The exponents of the continuous current system contend that, for urban and suburban traffic, the continuous current system is the cheapest to install and operate, and that, if any further extensions were to be found advisable, the single phase system could easily be installed, in addition to the continuous current system, thus rendering the duplication of plant a certainty in the event of electrification proving financially desirable for anything beyond purely urban working. On the other hand, those who have had experience of the single phase as well as the continuous current system, both here and abroad, contend that the single phase system will be found, from an economical point of view, at least as satisfactory for suburban working as the continuous current system, whilst it is the only one which lends itself to unlimited extension. But there is a further important question to be considered, and that is the necessity for railways electrifying their lines considering the question of uniformity of system, so as to allow interchange in traffic, which has proved such a fruitful source of blessing to the travelling public in the past. This might be an argument in favour of the continuous current, had any electrification on a very large scale taken place on any of our main line railways. Fortunately, this is not the case, and there is still the possibility of railways agreeing on the use of one uniform system, if and when they electrify. The cost of the battle of the gauges and the battle of the compressed air and vacuum brakes is an example which, it is hoped, will not be repeated in the case of railway electrification.

"We will now proceed to consider the growth of railway electrification up to date, so as to make the decision as to future possibilities easier, in the light of past experience, for those railway authorities who may be considering this problem." Mr. Dawson went on to give an interesting *résumé* of the electrification of several United States main railways, which were the

first to venture on the conversion on a large scale, and, turning to Europe, he said that although electric traction on a limited scale was, in 1903, introduced on some British railways, such as the Liverpool and Southport line of the Lancashire railway, and the Tyneside lines of the North Eastern Railway round Newcastle, it was Germany, and more especially the Prussian Government Railway authorities, whom they had to thank for the greatest progress. "The experiments which they have carried and are carrying out are dominating factors which we cannot overlook when we consider what the future rôle may be which electric traction is to play in connection with the operation of our great railway systems in this country. With their characteristic thoroughness, the Prussian Government went to work and spent a large amount of money in order to discover what, if any, benefits they could derive in electrifying any portion of their railways. The competition of electric tramways in and round urban districts affected them as much as it did railways in other countries. With a view to testing the benefits which might result from electric traction, they electrified the Berlin Gross Lichterfelde section of the Berlin suburban system on the continuous third rail system between Berlin and Gross Lichterfelde—a distance of eight miles, on which there is a very heavy local service. This line was opened in 1903, and has been giving very good results ever since. The studies which the Government engineers made, and the very complete data which they collected in the course of several 'Studienreisen' in the United States, soon convinced them that electrification would, in the near future, be applied to a much larger field than the purely suburban one; but to render any such extensions economically possible it was necessary to consider very high working, as well as transmission pressures, which was quite out of the question with continuous current. It was just at this time that electrical engineers in Europe and America had realised this necessity and had developed a satisfactory single phase traction motor, which, if found to be commercially successful, would fulfil all requirements. The Prussian Government, with the object of testing this invention, installed the single phase system on a local line in the suburbs of Berlin, near Spindlersfeld. The results of the experiments, extending over nearly three years, were so satisfactory that the Prussian Government adopted this system for electrifying the suburban line in Hamburg. This is a purely local service, and the figures of capital expenditure and working costs there obtained have enabled the Government to make a comparison between continuous and alternating current operating under similar conditions of heavy suburban service. The Hamburg system has now been running for over four years, and has given the Government the greatest satisfaction in every way: so much so that the chief engineer of the Government railways, Herr Wittfeld, in a letter to me, stated that 'the Prussian Government were definitely satisfied now that for handling purely suburban traffic the single phase was, from every point of view, at least as satisfactory as the continuous current system.' With a view to proving the accuracy of these conclusions, they decided to electrify the section of main line between Magdeburg, Leipzig and Halle—a distance of over 100 miles. The very satisfactory results obtained with the single phase system in Hamburg, and the very wide field to which electrification will undoubtedly be applied in the near future, have resulted in all the German Government railways deciding henceforth only to consider the single phase system of electrification, so as to have uniformity of railway electrification for all purposes." Single phase installations in Austria, Switzerland, Italy, Sweden, Holland, and France were next described, followed by a reference to conversions undertaken in this country. Adverting to the L.B. and S.C. suburban electrification, he said that the total amount at present electrified is equivalent to 62 miles of single track, and 50 electric motor coaches are possessed or are on order.

"On the South London line experience extending over two years has shown that, as regards economy of working, the results are if anything better with the single phase than with the continuous current system. This experience corresponds with that of the Prussian Government at Hamburg. The results so far obtained have been so encouraging that extensions from Balham, *via* Thornton Heath, to Croydon and Wallington and other adjoining lines are being planned. The results given there show that the first year's electric working of the South London line resulted in an increase in the number of passengers carried over the previous year (with steam) of 97 per cent., whilst the second year's electric working, which has just come to an end, shows an increase of 130 per cent. over steam. As regards the Crystal Palace line, in consequence of the shortage of power plant, only a portion of it could be opened last May, and, although satisfactory increases have taken place, the real comparison will only be available in a few months' time, as the Festival of Empire during the summer months makes a

correct comparison with the previous year, under steam conditions, impossible. The results of the electric service to the Crystal Palace will, of course, be greatly improved as soon as the section between Balham and Selhurst has been electrified, which will enable a circular service to be run. A new plant which the company are supplying us and now completing will enable great extensions to be made in the service. It is, I think, unique that, ever since experimental running was started, in January, 1909, to the present moment, notwithstanding the shortage of plant, we have never had an interruption of the supply. This is most creditable to the company, but I think that it also speaks largely in favour of the success of the single phase system.

"The whole case of long-distance electrification rests on cheap electric power being available, and the cost of distribution being kept within moderate limits. In England to-day electricity for traction purposes is being generated by steam at a works cost of $\frac{1}{4}$ d. per unit; on to this must be added the capital charges, which will vary according to the nature and size of the power plant and its location and load factor. In America works cost is as low as 0.22d. per unit in a station which consumes 2.9 lb. of coal per kw. hour. Capital charges should not exceed 0.2d., so that it is quite conceivable that railways will, in the future, be able to purchase alternating current in this country at 0.4d. of coal per kw. hour. Capital charges should not exceed 0.2d., will be the total cost to the company if alternating current is used. On the other hand, if continuous current is adopted, this figure will be increased by the losses sustained in the course of transformation, and by the low-pressure distributing losses, as well as by the costs involved in the sub-stations, as regards working, maintenance and capital charges. Some idea of what these may amount to may be gained from the fact that in the case of the N.Y.C. and N.H.R.R., according to Mr. Wilgus, the cost of sub-station transformation and distribution is 0.158d. per unit, whilst the capital charges due to this item are 0.455d., thus making a total of 0.613d. per unit for transformation alone, a truly colossal amount. This need not be so great in every case, but, under such favourable conditions as exist in London on the County Council tramways, this figure is represented by 0.26d., or a figure larger than the total works cost at the generating station. This would increase the cost of current to the railway by at least 50 per cent., making the total cost of continuous current delivered to the line 0.6d. to 0.675d. per unit. This is a very important consideration, when it is remembered that the cost of current represents about 50 to 60 per cent. of the total locomotive charges per train mile. The annual cost for maintenance and repairs of electric locomotives is less than half that of steam locomotives, but, in addition to this, an electric locomotive can do more work than a steam locomotive, as it requires no time to fill up with coal and water, or to raise steam, rake fires, or clean fire tubes. Repairs are also carried out much quicker, so that five electric locomotives will do the work of eight steam locomotives. Only one man is needed to drive an electric locomotive, whilst two are necessary with steam, and the work is much less hard on the man. Time and space are saved at termini, as turn-tables become unnecessary, and all electric locomotives standing are available for service, without first having to be filled and fired up. The reduction in the cost of maintenance of stations and bridges will also be important, in consequence of the total absence of steam or smoke, a difference which those who travel on the District Railway now and who remember it in the days of steam, will readily appreciate. No water cranes, ash pits, or coal stacks are required, the absence of which will allow a very large and valuable spare space at termini to be available for other useful purposes. These points are fully realised by the Brighton Company, and it is for this reason that a scheme for electrifying the whole of their services to Brighton is being investigated. As will be seen from the map of the system, the whole of the services between London Bridge and Brighton could easily be electrified, all steam, as regards this portion of the line, being entirely done away with. The Eastbourne and Hastings trains would be hauled electrically as far as Lewes, where a steam locomotive would take them to their destination. Many, if not all, of the Portsmouth trains, would be run electrically as far as Worthing, whence a steam locomotive would haul them to Portsmouth. All towns not on the electrified section would be provided with frequent motor rail cars (steam, electric or petrol) connecting with the nearest station on the electric line, thus providing a much more frequent, as well as quicker, service connecting them with London than it is possible to give now. Such a transformation would enable a 10 to 15 minute service to be given to Brighton, and a 20 to 30 minute service to all the intermediate stations; and the consequent traffic increase should be at least correspondingly large. It is pro-

posed that the non-stop trains should do London to Brighton in about 45 minutes, and the stopping trains in about 60 minutes. The surveys and calculations in connection with this proposal are already far advanced, but the work involved is enormous, and it will be several months yet before any scheme will be ready to present to the Brighton board for their consideration." The paper was illustrated with cinematograph views and diagrams.

AN INDIAN RAILWAY CONFERENCE.

Lord Morley, the Secretary of State for India, has convened a conference, to meet in India, on January 12, 1915, the object being to discuss a number of questions which have arisen and which had caused friction between the Railway Board, as representing the Government of India, and the various administrators of the railways in that country. Lord Incheape, G.C.M.G., K.C.S.I., K.C.I.E., Member of Council, will preside and, together with Mr. A. Brereton, C.S.I., Government Director of Railways, will represent the Secretary of State and the India Office; the members of the Railway Board are Sir T. R. Wynne, K.C.I.E. (president), Mr. W. H. Wood and Mr. S. Finney, C.I.E. members, with Mr. R. C. F. Volkers as secretary.

The following chairmen and directors of the principal railway companies are expected to be present; in fact, the majority of them are on their way out:-

Col. T. Gracey, C.S.I., R.E.,	}	Bengal and North Western
chairman,		
Mr. A. Izat, managing	}	and Rohilkund and Kumaon.
director,		
Mr. Robert Miller, director,		Bengal Nagpur.
Col. Sir W. S. S. Bisset, K.C.I.E., R.E., chairman,		Bombay, Baroda and Central India, and Madras and Southern Mahratta.
Sir F. R. Upcott, K.C.V.O., C.S.I., chairman,		East Indian; formerly president of the Railway Board.
Col. Fred Firebrace, R.E., chairman,		Great Indian Peninsula.
Sir Henry Kimber, Bart., M.P., chairman,		South Indian
Mr. Neville Priestley, managing director,		(formerly secretary of the Railway Board.)

CHRISTMAS PARCELS TRAFFIC.

The London and North Western Railway Company have made complete arrangements for the collection, quick transit, and prompt delivery of Christmas parcels in all the principal towns on their system, and all parts of Wales, Scotland, and Ireland. Special "parcel" trains will be run, and through vans will also be attached to the principal passenger trains for the accommodation of the traffic, and additional delivery and collection services by parcel vans and carts between the receiving offices and the railway stations will be in operation during Christmas and the preceding week.

The Midland Company have made special arrangements for dealing with the exceptional parcels traffic over their line during the month of December. Special express parcels trains will be organised in addition to the through vans which will be attached to the long-distance expresses serving the principal town and country districts of England, Scotland and North of Ireland.

The Great Northern Railway has made special and complete arrangements for the collection, quick transit, and prompt delivery of parcels traffic to and from all their stations, and also to stations on other companies' systems in connection. Through vans are attached to many of the express trains, whilst special parcels trains will be run to meet additional demands. Special frequent collections of parcels will be made from London receiving offices and the provinces.

The Great Central Railway is again to the front. They announce that frequent collections of parcels will be made at the receiving offices in London and the large centres, and the traffic will be despatched by the first available train after receipt. Special trains will be run, and additional through vans be attached to the principal express and mail trains. Reduced through rates are now in operation, and the minimum weights formerly charged on packages of perishables at owner's risk have been abolished, the charges being now based on the actual weight. The rates for parcels carried short distances are lower than those by parcel post.

The senders of parcels on all lines are again reminded of the importance of clearly addressing all parcels before despatch, and, as an extra precaution, to enclose a duplicate label inside each package.

RAILWAY MILEAGE IN EUROPEAN COUNTRIES.

Mr. Chiozza Money, Liberal Member of Parliament for Northants East, is one of the political advocates of a policy for nationalising the railways in this country. Probably for the purpose of acquiring facts which might help him in his campaign, he has elicited from the Board of Trade a set of statistics which are of much interest to all concerned in railways. Doubtless the figures are obtainable otherwise with more or less research, but they are in this case officially presented by the Board of Trade ready for inspection. They show not only the mileage of railways in the principal countries of Europe at the present time, but afford comparisons with previous years back to 1905 or 1906. The question which Mr. Money had on the notice paper of the House of Commons last week was whether the President of the Board of Trade would state for the last five years for which the figures are available the railway mileage of each of the great European countries in order to show to what extent the railways in each country have recently been increased. Mr. Buxton issued a printed reply on Tuesday last in the following terms:—

The following statement shows for each of the last five years for which the particulars are available the route mileage and track mileage of railways in the United Kingdom, Russia (including Asiatic Russia), Germany, France, Austria, Hungary and Italy on the dates specified.

(A) UNITED KINGDOM.

Date.	Route mileage.	TRACK MILEAGE.				
		OF TRACK PROPER.				Total track mileage in equivalent of single track.
		Single.	Double or more.	Total reduced to single track.	Length of sidings reduced to single track.	
Dec. 31, 1906	23,063	10,252	12,811	38,872	14,032	52,904
" " 1907	23,108	10,263	12,845	39,013	14,145	53,158
" " 1908	23,205	10,279	12,926	39,316	14,353	53,669
" " 1909	23,280	10,284	12,996	39,622	14,359	53,972
" " 1910	23,387	10,315	13,072	39,851	14,469	54,311

(B) RUSSIA IN EUROPE AND ASIA (EXCLUDING FINLAND).

Date.	Route mileage built.	TRACK MILEAGE				
		OF TRACK PROPER.				Total track mileage in equivalent of single track.
		Single track.	Double track.	Total reduced to single track.	Sidings, loops, shunting and secondary station lines reduced to single track.	
Dec. 31, 1905	38,521	30,996	7,525	46,046	*	*
" " 1906	40,071	32,091	7,980	48,051	12,733	1,148
" " 1907	41,152	32,663	8,488	49,640	*	*
" " 1908	41,427	32,621	8,806	50,233	*	*
July 1, 1909	43,570	34,646	8,924	52,494	14,847	1,238

NOTE.—Including narrow gauge lines. * Not stated in the original Russian railway returns for these years.

(C) GERMANY.

Date.	Route mileage	TRACK MILEAGE OF TRACK PROPER.					
		Single track.	Double track.	Treble track.	Quad-ruple track.	Quin-tuple track.	Total reduced to single track.
March 31, 1906	34,103	22,019	11,942	30	109	3	46,445
" " 1907	34,619	22,277	12,185	29	125	3	47,251
" " 1908	35,037	21,962	12,900	37	135	3	48,428
" " 1909	35,617	22,100	13,322	40	152	3	49,487
" " 1910	36,294	22,408	13,685	42	156	3	50,542

NOTE.—The above particulars relate to normal gauge lines only and are exclusive of the length of narrow gauge lines stated below.

Narrow Gauge Lines.

	1905	1906	1907	1908	1909
Route mileage	1,279	1,283	1,304	1,314	1,349
Track mileage in equivalent of single track	1,533	1,546	1,573	1,585	1,620

(D) FRANCE.

Date.	Route mileage in operation.	TRACK MILEAGE OF TRACK PROPER.		
		Single track.	Double track.	Total reduced to single track.

NOTE.—The above particulars relate to State railways only, and are exclusive of private railways with a route mileage of about 2,124 miles in 1909, for which similar details are not available. The length of these lines in previous years is not given in the returns from which the statement was compiled.

* The large increase in the route and track mileage at this date as compared with that for June 30, 1905, is due mainly to the acquisition by the State in the interval of the system formerly worked by the Southern Railway Company with a length of approximately 1,379 miles.

† "Lunghezza del impianto o di costruzione."

A Grand Trunk Booklet.—The Grand Trunk Railway recently issued a handsome *brochure* slightly different to the ordinary run of railway booklets inasmuch as it contains no descriptive matter. Instead, a number of views tell their story without words. The title is simply "Vistas," with the Grand Trunk trade mark on one corner of the cover, which is a reproduction in colours from a painting of "The International, Limited," probably the finest and fastest train in Canada. Inside the book are found maps of the Grand Trunk Railway system and the Grand Trunk Pacific Railway and a series of sixty-one pictures of Canadian scenes, printed on high-class coated paper.

Another matter which he was sure would be of great interest to the shareholders was the fact that himself and their managing director, Mr. Neville Priestley, would be leaving for India in the course of a few days to attend a conference which was to be held in Calcutta on January 17, 1912, to which the Secretary of State had invited them to be present. That conference was to be presided over by Lord Inchausti. It would be a very important conference, and it would discuss many ques-

tions which had arisen between the Government in India and the railways, which the Secretary of State thought would be more satisfactorily settled by a round table discussion. Himself and their managing director would, of course, take the opportunity of inspecting their own railway, and they anticipated very fruitful results would accrue from a personal talk with their officers about several large questions which they had lately had under consideration. (Cheers.) In that connection he desired to accord a special vote of thanks to their agent, Mr. Muirhead, and all concerned on the other side in bringing about such excellent results as the shareholders had seen for the past year, and which must have imposed an enormous amount of work upon them. Such a vote as he would move later on was rather apt to assume a stereotyped form, but the enormous increase in their business during the past year emphasised the important part which was played by their officers and staff in India generally, and by their agent in particular in producing those results. Some of the increase in the business was doubtless due to normal causes, but much of it was due to the careful and constant study of the wants of the people and the wise measures adopted for meeting those wants. (Applause.) It would therefore afford him the greatest possible satisfaction to propose a special vote of thanks to their agent, Mr. Muirhead, and to their officers and staff generally for the excellent work of the past year. (Cheers.) He was not including the name of Mr. Neville Priestley in that vote, as their managing director was upon this side, but they keenly appreciated the value of that gentleman's services, and he pointed out how important it was to have upon this side a gentleman of actual experience and ability in respect of the administration of railway affairs in India. (Loud applause.) He concluded by moving: "That the directors' report and statement of accounts for the half-year ended June 30, 1911, be received and adopted."

Sir J. D. REES seconded the motion, which, after some congratulatory remarks from Mr. JAMES, who expressed satisfaction at the progress of the Ceylon extension, was unanimously agreed to.

The CHAIRMAN then moved, and Mr. HENRY W. NOTMAN seconded, a resolution as follows, which was unanimously agreed to:—"That guaranteed interest of $1\frac{3}{4}$ per cent. and the guaranteed surplus profits of $\frac{1}{2}$ per cent., or 2 per cent. in all, for the half-year ending December 31, 1911, be paid on January 1, 1912."

The cordial vote of thanks to the agent and staff in India, to which the chairman had given such strong support, was then moved by Sir HENRY KIMBER and seconded by Mr. NEVILLE PRIESTLEY, and unanimously agreed to; and the proceedings terminated with a similar compliment to the chairman and the directors generally for their past services.

ISLE OF THANET ELECTRIC TRAMWAYS AND LIGHTING.

The ordinary general meeting of shareholders was held on Thursday last at Winchester House, Old Broad Street; Lord Arthur Butler (chairman of the company) presiding.

The SECRETARY (Mr. J. Barber Glenn) read the notice convening the meeting and the auditors' report.

The CHAIRMAN said that the directors were presenting a statement of accounts which spoke for itself, and which they considered very satisfactory. He would call their attention to one or two points in it. First, they would see that the gross revenue showed an increase of £4,628, and that the traffic receipts had increased by the very satisfactory figure of £2,817. In his address last year he said that the bad weather of 1910 had been very unfavourable for traffic; it was hardly necessary to say that the weather for 1911 had been all that they could desire from a traffic point of view. The electric lighting had again shown a large increase—viz., £1,784, or over 32 per cent., a very gratifying rate of expansion which promised to continue. The expenditure side of the revenue account bore favourable comparison with the corresponding items of last year's account. With reference to coal and coke, that item showed an increase of £813, owing to the larger output of electric current, the units generated being 2,120,791 this year against 1,700,923 units last year, an increase of nearly 18 per cent.; and to a scarcity and higher price of coke, of which they used all they could get from the local gasworks. The scarcity of coke had involved the use of a larger quantity of the more costly coal. Referring to the last item, they had a profit balance of £21,785 against £18,242, an increase of no less than £3,542, which was nearly 80 per cent. of the increase in gross receipts—viz., £4,628, so that it cost them only £1,086, or little more than 20 per cent. of the increase, to earn the additional profit. The improvement in the net earnings of the company had been steady and continuous in recent years.

During the last four years the profits earned by the business were:—In 1908, £13,390; 1909, £15,953; 1910, £18,242; 1911, £21,785—which was very satisfactory progress. The profit for the past year was carried down to the appropriation account, and after debiting the debenture interest and interest on loans, income-tax, etc., the amount of net profit transferred to the revenue account in the balance-sheet was £13,255 against £9,550, an increase of £3,705. Turning to the balance-sheet, the shareholders would see, on the debit side, that their loans were £42,000 against £44,000, a decrease of £2,000, which had been paid off in the year. The creditors were £3,868 against £1,909, an increase of £1,959, which increase represented the sum due to the contractors for the supply of additional machinery. The item, contractor for unpaid balance, was £1,000 against £1,750 last year, a reduction of £750, being the amount paid Mr. Murphy in the year. Then the reserve account had been increased from £8,500 to £11,000, the permanent way reserve from £1,500 to £4,000, the increase in each case of £2,500 being the amounts set aside to those purposes out of last year's revenue balance. On the credit side of the balance-sheet there was considerable alteration in the figures. They had to provide, in order to meet the growing business, a new high tension cable at a cost of £3,541, additional plant and machinery at a cost of £2,077, and had to spend on electric light installation a sum of £2,705. All those sums had been paid with the exception of the balance due to contractors, about £2,300, which would be paid in due course. In electric lighting, as in gas undertakings, the expenditure on capital account never ceased as long as the business continued to grow. New customers could not be secured without sufficient cable and generating capacity to supply them, and they had to face, in the immediate future, the provision of an additional generator at their power house in anticipation of the increased load which they expected next autumn. No money could, however, be better invested than capital expenditure to meet a growing demand for electric current when it could be sold at a reasonable price. The final result was that they had at the credit of revenue account in the balance-sheet £15,532, against £11,026 last year, and their recommendation was that they should pay the preference shareholders half this year's dividend £3,750, place £1,500 to reserve account, place £6,000 towards future maintenance of permanent way, raising that fund to £10,000 for special maintenance expenditure or reconstruction of line when the time came, and they proposed to start a new reserve for third party insurance with £2,000, and carry forward to next year £2,282, against £2,276 brought into the account.

With reference to the appropriation of £2,000 to a third party insurance reserve, it might be explained that it was becoming increasingly difficult for all tramway companies to place their third party risks with solvent insurance companies on reasonable terms. As long as they could get covered at reasonable rates they proposed to continue insuring, but in case they should find it advisable to take the risks themselves they could do so with much more confidence if they had a reserve specially ear-marked for the purpose of meeting any exceptional claims. With regard to the other appropriations, £1,500 was not a large amount to put to general reserve; and though £6,000 might seem a large sum to place to renewal of permanent way, they were warned, by the experience of the older electric tramway companies, that this became a very heavy charge, after a certain period in the life of the rails and paving. With that survey of the figures, some preference shareholder might say, with all this prosperity, "Why don't you pay us a larger dividend?" Well, the reply to that was, that although the financial position of the company had been immensely improved during the past four or five years, they were unable to pay those shareholders their full dividend without borrowing. They could pay the $2\frac{1}{2}$ per cent. out of their cash resources, and the warrants, if the report was adopted, would be posted on Saturday, but if they gave anything more than that they would have to borrow, and that they were anxious to avoid. They looked forward, however, to the time when they would be able to increase the distribution.

After replying to a few questions asked by some of the shareholders, the Chairman moved "That the directors' report be received and adopted," which was seconded by Mr. A. R. Monks and carried unanimously.—Mr. William M. Murphy proposed the re-election of Lord Arthur Butler and Mr. A. R. Monks, directors retiring by rotation.—This was seconded by Mr. Henry Brown and carried unanimously.

The auditors, Messrs. Hays, Akers, and Hays, were duly re-elected, and with a vote of thanks to the chairman and directors the proceedings terminated.

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY.

The 112th half-yearly ordinary general meeting of the proprietors was held yesterday, December 8, at the Cannon Street Hotel, E.C.4, Col. Sir W. S. S. Bisset, K.C.I.E., R.E. (chairman of the company), presiding.

The SECRETARY (Mr. C. A. R. Crommelin), having read the notice convening the meeting,

The CHAIRMAN said: Gentlemen, before commencing the business of the meeting, I wish to congratulate you upon the receipt yesterday of a telegram from our agent, announcing the satisfactory completion of his Majesty's railway journey over our system from Bombay to Delhi—the first railway journey which has ever been undertaken by the British Sovereign as Emperor of India.

Our first business to-day is to consider the report for the half-year ended June last, which has been circulated among you, and no doubt perused with interest by all. If, therefore, you will be good enough to take it as read, I propose to make a few remarks on the results of the half-year before asking you to pass the report and accounts.

GENERAL RESULTS.

The general results of the half-year may, I think, be considered good, in that both on the Bombay Baroda and the Rajputana-Malwa the earnings show an increase over those of the corresponding period of the previous year, which was in itself a good one. These increases have, however, been discounted by a rise in the working expenses, on which I will remark later. The final result being that, with an increase in the gross earnings of about Rs. 8,00,000, we have a decrease in the net earnings of a little over a lakh of rupees. The increase in our earnings has again, I am glad to say, been contributed to by our passenger traffic, which shows the satisfactory improvement over the corresponding period of the previous year of nearly Rs. 2 lakhs on the Bombay and Baroda, and of nearly Rs. 7 lakhs on the Rajputana-Malwa Railway. We carried on the combined system over 22½ million of passengers, against 21 million during the previous year. The increases have been mainly in intermediate and third class passenger traffic on the Bombay Baroda and in third-class on the Rajputana-Malwa, and were due to a general revival of trade consequent on the favourable monsoon in 1910, and to an increase in the number of Hindu marriages. In goods traffic the results have not been quite so satisfactory. There was an increase of about Rs. 27,000, mainly in general merchandise and live stock on the Bombay Baroda, but it must be remembered that the half-year with which we are making comparisons was, on this section of the company's system, a very good one. On the Rajputana-Malwa, also, there was a small increase of some Rs. 10,000.

THE MONSOON.

Of the past monsoon, I am sorry I cannot give you a very favourable report. The rainfall was, in many parts of the country served by your railway, scanty, and at one time it was feared a serious famine might result. Good rain, however, fell late in the season, which improved the situation and enabled the cultivators to make late sowings. The serious failure of the earlier rains resulted in a more or less complete failure of the grass and fodder crop in Guzerat and Kathiawar, on which the people rely to feed their cattle, and we have carried large quantities of fodder from more favoured parts of the country to save the cattle which in some places were starving for want of it. As on previous occasions of this sort, we have carried this fodder at the lowest possible rates.

TRAIN MILE EARNINGS AND EXPENSES.

The gross earnings per train mile continue to be satisfactory, though they show a small decrease on the Bombay Baroda—being Rs. 6.27, against Rs. 6.30 during the corresponding period of the previous half-year. On the Rajputana they were Rs. 3.72, as compared with Rs. 3.68. In consequence of the rise in working expenses already alluded to, the net earnings per train mile show small decreases on both sections, being Rs. 3.30, as against Rs. 3.52 of the previous year, on the broad-gauge section, and Rs. 1.87, against Rs. 1.88, on the metre-gauge. Turning now to the expenditure side of the account, I remarked a few minutes ago on the rise in our working expenses. Details of the increases will be found set out in paragraph 10 of the Report, and if you will kindly turn to that page you will see that out of a total increase of Rs. 9,97,515 Rs. 8,13,401 has been on account of maintenance, due chiefly to 25 miles having been relaid with 90 lb. rails, as compared with only eight miles in the first half of 1910, and to heavy expenditure on rebuilding the Mahi Bridge and certain other bridges. This expenditure is in pursuance of the policy of your Board, which has on other occasions received your approval,

for raising your railway up to standard which will enable it to meet the heavy demands which it will, I feel sure, in the future be called to meet.

FORECAST OF RESULTS OF CURRENT YEAR.

With regard now to the results of the year which is drawing to a close, on which depends the dividend to be paid in July next, I have just received a telegram from the company's Agent in India in which he estimates that, although the working expenses have included heavy expenditure on strengthening of permanent way and renewal of bridges, the net earnings for the whole year 1911 will amount to 270 lakhs, which is practically the same as earned during 1910. Heavier interest charges payable on capital outlay have, however, to be met, with the result that the company's share of the surplus is estimated at a small fraction over 4 lakhs of rupees, as compared with 1½ lakhs in 1910. This amount will suffice to pay, in July next, the usual dividend of 10s. per cent., in addition to the guaranteed interest of £1 10s.

REVISION OF COMPANY'S CONTRACT.

As mentioned in the report, negotiations have been in progress between the Secretary of State and your board for the revision of the company's contract so as to include the Nagda Muttra Railway, and I am glad to be able to inform you that the preliminaries to this revision have now been arranged. Your board have had the great advantage of advice and assistance of some of the principal shareholders in conducting these negotiations and in agreeing to the proposed terms, and they now ask you to authorise the completion of the new contract, which will then have effect from 1st January, 1912. Under this agreement the company's system will be consolidated, the clauses of the existing contract being cancelled under which the Secretary of State reserved power under certain circumstances to withdraw the Rajputana-Malwa Railway from the system. The Nagda Muttra Railway, with a length of 340 miles, will be included in the system, thus giving the long-desired direct and unbroken communication between Bombay and the cities of Agra and Delhi. For the purposes of the contract it is proposed to take a revised capitalisation of the whole system, based upon twenty-five years' purchase of the average net earnings of the past five years, after allowing for interest on the existing £1 million debenture stock. Of this revised capitalisation, which amounts to 40½ millions, 30 millions are to rank as preferred ordinary capital, the company's capital of 2 millions being included. The amount of the preferred ordinary capital has been agreed upon at 30 millions, so that in a year of minimum traffic the minimum net earnings will suffice to pay a dividend of 4 per cent. on this capital. (Hear, hear.) The half-yearly guaranteed payment of interest by the Secretary of State will remain at the rate of 3 per cent. per annum as at present, but with the resources of the stockholders' reserve account available, we feel able to hold out to you the confident expectation that each half-year in future a minimum dividend of 2 per cent., or at the rate of 4 per cent. per annum, will be available for distribution. (Hear, hear.) As the agreement arrived at during these negotiations will now, we trust, be followed by your authority to complete a contract on the terms indicated above, I hope to be able to leave for India next week to visit the company's system and to make any new arrangements that may be necessary to give effect to the new contract, which is to have effect from January 1, 1912. You will have noticed in the report that the Secretary of State has invited a representative of the board to be present at a consultation to be held in Calcutta in January next in regard to matters of railway administration. Readers of the financial supplement of the *Times* of July last will have already learned something about the principal subjects for consideration at the proposed meeting, and all of you will be glad to learn that this meeting has been arranged with a view to a friendly exchange of opinions between the companies' representatives and the representatives of the Secretary of State, and to the prompt adoption of any revised arrangements which may be determined upon after hearing all sides of the question. I have now, gentlemen, to move:—

"That the report of the directors, with the accounts for the half-year ended at June 30, 1911, now presented, be received and adopted."

Mr. S. J. WILKIE seconded the resolution, which was carried unanimously without discussion.

On the motion of the CHAIRMAN, the interest payable by the Secretary of State on the company's stock was ordered to be distributed on January 5 next, and the directors were authorised to enter into an agreement with the Secretary of State to provide for the inclusion of the Nagda-Muttra Railway in the company's system, and for such revision of the company's principal contract as the directors may think fit.

A vote of thanks was accorded to the company's agent in India and to the Indian staff generally for their past services, and a similar compliment to the chairman and directors terminated the proceedings.

ISLE OF WIGHT CENTRAL RAILWAY.

An extraordinary general meeting of the Isle of Wight Central Railway Company was held on Thursday, Mr. H. Willmott presiding, when resolutions were passed for the seal to be affixed to the working agreements with the Freshwater, Yarmouth and Newport, and Newport, Godshill and St. Lawrence Companies, and sanctioning the creation of £50,000 debenture stock, as to £15,000 in "A" stock, £25,000 in "B" stock, and £10,000 in "C" stock. The Chairman mentioned that the directors had taken the bold step of reducing their fares in some instances. He believed he would have a very satisfactory statement to make at their next half-yearly meeting.

ARGENTINE NORTH EASTERN RAILWAY.

At a special meeting of the Argentine North Eastern Railway Company, held in London on Thursday, a resolution was passed authorising the creation and issue of further capital to the extent of £2,000,000. One or two shareholders offered criticism, and an adverse amendment was carried on a show of hands. A poll was then demanded by the board, and, after further explanations, the amendment was withdrawn, and the original resolutions carried unanimously.

EAST INDIAN RAILWAY.

The gross receipts of the half-year ended June 30, 1911, (Rs.4,89,10,749) show an increase of Rs.27,49,088, the working expenses (Rs.1,89,27,256) an increase of Rs.11,11,240; and the net receipts (Rs.2,99,83,493) an increase of Rs.16,37,848, as compared with the corresponding half-year of 1910. Percentages of the working expenses upon the gross receipts of the two half-years ended June 30, 1911 and 1910, were 38.70 and 38.59 respectively. Excluding from the account the receipts and charges for traffic carried for the undertaking, the percentages for the two half-years were 37.06 and 37.24 respectively. The net earnings for the half-year of the undertaking, the South Behar, and the Tarkessur Railway, together with the sum received for working the Delhi-Umballa-Kalka Railway, amount to Rs.2,92,58,224. From this has to be deducted prior charges amounting to Rs.1,73,06,729, leaving a divisible surplus of Rs.1,19,51,495, the company's share of which, after deducting Rs.25,325 for Indian income tax, is Rs.11,20,363. This amount has produced the sum of £74,934, which, together with the balance brought forward from last half-year, enables the board to recommend the payment of a dividend for the half-year of £1 3s. per cent. on the deferred annuity capital and the deferred annuity capital, class D of the company, in addition to the guaranteed interest of £2 per cent.

The receipts from coaching traffic were Rs.1,29,58,561 against Rs.1,24,38,337, the passengers carried totalling 17,556,742, against 16,399,400. The receipts from merchandise and coal traffic were Rs.3,31,06,280, against Rs.3,07,53,412, the number of tons carried being 7,730,568, against 7,547,180.

The total length of the East Indian Railway proper is 2,220½ miles, of which half a mile is 6 track, 2½ miles are 4 track, 13½ miles 3 track, 581½ miles double track, and 1,631½ miles single track. In addition to the above the Delhi-Umballa-Kalka Railway, 192½ miles, the South Behar Railway, 70½ miles, and the Tarkessur Railway, 22½ miles, were worked by the company, making the total length worked on June 30, 1911, 2,523½ miles, as compared with 2,506½ miles on December 31, 1910, the increase being due to the opening for traffic during the half-year of the Dulia branch of the Barharwa-Katwa line, 16½ miles. The mean length worked (including foreign lines worked over, 77½ miles) during the half-year was 2,590 miles. The total capital outlay on the East Indian Railway undertaking and on incorporated branches, to June 30, 1911, was Rs.61,33,01,052, including Rs.1,44,009 in respect of capital not bearing interest; or excluding lines under construction, suspense accounts and steamboats, Rs.59,00,86,407, giving an average cost of Rs.2,64,674 per mile of track on 2,220½ miles open. The capital expenditure during the half-year was Rs.79,61,522.

The report states:—"The line from Bhagulpur to Bausi, 31 miles, was opened for goods traffic on July 1 last, and for passenger traffic on October 1 following. Good progress has been made with the construction of the line from Hooghli *via* Katwa to Barharwa, and it is confidently anticipated that the first portion as far as Katwa will be completed by the end of March next. The work in connection with the doubling of the line was continued during the half year, and, with the exception of a small section between Mirja Road and Jigna, which it is expected will be opened shortly, the main line is now doubled

between Howrah (Calcutta) and the right bank of the Jumna at Allahabad, *via* the Chord line, a distance of some 562 miles. During the half-year new girders were erected for both the up and down tracks of the Hullohur bridge, 4 spans of 150 feet, mile 266, and arrangements are now in progress for re-girding both tracks of the Kiul bridge, near Luckeeserai, 9 spans of 150 feet, and for providing the second track over the river Jumna at Allahabad and Delhi, 14 spans and 12 spans respectively of 205 feet each."

ARGENTINE TRANSANDINE RAILWAY.

The report for the year ended June 30 last states that the gross receipts for the year from the working of the railway have amounted to £139,425, an increase of £52,632, or 60.64 per cent. The proportion of the receipts payable to this company under the working agreement with the Argentine Great Western Railway Company is £42,873, as compared with £23,607 in the previous year. This is the first complete year since through working was established with Chile, and there has been a satisfactory increase in the total traffic, the principal figures being as follows:—Passengers, gross receipts, £80,233; 1909-10, £52,932. Live stock, £37,620; 1909-10, £23,239. Goods, £13,578; 1909-10, £6,024. The increase in the goods traffic is largely due to the carriage of material for the erection of snow shedding and for other works in connection with the completion of the line. A considerable quantity of snow shedding has been erected, and the running of trains was regularly maintained on the line throughout the year under review, with the exception that in June, in consequence of very heavy snowstorms, through passenger traffic with Chile was suspended for a few days. The period of five years during which the interest on the B debenture stock has been paid, in accordance with the resolutions of May 17, 1906, came to an end on June 30 last, and the B debenture stock has now reverted to its original status as income debenture stock, dependent for interest on the surplus net revenue of the company in each year, the interest in future being payable on or before December 31 out of the net revenue for the year ended the previous June 30. The completion of works reserve account was, under the resolutions of May 17, 1906, chargeable with the interest on the B debenture stock, for the five years to June 30, 1911, in so far as the net revenue of any year was not sufficient to provide that interest, and this liability having now been determined, the balance has been, in accordance with the original purposes of the account, transferred to the credit of receipts on capital account to meet expenditure incurred in the completion of the line. It has not yet been found necessary to issue any of the additional £289,834 B debenture stock authorised, but in order to provide for the cost of extending the snow shedding, further rolling stock, etc., an issue will shortly have to be made. The revenue account shows a credit balance for the year of £20,968, and adding the amount brought forward, £4,952, there is a total available of £25,920, of which amount the directors have placed to the credit of a general reserve fund £5,000, leaving a balance of £20,920. They recommend that a dividend of 3 per cent. be paid on the preferred shares on account of the arrears of dividend for the year to June 30, 1907, absorbing £15,000, leaving to be carried forward £5,920.

ASSAM-BENGAL RAILWAY.

The half-yearly report covering the six months ended June 30, 1911, states that the expenditure on capital account down to the end of the half-year amounted to Rs.14,27,63,497, of which Rs.13,32,61,815 represent the actual outlay on works, and Rs.95,01,682 interest chargeable to capital and the amounts debited to suspense account. The expenditure incurred and charged to final heads during the half-year amounted to Rs.25,09,576. The gross receipts for the half-year amounted to Rs.27,04,684, against Rs.24,89,747 in the corresponding half of 1910. The expenditure chargeable to revenue for the half-year amounts to Rs.22,71,081, against Rs.22,08,428 in the first half of 1910, the ratio to gross receipts being equal to 83.97 per cent., as compared with a ratio of 88.70 per cent. The net earnings for the half-year amounted to Rs.4,33,603. This sum is, under the contract, retained by the Secretary of State in reduction of the charges for interest incurred by him. The board recommend that a dividend for the current half-year ending December 31, 1911, be declared at the rate of 3 per cent. per annum, payable out of the guaranteed interest receivable from the Secretary of State in Council of India.

United Railways of the Havana. An extraordinary general meeting of the United Railways of the Havana and Regla Warehouses was held on Thursday, at which the resolution ratifying the arrangement with the Western Railway of Havana was confirmed.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

In their seventy-first annual report the directors state that the net surplus for the year amounts to £410,015, including £67,181 13s. 7d. brought forward from the last account. After deducting the amount of the interim dividend of 2½ per cent. on the preferred stock, and 3½ per cent. on the deferred stock, paid in May last, the balance admits of a further payment of 2½ per cent. on the preferred, and 6½ per cent. on the deferred stock, together with a bonus on the latter stock of 3 per cent., after making a special appropriation to the depreciation reserve for the year, which is raised to £559,542. The distribution for the year is therefore equal to 9 per cent. on the paid-up capital. A balance is carried forward to the next year's account amounting to £67,615.

Looking backward to the year's operations, it is satisfactory to note that no serious casualty has been experienced, and that the work of the fleet has been carried on with the usual efficiency and punctuality, except, in certain instances, where labour difficulties have interfered with the usual programme of sailings. The following extract from a report made by the management to the board, on the subject, shows in a few words what the situation was during the strikes of last summer:

"During the three or four weeks when these dock strikes were at their height, the company had fourteen ships altogether directly affected. They could neither discharge, coal nor load them. Three mail steamers had to be despatched in ballast, and the Post Office was duly warned that if the strikes continued the mail service must break down. Ships were occasionally coaled at the Hook of Holland and at Plymouth when coaling was impossible in London. Apart from these mail steamers sent away without cargo, two or three cargo vessels were despatched from Antwerp only half laden, which should have completed their loading in London. Other vessels were simply kept in the docks doing nothing until work could be resumed, and one ship was delayed in Liverpool nearly three weeks trying to get rid of a moderate quantity of refrigerated cargo. Two other ships were detained at Tilbury with full refrigerated cargoes, which it was impossible to discharge. Other ships were kept lying at Southend because it was useless to bring them into dock as work was impossible, and so on." The immediate loss to the company owing to the state of affairs thus described may be ascertainable, but the future burden of expenditure, seeing that every workman, skilled or unskilled, in every direction, connected with shipping, has obtained a very substantial increase of wages, must remain an undetermined problem for a considerable time to come.

At the last annual meeting the chairman found himself called upon to explain the character and bearing of an Enactment then quite recently passed by the Governor and Legislative Council of the Straits Settlements, the purport of which was to impose heavy fines on shipowners, such as this company, and hand over these penalties to other shipowners as an inducement to come in and annihilate the people who had been carrying on the trade for very many years. The first effect of this measure was unfortunate for the Government policy. The companies thus attacked naturally declined to play into the hands of the Singapore Legislators, and to continue to quote rates or provide regular sailings. Without the certainty of these fixed rates and sailings which had existed under the Conference system, merchants were placed in a position of great difficulty, and business came very nearly to a standstill. The Straits Government had at last to come to the rescue by suspending the operation of the newly passed Ordinance on the understanding that the Conference question should be discussed subsequently in London. In closing his explanation on this subject, the chairman observed that even in these somewhat revolutionary times no British Government would venture to submit legislation of this character to the House of Commons, and he could not, therefore, imagine that this despotic interference with the liberty of British and foreign shipowners, carrying on their business in conformity with the laws of the country, would ever receive the sanction of the Crown. This anticipation of events proved to be correct, for after a short discussion at the Colonial Office the obnoxious Ordinance was repealed.

The directors, with great regret, mention that Mr. G. F. Johnson has been obliged to retire from the secretaryship on account of impaired health, after a long and valuable service in various posts both at home and abroad. He is succeeded by Mr. F. J. Abbott, who has recently been one of the company's agents in Japan, and has had much foreign experience in the service.

The last annual report called attention to the fact that after three very lean years shipping had experienced a great rebound, and in the case of the company the freight returns had shown

an improvement for the year of £215,000. This improvement has been maintained throughout the year under review although the freight returns, amounting to £1,721,006, show an adverse difference of £12,582 as compared with the previous year. Even if there had been no other adverse cause at work this slight difference would be more than accounted for by the dockers' strike. There have, however, been other causes affecting the company's receipts, first, that owing to the sale of several old cargo steamers there have been rather fewer cargo voyages than last year, and secondly, there has been a regrettable deficit in the earnings of the Bombay and China line. It has been more than once explained that this service, which was once a very flourishing concern, tends to become the *bête noir* of the company's operations, for while the character of the mail service requires the company to run expensive ships on the line, the loss of the opium freight and other causes tend towards very unprofitable results. But for the labour troubles the freight account would have shown considerably better figures than last year, notwithstanding the drawbacks just mentioned. As to the future, it is impossible during the present chaos in China to foresee what business may become in that part of the world, but in other respects shipping prospects appear fairly hopeful. The passenger receipts for the year, £1,204,421, are ahead of those of last year by nearly £17,000. It is satisfactory to note that this increase is spread over the company's services generally. The touring business has been larger than last year owing no doubt to an exceptionally fine summer. In the way of expenditure, there is no item in the present account requiring special explanation, but as to the future the company, in common with all shipowners, must look forward to increased labour bills, and also apparently to enhanced coal prices, as contracts made for next year show a distinct advance in price.

DIVIDENDS.

The directors recommend the following dividends—viz.:—On the preferred stock at the rate of 2½ per cent., making, with the interim payment in May, a total distribution for the year of 5 per cent.; on the deferred stock at the rate of 6½ per cent., and a bonus of 3 per cent., making, with the dividend in May of 3½ per cent., a distribution of 13 per cent. on this stock for the year. The dividends and bonus now recommended will be payable on and after December 10.

Argentine North Eastern Railway.—An extraordinary general meeting was held in Winchester House, Old Broad Street, London, E.C., on Wednesday. Mr. W. Bailey Hawkins presiding for the purpose of considering a resolution to increase the capital of the company. The chairman, in moving the resolution, increasing the capital by £2,000,000, said that the details had already been fully placed before the proprietors. In reply to Mr. Gardiner Williams, he said the directors were asking power to issue the £2,000,000 as and when required. Mr. Williams then moved as an amendment that the board be allowed to create the £2,000,000 of stock, but not to be allowed to issue more than £1,000,000 without coming before the shareholders and asking permission to do so. The chairman said that if the course suggested by Mr. Williams were adopted it would be fatal to the interests of the company. Requests came from Argentina for the company to do certain things, and the wisest thing would be to do them; but Mr. Williams was asking to have the powers of the board restricted in a way which was unreasonable. The board would not issue more than a million of the stock at present; but they might be called upon to spend money on stations and improvements. Their stations were at least 30 kilometres apart, and it must be remembered that when the Government of the country demanded it, and the inhabitants of that country supported the demand, the directors ought to be in a position to at once do what was necessary. The policy of the board had been placed before the shareholders for some considerable time, and had been confirmed by them. After discussion, the amendment was withdrawn and the motion was adopted. The chairman mentioned that the traffic return for the past week showed £6,835, an increase of £208 for the week. This showed the progressive nature of their traffic. It was impossible to forecast what would be the requirements of the company in the way of rolling stock during the next two or three years. On the motion of the chairman, a resolution was adopted, providing that in view of the creation and payment of interest upon the issue of "C" debentures and debenture stock ranking next after the "B" debentures and debenture stock, the full interest upon the "B" debentures and debenture stock shall, forthwith, run concurrently, and be cumulative, and be payable by the company, unconditionally, in accordance with the terms of the trust deed securing the same.

GENERAL NEWS.

CONSTANTINOPLE ELECTRIC RAILWAY.

Leuz and Co., of Berlin, who have obtained the concession for the construction of an electric railway from Constantinople along the Bosphorus for about twenty miles to the Black Sea, have undertaken to construct and work the railway at their own expense, the plans being subject to the approval of the Ministry of Works. The estimated expenditure is £4,000,000. The workmen and officials are to be Turkish subjects, but foreigners may be conditionally employed for technical work in so far as natives cannot be obtained. A Turkish company is to be formed by the concessionaire one year after the ratification of the agreement, and one half of the shares is to be placed at the disposal of Turkish subjects. The Government will have the right to acquire the undertaking at any time from the fifteenth year of the opening of the whole of the railway. If the obligation to hand over the line in good condition and free from debt is not, or is only partly fulfilled, the Government may collect the receipts five years before the expiration of the concession.

SUCCESSFUL APPEAL AGAINST THE RAILWAY COMMISSION.

The appeal of the plaintiffs in the case of Weaver and Co., Limited, of Swansea, *v* the Great Western Railway Company from a judgment of the Railway and Canal Commission, came before the Court of Appeal on Wednesday.

The applicants, corn merchants and millers, claimed a rebate from the rates charged them by the railway company, on the ground that those were station to station rates, and that while they had provided sidings they were not afforded terminal accommodation. It was admitted that the applicants were charged rates of the same amount for goods sent from their sidings as were charged to other traders to and from Burrows Lodge Station. The applicants contended that the true effect of the agreement of 1864 was to give their sidings all the advantages of a terminal station without any of the burthens of such position. The railway company contended that the meaning of the agreement was to place the sidings in the position of a terminal station, and to afford this advantage along with the corresponding burthen in the matter of charges.

The Railway Commission gave judgment for the railway company. The court (the Master of the Rolls, and Lord Justices Moulton and Farwell) allowed the appeal, holding that the railway company were not entitled under the agreement to make terminal charges in respect of the warehouse and sidings, but were entitled to charge mileage rates up to the warehouse. Their lordships sent the case back to the Commissioners to fix the amount of the rebate.

NEW CORRIDOR TRAINS OF THE GREAT CENTRAL.

The Great Central Railway Company has just introduced in the Newcastle and Barry service an entirely new train composed of five vehicles which have been constructed in the company's works at Dukinfield. Each vehicle is 60 feet long by 8ft. 10in. wide, mounted on two four-wheel bogies of special type, which add considerably to comfort, ensuring easy riding with a minimum of vibration. The vehicles are fitted with complete "Dual" brakes and tell-tale indicators, which work in conjunction with the automatic and hand brakes, effectively preventing the latter being negligently left in the "on" position. Passenger alarm apparatus is also fitted, and a special heating apparatus which is automatically sensitive to changes of external temperature, and, in addition, under the full control of passengers. The lavatory appliances are most complete, and include the provision of hot and cold water. Another noticeable feature is the absence of all unnecessary projections of polished woodwork, there being, without any objectionable flatness, a "flush" finish about the cabinet work, which has been carried out in walnut with patapase panels in the first class, and mahogany in the third class—all metal fittings and furniture being uniformly of oxydised copper finish. The first class compartments and the dining cars are fitted with a new type of double parcel rack, consisting of an ordinary or upper one, supplemented by a smaller one for the reception of very light or slender articles. Folding flush elbow rests have been adopted throughout the first class compartments, whilst hassocks, or footstools, are also provided. The tables with which the Great Central has always fitted its corridor carriages have been improved upon, and a very useful one has now been provided of the extending type—i.e., with a loose leaf that can be added when required. Lighting is electrical, and controllable back lights are provided in each class of

compartment. Bell communication for the attendants is supplemented by a separate indicator over the door of each compartment on the corridor partitions. In each side of the guard's van an ingenious train indicator, which is illuminated at night, has been introduced.

RAILWAY BILLS IN 1912.

In addition to the notices of railway Bills to be promoted in next session of Parliament, of which we gave abstracts last Saturday, notice has since been given of three more Bills of which summaries are given below. The time has now expired for giving notice, so that the total number of railway Bills (including Scotch Provisional Order applications) is 23.

BARRY RAILWAY.

To authorise the company to make a railway at the Barry Dock; to acquire lands; to abandon a railway authorised in 1907; to cancel an agreement with the Brecon and Merthyr Tydvil Junction Railway Co.; to enable Cardiff Corporation to supply water in bulk to the company; to raise additional capital. Solicitors—Downing and Handcock, Vienna Chambers, Bute Docks, Cardiff. Parliamentary Agents—Dyson and Co., Caxton House, Westminster.

COLLOONEY, BALLINA AND BELMULLET RAILWAYS AND PIERS.

To extend the time for the completion of the authorised railways and works. Solicitors—Deacon and Co., 9, Great St. Helens, London, E.C. Parliamentary Agent—John Kennedy, W.S., 25, Abingdon Street, Westminster.

TAFF VALE RAILWAY.

To empower the company to make a branch railway in Glamorganshire; to extend the time for the construction of works and the purchase of lands; to rearrange, consolidate and increase the company's capital. Solicitors—Ingledew and Sons, Cardiff. Parliamentary Agents—Sherwood and Co., 22, Abingdon Street, Westminster.

THE LOTS ROAD TURBINES.

JUDGMENT FOR UNDERGROUND RAILWAYS COMPANY.

Judgment was delivered on Monday in the dispute between the British Westinghouse Electric and Manufacturing Co., Ltd., and the Underground Electric Railways Company of London, Ltd., regarding the substitution of Parsons turbines for Westinghouse turbines at the Lots Road generating station. Briefly, the facts were that certain Westinghouse steam turbines failed to come up to the contract figures for steam consumption; Parsons turbines were substituted. This was done by agreement between the parties, but a dispute arose as to the amount the Westinghouse Company should pay as damages for the failure of their turbines to come up to contract. The arbitrator (the Hon. Alfred Lyttelton, K.C.), acting upon directions from the High Court, to which he appealed for advice, assessed damages on the basis of the difference between the actual and guaranteed steam consumption of the Westinghouse turbines during the five years they were at work, plus the whole cost of the Parsons turbines. An important legal point in the case was as to whether an arbitrator's award, when based upon directions from the High Court, as in this instance, is appealable. The Westinghouse Company appealed to have the arbitrator's award set aside or remitted to him on the ground that these directions were wrong in law.

Lord Justice Vaughan Williams, in giving his judgment, held that under section 19 of the Arbitration Act of 1889, there is no appeal from a decision of the King's Bench Division when embodied in an arbitrator's award. Such a decision did not amount to a judgment or an order, and he quoted a judgment by Lord Esher to the effect that the Arbitration Act would be a "snare and a delusion" if an appeal under such circumstances were allowed. There never had been, he said, a case in which an appeal had been entertained against an arbitrator's award on the ground, as was contended by the Westinghouse Company in this case, that the advice given to the arbitrator by the High Court was wrong in law. The fact that the arbitrator had made the advice of the High Court part of his award made no difference. At the same time, he held that the advice given by the High Court in this case was perfectly right, and that the appeal should be dismissed with costs.

Lord Justice Kennedy agreed with Lord Justice Vaughan Williams on the main question as to the method of assessing the damages, but held that where the advice given by the High Court to an arbitrator was a mistake in law, that was a good ground for the Appeal Court to set aside or remit the award to the arbitrator.

Lord Justice Buckley also took this latter view, but held that the appeal should be allowed for the following reason. In his

opinion the arbitrator had admitted in his award that not only was it a reasonable and prudent thing for the Underground Railway Company to substitute Parsons for Westinghouse machines in consequence of the breach of contract, but that even if the Westinghouse machines had given the contract figures for steam consumption it would still have been a reasonable and prudent thing for the Underground Company to instal Parsons machines, owing to their greater efficiency. He therefore thought the Westinghouse Company were entitled to an order remitting the award to the arbitrator, as, in his opinion, the advice of the High Court was wrong in law, and that the arbitrator had been misdirected as to the basis upon which to assess damages.

By a majority, however, the appeal was dismissed with costs.

NEW RULE REGARDING EITHER-SIDE WAGON BRAKES.

Following the decision given in the Railway and Canal Commission Court (reported in our issue for October 28) against the appeal of the Barry Railway Company, the Taft Vale Railway Company, the Rhymney Railway Company, and the Incorporated South Wales and Monmouthshire Freighters' Association, against a Board of Trade order, under the Railway Employment (Prevention of Accidents) Act, 1909, requiring the use of both side brakes, with certain exceptions, the Board of Trade ordered the adoption of the rule as from November 7th last.

The new rules are as appended:—

(1) All wagons constructed after the expiration of six months from the coming into operation of this rule, for use on any railway, shall be fitted by the owners thereof on both sides with brake levers complying with the conditions set out in the Schedule Number I. to this rule.

(2) Within the periods prescribed in Clause 3 all wagons now existing or constructed before the expiration of the six months above mentioned for use on any railway, and not so fitted, shall be fitted by the owners thereof on both sides with brake levers complying with the said conditions.

(3) The periods prescribed for the purposes of Clause 2 shall be from the date of this rule:—

Ten years for wagons of companies or persons owning under 3,000 wagons.

Fifteen years for wagons of companies or persons owning 3,000 and under 20,000 wagons.

Twenty years for wagons of companies or persons owning 20,000 wagons and over.

In any case where it is shown to the Board of Trade that for any sufficient cause the time within which any of the above provisions have to be carried into effect should be extended, the Board of Trade may from time to time grant such extension upon such terms and conditions as they may think fit.

(4) The wagons specified in the Schedule Number II. hereto are exempted from the operation of this rule.

(5) This rule shall come into operation as from the date hereof, and may be cited as the Prevention of Accidents Rules, 1911.

SCHEDULE NO. I.

1. The levers to be of like pattern, and to be so placed that each shall be to the right of a man facing the side of the wagon.

2. Each lever to be so fitted that the brake can be conveniently applied with one hand.

3. The levers to be so fitted that the brakes can be released only from the side on which they have been applied.

4. The levers to be "press down and lift up," and to be provided in the "off" position with a stop.

5. Articles 3 and 4 of this schedule shall not apply to brakes of which the design has been approved by the Board of Trade.

SCHEDULE NO. II.—Exemptions from the Rule.

(a) Wagons used upon railways of a gauge less than 4 ft. 8½ ins.

(b) Chaldron wagons of a carrying capacity of 5 tons or less.

(c) Wagons of a carrying capacity of over 20 tons.

(d) Boiler wagons.

(e) All wagons fitted with the Dean and Churchward brake, as described in specification No. 202, of 1902, if arranged as a cross-cornered brake.

(f) Any wagons with regard to which compliance with this rule is, in the opinion of the Board of Trade, unnecessary or impracticable.

Provided that all wagons exempted under (c), (d), and (f) are fitted on both sides with such other appliances as will enable sufficient brake power to be conveniently applied from either side, if, in the opinion of the Board, such other appliances are necessary.

Cartagena (Colombia) Railway Company.—The directors announce that a proposal which they consider satisfactory has been made by the Colombian Government for the settlement of the outstanding subvention claims of the allied Navigation Companies.

DIVIDEND ANNOUNCEMENTS.

PERUVIAN CORPORATION. A dividend of 2 per cent. on the preference stock and carrying forward £57,412.

ROYAL INSURANCE COMPANY.—The directors have declared an interim dividend of 11s. 6d. per share, less income-tax, payable on December 15.

R. WOOD AND COMPANY.—The directors have declared an interim dividend at the rate of 5 per cent. on the ordinary shares for the half-year ending September 30.

ANTOFAGASTA CHILE AND BOLIVIA RAILWAY.—The directors have declared a dividend of 2½ per cent. on the preferred ordinary stock. A year ago a dividend at the same rate was declared.

CANADIAN GENERAL ELECTRIC COMPANY. A quarterly dividend of 1½ per cent. on the common stock for the three months to December 31, being at the rate of 7 per cent. per annum. A year ago the corresponding quarterly dividend was at the same rate.

MESSRS. J. G. WHITE AND COMPANY.—The directors have declared an interim dividend, payable January 1 next, of 6 per cent., less income-tax, for the half-year to August 31, 1911, on both the preference and ordinary shares of the company. This interim dividend is 12s. per share on the preference shares, against an interim dividend of 10s. per share paid last year.

PERSONAL.

Mr. Edward P. Busch, of Messrs. H. Springmann and Busch, has joined the Board of the Royal Insurance Co., Ltd.

Mr. L. Speakman, assistant to the Liverpool district manager of the L. and N.W. Railway since 1886, has been promoted to be manager of the Wolverhampton district. On his departure he was presented by Mr. L. A. P. Warner, the district manager, on behalf of the staff, with a silver hot-water jug, suitably inscribed, and a pendant and gold bracelet for Mrs. Speakman.

Mr. W. Thomson, M.V.O., has been presented by the officers of the South-Eastern and Chatham Railway with a gold chronograph watch, and also a diamond pendant for Mrs. Thomson, as an expression of their friendship and regard upon the occasion of his recent retirement from the position of superintendent of the line. Mr. Thomson was also the recipient of an album containing the names of the subscribers to the presentation. Mr. Vincent W. Hill, M.V.O., a director of the company, and until recently the general manager, presided.

Mr. G. D. Lawie, who recently retired from the position of Superintendent of the Southern Section of the Caledonian Railway, has been the recipient of a number of presents from the members of the staff and a few friends at Carlisle. The gifts consisted of a handsome silver centrepiece, two silver candlesticks, and a golf-bag and clubs, with a silver-fitted dressing case for Mrs. Lawie. The Carlisle section of the Caledonian Railway Ambulance Brigade presented Mr. Lawie, who was their president, with a Thermos flask, in case. Mr. Mason, who has succeeded Mr. Lawie, made the presentations. In returning thanks, Mr. Lawie, who joined the service in 1863, said he sincerely hoped the servants would not again resort to that cursed thing—a strike. He thought they would secure the reforms and improvements they desired by the exercise of moderation and patience. The companies had shown a desire to meet all their reasonable demands. (Applause.)

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, December 6, compared with that for the previous week, shows the following changes:—

Dec. 7, 1910.	BANKING DEPARTMENT.	Nov. 29, 1911.	Dec. 6, 1911.	Increase.	Decrease.

RAILWAY NOTES.

Proposed Wharf and Railway at Canvey Island.—In next session of Parliament a Bill will be promoted for the incorporation of a company to construct a deep-water wharf at Canvey Island, on the north side of Thames Estuary, with a railway connection joining the main line of the London, Tilbury, and Southend Railway at Benfleet Station. It is proposed to work the railway by electric traction.

Victorian Railway Investigation.—In consequence of the Railway Commissioners having stated that the suburban lines of the Victorian Railways were run at a considerable loss, the Government appointed two accountants to make an investigation. Their report shows that the lines were operated at a profit last year, according to their basis of reckoning, of £33,000.

Christmas Arrangements.—The traffic departments of the various railways have devoted themselves with great energy to devising travelling arrangements for the Christmas holidays, and the advertising departments have already entered upon a campaign to secure a larger movement of the public than ever. Some indication of this is apparent from our advertising columns. The diversity of the arrangements may be gathered from the fact that they range from excursions to the Continent to trips to the Crystal Palace and the Surrey Hills. Next week we hope to give the complete arrangements.

Proposed New Joint Station at Barnsley.—Sir Guy Granet and Mr. Sam Fay, of the Midland and Great Central Railways respectively, on Tuesday received a deputation from Barnsley Corporation and the Chamber of Commerce, who submitted a scheme for the provision by the companies of a new station in place of the present Court House Station, to be used by the Midland, Great Central, Lancashire and Yorkshire, and possibly the Hull and Barnsley Companies. It was proposed that the station should be erected near the goods sidings of the Lancashire and Yorkshire Company, towards Harborough Hills Road. The connections to the proposed station would be made with the existing Midland line in Pontefract Road, with the Lancashire and Yorkshire line near Old Mill Lane, and with the Great Central line from Penistone near to Huddersfield Road. Accommodation should be provided, it was suggested, for the possible extension of the Hull and Barnsley Railway from Cudworth. The scheme for centralisation would provide a main line between Bradford and London over the Midland and Lancashire and Yorkshire systems.

Railway Manager on the Value of Newspaper Advertising.—Mr. C. L. Connacher, traffic manager of the Cambrian Railways, presiding on December 1 at the annual meeting of the Cambrian Resorts Association, stated that newspaper advertisements afforded the best medium for bringing the claims of watering-places before the general public. This, he said, was proved by the excellent results of last season. Co-operative advertising was a sound commercial investment, and the public were impressed by a persistent, systematic appeal. At the annual meeting of the North Wales Advertising Board the Town Clerk of Pwllheli spoke emphatically of the value of newspaper advertising, and complained that money had been frittered away on handbooks which could have been spent to greater advantage in the newspapers. Both meetings supported resolutions in favour of a Bill to empower local authorities to defray the cost of advertising their respective districts.

OBITUARY.

Papers found on a body discovered floating in Table Bay bear the name of Mr. Broadbent, chief accountant of the Uganda Railways.

Mr. Alfred Hunt, whose death is announced from Liverpool, was the founder of the Ocean Steamship Co., past chairman of the Mersey Dock and Harbour Board and past president of the Liverpool Engineers' Society. He invented valuable improvements in marine engines, and was first advocate at the Dock Board of the Liverpool Overhead Railway, which opened in 1893.

Sir Henry Harben, D.L., J.P., President of the Prudential Assurance Company, died on December 2 at Warnham Lodge, Horsham, in his 80th year. Sir Henry was one of the pioneers of industrial insurance, and the great business transacted in this department by the Prudential originated under his management. He was knighted in 1897 when vice-chairman of the company. Sir Henry devoted much time to the work of the Metropolitan Board of Works and the London County Council, and was the first Mayor of Hampstead. His many public benefactions included the erection of a convalescent home at Rustington at a cost of nearly £100,000.

Sole manufacturers of Dean and Churchward's patent "Eitherside" Brake, and Marillier's patent "Instantan" Coupling.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

OFFICIAL NOTICES.

Canadian Pacific Railway Company.

ISSUE OF NEW ORDINARY CAPITAL STOCK.

NOTICE is hereby given that, pursuant to Resolution passed at the Special General Meeting of the Shareholders, held on the 7th October, 1908, an issue of \$18,000,000 additional Ordinary Capital Stock of the Company, or 180,000 Shares of \$100 each, has been ordered by the Board of Directors.

The said Stock will be offered to the Shareholders of record at 3 p.m. on Tuesday, the 2nd day of January, 1912, at the price of \$150 per Share, being at a premium of fifty per cent. over and above the par value thereof, on the basis of 10 per cent. (or one Share in ten) of their respective holdings.

The right to subscribe will expire at 3 p.m. on Tuesday, February 13th, 1912.

Payments will be received at the Bank of Montreal, London, New York, or Montreal, as follows:—

20 per cent., or \$30 per Share, on Subscription, on or before February 13th, 1912.

20 per cent., or \$30 per Share, on April 12th, 1912.

20 per cent., or \$30 per Share, on June 14th, 1912.

20 per cent., or \$30 per Share, on August 16th, 1912.

20 per cent., or \$30 per Share, on October 18th, 1912.

Interest at the rate of 7 per cent. per annum will be paid in October, 1912, from the due date of each instalment to September 30th, 1912, on instalments up to and including that of August 16th, 1912, which have been paid on or before the due dates. All Shares of the Issue on which instalments have been paid in full on the due dates, will rank with the existing Stock for the full dividend accruing for the quarter ending December 31st, 1912.

A circular containing the terms of Subscription and payment, and enclosing Warrants of Subscription, will be mailed to the Shareholders on or about the 15th day of January, 1912.

By Order of the Board.

W. R. BAKER,

Secretary.

Montreal.
December 13th, 1911.

Portuguese Government Guaranteed Railway Bonds.

ISSUE BY THE TRANS-AFRICAN RAILWAY COMPANY OF £1,890,000 FIVE PER CENT. FIRST MORTGAGE DEBENTURES.

NOTICE is hereby given that the usual half-yearly drawing of Bonds of The Trans-African Railway Company, according to the Amortization Table endorsed thereon, will take place at the Company's principal office in Oporto, Portugal, on Thursday, the 21st day of December, at 12 o'clock noon, in the presence of Eduardo Arthur Maia Mendes, Notary Public.

By Order,

THOMAS CASTELLI,

Secretary and Agent of the Company in England.
Dated this 13th day of December, 1911.

Great Eastern Railway Company.

NOTICE is hereby given that the Transfer Books of the Guaranteed and Preference Stocks of the Company (other than the Metropolitan Stock) will be closed on the evening of Friday, the 29th December, instant, and will re-open on Monday, 1st January, 1912.

By Order,

P. LOMAS,

Secretary.

Liverpool Street Terminus,
London, 15th December, 1911.

North Staffordshire Railway.

NOTICE is hereby given that the Register of Transfers of the Three per Cent. Consolidated Debenture Stock of this Company will be closed from Thursday, December 21st, 1911, to Friday, January 5th, 1912, both days inclusive.

By Order,

R. E. PEARCE,

Secretary.

Stoke-on-Trent,
6th December, 1911.

OFFICIAL ADVERTISEMENTS for insertion in the current week's issue should be received by 6 p.m. on Friday.

All communications relating to advertisements should be addressed to THE RAILWAY TIMES, 12, North Street, Strand, London, W.C.

The Great Indian Peninsula Railway Company.

AT the One Hundred and Twenty Fourth Half-Yearly General Meeting of the Stockholders, held at Salisbury House, London Wall, London, E.C., on Monday, the 11th December, 1911, Colonel F. Firebrace, Chairman of the Company, in the chair.

The Advertisement convening the Meeting was read. The Company's Seal was affixed to the Register of Stockholders.

The Directors' Report having been taken as read, It was moved by the Chairman, seconded by Alexander H. Campbell, Esq., and Resolved:—

"That the Report of the Directors, together with the Accounts now submitted, be received and adopted."

It was moved by the Chairman, seconded by Alexander H. Campbell, Esq., and Resolved:—

"That a dividend of 11s. per cent. upon the 3 per cent. Guaranteed Stock of the Company be and is hereby declared out of Surplus Profit to be paid to the holders of 3 per cent. stock now registered in the books of the Company in addition to the guaranteed interest of £1 10s. per cent. for the current half-year."

It was moved by the Chairman, seconded by Major-General R. C. B. Pemberton, C.B., C.S.I., and Resolved:—

"That the Directors be and are hereby authorised to grant to Mr. J. I. Berry, the Secretary of the Company, as a mark of appreciation of his long and excellent service during the past fifty years a bonus of £200, to be provided out of the Stockholders' Surplus Profit Account, and subject to the sanction of the Secretary of State in Council for India being obtained, a further bonus of £300, to be provided out of Revenue, as part of the working expenses of the Company's undertaking."

It was moved by the Chairman, seconded by H. C. E. Wenden, Esq., C.I.E., and Resolved:—

"That the best thanks of the meeting are due and are hereby given to F. T. Rickards, Esq., the Agent, to Major H. A. L. Hepper, R.E., the Acting Agent, and to the Heads of Departments and members of the Staff in India generally, and also to the Home Staff, for their valuable services during the past half-year."

It was moved by Major H. Fearnside-Speed, seconded by E. J. R. Surridge, Esq., and Resolved:—

"That the best thanks of the Meeting are due, and are hereby given, to the Chairman and Directors for their attention to the interests of the Company."

FRED FIREBRACE,

Chairman.

TENDERS INVITED.

Dublin and South Eastern Railway Company.

RAILS, ETC.

THE Directors of the above Company are prepared to receive Tenders for the Supply of 1,000 tons Bullhead Steel Rails (85lbs. per lin. yd.), with corresponding Fishplates, 500 tons to be delivered in February, 1912, and 500 in June, 1912; also for the Supply of 600 tons Cast-Iron Chairs, half to be delivered in February, 1912, and half in June, 1912.

Specifications and Forms of Tender can be had on application to Mr. S. J. Shannon, Engineer's Office, 52, Westland Row, Dublin.

Tenders, marked "Tenders for Rails and Chairs," and addressed to the undersigned, to be forwarded so as to be received not later than 10 a.m. on 3rd January, 1912.

M. F. KEOGH,

Secretary.

Secretary's Office.

Westland Row Station, Dublin,
11th December, 1911.

Bombay, Baroda, and Central India Railway Company.

WHEELS, ETC.

THE Directors are prepared to receive up to noon on Tuesday, 2nd January, 1912, Tenders for the Supply of Wheels and Axles.

Tenders must be made on forms, copies of which, with specification, can be obtained at these offices on payment of 21s. each (which will not be returned). The Directors do not bind themselves to accept the lowest or any Tender.

C. CROMMELIN,

Secretary.

Offices, Gloucester House,
110, Bishopsgate, London, E.C.,
12th December, 1911.

Subscription to THE RAILWAY TIMES.

One Year—Twenty-five shillings.

Six Months—12s. 6d.

POSITIONS VACANT.

Port of London Authority.

THE Port of London Authority is prepared to receive applications for the appointment of an Officer to supervise the working of the Authority's railways at a commencing salary of £400 per annum. Candidates must be under 45 years of age and have had practical experience in handling and controlling railway traffic and staff under Dock conditions.

Applications must be on the prescribed form, obtainable at the Secretary's Office, 109, Leadenhall Street, E.C., and be delivered at that office not later than 10 a.m. on Saturday, the 30th December, 1911.

Canvassing of members of the Authority, either directly or indirectly, is strictly prohibited, and will disqualify.

By Order,

F. ATLIFFE,

Secretary.

109, Leadenhall Street, E.C.,
12th December, 1911.

LOCOMOTIVE SUPERINTENDENT.

Required by the East Africa Protectorate Government for the Uganda Railway for tour of 30 months' continuous residential service in first instance. Age not to exceed 40 years. Candidates must have had a good general and technical education, and must have served either pupillage or apprenticeship in the locomotive department of one of the principal railway companies of Great Britain. Preference will be given to men who have had carriage and wagon experience.

Strict medical examination and vaccination if necessary.

Salary £700, rising at such times and by such increments as may be recommended by the Governor, to £900 a year. Single quarters free of rent (but not of rates, etc.), or an allowance in lieu thereof. Free first-class passage out and home again on satisfactory termination of engagement. Half salary from date of embarkation on first engagement, full salary from date of disembarkation on African coast. Leave (after 30 months' continuous residential service) on full pay for 2½ days in respect of each completed month of continuous residential service, increased to five days per month if returning to the Protectorate, with full pay during voyage or voyages and free passages.

Letters of application (no special form required), accompanied by full particulars as to age, whether married or single, education (general and technical), training and subsequent experience, with dates (which must be given), together with copies only of testimonials, and names and addresses of referees, from whom inquiries can be made as to capabilities and character, should be sent at once to the Crown Agents for the Colonies, Whitehall Gardens, London, S.W. Quote M.5,092.

Applicants may possibly have to wait a considerable time before the result of their application is known, as the appointment cannot take effect until April next.

South Eastern and Chatham Railway.

CHRISTMAS HOLIDAYS.

MONTE CARLO, CANNES, NICE, MENTONE, Etc.—CHEAP RETURN TICKETS, via FOLKESTONE and CALAIS, 1st Class, 49 12s. 0d.; 2nd Class, 46 12s. 0d., leaving CHARING CROSS STATION at 10 p.m. on DECEMBER 22nd. Returning any day up to JANUARY 30th.

PARIS and Back, via CALAIS or BOULOGNE, 30s. 0d.; **BRUSSELS** and Back, 19s. 6d.; **BOULOGNE** and Back, 17s. 10d.

SATURDAY, DECEMBER 23rd.—A FAST LATE TRAIN to SEVENOAKS, TUNBRIDGE WELLS, ST. LEONARDS, HASTINGS, ASHFORD, CANTERBURY, RAMSGATE, MARGATE, FOLKESTONE and DOVER, leaving CHARING CROSS at 12.15 mid., WATERLOO 12.17 a.m., CANNON STREET 12.22 a.m., LONDON BRIDGE 12.28 a.m., and NEW CROSS at 12.37 a.m. **A FAST LATE TRAIN** TO CHATHAM, SITTINGBOURNE, SHEERNESS, FAVERSHAM, WHITSTABLE, HERNE BAY, BIRCHINGTON, WESTGATE, MARGATE, BROADSTAIRS, RAMSGATE, CANTERBURY, WALMER, DEAL and DOVER, leaving VICTORIA 12.30 mid., HOLBORN 12.35 mid., ST. PAUL'S 12.37 a.m., ELEPHANT and CASTLE 12.31 a.m., LOUGHBORO JUNCTION 12.38 a.m., BRINTON 12.39 a.m., and HERNE HILL 12.45 a.m. **CHEAP RETURN TICKETS** will be issued, by these Trains, at the **Week-end Fares**, for Stations to which Week-end Bookings are in force.

CHRISTMAS DAY.—Several Extra Trains will run, but the Ordinary Services will be as on Sundays.

TUESDAY, DECEMBER 26th.—CHEAP EXCURSIONS FROM PRINCIPAL STATIONS TO PENGE (FOR CRYSTAL PALACE) AND LONDON, returning from LONDON about midnight. Frequent Trains from VICTORIA, SNOW HILL AND LUDGATE HILL to the CRYSTAL PALACE (HIGH LEVEL STATION) and vice-versa.

For full particulars as to alterations in Train Services, etc., see Special Train Service Supplement and Holiday Programme.

THE RAILWAY SETTLEMENT.

The most serious labour crisis which has ever confronted the railways of this country was, we hope and believe, brought to a satisfactory close on Monday last by the agreement arrived at between representatives of the railways and of the railway labour unions, under the auspices of the Board of Trade. The most serious feature of that crisis was that it should have been prolonged for four months, during which time the whole business of the country was under a threat of further disturbance, and the energies of responsible managers and other officials were directed to a large extent to making arrangements to maintain the public services should any further trouble arise. Whatever opinion may be held regarding the origin and progress of the railway labour agitation, it is satisfactory to know that the settlement arrived at on Monday last is fair to all parties, and provides the basis for an enduring peace. Of course, in all these matters the spirit in which points of difference are approached is almost everything, but there is good reason to hope that after the strained relations which have existed for the last few months between the labour agitators and the companies the former will grasp the fact that they can best serve the interests of railwaymen in general by assisting the companies themselves. From beginning to end the companies have done all that was possible to promote a reasonable settlement. Although the strike itself was a breach of the arrangement come to in 1907, they agreed against their inclinations to refer the working of the Conciliation Scheme to a Royal Commission and to abide by the recommendations made. They also agreed to reinstate all their servants who struck without notice. They have carried out these obligations, although to many they appeared to be contrary to their own interests. After the report of the Royal Commission had appeared and vindicated their position, they proceeded voluntarily to raise wages, particularly among the lower grades of their servants. Finally, to meet the wishes of the House of Commons, as expressed in their resolution, the companies agreed to a Conference to discuss the report of the Royal Commission, which led to what we may hope is the final settlement of the crisis. As we pointed out at the outset of the dispute, the agitators were not so much concerned about conditions of labour in the railway world as they were about "recognition" for their unions, and, of course, experience has proved that a crusade of this character brings in new members to the unions. Whilst the reasonable demands of the trade union members for representation have been met, the companies surrendered no principle in connection with the concessions made as a preliminary to the final settlement. The prolongation of the trouble after the report of the Commission was presented was probably due mainly to the anticipation in many quarters that "recognition" would be conceded and to the precipitate condemnation of the report which was indulged in as soon as it was presented by various union leaders. There is no need to indulge in recrimination, and, indeed, in the circumstances all parties may be congratulated on the fact that personal feeling has not been unduly aroused, and that no cause for resentment need exist in any quarter. It is true the companies lost about half a million in gross

receipts during the brief period the strike existed. Under ordinary conditions this would have implied a serious loss of dividends for the current half-year. As it happens, however, trade is so good that the loss referred to has already been more than made up. The main hope of the railwaymen and of the companies now is that their relations will become more amicable than ever, and that in advancing passenger rates, and possibly goods rates also, the companies may rely upon the assistance not merely of the Government but of the railway labour leaders and the railwaymen themselves. To say the least, it is not fair to the railway companies or to their men that so important an industry should be subjected to constantly growing working charges on the one hand and to fixity of charges made to the public on the other; and this, if we may venture to say so, is probably the economic cause of the dangerous situation which arose during the last few months. Certainly railway directors and railway shareholders cannot be accused of a desire to earn large profits at the expense of their men, and in fairness the companies must be allowed to recoup themselves for the advances in their wages bills by which they are now confronted.

RAILWAY ELECTRIFICATION.

We have from time to time dealt with the advantages of converting steam railways to electric traction in cases where the passenger traffic is sufficient to warrant the change and where there are no special circumstances against it. Reference has also been made to the success which has followed the conversion of various lines, especially of some of the London local routes of the Brighton Railway Co., and in the previous issue the great electrification scheme of the London and North Western Railway Co. was touched upon. The intensely interesting paper on the electrification of railways, and particularly of the Brighton Railway, which was read by Mr. Philip Dawson before the Royal Automobile Club, and of which an abstract appeared in our last issue, again draws attention to the subject. The case which Mr. Dawson was able to make for the single-phase alternating current system was stronger than ever, owing to the great extension of that system in foreign countries, and there is no doubt that for a long line of railway, such as that from London to Brighton, the system presents many advantages over the continuous-current method which is in use on all other English electric railways except the Morecambe branch of the Midland. For short lines like those in London the continuous-current system has much to recommend it, and its drawbacks for long railways do not appear. There can hardly be a doubt, moreover, that it will be adopted on the London and North Western suburban lines, seeing that it is proposed to run through trains on to railways already worked by the continuous-current method. Mr. Dawson was able to show that with a frequent train service electric traction becomes cheaper than steam. It may also be made faster, and the proposal is that express electric trains will cover the distance between London and Brighton in 45 minutes. One of the most interesting features of the meeting at which the paper was read was the remarks made by Lord Bessborough, chairman of the Brighton Company, and Mr. William Forbes, the general manager. Both of them spoke in terms of high praise of the results of electrifying the South London and Crystal Palace lines of the company. Lord Bessborough announced that when the complete electrification scheme for the railway to Brighton, which Mr. Dawson is drawing up, comes before the directors, they will give it the most earnest attention with a view to putting it into practical effect. Thus it is hoped that the complete electrification will be an accomplished fact in two or three years' time. The specific figures which Mr. Forbes gave regarding passenger traffic on the South London

line should have the close attention of all those concerned in railways which are subject to electric tramway competition. The statistics are a striking example of a general fact. When the London County Council electrified the tramways running to Peckham Rye, the eight million of passengers per annum carried on the South London railway fell to three millions. In the first twelve months after the railway was electrified the number rose again to eight millions, and in the succeeding ten months the number of passengers was ten millions, so that the record when the year finishes is likely to be about twelve millions. The railway companies which serve the swarming districts of South Lancashire and West Yorkshire may profitably devote attention to the matter. Electric tramways unite the numerous large towns which are so thickly dotted over the country, and these lines have abstracted great numbers of local passengers from the railways. The only electrified railway in the district (apart from the small Morecambe line of the Midland Company) is the Liverpool-Crossens line of the Lancashire and Yorkshire Company and some short branches. It has been enormously successful, and the conversion of branches may be pushed further. But there are other districts not very far away which afford an even more promising field. Electrification schemes have been talked about for two or three years, but so far nothing has come of them. It is to be hoped that the example of the London and Brighton Railway will have some effect, as an incalculable amount of passenger traffic might be induced on railways in Lancashire and Yorkshire by the use of electric traction. The necessary capital expenditure would be far more than justified by the great increase in net revenue, and the frequency and speed of the services could be so increased as to be a great boon to the public.

Weekly Traffic Summary.

The traffic receipts for the week ended December 10, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,122,920, which was earned on 21,521 miles, being at the rate of £98 12s. 10d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,019,013, with 21,467 miles open, or £94 1s. per mile. There was thus an increase of £103,907 in the receipts, an increase of 54 in the mileage, and an increase of £4 11s. 10d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £31,361 (or £1 8s. 2d. per mile) in the passenger receipts, and an increase of £66,741 (or £3 0s. 9d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-four railways for twenty-three weeks in the passenger receipts has been £294,125, while the aggregate increase in the goods traffic was £536,614. The aggregate receipts of the fifty-two railways for twenty-three weeks (July 2 to December 10) amounted to £53,933,299, in comparison with £53,121,934 in the corresponding period of last year—an increase of £811,365.

DIVIDEND ANNOUNCEMENTS.

MANILA ELECTRIC RAILWAY AND LIGHTING CORPORATION.—A dividend of $1\frac{1}{2}$ per cent. for the quarter ended December 30 has been declared on the capital stock, raising it to a six per cent. basis. Hitherto the quarterly dividend has been at the rate of 1 per cent.

ASSAM RAILWAYS AND TRADING COMPANY.—The directors have declared an interim dividend of 4 per cent. (being at the rate of 8 per cent. per annum on the "A" stock, and at the rate of 8 per cent. per annum on the pre-preference shares for the half-year ending December 31, and at the rate of 6 per cent. per annum on the new 6 per cent. preference shares for the half-year.

A fair amount of gold was received at the Bank from the mines this week, but it was exceeded by exports required to supply demand from South America. On balance the Bank lost £375,000, another amount approximating to £777,000 was required for circulation in the provinces, which was offset to an inconsiderable extent by a contraction of £107,000 in the active note issue. In the result the Reserve is £1,045,000 lower at £25,713,000. The most remarkable feature of the return is that presented by Other Deposits, which, instead of rising above the low figure recorded last week, have declined another £1,989,000, reducing this item to £37,558,000, which, when the present activity of trade is taken into account, is really a portentous event. The decline has occurred in spite of the addition of £1,310,000 to Other Securities, and £800,000 to Government Securities. It is directly consequent upon the inflation of Public Deposits by £3,036,000, as the result of payments for Treasury bills earlier in the Bank week. The ratio of Reserve to liabilities is only down a point, but the altered situation in respect to the open market has naturally been reflected in rates, interest and discount.

On the Stock Exchange the change was also very perceptible. Professional operators had again attempted a grand demonstration of the latent buoyancy of prices, especially those of Home Rails, and quotations which were raised day after day received their first check when the position of the money market was realised. What will be the final outcome of the movement, and whether those professionally interested in the Home Rail market will be able to engineer an upward movement of sufficient strength and duration to again induce the public to come in and take a hand in the game, is difficult to judge and dangerous to guess. The permanent investor has not

been much impressed so far with the patching up of the labour dispute in the railway world. As a rule the threats and declarations of labour do not move him, at least do not move him to sell, on the other hand he is not made eager to buy by the statement that Labour has expressed itself as satisfied. The question is whether, now that the inhibiting influence of labour difficulties is mitigated, if not removed, he can be brought to see the other favourable factors which have been at work converting Home Rails into high-yielding stocks, or at all events stocks returning dividends which would have astonished the investors of half a generation ago. The weekly traffic receipts are not so much studied as they used to be, because the various increments of wages, hours, and other privileges that have been granted to employees, together with the uncertainty attaching to the question of what appropriations the directors may deem it expedient to place to reserve, make all calculations of future dividends based on the recorded traffic receipts less trustworthy than before.

The events of the week have been steps in the process of what is called laying the table, that is to say arranging the prices of the wares in readiness for the public demand, which is expected to set in with the new year, when January dividends have been paid, and the money, or some of it, is available for investment. But will the public have as large a balance as usual available for investment after settling up their Christmas bills and taxes? In connection with this the remarks of Lord Lansdowne, on the occasion of the second reading of the Insurance Bill, are worth notice. After reminding the House that the estimated cost of Old-Age Pensions rose from £0,000,000 to £20,000,000 per annum equivalent to a capital charge of £600,000,000, he went on to say, with regard to the Insurance Bill: "I have seen an estimate, apparently proceeding from high authority, which places the total ultimate cost at no less than £40,000,000 sterling, a sum which capitalised would represent an addition of no less than £1,600,000,000 to the liabilities of the nation." Thus the present Government have increased the national obligations of the country by about three times the amount of the national debt during the last three years.

Home Rails were steady last Saturday, while Canadian and American Rails inclined upwards. Gilt-edged stocks were, however, depressed. Monday, though the last day of the account, saw a marked improvement in almost all markets, which was bettered the following day when there were some thirty rises of one point or more in Home Rails. Great Central 1891 Pref. rose 2, as did South Western Ordinary and Rhymney. A large business was done in Great Northern Deferred, South Western Deferred, and particularly in Midland Deferred. The news that the Canadian Pacific Railway would issue \$18,000,000 of new shares at 150 put the stock up three points and more. On Wednesday the general tone was still exuberant, but an appreciable check was felt the next day, as has been already mentioned, and certain speculators hastened to realise profits. Closing prices were, therefore, well below the best, though the changes on the day did not in all cases result in a fall.

On Friday, the position disclosed by the Bank Return was again influential in causing a further decline of ¾ in Consols. Other Government stocks declined in sympathy. An absurd rumour of an attempt on the King's life in India was made responsible for a fall in Home rails, which, in fact, relapsed on continued evidence that the rise of the last eight days was not receiving adequate support from the investing public. India 3½ per cents. rose ¼. Americans became irregular, but Canadian rails were well supported. Among foreign railways Paraguay Central Debentures rose 1. Guayaquil and Quito fell the same amount, and Mexicans were inclined to be dull. The issue of C Debentures by the Argentine North Eastern line was a great success. The lists were closed almost as soon as they opened, and the scrip advanced to a premium of 2.

The movements of the week are set forth in the following table:—

New Omnibuses for London.—At the meeting of the London General Omnibus Company yesterday Mr. Henry Hicks, who presided, said that before next September one thousand new motor omnibuses of the latest type would be built. The board did not intend that any good route in London should be without its motor omnibuses. If any competition was attempted, they had the experience and the omnibuses to meet it. Informal negotiations are in progress between the company and the London Electric and District Railways, and should any definite result be reached shareholders would be called together to consider the matter.

Index Numbers of Railway Debentures.

Our Index Numbers for the prices of best debentures of English Railways, based on the average yield obtained from these stocks, are repeated below, and the table is brought up-to-date. The rate of interest is assumed to be 3½ per cent.

Underground Electric Railways of London.

The Underground Electric Railways Company of London, Ltd., has issued the following comparative statement of receipts and expenses of the Associated Companies for November:—

<i>Metropolitan District Railway.</i>					
Month of November.	Inc.	July 1 to Nov. 30.	Inc.		
1911.	1910.	or Dec.	1911.	1910.	or Dec.
Gross receipts.....	£63,968	£60,695 +	£3,273	£295,619	£283,827 +
Working expenses.....	28,292	28,342 -	50	142,399	141,094 +
Net receipts	£35,676	£32,353 +	£3,323	£153,220	£142,733 +
<i>London Electric Railway.</i>					
Month of November.	Inc.	July 1 to Nov. 30.	Inc.		
1911.	1910.	or Dec.	1911.	1910.	or Dec.
Gross receipts.....	£68,405	£63,934 +	£4,471	£301,251	£290,111 +
Working expenses	32,389	31,530 +	859	159,757	154,202 +
Net receipts	£36,016	£32,404 +	£3,612	£141,494	£135,908 +
<i>London United Tramways.</i>					
Month of November.	Inc.	July 1 to Nov. 30.	Inc.		
1911.	1910.	or Dec.	1911.	1910.	or Dec.
Gross receipts	£23,744	£21,965 +	£1,779	£150,576	£144,645 +
Working expenses.....	17,597	18,176 -	579	91,594	99,815 -
Net receipts	£6,147	£3,789 +	£2,358	£58,982	£44,830 +

PERSONAL.

Mr. Alfred Aslett, secretary and general manager of the Furness Railway, who has attended the Durbar at Delhi, leaves Bombay on December 30.

Mr. Henry Evans, chief goods manager, Midland Railway, on behalf of the officers of the Sherwood Foresters, on Saturday evening presented a cup to the Midland Bowling Club at Derby.

Colonel Plews is to be presented with a testimonial from the officials and staff of the Great Northern Railway Company of Ireland on the occasion of his retirement from the position of general manager.

Mr. F. R. Moore, of the chief mechanical engineer's department of the Midland Railway, will leave Derby early in January to take up the position of locomotive accountant to the Buenos Ayres and Pacific Railway Company. He has been twelve years in the employ of the Midland Company, having started as a clerk in the locomotive department.

Lord Ninian Edward Crichton Stuart, brother of the Marquis of Bute, and Member of Parliament for Cardiff, has been elected to a seat on the Board of the Railway Passengers' Assurance Company. This company, well known as the oldest Accident Office in the world, has recently—by the purchase of its shares—passed under the control of the North British and Mercantile Insurance Company, which in this, the third year of its second century, has achieved the distinction of having accumulated funds to the amount of twenty millions.

Mr. F. W. Pim, chairman of the Dublin and South Eastern Railway Company, on December 11 was sued at Dublin for £500 damages for alleged libel by Mr. T. Archer, timber merchant of Dublin. The statement complained of was contained in a published resolution regarding a consignment of traffic during the railway strike. For Mr. Pim it was stated that at the time he believed the plaintiff's consignment was a test one, but after the perusal of documents he was satisfied that it was *bona-fide*. He therefore offered a complete withdrawal of the statement and to pay plaintiff's costs. Mr. Justice Kenny remarked that this was a most satisfactory termination of the action.

THE RECENT RESULTS AND FUTURE PROSPECTS OF ELECTRIC TRACTION ON THE BRIGHTON RAILWAY.

DISCUSSION ON MR. DAWSON'S PAPER AT THE AUTOMOBILE CLUB.

In our issue of last week we gave an extended summary of the interesting paper read by Mr. Philip Dawson, consulting engineer of the London, Brighton and South Coast Railway, under the title of "London to Brighton in Forty-five Minutes." We give below the remarks of the various speakers in the discussion which followed, but was concluded too late for our last impression. At the conclusion of the paper the chairman, Lord Bessborough, said that Mr. Dawson would be pleased if a discussion were to take place, and he invited those present to address the meeting.

Mr. O. H. BALDWIN, of the British Westinghouse Company, expressed his indebtedness to Mr. Dawson for having brought together so many facts and figures relating to electric traction on different railways throughout the world. The Americans, as Mr. Dawson had stated, first started the particular system in which he was greatly interested—namely, the single-phase system. This system, as Mr. Dawson had also said, had been carefully considered in Germany, and it was a great source of wonderment to the average Anglo-Saxon that so much should have been done by Americans and people on the Continent—the Germans, Swiss, and Italians—and so little comparatively in this country. He (Mr. Baldwin) thought they should congratulate Mr. Dawson on the work he had done, and the London, Brighton and South Coast Railway, who had given him the opportunity of showing what an English engineer could do in the way of electrifying a large portion of the system of the London Brighton line in and about London. As an engineer interested in electric traction, there was only one criticism which, as an Anglo-Saxon, he would like to make in connection with this work, and that was that, while the capital and the engineer were all supplied here in England, the work, harring that of Messrs. Blackwell and Company, was taken up and carried out by German manufacturers and under German influence, and he felt that, if the railways of England meant to deal seriously with the idea of electrifying a large portion of the main lines the work should be carried out in this country. Mr. Dawson's facts were extremely interesting to all of them. They all knew, in a general way, that a large portion of this work had been done, but few realised how much had been done in this particular way—namely, by the single-phase system of electrical transmission and distribution.

Mr. E. MAXVILLE said that in order to give a point to the discussion, he would like to mention that what Mr. Dawson had endeavoured to make clear was not that in itself the direct current system for electric traction or the alternating current for electric traction had necessarily any particular merits over the rival system in regard to speed of trains and the actual running of trains, but only in regard to what might be termed the future possibilities—the bearing on the possible future electrification of any particular railway. If one system cost no more than the other, and if the service to be maintained was regular with either, then it seemed to be that the only logical conclusion was that the system to be adopted should be the one which enabled the electrification of any particular railway system to be carried out to the utmost extent possible. It was perfectly certain, and there could be no dispute about it, that, whilst either of these systems was quite applicable to suburban service, there was only one of the two that was applicable to long-distance railway electrification, that being the alternating current system. Until the first system of the Brighton line had been constructed and operated it was always disputed that the single-phase alternating system could possibly be as efficient in regard to maintenance costs (in which, of course, he included running expenses) as the direct current system. Now that the Brighton system had been in operation for a considerable time, it had been demonstrated beyond the possibility of argument that the alternating current system was at least as cheap as, or even cheaper than, the direct current system to operate on the shortest of lines. That being so, it seemed to him that that must be the system which in the future should be used, and he thought would be used, for both suburban and long-distance traffic.

Mr. W. FORBES, general manager of the London, Brighton and South Coast Railway, said that with his chairman's permission he would say a few words as one who was very directly interested in the success of what was undoubtedly an experiment some four years ago, but which they no longer looked upon as an experiment. They had now gained sufficient experience to show that the system they had adopted was to their mind the most satisfactory and progressive system. He had been

getting out some statistics during the last two or three days, of which he might give a general idea. They started the running of the electric trains on the South London line in December, 1906, just about a year and ten months since. During that period they had carried over ten million more passengers, which, if worked out per diem, came to something like 17,000 to 18,000 per day more passengers for that very short section of line. He did not know whether many of them lived in, or knew the region of, Peckham, but at all events that part of the world was served uncommonly well by the London County Council tramways system. They had, therefore, the most active competition to deal with. The result had been so satisfactory that they had not only obtained the whole of the traffic that they lost in 1903 or 1904, when the London County Council started running their electric tramways down into that neighbourhood—they suddenly dropped from eight million to three million passengers—but in the first year of electrification they got back to eight million passengers, and this year they would get up to ten million passengers. That showed that they had not only regained the whole of their traffic, but a very sensible increase on those halcyon days before the London County Council trams were thought of. That must be considered as very highly satisfactory. The results on the Victoria to Crystal Palace branch had been equally satisfactory. Opened in May of this year, there was an increase of something like 70 per cent. in the number of passengers. In fact, it had become so urgent a question that he would have to approach the board very shortly to see whether they could give a little more rolling stock, because he was afraid that passengers were beginning to complain of the want of accommodation. However, he had not had one single complaint from the public. That was a most extraordinary fact. In the days of running on the South London line a-ample a steam service as possible under those conditions they had a certain amount—in fact, a good deal—of overcrowding, and the complaints were loud and bitter. But it was a most remarkable fact that when an electric service was put on for some extraordinary reason or other the public did not complain. They were hoping for much greater results when they opened the London Bridge section. On March 1 next they hoped to have that section running as well, and they hoped the ten million passengers would then become even a larger number than ten millions. He could tell them with the utmost confidence that the financial results were also most satisfactory, and they were thoroughly satisfied with them. The board were now considering the question of the extensions of the system, and, before many months were passed, the probability was that they would see something in the newspapers about the progressive and able administrators of the Brighton railway. (Cheers and laughter.)

Mr. G. W. PARKING (London Electric Supply Corporation, Ltd.) said he was sorry there had not been any adverse criticism. He had hoped to hear what the direct-current people had to say. Mr. Dawson had been kind enough to compliment his company on the current supply. One of the chief reasons for the satisfactory supply had been the extreme simplicity of the system. The trains in themselves were connected solidly with the generators; they had no sub-stations with running machinery—machinery which was liable to get out of order—and so long as the pressure was on the trains ran. The battle of the two systems, the alternating and direct, had been going on for a great number of years. He remembered some twenty-two years ago, when his company first started to run the Deptford generating station—the first high-pressure alternating current system in the world—in those days they had direct current engineers, including Mr. Edison, who came down in September, 1890. They condemned the high-pressure alternating current system, and said the only system was the direct current system. Since those days things had changed. He thought all engineers would agree that the most economical system of generation was by means of large turbo-alternating machines. To-day they had large turbo-alternating machines of 30,000 h.p., whereas, as far as his knowledge went, the largest direct current machine was only 3,000 h.p.—that is to say, one-tenth the size and by no means so economical. Now, if the alternating current was the most economical to generate, why could they not connect this alternating current direct with the train? The use of sub-stations meant great loss. Some of the best systems had got an efficiency of from 80 to 85 per cent. only, and that was very high. Now the efficiency of their present system—and he spoke feelingly, because they metered the units on the line—was 95 per cent. from the generators to the railway. When one was generating units in millions, 10 or 5 per cent. of efficiency was a very great thing. For instance, at the L.C.C. generating station at Greenwich they heard the other day from Sir John Benn the cost per unit generated there was about 3d. Now they generated about 100 million units a year, and 10 per cent. on that worked out at a small figure of

£10,000 a year, which was certainly worth while saving. He, therefore, maintained that the advantages of the single-phase system, from the point of generation and distribution, were these:—First, it was more economical; secondly, the trains being connected direct with the alternators made it much more simple; and, thirdly, it was much more flexible.

The CHAIRMAN said his object in rising was to say this: that Mr. Dawson and others were preparing a report as to the electrification to Brighton. Well, he did not know whether any shareholders were in the room; if they were they need not be frightened; but he was bound to say that report, when it reached the directors, would be most seriously considered with a view to putting it into operation. Further, he would say that he hoped it would not be so many years before they could go down to Brighton, fully electrified, in the 45 minutes which Mr. Dawson had outlined. If Mr. Dawson would allow him, he would just say that they of the Brighton railway felt exceedingly indebted to him for the enormous advantages of the advice that he had given them during the time that electrification had been under consideration. He must say that he thought the figures of Mr. Forbes, the very popular general manager of their lines, who had been more than energetic and more than justified in keeping this matter to the front, must be a source of satisfaction to himself and Mr. Dawson, for they proved the very great increase in the number of passengers they had carried. In speaking of numbers, he once told a brother chairman of a railway what the increase was, and he said: "You jaw a lot about your numbers, but how about your money?" From what they had heard from Mr. Forbes they could be quite satisfied that the money was all right, and he only hoped that as electrification went on the numbers and the money would be still more satisfactory.

Captain F. E. DYKE ACLAND then thanked Mr. Dawson on behalf of the members of the Automobile Club for coming there and teaching them about another form of automobilism. He had the greatest belief in the future of electric locomotives, and he hoped they were not going to be left behind by the Germans.

Mr. PHILIP DAWSON, in replying to the discussion, said he should like, before passing a few remarks on the points raised by the gentlemen who had been kind enough to take part in this discussion, to thank very much Lord Bessborough, the chairman of the London, Brighton and South Coast Railway, for doing him the honour of presiding over that meeting. He would also like to thank the general manager, Mr. Forbes, for the great assistance which he had always received at his hands and at the hands of the directorate and of all the officers of the Brighton Company. Without their assistance, the first task, which was most difficult, could not have been carried out. As regards the observation that a certain portion of the electric material for the first contracts came from Germany, they went by tender, asking most of the important English, Continental and American firms to tender, and the guarantees and prices of the particular German firm whose tender they accepted were so immeasurably better than anyone else's that they could not help themselves. They had been absolutely satisfied with all the work they had so far carried out. As regards future electrification being carried out by English workmanship, there was no one who wished more ardently for that than he did. The whole object of the paper which he had read that evening had been to show, firstly, that the system which the Brighton railway had adopted had been found satisfactory for local service, and, secondly, that the experience gained during these last four years clearly showed that electrification for very much longer distances was not a thing of the far distant future, but of the next five, six, or seven years. The only system which would deal with this was the system they had installed, and which had been satisfactory for their local service, and, therefore any main-line railway which dealt with uniform traffic should think twice before adopting a system which was not elastic and which could not be extended to whatever lengths might prove eventually to be desirable. As regarded the increase in traffic, he was much indebted to the general manager, Mr. Forbes, for the figures he had just given and for the facts he had put before them. Those were official facts and figures which could not be controverted, and they were quite sufficient evidence of the success of the undertaking which the Brighton Railway decided to start four years ago, when, as Lord Bessborough had remarked, everyone was criticising unfavourably that decision. He wished particularly to thank Mr. Partridge for what he had said about the simplicity of the single-phase system. They owed much to the ability and great experience of the company who supplied them. As regards Lord Bessborough's remarks about going to Brighton, when he (Mr. Dawson) first discussed the possi-

bilities of electric traction there were difficulties in the way of large electric locomotives running at high speeds. Since that time things had progressed very rapidly, and to-day there were some scores of examples of high-speed, single-phase locomotives running in America and on the Continent of Europe. Therefore, in any installation the Brighton Company might wish to carry out, when he had the honour of presenting them with the documents and the report that were now being prepared, they could be perfectly certain that they would not be carrying out any experimental work, but were applying the practical experience paid for by other people, and with the certainty of success.

AN INDIAN ROYAL TRAIN.

Lord Curzon, the Viceroy of India at the time, ordered the East Indian Railway Company to build a train for the accommodation of the Prince and Princess of Wales during their Indian tour in 1905-6. Mr. H. Kelway Bamber was then carriage and wagon superintendent of the line, and the work was entrusted to him. It was carried out according to his designs and under his close and personal attention. As this same train, after thorough renewing and overhauling, is now being used by their Majesties, a short description of its manufacture and of its leading features will be of interest.

The whole train, underframe, bogies and all, was constructed from raw materials by native labour, under, of course, European supervision, and, as turned out, was not only far in advance of anything that had been put into service at that time, but has, in its special features, become a standard example adapted by the State for all its carriage stock. The total length of the train is 700ft., and it is composed of ten carriages, weighing altogether nearly 430 tons, the engine being 70ft. in length. The vehicles are:—A front brake-van for the police and railway staff, and a rear one for luggage; eight saloons, three for the staff with 17 berths, their Majesties' two saloons, the Royal dining saloon, and another for the attendants, with a kitchen-carriage between them. The present decoration, furniture and fittings are all new, having been mostly chosen by their Majesties, and the lighting is on Stone's system. The underframes and six-wheeled bogies are all alike. A special and novel feature, introduced by Mr. Bamber, which in a great measure accounted for its smooth running, is the carrying of the entire weight of the carriage body and underframe on side roller bearings, the bogie centres merely being used as turning pivots. The draw-bar springs are specially designed. Another great departure from ordinary practice was the abolition of the outside sunshades, then in universal use. Owing to the amount of room demanded in each saloon, which, for fear of fouling standing structures, it was impossible to give by any addition to the length of the vehicles, while keeping to the standard width, Mr. Bamber was led to doing away with the sunshades. This enabled him to increase their total width while making the carriages 72ft. long, or many feet more than was previously possible. The train passed through practically every broad gauge tunnel in India without touching at any point on any of the sharp curves. The whole body of the carriage is constructed with special heat-resisting materials, particularly in the roof; this is clerestoried, and thereby space is allowed for thorough ventilation; the Indian plague of flies is avoided by a wire blind to all vehicles. The absence of outside sunshades diminishes the effect of wind pressure, and also the danger of damage from doors left open on passing vehicles.

So pleased were their Royal Highnesses with the running of the train that the Prince of Wales said they had slept as comfortably in it as in their own home at Marlborough House, and that their many nights' journeys had been made without a particle of the discomfort to which they had looked forward with dread. The Prince gave practical proof of his satisfaction by investing Mr. Bamber with the Victorian Order on the conclusion of the trip, at Karachi, while thanking him for making their journey both smooth and restful.

On the present occasion the Royal Party has been accompanied by the Agent of the East Indian Railway, who has been the recipient of Coronation Honours in the shape of a Knighthood in the Order of the Indian Empire, Sir W. A. Dring having previously been created a companion thereof.

N.E.R. Conciliation Conference Elections.—Mr. P. Burt, deputy general manager, the company's secretary for the North-Eastern Railway Conciliation Conference, on Wednesday, announced the result of the ballot for the men's representatives to succeed those whose three years' term of office expires at the end of the month.

RAILWAY COMMISSION CONFERENCE.

AN AGREEMENT SIGNED AT THE BOARD OF TRADE.

MODIFICATIONS OF THE COMMISSION'S REPORT.

An agreement which gives a prospect of permanent peace in the railway labour world was arrived at on Monday last, as the result of the third day's sitting of the conference between the representatives of the Railway Companies and of the four Unions of railway employees as to the best means of carrying into effect the new scheme presented in the Report of the Royal Commission appointed to investigate and report on the working of the Railway Conciliation and Arbitration Scheme of 1907. Sir George R. Askwith, Chief Industrial Commissioner, again presided over the proceedings, which took place at the offices of the Board of Trade, and late in the afternoon it became known that terms of settlement had been agreed to. The text of the agreement was issued by the Board of Trade at 6.30 p.m.

Subject to a few alterations and additions both sides now accept the scheme of the Railway Commission, which was given in full in *THE RAILWAY TIMES* of October 21. The alterations are for the most part in matters of detail in connection with the working of the scheme. A concession made by the companies' representatives in regard to the payment of casual labour seems to be the most warmly welcomed as far as the employees are concerned. The casual labour referred to is that engaged for the manipulation of goods traffic. These men are to be paid at hourly rates not lower than the minimum rates for permanent men.

The Commission's new scheme, which includes the abolition of the central conciliation boards, it has now been agreed shall come into operation on the first meetings of the sectional boards in May next, but any alterations then proposed will not come into force until July 1, 1912.

TEXT OF THE AGREEMENT.

The representatives of the companies have undertaken to use their good offices to induce other companies to adopt the agreement, the official text of which is as appended.

RAILWAY CONFERENCE AGREEMENT.

December 11, 1911.

In furtherance of an agreement signed at the Board of Trade on August 19, 1911, and of the Report of the Royal Commission appointed to investigate and report on the working of the Railway Conciliation and Arbitration Scheme of 1907, it was agreed by the undersigned on behalf of the Railway Companies in Great Britain who have adopted the Conciliation Scheme of 1907 and of the Joint Executives of the Trade Unions of Railway Employees, and of the Government and the Board of Trade that the Report and Scheme of the Royal Commission be accepted and adopted with the following alterations and additions:—

(A.)

It was agreed that the form of procedure as laid down in Clauses 2 to 8 be adopted, subject to the following modifications:—

Clause 2.—The last sentence to read as under: "The company shall receive the deputation within 14 days from the receipt of the petition and shall give a reply in writing to the petitioners within 28 days of the reception of the deputation."

With regard to the signing of the petition by at least 25 per cent. of those concerned, it was agreed that each company shall settle with its employees the question of percentage.

For this purpose a special meeting of each Conciliation Board shall be convened.

Failing agreement between the two sides of the board the percentage of 25 laid down in the scheme to apply.

Clause 3.—The words "either orally or" in lines two and three to be deleted.

The following words to be inserted after the word "applicants" in the fourth line: "within 14 days of the receipt of the application."

The words "in writing" to be inserted after the word "made" in the fifth line.

Clauses 5 and 6 to be deleted, and the following clauses to take their place:—

Clause 5.—In the event of the company proposing to reduce the rates of wages, or to increase the hours of labour, or otherwise alter adversely the conditions of service (other than matters

of management or discipline) of a class of employees, the company shall circularise the men concerned stating what their proposals are, and giving notice that the proposal will be placed on the agenda for the next appropriate meeting of the Conciliation Board. Such circular to be issued to the staff not less than one month before the date of the meeting of the Conciliation Board at which the proposal will be considered.

Clause 6.—If the company find it necessary to reduce the rates of wages or increase the hours of labour, or adversely alter the conditions of service of any individual or individuals, as distinct from a class of employees, they shall be at liberty to do so subject to the man or men concerned having the right (if he or they feel aggrieved) to refer the question, unless it is one relating to matters of management or discipline, to the next meeting of the Conciliation Board.

If, at the meeting of such board, it is determined that the alteration was not reasonable, the matter shall be adjusted as from the date the alteration was made.

(B.)

It was agreed that Clause 13 should be altered to read as under: "In those cases where the elections of employees' representatives have taken place during the year 1911 the term of office of such boards shall expire on November 6, 1914, except in those cases where it is found necessary to reorganise the grades coming under the existing boards. Elections under these conditions and also in the case of boards not yet formed, or not re-elected during 1911, shall be held as soon as possible."

It was agreed that the first meetings of the Conciliation Boards established under this scheme should not be held prior to May, 1912, except so far as the special meetings necessary to decide the percentage referred to in Minute (A) (Clause 2) are concerned. At the first meetings held in May, 1912, it shall be competent to raise for discussion, after the usual procedure laid down in Clauses 2, 3, and 4 of the scheme has been carried out, any matter included in settlements at present in operation, subject to the proviso that no alteration in such settlements shall operate before July 1, 1912, as laid down in Clause 47 of the scheme. Clause 48 to be deleted.

(C.)

Clause 14.—It was agreed that the following note should be added to paragraph (c) in this clause: "The Board of Trade have, in their discretion, in the case of small companies, modified the number of adult employees required to sign the nomination papers. This discretion to be continued."

(D.)

Clause 15.—It was agreed that the words "in the permanent employ of the company" in line 3 shall be read as imposing no restriction on directors sitting upon the boards.

(E.)

Clause 18.—It was agreed that co-optation should be employed in the case of vacancies caused by an insufficient number of candidates being properly nominated for election.

(F.)

Clauses 25 and 29.—It was agreed that in the event of the employees' side of a Conciliation Board being unable to agree upon the selection of its leading member or secretary the question shall be referred to the Board of Trade, who will either decide the matter or take a ballot of the whole of the men employed in the grades represented by board.

(G.)

Clause 43.—It was agreed that the record of meetings entered in the duplicate minute books shall be signed by the leading members of both sides as well as by the secretaries.

(H.)

It was agreed that Clause 48 should be deleted.

(I.)

Upon the representatives of the men's side raising the question of the alteration of trip rates by the railway companies, it was explained that the companies must retain the right to vary trip rates according to varying circumstances, but it was stated that in case of the men not being satisfied as to the reasonableness of any such alteration of trip rates in a downward direction the matter could be referred in the ordinary course to the next meeting of the Conciliation Board, it being understood that if it was determined that such a reduction was not reasonable the matter should be adjusted from the date of the alteration.

(J.)

Joint Staff.—It was agreed that Joint Staff, where there is no separate Conciliation Board, shall be allocated to one or other of the owning companies for election purposes, and that so far as alterations in their rates of wages, hours of duty, and conditions of service are concerned, they shall be dealt with through

those Conciliation Boards as though they formed part of the staff of the company to which they are allocated, it being understood that in those cases where the joint staff are under the supervision of a joint officer all applications shall in the ordinary course be submitted to such joint officer.

In those cases where the joint staff are not under the control of a joint officer, it is understood that they should participate in any improved conditions which may be granted as the result of a petition dealing with the whole of the grade to which they belong throughout the company's line to which they are allocated.

In addition to the above alterations, it was agreed on behalf of the companies whose representatives were present at the Conference that extra and casual men employed in the manipulation of goods traffic shall be paid for the time actually worked at hourly rates on a basis not lower than the minimum rates of wages and hours of duty of the permanent men working in similar positions.

The representatives of the companies further undertook to use their good offices to get other companies to adopt the same arrangement.

(3) On behalf of the Government and the Board of Trade :

G. R. ASKWITH.

SIR GEORGE ASKWITH THANKED.

At the close of the proceedings in the offices of the Board of Trade a vote of thanks was unanimously passed to the chairman, and, in reply, Sir George Askwith said. Gentlemen,—As far as I am personally concerned I thank you very much for the kind expressions that you have used. My services, small as they were, were most gladly at your disposal, and I can only hope that the settlement which has been arrived at to-day may be one which will cause in the future no such disturbance as has arisen in the past, and that it may be an augury of the peaceful and smooth working of the great railways of this country. I know that on both sides causes of friction may from time to time be apt to arise, but if they are treated in the same spirit that has been followed during the last few days around this table, those causes of friction ought rapidly to disappear with advantage to the railway companies, their employees, and the country as a whole. In matters of interpretation, or in matters of assisting in the smooth working, we, as far as possible, will use our best endeavours to assist you, and I am sure that when you come to look back upon the day on which this agreement has been signed it will be with feelings of very great satisfaction.

After the signing of the agreement the representatives were received by Mr. Sydney Buxton (President of the Board of Trade), and congratulated on the result.

APPROVAL OF THE A.S.R.S. EXECUTIVE.

Interviewed on Tuesday, Mr. J. H. Thomas, M.P., said : "At their routine quarterly meeting just concluded, the executive committee of the Amalgamated Society of Railway Servants has endorsed the action of Messrs. Williams, Bellamy, and myself in signing the amended agreement. Personally I am well satisfied with it, and, of course, my colleagues and myself are much gratified at the action of our committee."

Mr. J. E. Williams, questioned upon the present aspect of the men's programme, was unable to say definitely whether the ballot of the unionists would be proceeded with and the result announced. They had not yet received the full returns from the other three societies, which were counting and tabulating their own papers.

NEW WATERLOO STATION APPROACH.

The reconstruction of Waterloo Station of the London and South Western Railway, which was described in THE RAILWAY TIMES of January 14 last, has now been so far completed as to permit the new approach to the south station from Westminster Bridge Road to be brought into use. It will be opened to foot passengers and vehicles on Monday, when all road vehicles arriving at Waterloo with intending passengers for departure by main line expresses and special boat trains, etc., must enter the station by way of the new entrance instead of, as hitherto, by the Griffin Street entrance, which will be closed. After setting down passengers all vehicles will leave the station by the Lower Marsh spur road, as shown on the accompanying plan. The main line trains leaving the new station will be for Andover, Salisbury, Yeovil, and the West of England generally ; for Bournemouth, Swanage, and Weymouth lines ; for the Portsmouth direct line to the Isle of Wight ; and for Aldershot, Farnborough, Winchester, and Southampton lines. Trains also leave this station for Epsom, Leatherhead, Surbiton, Woking, Chertsey, Weybridge, Hampton Court, and other suburban stations.

The new approach commences in Westminster Bridge Road, the entrance being between York Road and Lower Marsh at a point near the railway overbridge. There is an easy

New Approach to Waterloo Station from Westminster Bridge Road.

gradient to the booking hall, and vehicular traffic is convenience by the area opposite the station being paved with wood. The footpath is roofed for a considerable distance.

The opening of this convenient access to the station marks another step forward in the extensive rebuilding scheme which will not be completed for some time. There are practically three stations at Waterloo—the South, the Central, and the North. The company commenced its extension on the south side, and so arranged traffic that the main line and suburban service has been fully maintained throughout the reconstruction. A handsome station, with a lofty roof, wide and spacious platforms and booking-hall, and thoroughly equipped offices has taken the place of the old structure.

At present the army of workmen are engaged on the central station rebuilding scheme, and when that is finished the north side will be attended to. It is not only a case of rebuilding, but of extending, and the land at the engineers' disposal has been put to the best advantage. Growing traffic, especially in connection with the development of suburbs below Clapham Junction, had rendered additional accommodation absolutely imperative if the company was to maintain its reputation for efficient and punctual service.

When the enlargement works have been completed, it will then be possible for the company to turn its attention to the electrification of the suburban lines.

The G.N.R. Acquire a London Line.—The half mile of railway between Muswell Hill and the Alexandra Palace has been acquired by the Great Northern Railway Co., and the company formerly owning it has been wound up.

Plan of Waterloo Station, London and South Western Railway, showing new approach from Waterloo Bridge Road to be opened on December 18

GREAT INDIAN PENINSULA RAILWAY.

The 124th half-yearly ordinary general meeting of the stockholders was held on Monday, December 11, at Salisbury House, London Wall, E.C.; Col. F. FIREBRACE (chairman of the company), presiding.

The SECRETARY (Mr. J. I. Berry) read the notice convening the meeting, and the CHAIRMAN affixed the seal of the company to the register of stockholders, 4,839 in number.

The report having been taken as read,

The CHAIRMAN then said: Ladies and gentlemen, Before commenting on the results of the half-year, I would like to say a few words in regard to the great loss we have sustained in the resignation of Sir Andrew Scoble, referred to in paragraph 23 of the report. In a period of 17 years many changes naturally happen, and in our case the changes have been many and varied.

In 1900 the proprietary interests of the shareholders were bought by Government, and the line was handed back under a working agreement, the shareholders retaining a smaller interest, but sufficient to induce the company to work the line in as satisfactory a manner as possible. This change was in itself a matter of great difficulty, but, thanks to Sir Andrew Scoble, it was eventually brought to a satisfactory conclusion.

In 1894, when he became chairman of the company, the rolling stock on the line was neither sufficient, nor up-to-date. The then new neighbouring railways—the Indian Midland and the Bengal-Nagpur—with their new and powerful stock, were then in full work, and it required two train loads of G.I.P. stock to carry away every train load brought in by these lines. This has now been entirely remedied, the locomotives are now much more powerful, and the stock has been practically renewed. Indeed, the passenger stock is now second to none in India, and vies with that to be found on any English railway for comfort and convenience.

In all these improvements, and, indeed, in every form of progress, both social and mechanical, which tended to advance the interests of the railway and promote the welfare of the country, Sir Andrew Scoble took the keenest interest. Further, I may say that now that he has had, perforce, to retire from active work, his colleagues part with him with the greatest regret, as they lose the advantage of his sound advice and the influence due to his practical common sense. I feel sure also that the shareholders, equally with the directors, regret his retirement. Sir Andrew Scoble still retains the chairmanship of the Agency Trustees, so we hope to be able to consult him when important problems are under consideration.

My colleagues have asked me to succeed Sir Andrew Scoble as chairman. Fortunately, the privilege I have had of serving with him for many years will, I trust, stand me in good stead; anyway, I shall try and do my best.

To fill the vacancy on the board, the directors have been fortunate in securing the services of Mr. James F. Finlay, C.S.A. His wide Indian experience and his intimate knowledge of finances will make him a valuable addition to the board.

In regard to the general results of the half-year's working, it will be observed that while the coaching traffic shows a large increase, the receipts from the goods traffic have decreased, the result being that the gross receipts were Rs.1,41,355 less than in the corresponding half of last year. The coaching traffic is steadily increasing year by year. We carried over

13,400,000 third-class passengers in the half-year—an increase of 650,000 over those of 1910—and all but about 4 per cent. of this enormous number only paid one penny for each six miles travelled.

In the earnings from goods traffic the accounts show a decrease of Rs.5½ lakhs. The variations in the receipts from the chief staples of our traffic are shown in paragraph 8 of the report, and it is an interesting study to compare this table with those presented in former reports. In this table it will be noticed that cotton and cottonseed—two staples on which our goods receipts largely depend—show very large decreases. The character of the previous monsoon rains has always a very important bearing on our goods traffic; the rains of 1910 were not evenly distributed as regards the requirements of the cotton crop, and consequently that crop was deficient. Also, in good years, India provides large quantities of produce available for export, but that traffic again depends on enquiries from European markets and also on the state of the freight market. It is not many years ago that the traffic in cottonseed was infinitesimal, as it was practically only used as food for live stock; now it is largely exported to Europe as a valuable oil seed. Of manganese ore, India can supply any quantity desired, and about 50,000 tons are regularly stacked in Bombay awaiting shipment. Unfortunately there are other sources of supply of this material, and competition is severe; unless, therefore, sea freight is low, the export from India falls off. In this year sea freights have been higher than usual, and consequently the volume of export traffic in this staple has fallen off.

Another reason for the decrease in earnings is to be found in the opening of the Nagda-Muttra Railway to the north—a new route to Delhi, and controlled by the Bombay, Baroda and Central India Railway Company. Some time ago Sir Andrew Scoble pointed out that on the opening of this line—a shorter line between Bombay and Delhi—the Great Indian Peninsula was bound to suffer to a certain extent. The trade of India is, however, increasing very rapidly all over the country, and although we are now suffering somewhat from this competition, I think we may console ourselves with the fact that there is ample room for both lines, and ample traffic for both.

These, and the absolute necessity to strengthen our permanent way, are the main reasons why our surplus profits are not larger. The general results for the official year, ended June 30, 1911, show gross receipts of Rs.6,83,34,400, and expenditure of Rs.4,04,18,000. The gross receipts were less by rather more than Rs.5 lakhs, and the expenditure increased by Rs.38 lakhs. Most of the excess is in the engineering department and is due to the necessity for raising the standard of the permanent way. Similar expenditure is going on on other Indian railways, so we are not exceptional, and is not due to any neglect on our part by allowing the maintenance to run down at any time. In the two last half years, which make up the full year under our agreement, the gross earnings from cotton and cottonseed alone show a diminution of Rs.32 lakhs; so had we had an equally favourable cotton crop, the surplus of net revenue would have been almost sufficient to maintain last year's dividend. As it has turned out the net revenue is only sufficient to give a surplus dividend of 11s. per cent.; this with the 1½ per cent. interest guaranteed by the Government makes a dividend of £2 18s. per cent. payable on January 1 next.

During the half year 44 miles of track were relaid with 100-lb. rails, and 7 miles of the 60-lb. iron rails were replaced by released 82-lb. rails. Practically all the released rails and most of the pot sleepers are being utilised elsewhere, so the expenditure is being reduced to a minimum. Similarly the weak girders taken out of the line are either strengthened to carry the new load standards, or are being utilised on lines with a narrower gauge. Besides the ordinary programme for strengthening the girders, the expenses in the half year were somewhat increased by the necessity of finishing the Tapti bridge, all the outlay on which has fallen against revenue. In the locomotive department the increase of Rs.1,54,900 is comparatively small, and is chiefly due to increased engine mileage run, and to a larger number of engines renewed. Against this, however, there was a saving in the coal bill; for although 25,000 tons more were burnt there was a saving of Rs.64,000 owing to the cheaper cost of the coal. In the carriage and wagon department an increase of Rs.3,61,000 is recorded, entirely due to the larger number of vehicles renewed and to heavier repairs. By the imperative orders of Government the renewals in 1909-10 were reduced very much below what we desired to carry out, with the result that much of the normal expenditure was thrown forward into succeeding half years. This year, in view of the strain on the stock anticipated owing to the Coronation Durbar, it was necessary

EAST INDIAN RAILWAY COMPANY.

The sixty-fourth half-yearly general meeting was held on Wednesday, December 13, at the company's offices, 28-30, Nicholas Lane, E.C.

Lieut.-Col. Richard Gardiner, R.E. (deputy-chairman), in the chair.

The SECRETARY (Mr. C. W. Young) read the notice convening the meeting.

The CHAIRMAN said: Before proceeding to the regular business of the meeting, it is my duty to explain my presence in the chair. Your chairman, Sir Frederick Upcott, is on his way to India to attend a conference of the chairmen of the Indian Railway Companies, convened by the Secretary of State for India, which is to be presided over on his behalf by Lord Inchcape. The conference is to meet in Calcutta in January, its object being to endeavour to smooth out certain difficulties in the administration of the various Indian railways. Our own difficulty can be very briefly stated. We want less interference in details, and that, subject to such broad general control as is recognised by all to be essential, we may be allowed to manage the business committed to our charge. The *Times* of December 5 has a special article on the Indian railways that sets forth the position very fully; put shortly, the tendency in India seems to be to largely usurp the proper functions of the several Indian railway company directorates. In addition to attending this important conference the chairman has planned out for himself a distinctly arduous tour of inspection, both of the open line and of the important new lines in the Bhagirathi Valley which are now approaching completion. We all, I am sure, wish the conference a speedy and satisfactory solution of the problems submitted to its deliberations, and we hope to welcome our chairman back about the end of February or early in March.

A VERY SATISFACTORY HALF-YEAR.

Turning now to the regular business, I would ask you to take the report, which has been for some time in your hands, as read. (Hear, hear.) The report is the record of a very satisfactory half-year's working. When we met last June your chairman gave you a forecast of the results anticipated, as follows:—Estimated earnings Rs.488 lakhs, estimated expenses Rs.180 lakhs. The results have worked out slightly better—viz., as follows, in round figures:—Gross earnings Rs.480 lakhs, expenses Rs.180 lakhs, net earnings Rs.300 lakhs. After deducting the fixed charges of the half-year from the net earnings there remains a surplus of Rs.1,19,51,495, of which Rs.1,08,05,806 goes to the Government and the balance, Rs.11,45,688, to the deferred annuitants, who in our case take the place of shareholders. This rupee balance has produced the sum of £74,934, which enables us to recommend the payment of a dividend for the half-year of £1 3s. per cent. in addition to the guaranteed interest of £2 per cent. The actual dividend proposed is 6d. better than that forecasted last June, a difference, I anticipate, you will not be disposed to take exception to. (Hear, hear.) How these results have been attained is set out at considerable length in the report, and I do not propose to weary you with going over it in detail. Traffic has been good in both passengers and goods, and our business has been efficiently and economically performed. The most important question that has been exercising the minds of railway men for some time past has been the unrest in the labour market, not only of England, but you may say of all the world. We, and I believe all railway administrations, recognise very fully that continuous prosperous railway working is, in the main, the results of the efforts of a loyal and contented staff, and that for successful business administration you must carry with you the good will and the interests of the workers of all grades. (Hear, hear.) I speak, as you may possibly know, with very long and varied experience of Indian railways, and I think I can say with confidence that the welfare of their staff has always bulked very largely in the minds and in the actions of all Indian railway administrations. The conditions of railway service in India and at home vary so much that actual salaries cannot be very well compared. In India, railway employment, at any rate in the case of a large and very important element of the employees, means a very different thing from what it does at home.

THE COMPANY'S PATERNAL CARE OF EMPLOYEES.

The railwayman in India to a large extent lives in a small world of his own, in a settlement owned and built by the railway which employs him, with its institutes, recreation grounds, schools, hospitals, etc., provided by the railway, and such amenities of life as general sanitation, water supply, lighting, etc., also undertaken by the railway. The costs of

these several items adds up to a considerable total, and cannot be left out of account when considering the wages bill. The old age question is also not overlooked, for on all Indian railways there are provident funds administered by a committee of members under the general control of the railway administration, to which all monthly employees of all grades on salaries of Rs.15 per mensem and above contribute one-twelfth of their wages, and to which is added a contribution from earnings which, at any rate on the East Indian Railway, doubles annually the contribution of the employee. This provident fund money is payable on death or retirement, thus ensuring on death or retirement a provision for the family or for the individual. The railway contribution to the provident fund for the year ended June, 1911, was Rs.8,95,535, equal at 1s. 4d. per rupee to £59,702. The increase in the cost of living which has undoubtedly taken place in India and elsewhere of late years, and its effect on the powers of the employees to make a further provision for themselves on retirement, has not escaped notice, and the companies some years back approached Government for authority to better the position in this respect both by improving the provident fund and by granting to old employees, on retirement, special gratuities. I am glad to be able to say that we have now received authority to further reward old servants for good, efficient and faithful continuous service by a bonus on retirement, which may, at the discretion of the directors, extend to half a month's pay for each year of continuous service, subject to a maximum of fifteen months' pay, which will make a very substantial addition to their provident fund money, and is a concession which will no doubt be highly valued by the staff. The concession applies to employees of all grades except the officers, whose case is still under consideration. The other point of some improvement of the provident fund is now being discussed in India.

I may mention here also a rather interesting feature in connection mainly with our employees on small salaries. Famine or scarcity unfortunately visit at times some portions of the vast areas we traverse, and of course bring in their train large increases in the cost of the staple foods of the people. On such occasions we have a system of allowances-compensation for dearthness of provisions, which varies relatively as the current prices compare with the normal rates, thus preventing the unavoidable temporary increase in the cost of living bearing too hardly on our poorer servants. In addition to the provident fund and gratuities above referred to, we have several other methods and means for encouraging thrift amongst the employees. We have a savings bank open to all classes, established, I think, sixteen years before the Post Office savings bank. We have a loan fund to aid our poorer native employees and help to keep them out of the money-lender's hands on those important occasions in native life when special expenditure is unavoidable, and we are considering the question of supplementing it by a co-operative loan bank, to be established under an Act of the Indian Legislature passed in 1904. At our collieries, also, where, according to the last census, 13,845 people live on the estate, we have a very successfully managed benefit fund to meet such important events as births, marriages and deaths.

As regards provision for sickness, the railway has a large European and native medical staff, with dispensaries and hospitals at all important stations, where medical advice and medicines are given free to all classes, while the sick and ordinary leave rules are distinctly liberal. The cost of the medical department and medicines, but excluding cost of upkeep of buildings, etc., is about £16,000 per annum.

THE NUMEROUS SCHOOLS FOR CHILDREN.

I should also just like to say a word as to our schools, for the requirement in this respect, especially in regard to the children of Europeans and Eurasians in India, has lately been specially urged on the people of England. That the public appeal is justified, I do not question, for there is doubtless a large class outside those reached by the great employers of labour. This railway has built and maintains, or assists, scattered up and down the length of the line, wherever the necessity is found to exist, 24 day schools for Europeans and Eurasians, and 73 day and night schools for natives. The schools of the first category controlled by the company have some 600 railway scholars on their rolls, and those of the second, including native adult schools, some 5,400 scholars. The cost of working these schools was for the first half of 1911 Rs.64,000, the fees realised Rs.25,027, the grants in aid were Rs.25,788, the upkeep of the buildings, etc., and the balance of the working cost falling on the railway. In addition to the schools in the plains referred to above, the railway has at Jharipani, on the Masuri Hills, a hill boarding-school for the children of its European and Eurasian

employees, which has separate sides for girls and boys, and in co-operation with the North-Western Railway of India it is now being extended to provide a separate junior school for both sexes. In the first half of this year 346 scholars were in residence, 223 boys and 123 girls, and we hope next year to be able to receive 200 children in the junior school. The working expenditure on the school in 1910 amounted to Rs.1,00,784, the fees realised amounted to Rs.68,181, it received a Government grant of Rs.10,587, and the balance of the expenditure was practically all made good by the railway. In connection with the boys' side a technical school and workshops have been established, and for the girls there is instruction in dressmaking and lessons are given in domestic economy and hygiene. The school has also a volunteer cadet corps, with some 145 members this year. The foregoing will, I think, bring home to you that there is a good deal more in railway administration than the very important question of rates and fares. I have, I am afraid, detained you rather long, but at the present moment it seems desirable that you should have some idea of the position of these matters on the great undertaking in the working of which you are associated.

CURRENT HALF-YEAR'S RESULTS.

Before I conclude I will now, as usual, give you a forecast of the results of the current half-year's working. We have just received the estimated approximate figures from India, and they are as follow:—The gross receipts are anticipated to come to Rs.407 lakhs against Rs.428½ lakhs in the corresponding period of 1910. The working expenses are put at Rs.180 lakhs as compared with Rs.167½ lakhs in 1910, and the net earnings Rs.287 against Rs.261½ lakhs. After deducting the charges for interest and the annuity, payments to the worked lines and to the provident institution, there will remain a probable surplus of Rs.104½ lakhs, the company's share of which would be Rs.10.14 lakhs, after paying Indian income tax. Should nothing unforeseen occur, and no abnormal exchange fluctuations take place, we shall, we hope, be able to propose at our next meeting an extra dividend of, say, 20 shillings. If this is realised it will, with the dividend now about to be proposed, make an extra dividend for the year of £2 3s., and added to the guaranteed interest of 4 per cent. give a total return for 1911 of £6 3s. The East Indian Railway is greatly concerned in the visit which our King and Queen are paying to their Eastern Empire. So far as practicable, everything is being done to make the visit a success and to ensure the safety and comfort of the Royal visitors, and we pray and trust that this undertaking of our King and Queen may prove of great and lasting influence for the happiness and welfare of India. Amongst the Durbar honour list the board have noted with much pleasure the advancement of the company's agent in India, William Arthur Dring, Esq., C.I.E., to the Knighthood of the Most Eminent Order of the Indian Empire, a well-earned recognition of good services. They have already conveyed to him their congratulations, in which I am sure you all join. (Hear, hear.) Before putting the motion for the adoption of the report to the meeting, I shall be happy to answer any questions to the best of my ability.

A SHAREHOLDER asked whether religious instruction was given in the schools to the European scholars—was there a chaplain?

The CHAIRMAN: No, but there is an ordinary form of prayer which is used. At the hill schools the boarders go to their respective denominations for instruction. Religion is a very difficult question in India.

Mr. B. W. HUTCHINS said they had all listened with very great interest to the chairman's statement about the labour question, if he might so call it. In India the economic conditions were entirely different to those in this country, but he understood the cost of living was increasing there, as well as here, and practically throughout the world. He imagined the company had not had the same difficulty relatively—because it was all relatively—with regard to labour and unrest that had occurred in England.

The CHAIRMAN: I do not think there is any question but that the cost of living has increased enormously for some years. I think it is the same all over the world. As to us having any difficulty, out in India, I do not think we have any reason to anticipate any serious difficulty. We are doing everything in reason for our men, and we certainly have their interests entirely at heart. I now beg to move: That the report of the directors be received and adopted.

Mr. F. M. HALLIDAY seconded the motion, which was put and carried unanimously.

The CHAIRMAN: I now beg to move that a dividend at the rate of £1 3s. per cent., less income-tax, be paid to the deferred annuity holders and deferred annuity holders class "D," registered in the books of the company on the 1st day of December, 1911, out of the surplus profits for the half-year ended June 30, 1911.

So JAMES AUSTIN BUCKHILLON, K.C.S.I., seconded the motion, which was carried.

Mr. GEORGE HUMPHREY had much pleasure in proposing that the best thanks of the meeting be given to the Chairman, Sir Frederick Upcott, and the Board of Directors, and also to Sir Wm. A. Dring, the company's agent in Calcutta, and to the staff in India and at home for their services during the past half-year.

Mr. W. CAMPLING said he had very great pleasure in seconding the motion.

The motion was unanimously carried.

The CHAIRMAN: I thank you, gentlemen, on behalf of Sir Frederick Upcott and my colleagues, as well as the staff, for this vote of thanks. I assure you the staff in India always appreciate the vote of thanks they get at this meeting.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

The 71st ordinary general meeting was held on Tuesday in the company's offices, Leadenhall Street, London, E.C., Sir Thomas Sutherland presiding.

The CHAIRMAN, in moving the adoption of the report (an abstract of which appeared in last Saturday's RAILWAY TIMES), said that in many ways the year had been an extremely anxious one, but the result was fairly satisfactory. They paid the same dividend and bonus as for a considerable number of years; they carried to depreciation reserve £550,542, and they carried forward £67,115. Passenger traffic receipts amounted to £1,294,421, an increase of £47,000. It was the largest amount ever earned under this head. Some benefit had been derived from the Coronation, the company having carried to and from this country some of the Indian Princes who attended the ceremony. The freight account amounted to £1,721,600, which was a few thousand pounds short of the previous year. The purchase of the Blue Anchor Line had turned out most favourably. In that line only one class of passengers was carried, via the Cape to Australia. The last vessel despatched in that service took over 1,000 emigrant passengers. Emigration to Australia had suddenly increased, and the number which in all probability would go from this country to Australia during the current year would be about 60,000, or four times as many as three years ago. The Australian Commonwealth had not, however, made up its mind to pay very liberally for the accommodation required. The rate for assisted passengers was £12, of which the shipowner received £11 8s. net, and it would puzzle the shareholders to know how the shipowner could live by such a receipt in respect of a journey of 12,000 miles. The expenditure had been £20,000 less than in the previous year, owing to the smaller mileage. The general tendency was for expenses to rise rapidly. In the last three years the navigation expenditure alone had risen by £210,000, more than one-half of which was due to coal, in connection with both higher prices and the speed and size of the newer mail steamers. They were likely to have higher prices for coal in the coming year. They had some small stocks which stood at a low figure, and some fairly cheap contracts, and therefore they would not be altogether at the mercy of the advanced and advancing prices. A great compliment had been paid to the company by the selection of the s.s. "Medina" to convey their Majesties to India—a compliment to which the company was fairly entitled. No ship had ever left these shores after so great an amount of preparation. He wished they could express the same gratification regarding the s.s. "Madoja," which had been sent out in connection with the Durbar; but they had suffered some disappointment, although a fair number of passengers travelled by the vessel. The demands made by the Indian Administration for accommodation at Delhi had closed the door in the face of the public from this country and America, the proposed charge of the authorities being, in the first instance, £15 per day per person, who must guarantee a stay of at least a fortnight. When the terms were altered, enthusiasm regarding the Durbar had been absolutely quenched, and the announcement of an autumn session put an end to the company's expectation that a handsome return would be made on the voyage. By the strikes they had fourteen steamers held up, and three steamers were despatched in ballast. The immediate loss in August was £35,000, and as every mechanic and labourer in connection with the strike had obtained an advance in wages, it was obvious that shipowners must look forward to a rise in expenditure of no mean order. He would draw even more particular attention to the fact that the strike represented a new departure. For the first time labour had combined in a sort of federation, and at one moment there were 30,000 men idle in the Port of London. The shipowners were perfectly helpless, and the Shipping Federation did not even appear on the scene in London until the strike was virtually over. The aim and purpose of the Labour leaders were to form a sort of confederation and

obtain power to paralyse the business of the country unless their demands were immediately complied with—an attitude depending upon intimidation on one side and fear on the other. He did not know whether combinations of that kind came within the law of conspiracy; but if such disturbances ever again occurred it would be a grave question for the Government to know how to maintain law and order. The company had a fleet of over 400,000 tons standing in the books at a net sum of between £3 and £4 per ton—all the vessels being in the best possible order and of the highest quality. When he first addressed the shareholders of the company their overland trade had been annihilated by the opening of the Suez Canal. They had 120,000 tons of ships all unfit for the Suez Canal trade, and standing in the books at £3,000,000, for they had no reserve in the ordinary sense of the word. The dividends were reduced until they became almost invisible, and would have ceased if in the accounts proper amounts had been charged for depreciation. The company was in a most impecunious condition, unable to obtain any considerable advances from bankers except by promising to make a call upon the shareholders within a short space of time. There were petitions from Liverpool and London to the Government to prevent the company from running mail steamers through the Suez Canal; there was, in fact, a conspiracy to unseat the board and wreck the company. Now they had four times as great a tonnage as at that time, with an extremely moderate capital. They performed an arduous mail contract with little more than half the subsidy then obtained. Their regular dividends were not to be despised, and their resources were such that they never borrowed from bankers, but were ready to lend to them. This very different state of things justified the policy carried out for many years past, and if they estimated the future by the past, they might feel confident that the company would be as successful in the distant future as for many years past.

The report was adopted, and dividends were declared for the half-year to September 30 of $2\frac{1}{2}$ per cent. on the preferred stock, and $\frac{1}{2}$ per cent., with a bonus of 3 per cent. on the deferred stock.

MIDLAND RAILWAY OF WESTERN AUSTRALIA.

The report for the year ended June 30 last states that the scheme for the rearrangement of the debenture stock and share capital of the company has been carried through. The confirmation by the court of the reduction of capital was granted on March 10, 1911. When this confirmation was obtained the company was empowered to issue the new £600,000 four per cent. second mortgage cumulative income debenture stock and the £519,781 unified ordinary stock to the holders of the old six per cent. cumulative income debenture stock, which those holders had agreed to accept in part satisfaction of their holdings. The new four per cent. second mortgage cumulative income debenture stock was issued on April 1, 1911, and in the terms of the scheme bears interest from that date. The traffic receipts of the railway were:—Gross £123,168, an increase of £5,306, and working expenses £60,416, an increase of £2,748, leaving net traffic receipts £53,752, an increase of £2,648. The net traffic receipts exceed those of any previous year. The increase in the working expenses is mainly due to the extensive repairs and renewals to permanent way and rolling stock. The net revenue (including interest) was £58,877. Interest on the four per cent. guaranteed debentures to December 31, 1910 (since redeemed), amounted to £6,000; the interest on the five per cent. prior lien debenture stock for the same period, since redeemed, required £2,240; and the interest on the new four per cent. first mortgage debenture stock from December 31, 1910, to June 30, 1911, required £10,700, leaving a sum of £30,931. To this must be added the balance as at June 30, 1910, of £53,268, less interest on the five per cent. cumulative income debenture stock from July 1, 1907, to January 31, 1911 (since redeemed), £23,244, making a total of £49,955. This amount has been appropriated as follows: To the renewal and contingency account, £13,462; to writing off the balance of the expenditure in relation to the re-organisation of capital and the issue of four per cent. first mortgage debenture stock, £16,249; to the payment of the interest on the new four per cent. second mortgage cumulative income debenture stock for the period from April 1 to June 30, 1911, £6,000; to reserve account, £10,000; leaving to be carried forward, £4,243. The expenditure of £61,187 in relation to the re-organisation of capital and the issue of the new four per cent. first mortgage debenture stock has been dealt with as follows: £43,540 was provided by (a) transferring from land sales account an amount equivalent to the rents, pastoral licences, interest and sundry receipts of former years which had previously been credited to that account; and (b) £1,397, profit on redemption of four per cent. first mortgage debenture stock. This left £16,249, which has been written off out of the year's

revenue. By the appropriation of £13,462 the renewal and contingency account has been increased to £25,000, after debiting £8,462 for extraordinary renewals of permanent way during the year. The creation of a reserve account of £10,000 and writing off the above mentioned £16,249 has the advantage of facilitating in subsequent years the application of net profits to the payment of the interest on the four per cent. second mortgage cumulative income debenture stock. The instalments of purchase money of land sales outstanding at June 30, 1911, amounted to £258,172, carrying interest at the rate of four per cent. per annum until paid. The balance of the land remaining unsold at June 30, 1911, amounted to 1,843,317 acres.

BURMA RAILWAYS.

The directors' report for the year ended June, 1911, states that the capital outlay during the year amounted to Rs.51,91,015, of which Rs.14,00,000 was expended on rolling stock. The principal other items were doubling the line, rebuilding and remodelling of obsolete stations and yards, provision of staff quarters, and construction of new carriage shops. The gross earnings exceeded those of the previous year by over Rs.5,00,000, and the working expenses advanced by an almost similar amount. The net earnings showed a slight improvement of Rs.3,523. Coaching earnings improved by Rs.91,749. Goods earnings were better by Rs.5,08,764, and there was a rise of more than Rs.10,000 in steamboat earnings, but sundries produced over Rs.1,00,000 less, owing to less interest having been paid by Government to the company on the balance of capital in their hands. Working expenses absorbed 64.07 per cent. of the gross earnings, as compared with 63.10 per cent. in the previous year. The surplus profit account for the year ended June 30, 1911, stands as under: Balance in India on June 30, 1911, Rs.708; share of surplus for the year paid over to the company on September 23, 1911, Rs.9,49,598; total, Rs.9,50,306. Remitted to England at Rs. 4½d., the equivalent of £63,554, Rs.9,49,600; balance in Burma on September 26, 1911, inclusive of interest, Rs.706; surplus profits as above, £63,554; balance in England at end of June, 1911, £55,806; total available for the year, £119,360; dividend of $\frac{3}{4}$ per cent. paid on July 1, £21,187; balance now available, £98,173. The directors recommend that, in addition to the payment on account of surplus profits made on July 1 last, which absorbed, as shown above (less income-tax), £21,187, a further sum, from surplus profits for the year ended June 30, 1911, of £1 5s. per cent. (subject to income-tax, which will be deducted before payment), be paid to the holders of the £3,000,000 stock on January 1 next, thus making, with the £2 10s. guaranteed interest, a gross return for the year of £4 10s. per cent. The payment of this final dividend (inclusive of income-tax) will absorb £37,500, leaving a balance to be carried forward of £60,673.

Colombian Northern Railway.—Presiding at the ordinary general meeting at 9, Bishopsgate, London, E.C., on December 8, Mr. P. C. Matts congratulated the shareholders on the satisfactory results of the year's working. Again there was an increase in the receipts, showing a continuation in the steady progress of the undertaking since it was taken over by the company in 1905. The ratio of working expenses to receipts was only 36.71 per cent. A letter recently received from the chairman of the company, now on a visit to Colombia, showed that the undertaking was being conducted in a very economical and very efficient manner. The report was adopted, and a dividend of 2 per cent. declared.

South Yorkshire Junction Railway.—The ordinary meeting was held in 56, Moorgate Street, E.C., on December 4, Mr. J. B. Pope presiding. In moving the adoption of the report he said that the net revenue account showed a credit balance, after paying the $3\frac{1}{2}$ per cent. guaranteed dividend for the half-year, of £1,979. The accounts permitted of the payment of an additional dividend at the rate of $\frac{1}{2}$ per cent. per annum. It was proposed that the payment of this dividend should be included in the payment of the half-yearly $3\frac{1}{2}$ per cent. guaranteed dividend to December 31 next, thus making the dividend for the period under review at the rate of 4 per cent. per annum. The report was adopted.

Rhodesia Railways Trust.—The report states that the net earnings of the railway system in which the Trust is interested amounted to £695,264 in the year ended September 30, as compared with £642,684 in the preceding twelve months and £150,824 in 1908-9. During 1911 the carriage of permanent-way material decreased, and the increased net earnings are mainly due to much larger traffics in general merchandise, largely to the Belgian Congo. Pursuant to the provisions of the agreement with the railway companies, the British South Africa Company,

on February 15 last, called upon this company to take over the debt due to it by the Rhodesia Railways, Limited, amounting to £570,024, and on August 15 £561,804 due to it by the Mashonaland Railway, in consideration of which 1,131,888 £1 shares of the company were allotted to the British South Africa Company.

Southern Punjab Railway. At the half-yearly meeting held at 36, New Broad Street, E.C., on December 6, Sir Bradford Leslie, who presided, said that the present issue of preference shares would be converted into stock to rank *pari passu* with the existing stock of £1,500,000 as soon as possible after March 1, when the first payment of interest would be made. The main line gross receipts were 3,05,000 rupees in excess of the first half-year of 1910. The directors had declared the usual interim dividend at 6 per cent. per annum. The receipts during the current half-year encouraged the board to hope that next June would enable them to commence the practical carrying out of the policy of the board to keep £100,000 in hand for equalisation of dividends in bad times. He ventured to predict the declaration of a bonus of 2 per cent. per annum at the next meeting, which would make the distribution 8 per cent. for the year.

Argentine North Eastern Railway. Mr. W. Bailey Hawkins, presiding at the ordinary meeting of this company in Winchester House, E.C., on December 7, said that the present report was the best the company had ever issued. They were not only now able to pay their dividend on the "A" and "B" debentures, and place £10,000 to the credit of renewal, but to carry forward an amount of £27,353. The property was progressing very satisfactorily. The number of passengers carried during the year showed an increase of over 28,000, and the amount earned an increase of more than £13,000. There were several schemes in progress for colonisation along the line, and when these were developed there was no doubt that the traffic would increase. The carriage of live stock had been very heavy; but, owing to the drought, they lost in February last over £3,000 of traffic as compared with the previous year. That traffic, however, increased slightly in March, April, and May, until in June there was an increase of £4,600. He thought that this was a very satisfactory position, more especially when they considered what a terrible effect the drought had upon the country. With the exception of posts and charcoal, there was an increase in every item. More rolling stock was required, and a meeting would be held to sanction raising further capital. The report was adopted.

Bengal-Nagpur Railway.—At the 50th ordinary general meeting, held on Tuesday at Gresham House, Old Broad Street, London, E.C., Sir Samuel Hoare, who presided and moved the adoption of the report, said that during the 25 years of its existence the railway, as an investment to the shareholders, had not been unsatisfactory, and undoubtedly the advantage to the Indian Empire had been and was very considerable. By means of the Bengal-Nagpur Railway, with an open mileage of 2,480 miles, a vast tract of country, formerly sparsely populated, had been opened out, cultivation had been extended, and the mineral wealth of India had been developed. The fact that during the six months under review the railway carried 7,501,393 passengers and 3,061,472 tons of goods was a sure indication of the large share which the Bengal-Nagpur had had in the development of India during the last 25 years. The gross earnings of the half-year amounted to Rs.1,81,34,000, or an increase of Rs.10,92,000 over the corresponding half-year of 1910. The net earnings of Rs.92,23,000 showed a decrease of Rs.75,000. The reduction in net earnings was caused by an increase in working expenses, which were 80 lakhs, against 77½ lakhs. This was largely due to the acceleration of their programme for the strengthening and renewal of bridges and the relaying with heavier permanent way material on the main line between Sini and Nagpur. For the current half-year the returns to date indicated that their earnings would be a record for the period from July to December. The report was adopted.

District Railway Enterprise.—This week the District Electric Railway duly inaugurated the opening of the widening to four roads between Hammersmith and Chiswick Park, and signalled the occasion by the issue of an attractive poster, stating that the "track is fine, but the train service is finer." A train now arrives at Hammersmith every three minutes, instead of every five minutes. In due course it is hoped to widen the line for a distance of three miles between Wimbledon and East Putney. Meantime there is to be a general "speeding up" of the service to Wimbledon. Considerable improvement is also contemplated in regard to the service between Uxbridge and the Mansion House.

GENERAL NEWS.

ELECTRIFICATION PROJECTS IN VICTORIA.

Mr. McI., who has been engaged by the Victorian Government in connection with the scheme for the electrification of the suburban railway lines, will, it is reported shortly call for tenders for the carrying out of the proposals. A railway official, who has had much experience in connection with the Victorian railways, will proceed to London at an early date to assist in the formulation of the scheme.

Sir Alfred Mond, M.P., presiding on Thursday at the annual meeting of the Power-Gas Corporation, mentioned that the company had during the year taken an extremely interesting contract for the electrification of an important section of the Imperial Railways of Japan. The total amount of the contract was £100,000, and it included gas plant, gas engines, and dynamos. The Government were to be congratulated on their engineers, their modern spirit, and their appreciation of advances in modern power production. It made one a little melancholy when railways were being electrified all round to find in this country English engineers still adhering slavishly to their old steam practice, and that one had to go to Japan to really adopt up-to-date methods.

The New Zealand Government is investigating the conditions pertaining to the Christchurch-Lyttelton Railway, with a view to electrification, the power to be derived from Lake Coleridge. As an alternative to regrading, which is becoming necessary on many lines, reports are to be prepared upon the application of electricity to main lines as well as to suburban traffic.

THE PENNSYLVANIA RAILROAD'S NEW YORK STATION.

The New York correspondent of the *Pall Mall Gazette*, writing on November 28, gives some interesting facts regarding the Pennsylvania Railroad Company's first year's experience of running trains into their new station in New York, and also regarding improvements in means of communication in the city. He says:—

It is just a year since the Pennsylvania station was opened in the heart of New York city. The great railway company is now able to congratulate itself that the conception of its president, Alexander Cassatt, has been realised, and his anticipation borne out in practical successful operation. In the twelvemonth 112,000 trains have passed in and out of the tunnels reaching the station. There has not been a single accident on the section which includes the tunnels, and 99 per cent. of the trains have been on time. It is a splendid record, which has repaid the company to some extent for the enormous cost of the underground system, which tunnels under the city and two rivers.

The heads of the Pennsylvania Railway, however, are by no means satisfied with the situation. There is ample room for development of traffic. At present the station is comparatively out of the way of the main arteries of traffic in New York. The railway has ground of complaint against the city authorities' delay in carrying out a subway line on the west side of Manhattan, which should feed and be fed by the station. The railroad has made such an immense investment in the station buildings that it looks for some reciprocity on the part of the city. A project has just been ventilated of opening up the section of the city between the Pennsylvania Station at 34th Street on the West side and the Grand Central Terminal at 42nd on the East side by a curving diagonal street or avenue to connect these two imposing railway structures. The plan would involve considerable disturbance of the city's present map and would be extremely costly, needing £3,000,000 at least, though probably in the end the increased value of the buildings lining the street would return to the city the outlay incurred in condemnation proceedings.

But the more pressing need of the city is a comprehensive plan of underground railway communication linking the stations with the present subways. In spite of the good management and popularity of the Hudson and Manhattan Railway, which has two pair of tubes under the North River and connects the trunk railroad terminals on the New Jersey shore with the island of Manhattan, the traffic, after two years' running, has failed to reach the dividend-earning stage. Mr. William McAdoo, the president of the road, has courageously appealed to the public to support the company in its increase of fares to its uptown end. The nickel, or five-cent fare, which the popular voice insists should be the universal charge all over the city, is to be raised to seven cents, or threepence halfpenny, instead of twopence halfpenny.

RUNNING POWERS FROM NEW JUNCTIONS.

GREAT CENTRAL v. MIDLAND RAILWAYS.

In the Court of Appeal, last Saturday—before the Master of the Rolls and Lord Justices Fletcher Moulton and Farwell—judgment was given in the case of the Great Central Railway Company v. the Midland Railway Company, which raised a question of considerable interest. Briefly, the point was whether a railway company which already possesses general running powers over another railway company's line, and lawfully obtains a new point of access to that line, may exercise those powers from the new junction. The predecessors of the Great Central Railway Company, under a special Act of 1865, obtained general running powers over the Midland Company's Mansfield and Shireoaks line. In 1897 the Derbyshire Railway Company, whose line crossed the defendants' line at Shireoaks, constructed under powers of a special Act a short line called the Shirebrook curve and a junction connecting their line with the defendant company's line at Shireoaks, and, under agreement with the defendant company, were granted running powers over so much of the defendant company's line as lay between the junction and a colliery on the defendants' line for coal traffic to and from the colliery by way of the Shirebrook curve and junction. In 1906 the Great Central Railway and the Derbyshire Railway Company were amalgamated under a special Act which incorporated the amalgamation provisions of the Railway Clauses Act, 1863. The plaintiffs then claimed that as owners of the Derbyshire Railway's undertaking they were entitled to bring general traffic over the Shirebrook curve and junction, and then, by virtue of their general powers under the Act of 1865, to pass such traffic over the defendant company's line to and from Mansfield. Mr. Justice Neville gave judgment for the plaintiffs, and the Midland Railway Company appealed.

Lord Justice Fletcher Moulton, in a judgment which was read by the Master of the Rolls, said that the Great Central Railway Company sued for a declaration that they were entitled to exercise running powers for all their traffic over the Mansfield and Worksop line of the defendant company, and for that purpose to run on and off the said line by way of Shirebrook Junction. They based their claim on Section 29 of the Midland Railway (Mansfield, etc., lines) Act, 1865, which gave to the Manchester, Sheffield and Lincolnshire Railway running powers over that branch of the Midland line. The Manchester, Sheffield and Lincolnshire Railway Company subsequently changed its name to the Great Central Railway Company. The question might arise as to the extent of running powers granted by the above section, but it was immaterial, in his Lordship's view of the rights of the parties, and it was not argued before the Court—the defendants, however, reserving their right to raise it should it be found necessary. The real contest between the parties related to the last portion of the injunction claimed by the plaintiffs, namely, their right to run on and off the line of the Midland Railway Company at Shirebrook Junction. That junction was constructed by the Lancashire, Derbyshire and East Coast Railway, under the powers granted to them by their Act of 1897, and in order to link their line up with the Mansfield and Worksop line of the Midland Railway Company. That Act, however, though prescribing elaborately the conditions under which the junction should be made, gave to the Lancashire, Derbyshire and East Coast Railway Company no running powers on to or over the Midland line, but by Section 26 it gave to the two companies powers to enter into agreements for a variety of purposes (including the interchange of traffic). Under those powers the two companies made an agreement, dated December 1, 1897, with regard to such running powers, and it provided that the Lancashire, Derbyshire and East Coast Railway Company might run over and use for goods traffic only the Midland Company's Mansfield line from Shirebrook Junction to a proposed junction at Mansfield. That agreement was modified by one made between the same parties on February 1, 1898, which permitted the Lancashire, Derbyshire and East Coast Railway, without prejudice to the running powers already given by the former agreement, to run between Shirebrook Junction and Shirebrook Colliery for the purpose of traffic to and from that colliery at a fixed toll of 3d. per ton. Those limited running powers were all that were possessed by the Lancashire, Derbyshire and East Coast Railway Company at any time material to the existence of this action, so that only goods traffic and traffic going to the proposed junction at Mansfield of the Shirebrook Colliery could pass from that junction on to the Midland Railway through the Shirebrook Junction. In 1906 the Great Central Railway Company obtained an Act for the amalgamation of the railways and undertaking of the Lancashire, Derbyshire and East Coast Railway with their own undertaking. This Act incorporated Part 5 of the Railway Clauses Act (1863). The amalgamation was carried out in the second of the two forms

referred to in Section 37 of the Railway Clauses Act, inasmuch as the Lancashire, Derbyshire and East Coast Railway was dissolved, and its undertaking was transferred to the plaintiff company without any change of the name in the latter. The undertaking of a railway might change gradually by the construction of new lines, works, etc., without in any way affecting the identity of the railway company. But this was not the present case. That was a case of the union of the undertakings of two railways by amalgamation. That could only be done by statute, and the effect of such union was carefully laid down in Part 5 of the Railway Clauses Act, which the Legislature usually required should be incorporated in every Act authorising the amalgamation, in order that the general results of such a union might be uniform. The resulting company was an entity differing from either of the two component companies according to the provisions of Part 5 of the Railway Clauses Act. A perusal of Part 5 of that Act showed that the terms upon which amalgamation was permitted were based on the principle that third parties should not lose any rights or privileges thereby, but that, on the other hand, the rights and privileges of the component companies, so far as they affected third parties, should be preserved. The application of Section 8 to the present case was very simple. At the date of the amalgamation the dissolved railway had only the limited rights of passage on to the Midland line. To traffic other than that the Midland Company could close their junction at Shirebrook and could refuse to permit goods traffic to enter or leave. It was true, theoretically, the statutory powers of user existed which were given by Section 92 of the Railway Clauses Act, but it was admitted that those had nothing to do with this case. After the amalgamation the amalgamated company was entitled to enjoy those privileges only to the same extent and subject to the same conditions as the dissolved company enjoyed them. Any other decision would work great injustice. The junction at Shirebrook had been permitted on terms which left the user to be settled by arrangement, and an arrangement had been made between the two companies and the rights of the user of the junction fixed thereby. In accepting the amalgamation the amalgamated company accepted the terms that the rights of user of the junction should not be increased. His Lordship could not imagine any more serious interference with the rights of the Midland Railway Company, which was a third party not concerned in the amalgamation, than to extend the rights of user of the junction to all kinds of traffic running all over the Midland line, as the plaintiffs claimed that the Court should declare to be their right. The language of the clause as to amalgamation was so clear that plaintiffs' counsel scarcely attempted to deal with it. Substantially, the whole of plaintiffs' argument amounted to saying that the Court was bound by the decision in the case of the Midland Railway Company v. the Great Western Railway Company. His Lordship thought there were fundamental differences between the facts of that case and the present, but it was not necessary to examine the facts closely, as there was the all-important difference in the point of law that there was no amalgamation in that case, and in that case the Court had not to consider the effect of the statutable provisions on which the case before their Lordships entirely turned. In the Great Western case the plaintiff company had running powers up to and on the line of the defendant company, and it relied on those running powers entirely. At the date of the amalgamation the Great Central had no running powers over the Lancashire, Derbyshire and East Coast Railway, and might never have obtained any. It obtained, of course, the right to pass its traffic over the line of the dissolved company by amalgamation, but that would not give it any powers of passing that traffic on to the Midland line. Its powers of so doing were by the conditions of amalgamation no greater than those that existed for the traffic of the Lancashire Derbyshire and East Coast Railway at the date of the amalgamation. His Lordship was accordingly of opinion that the appeal should be allowed, and the plaintiffs' action dismissed with costs.

The Master of the Rolls and Lord Justice Farwell concurred, and the appeal was allowed.

Improvised Railway Trucks for Military Use.—On Tuesday some experiments were made at the sidings at Bulford Camp by the L. and S.W. Railway and the military authorities in the loading of improvised railway trucks with field guns and transport road wagons. A number of officers attended from Woolwich, Aldershot, London and elsewhere.

Durbar Honours for Railway Officers.—The following honours conferred by the King-Emperor were announced in the *London Gazette* last Tuesday:—To be Knight Commander of the Star of India: Sir Trevredyn R. Wynne, K.C.I.E., chairman of the Railway Board. To be Knight Commanders of the Indian Empire: Mr. Henry P. Burt, C.I.E., manager, North Western Railway; and Mr. W. W. A. Dring, C.I.E., agent, East Indian Railway Company.

THE ELECTRIC LIGHTING OF RAILWAY TRAINS.

RELIABILITY AND ECONOMY OF THE BRAKE-VEHICLE METHOD.

Mr. Roger T. Smith, on November 28, read a paper on the above subject at a meeting of the Institution of Civil Engineers, the following being an extract:—

The method of train lighting considered is that in partial use on the Great Western Railway, where axle-driven dynamos and batteries controlled by an automatic regulator are installed on brake-vehicles only. The lamps throughout the train are supplied from these equipments, which work in parallel with each other, the brake-vehicle equipments and the lamp wiring in the coaches dependent on them being connected electrically by through wiring coupled between coaches. There is consequently an appreciable reduction in initial cost and upkeep of plant, and, what is of chief importance from the railway point of view, increased reliability. Mr. William Langdon's paper, read before the institution in 1891, describes his, the first, attempt to light electrically passenger rolling stock in general, in place of lighting set or block trains which were never broken up in traffic. Mr. Langdon's final method provided one axle-driven dynamo in the block part of a main-line train, and a battery on each of the other coaches. All coaches were electrically coupled, and when uncoupled the lighting of each coach was continued during its branch journey by means of the charged battery. For any method of electric train lighting applicable to all passenger rolling stock the alternatives are either some such method as that proposed by Mr. Langdon, or that every coach is "self-lit," that is to say, provided with its own axle-driven generator and battery. Other methods are either not applicable to passenger stock as a whole or unsuitable for English railways.

LIFE OF TUNGSTEN GLOW LAMPS—ACCUMULATOR RENEWAL.

The first aim of any method of train lighting should be to light passenger rolling stock adequately and with reliability. Measurement and experience lead to the provision of an illumination, measured on a horizontal plane at eye level, of 2 foot-candles in third-class and $2\frac{1}{2}$ foot-candles in first-class compartments. Glare or dazzle can be minimised, if not entirely prevented, by keeping lamps out of the line of sight, by providing a white background behind the glowing filament, or by reducing the intrinsic brilliancy of the filament by enclosing the lamp in a diffusing globe or Holophane globe, the latter at the same time improving distribution. The tungsten train-lighting glow lamp now replaces the carbon glow lamp, its most economical efficiency with present train-lighting lamps being 1.3 watt per candle. On the average, tungsten glow lamps, with a useful life of 850 hours, now have to be changed only once a year in the electrically-lit coaches on the Great Western Railway, where lamp voltage is regulated within $\pm 2\frac{1}{2}$ per cent. Any axle-driven system must, in the first place, provide a lead cell or other accumulator, so that the lamps are lit whether the train is standing or moving throughout its range of speed. In order to draw proper attention to the importance of the accumulator in train lighting, it is both convenient and useful to look upon the accumulator as the essential element, and on the dynamo as the device for making the output of the accumulator continuous throughout the hours of lighting. As typifying the accumulator the lead cell alone is considered. The two extremes among methods of charging lead cells are charging at constant voltage and charging at constant current, but a method of charging which combines the advantages of both extremes, while avoiding their disadvantages, is recommended, the charge being completely under the control of an automatic regulator set to give the proper compromise. The arrangement consists in starting with a heavy charge and gradually reducing it until, after proper gassing has taken place so as to mix the electrolyte, the charge is stopped when the cells are full, or the battery is left floating on the load while the lights are on. Automatic regulation is necessary to secure a long and healthy life for the lead cell, and to reduce maintenance it is essential. When properly arranged, 10 per cent. per annum of the initial cost of the whole cell will provide both for maintenance and for renewals of the plates and boxes.

AUTOMATIC REGULATION.

The train-lighting dynamo is of secondary interest as compared with the battery, the essential element being some means of keeping the voltage constant at all speeds, while permitting of its automatic variation by the regulator when required. The suspension and driving of the dynamo and the reduction of belt losses and renewals are among the chief factors in success. The automatic cut-in cut-out switch for connecting or disconnecting the dynamo from the battery should be actuated electrically, since the voltage of the latter may vary 25 per cent. from that of the former at any given speed. It is desirable that this switch should also act as an instantaneous automatic reverse-current circuit

breaker. The problem of automatic regulation has not attracted the British inventor as compared with other inventors on both sides of the Atlantic. The functions of an ideal regulator, combining in one or two instruments battery and lamp voltage regulation may be defined briefly as the following: First, it must control the lamp voltage within $\pm 2\frac{1}{2}$ per cent. of the rated voltage of the lamps, and, within reasonable limits, must do so independently of lamp load and entirely independently of battery voltage. Secondly, when lamps are off, the regulator must control the generator field so as to provide the full output of the dynamo for charging an empty battery; and when lamps are on the balance of the full output must be available for charging. As charging proceeds, the regulator must control the inherent regulation of the dynamo so that its voltage only rises sufficiently to give a diminishing charging current. Thirdly, with a fully charged battery and lamps off, the regulator should reduce the charging current to zero. Fourthly, with a fully charged battery and lamps on, the dynamo output must be adjusted to equal the lamp load, leaving the battery in a floating condition with current neither entering nor leaving it. The foregoing requirements can to-day be obtained combined in one piece of apparatus.

RELIABILITY OF GREATER IMPORTANCE THAN COST.

To reduce the initial cost of electric train lighting, it is of first importance to reduce the number of battery cells, since within train-lighting limits it is the number of cells to be maintained, and not their size, which counts. The number of dynamos and regulators may be reduced in the same proportion. With the exception of through coaches transferred from main to branch lines, every train on the Great Western Railway has at least one brake-vehicle controlling it for traffic purposes, and all coaches which leave or join a main-line train *en route* are either brake-vehicles themselves, if detached or attached as single vehicles, or, if two or more coaches are detached, they are controlled by a brake-vehicle. If every brake-vehicle is equipped with a generator and battery the remaining coaches being wired only, while through wiring and couplers, designed to connect all vehicles together electrically, are provided on every coach, a less costly method of lighting trains is assured, as compared with the equipment of every coach as a self-lit vehicle. In addition, much greater reliability is secured by working two or more dynamos and batteries in parallel. This arrangement of equipment it is proposed to call the "brake-vehicle" method, because under ideal circumstances only brake-vehicles need be equipped. On the assumption that all Great Western passenger rolling stock might be equipped for electric train lighting, the percentage of brake-vehicles would be 27, of dependent coaches 40, and of self-lit coaches 33 for main-line working, while for local and suburban traffic the percentage of brake-vehicles would be 30 and of dependent coaches 61. If the ratio of the brake-vehicles to dependent coaches were as 1 to 3, and there were no self-lit coaches, the initial cost of equipping an entire rolling stock of some thousands of coaches would be reduced by about 35 per cent. as compared with self-lit equipments, and the working costs would be reduced about 40 per cent. The increased reliability due to a higher percentage of generator coaches is, however, of greater importance to the railway than reduction in cost. In addition to the electrical requirements already specified for the ideal equipment, others are specially needed for the brake-vehicle method. It is of primary importance that the dynamo should be capable of running with its brushes short-circuited, while in addition its output must be capable of being quickly altered by a simple adjustment to suit altered traffic conditions.

ANNUAL COST OF A SIX-COACH TRAIN.

An experimental six-coach train lit on this method was run nearly continuously for two years in all sorts of traffic, varying from fast main-line services to slow, stopping, local services. Two brake-vehicles, equipped with 45-ampere dynamos, regulators, and 180-ampere batteries, light themselves and three dependents. A self-lit detachable coach completes the train. The Leitner system provided the only available apparatus able to meet the special conditions. All the equipments are in parallel, coupled through cables throughout the train providing for this. For the lighting circuits the through wiring and method of coupling is arranged on the loop-positive system, one regulator controlling the lamp voltage on each side of the loop. The same looped-positive brake-vehicle method has been applied to two trains running on South Wales services, to two new trains specially built for the Cunard boat service between Paddington and Fishguard, and to two new trains used for Birmingham local services; and it is being further applied. The 'bus-bar system of through wiring, a simplification of the looped-positive system, is now being adopted. By the 'bus-bar system greater simplicity and increased reliability are secured

as compared with the looped system, but at greater cost. The total annual cost of lighting a six-coach train on the looped-positive brake-vehicle method is as follows. The cost of the initial equipment would be £761, inclusive of all carriage-work charges; adding working costs, extra cost of locomotive power—determined experimentally—and capital charges, the total annual cost becomes:—

Working costs	...	...	...	...	£45
Power to drive dynamos, $1\frac{1}{2}$ per cent on £875	...	...	...	...	13
Haulage of extra weight, 1.7 per cent. on £875	...	...	...	...	15
Interest on £761 at 4 per cent.	...	...	...	...	30
Reproduction of capital in 20 years at 3 per cent.	...	...	...	...	23

Total annual cost of lighting a six-coach train £126

With regard to the safety of electric train lighting, although at 22 volts an arc can be formed between any of the metals employed in train lighting, this arc will not persist. Provided the ordinary precautions necessary with electric circuits are taken, and suitable fuses are used and properly maintained, it is believed that complete immunity from fire risks can be ensured.

WAGES CONCESSIONS BY THE COMPANIES.

LONDON AND NORTH WESTERN.

During the past few weeks several of the railway companies have announced concessions to their employees.

Following upon its concession to the traffic staff, the London and North Western Railway Company has announced improved conditions for clerks and permanent way men. The new scale for clerks in the goods, coaching, rolling stock, horse, and detective departments is to come into force on January 1. At the age of fourteen years a junior entering one of these departments is to receive a minimum of £20, and the amount will rise in the second year to £25, in the third to £30, in the fourth to £40, and in the fifth to £50. If he enters at the age of fifteen years, he commences at £25, and reaches £50 in five years; if at sixteen, he begins at £30, and reaches £50 in four years; if at seventeen, he begins at £30, and has two £10 annual rises. After having been in receipt of £50 for one year, the clerks will pass into classes. Under the fifth class scale they will advance by £10 rises every other year until in the ninth year £100 is reached. This scale applies to Birmingham, Wolverhampton, Walsall, Birkenhead, Stockport, Derby, Halifax, Bolton, Cardiff, Coventry, Dublin, Leicester, Huddersfield, Hull, Leeds, Liverpool, Manchester, Nottingham, Oldham, Preston, Sheffield, Swansea, Warrington, and Wigan. In other places (other than London) the maximum is £90, reached at the seventh year.

After passing through the fifth class scale the men will be advanced according to merit, as vacancies arise, into fourth, third, second, and first class clerkships, and upon such promotion their salaries will be advanced £10 every two years, until the maximum of the class is reached, except in the case of the second and first class clerks, when the second advance will be

in each case one of £15. The scale for the places particularised will be as follows:—Fourth class, £100 to £120; third class, £120 to £150; second class, £150 to £175; first class, £175 to £200. A number of special class positions, at a salary of over £200 per annum, are to be open to clerks who have passed the classes referred to.

The permanent way staff, which numbers about 20,000 men, receive liberal concessions. The proposed increases in this department involve an addition of £30,000 per annum to the wages bill. Platelayers are the chief beneficiaries, and it is proposed to grant men in this grade holidays with pay, with six free passes a year for the use of the men and their families.

THE POSITION OF THE SOUTHERN COMPANIES.

The London and Brighton Company maintain that its men, by the concession in 1909, are practically as well off as are the men of the Great Western or other companies with the concessions recently granted. This former line met its men on the Conciliation Board on December 4. The bulk of the trade of the southern lines is passenger trade, and the greater portion of the traffic is suburban, and in most cases it is in competition with the London County Council tramways, and experience shows that even a slight increase in the fares will result in a considerable loss.

MINIMUM WAGE AT CREWE WORKS.

The London and North-Western Railway Company has brought into force at their Crewe works a minimum wage of £1 per week. All grades of labourers previously receiving 18s. and 19s. per week received payment at this rate as from October 26 last. The wages of skilled artisans in the works are to be increased in due course, probably to the extent of two or three shillings.

LONDON AND SOUTH WESTERN.

A revised scale of pay for the clerical staff came into operation on December 1. London clerks will have a rise of £5 after the first year of their appointments, then an annual rise of £10 until the fifth year, and an annual rise of £5 from the fifth to the eleventh year. Country clerks will be similarly treated up to the fourth year of service, after which they will receive advances of £5 annually to the tenth year. The terms of employment for other departments are under consideration.

RHONDDA AND SWANSEA BAY.

The Rhondda and Swansea Bay Railway Company has issued to the men engaged in the traffic department a list of improved rates of wages, to operate from October 23 last. The improvement, which affects all grades, means—when the maximum is reached—an extra expenditure of about £1,000 a year.

G. W. AND L. AND N.W. JOINT RAILWAYS.

At a meeting in Shrewsbury on December 6 of the Conciliation Board of the Great Western and London and North Western Joint Railways, concessions were arrived at between the companies and the men on the joint railways, by which some 1,500 men will get either reduced hours or higher wages, or both. The staffs affected include those at Birkenhead, Chester, Shrewsbury, Hereford, Ludlow, Wellington, Craven Arms, and many other stations. It is estimated that when the scheme comes into full working it will cost the joint companies a further £4,000 a year. The men's representatives regarded the concessions as a fair compromise.

GREAT WESTERN CLERICAL STAFF.

Sir J. C. Inglis, general manager, has informed the clerical staff that the directors have sanctioned arrangements whereby, under ordinary circumstances, and subject to efficient performance of duties and satisfactory conduct, salaries will in future be advanced by yearly increments up to £100 per annum. Beyond that amount the present practice will be continued, advances being dependent upon the post occupied, merit, and efficiency. The arrangements were brought into operation in the paybill for the four weeks commenced December 4.

Saloons for Invalids and Convalescents.—Two large saloons, each weighing 27½ tons, have recently been constructed at the North Eastern Railway Company's carriage works at York specially designed for the comfort of invalids and convalescents. The bodies of the coaches are 56ft. 6in. over ends, and 9ft. over waist mouldings, with a clear inside height at the centre of 7ft. 9in. The roofs are of a semi-elliptical form. The underframes are built of rolled steel sections, strongly trussed. Double entrance doors are arranged in order to allow of direct access of an ordinary bath chair or stretcher into the main saloon, which is 20ft. long.

CHRISTMAS EXCURSION ARRANGEMENTS.

GREAT CENTRAL.

A most attractive programme has been issued by the Great Central Railway for those who are spending Christmas in the Midlands, Yorkshire, Lancashire, Lincolnshire, or North of England. On December 23 and 24 special expresses will leave Marylebone at suitable times for over 500 different stations. The tickets, issued at extremely low fares, will be available for return on the following Tuesday, Wednesday, or Saturday. Luncheon or restaurant cars will be attached to the trains, and the compartments represent the acme of comfort, being well lighted, and maintained at a genial temperature. Shopkeepers and others whose business will keep them in London until late on Saturday evening will have the advantage of night trains.

MIDLAND.

The Midland excursion bookings from St. Pancras will commence on December 21 and be continued up to December 26. The field covered by these bookings includes all parts of the Midland counties and the North of England, Scotland, and many parts of Ireland, notably Belfast and the north, via Heysham. Passengers travelling long distances will be accommodated by tickets available for various periods up to 17 days. The Friday to Tuesday week-end tickets will be issued as usual, but will be available for an extra day, enabling the holders to return on Wednesday. Saturday to Monday tickets will be available for return on Tuesday.

Many of the ordinary train services will be suspended on Boxing Day, as shown in the time tables, and additional trains run as announced in special bills.

LONDON AND NORTH WESTERN.

The Saturday afternoon dining-car expresses to Devon and Cornwall on December 23 announced by the London and North Western Railway should prove most convenient to West-countrymen. Three specials will leave Waterloo for the West at 4.15, 4.25, and 4.40 p.m. Ordinary, week-end, and excursion tickets will be available by these trains, and hot dinners, suppers, and teas will be served en route. On the Saturday night special fast trains, at excursion fares, will leave Waterloo for the West, and the principal stations in Hants, Wilts, Somerset, and Dorset, the tickets being available for varying periods up to January 6. The usual week-end tickets will be issued, but with extension to return up to and including December 27.

The winter season at Bournemouth and Boscombe bids fair to surpass all others, and "The Land of Pines and Sunshine" will no doubt attract many visitors for Xmas. Two-hour expresses run from Waterloo, and Swanage is reached under three hours. The very pleasant places of Exmouth, Budleigh Salterton, Bude, Sidmouth, Weymouth, and Lyme Regis are also catered for. Budleigh Salterton possesses the finest seaside golf course in the south. Restaurant cars run in the principal expresses, and the compartments of most long-distance trains are warmed by special system under the passenger's control. Certain express trains will be duplicated on the few days preceding the holiday, and on December 24 special trains will run, including an express from Waterloo at 10.15 a.m. to Winchester, Southampton, Bournemouth, etc.

For visitors to the Continent, etc., 14-day tickets will be issued from Waterloo, via Southampton, to Paris and Havre

(24s. 6d.) on December 21, 22, and 23; to St. Malo for Brittany on December 23, and to the Channel Islands on December 22.

GREAT NORTHERN.

The Christmas and New Year programme issued by the Great Northern Railway embodies excursions to over 500 stations, and covers Scotland, North Eastern district, Yorkshire, Lancashire, Nottinghamshire, Lincolnshire, Norfolk, and the Home Counties. The trains will be composed of corridor carriages and comfortably warmed. The principal excursions are as follows: December 22, for 5, 8, or 17 days to Edinburgh, Glasgow, Perth, Aberdeen, Dundee, Inverness, etc. Light refreshments will be supplied on the 7.20 p.m. and 9.55 p.m. trains. December 23, for 4, 5, or 8 days, to Nottingham, Leeds, Bradford, Halifax, Harrogate, Huddersfield, Newcastle, Scarborough, Hull, Sheffield, Lincoln, Lynn, Norwich, Manchester, etc. Mid-night, December 23, for 3, 4, or 7 days to Bradford, Dewsbury, Halifax, Keighley, Leeds, Nottingham, Sheffield, etc. December 24, for 2, 3, 4, or 7 days and Christmas Day, 25, for 1, 2, 3, or 6 days to Peterboro', Nottingham, Newark, Retford, Lincoln, Grimsby, etc. December 25 and 26, for 1 day, etc., to Huntingdon, Cambridge, and stations in the Home Counties. December 26, for 1, 2, 3, or 4 days to Peterboro', Grantham, and Nottingham. December 26, for 5, 8, or 17 days to Edinburgh, Glasgow, Perth, Dundee, Aberdeen, Inverness, etc. Light refreshments on 7.20 p.m. train. Week-end tickets issued on December 22 and 23, also December 26 and 30, will be available for return on Sunday, Monday, Tuesday, or Wednesday following date of issue. Saturday to Monday tickets issued on December 23 will be valid for return on the following Sunday, Monday, or Tuesday.

LONDON AND NORTH WESTERN.

The London and North Western Company have issued a full and complete programme of excursion arrangements. Amongst the principal bookings are cheap fares from Euston on Friday, December 22, to Dublin, Cork, Killarney, Belfast, Londonderry, and many other Irish stations; to Blackpool, Morecambe, the Lake District, Liverpool, Southport, Manchester, Leeds, South Wales, and to numerous places in Scotland. On Saturday, December 23, to North Wales, South and Central Wales, the Cambrian Line, Blackpool, Morecambe, Lake District, Southport, Liverpool, Leeds, Manchester, Birmingham, and Wolverhampton Districts. On Dec. 24, and Monday, a special train at ordinary fares will leave Euston at 6 a.m. for Northampton, Rugby, Birmingham, Shrewsbury, Chester, Manchester, Liverpool, etc.; and on Tuesday, December 26, a day excursion will leave Euston at 9.45 a.m. for the Birmingham district.

The week-end tickets issued on Fridays and Saturdays, December 22, 23, 26, and 30, will be available for the return journey on the following Sunday, Monday, Tuesday, or Wednesday.

On Friday, December 22, a special dining car express will leave Euston at 4.50 p.m. for Liverpool (due 9 p.m.) and Fleetwood (due 10.25 p.m.) at ordinary fares.

SOUTH EASTERN AND CHATHAM.

Complete arrangements have been made by the South Eastern and Chatham management for the traffic to the sunny Sussex and Kent coast, as well as to the Continent. Week-end tickets, available by any train (mail and boat expresses excepted), will be issued from London on December 22, 23 and 24, available for return on 24, 25, 26 or 27. On December 23, a fast late train

at week-end fares will be run to the chief stations in Kent, leaving Victoria at 12.30 midnight and Holborn 12.25 midnight, calling at St. Paul's 12.27 a.m., etc. A similar train will run to Sevenoaks, Tunbridge Wells, St. Leonards, Hastings, Ashford, Canterbury, Ramsgate, Margate, Folkestone and Dover, leaving Charing Cross at 12.15 midnight. On Christmas Day several extra trains will run. On Boxing Day there will be cheap excursions from the principal stations to Penge (for Crystal Palace) and London.

The Continental arrangements of the S.E. and C. Company include cheap return tickets from London to stations on the French Riviera, leaving Charing Cross Station at 1 p.m. on December 22, returning any day up to January 30. Cheap excursions will be available from London to Paris on December 21-24; also from London to Brussels, via Dover-Calais, Folkestone-Boulogne, and Dover-Ostend on December 21-26 inclusive. Cheap tickets are announced to Boulogne on December 21-26, and also to Calais, Ostend and Flushing. For the winter sports in Switzerland special arrangements have been made.

RAILWAY NOTES.

Low Operating Costs.—The secretary of the Motor Rail and Tramcar Co., Ltd., 79, Lombard Street, E.C., writes:—"As an interesting corollary to the 'Remarkable Figures for Working Costs' of the Tilling's petrol electric road vehicles, mentioned on page 562 of your issue of 2nd inst., which showed cleaning and operating expenses of 7d. per car mile or 7½d. (inclusive of depreciation for 32-seat vehicles, with maintenance 1.25d. per car mile), the enclosed print of the East India Tramways Company's report, showing a total operating cost for 46-seat cars of 3.75d. (inclusive of .80d. for depreciation, and .37d. for maintenance per car mile), with petrol, or rather benzine, consumption of 8 miles per gallon, will doubtless prove interesting to railway and tramway readers generally." The East India Tramways Co. operate the "Simplex" cars.

Australian Transcontinental Railway.—The Board of Trade have now received a copy of a report by the consulting railway engineer for the Commonwealth of Australia on the construction of the proposed transcontinental railway through South

and Western Australia, from Port Augusta to Kalgoorlie. The total cost is estimated at £4,045,000, including bridges and culverts, £84,000; rails and fastenings, £1,012,000; sleepers and ballast, £1,038,000; water supply, £456,000; station yards (including telegraph equipment, terminal accommodation, and workshops and machinery), £335,000; rolling stock, £315,000, etc. If internal combustion locomotives were employed the cost would be reduced to £3,839,000, owing to the saving to a large extent of the cost of providing water. It is recommended that an extension of the same gauge as the transcontinental railway be built from Port Augusta southwards to Brinkworth, a distance of 96 miles, at a cost of not more than £300,000. This would effect a saving in distance between Port Augusta and Adelaide of 58 miles. The South Australian Government have contemplated extending their broad gauge railway from Hamley Bridge to Brinkworth. The report of the consulting engineer may be seen by British contractors and manufacturers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

"Continuous Passenger Transportation."—Lecturing on Wednesday, at the Society of Arts, Mr. W. Y. Lewis explained his scheme for enabling people to step from a moving platform to a moving train. He stated that the perfection of graduation attainable permitted high rates of speed change being employed. During these periods doors or gates, the safety non-pinching type, would automatically close and open, remaining open whilst cars passed through stations and closed whilst en route. The station would always be full of cars, because when one was leaving another was arriving at the other end. The track was invisible, as the cars were so close together that there was no room to get between them, and there was no train before which one could fall in front. The length of the station needed to be only 50 ft., or at most 75 ft. A car moving at three miles per hour would take seventeen seconds to pass through. Thus there would be eight seconds for passengers to step out of the cars during the passage of the first half of the station, and nine seconds for other passengers to step in during the passage through the other half of the platform. It did not require a second of time for even a slow-moving person to step over a line. The car floor was flush with the station level, and practically the whole side of the car would be open for ingress and egress.

Telephone No. Avenue 5555 (4 lines).

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

TENDERS INVITED.**Dublin and South Eastern Railway Company.****RAILS, ETC.**

THE Directors of the above Company are prepared to receive Tenders for the Supply of 1,000 tons Bullhead Steel Rails (85lbs. per lin. yd.), with corresponding Fishplates, 500 tons to be delivered in February, 1912, and 500 in June, 1912; also for the Supply of 600 tons Cast-Iron Chairs, half to be delivered in February, 1912, and half in June, 1912.

Specifications and Forms of Tender can be had on application to Mr. S. J. Shannon, Engineer's Office, 52, Westland Row, Dublin.

Tenders, marked "Tenders for Rails and Chairs," and addressed to the undersigned, to be forwarded so as to be received not later than 10 a.m. on 3rd January, 1912.

M. F. KEOGH,

Secretary.

Secretary's Office,
Westland Row Station, Dublin,
11th December, 1911.

Royal Siamese State Railways.**SOUTHERN LINE.****WAGONS.**

H. R.H. the Minister of Public Works is prepared to receive Tenders for the Supply of Four-Wheeled Open and Covered Goods Wagons and Spare Parts. Plans, specifications, and forms of Tender may be obtained from the Siamese Legation in London on payment of £1, which sum will not be returned.

Tenders, addressed to H. Gittins, Esq., Controlling Engineer, Southern Line, Royal State Railways, Bangkok, Siam, will be received up to 10 a.m. on the 2nd day of March, 1912, after which time no Tender will be accepted.

Great Northern Railway Company. (Ireland.)

THE Directors are prepared to receive Tenders for the Purchase of about 3,000 Tons of Old Steel Rails, 250 Tons of Old Iron Rails, and 2,300 tons of Scrap Metal of various kinds.

Forms of Tender may be obtained on application to the Secretary.

Tenders, made out on the Company's forms, should be delivered, under sealed cover, endorsed "Tender for Old Rails," or "Tender for Scrap Metal," to the undersigned not later than Ten a.m. on Monday, the 1st January, 1912.

The Directors do not bind themselves to accept the highest or any Tender.

T. MORRISON,

Secretary.

Secretary's Office,
Amiens Street Terminus, Dublin,
7th December, 1911.

OFFICIAL ADVERTISEMENTS for insertion in the current week's issue should be received by 6 p.m. on Friday.

All communications relating to advertisements should be addressed to **THE RAILWAY TIMES**, 12, Norfolk Street, Strand, London, W.C.

Bombay, Baroda, and Central India Railway Company.**WHEELS, ETC.**

THE Directors are prepared to receive up to noon on Tuesday, 2nd January, 1912, Tenders for the Supply of Wheels and Axles.

Tenders must be made on forms, copies of which, with specification, can be obtained at these offices on payment of 2s. each (which will not be returned). The Directors do not bind themselves to accept the lowest or any Tender.

C. CROMMELIN,

Secretary.

POSITION VACANT.**Port of London Authority.**

THE Port of London Authority is prepared to receive applications for the appointment of an Officer to supervise the working of the Authority's railways at a commencing salary of £400 per annum. Candidates must be under 45 years of age and have had practical experience in handling and controlling railway traffic and staff under Dock conditions.

Applications must be on the prescribed form, obtainable at the Secretary's Office, 109, Leadenhall Street, E.C., and be delivered at that office not later than 10 a.m. on Saturday, the 30th December, 1911.

Canvassing of members of the Authority, either directly or indirectly, is strictly prohibited, and will disqualify.

By Order,

F. ATLIFFE,

Secretary.

109, Leadenhall Street, E.C.,
12th December, 1911.

PUBLICATIONS.**ELECTRIC RAILWAY ENGINEERING.**

By H. F. Parshall, M.Inst.C.E., etc., and H. M. Hobart, M.I.E.E. 475 pages and nearly 600 diagrams and tables. Imp. 8vo, 42s. net. Contents:—Part I.—The Mechanics of Electric Traction; Tractive Resistance of Constant Speed; Acceleration; The Tractive Force and the Power and Energy at the Axles; The Study of the Characteristics of Electric Railway Motors and of Section Characteristics and the Construction of Load Curves. Part II.—The Generation and Transmission of Electrical Energy; The Electrical Power and Generating Plant; The High Tension Transmission System; The Sub-Stations; The Distributing System. Part III.—Rolling Stock; Locomotives and Motor Carriages and their Electrical Equipment; Trucks.

RAILWAY TRACK AND TRACK WORK.

By E. E. Russell Tratman, A.M., Am.Soc.C.E., Associate-Editor "Engineering News." Third Edition, fully rewritten and with additional chapters. HOME RAILWAY TRAFFICS AND DIVIDENDS.

The half-year now drawing to its close continues to maintain its character for excellent gross traffics. In reviewing the aggregate returns for the half-year to date, it must be borne in mind that during the strike period there was a total loss of half a million sterling, and that this has since been recovered and transformed into aggregate increases in the case of every important railway. Among the total gains as published to date, the North Western stands out with an addition of £160,000, the Midland following with a gain of £117,000. Next comes the Great Northern, with about £80,000 additional, and the Great Western with £74,000 increase. A relatively excellent result is that of the South Eastern and Chatham Companies of over £60,000 increase, followed closely by the Great Central and Great Eastern with £60,000 and £66,400 respectively. Although the North Eastern Company had to face a more prolonged strike than other leading railways, it has managed to turn its former large loss of traffic into a gain to date of over £35,000. A very satisfactory feature of the half-year's receipts is the good returns of the Scottish group, which, of course, cover a month less than the leading English railways. The Caledonian has published an addition of £34,500 to its receipts for twenty weeks, whilst the North British has gained over the same period £63,000. Even more striking in relation to its traffic is the Glasgow and South Western Company's addition of nearly £27,000. Among the passenger lines the Brighton has a gain of about £20,000, and the South Western £18,000, neither returns being equal to the South Eastern and Chatham Companies' figures already referred to. It is clear that the half-year will conclude with excellent results from this point of view, especially after allowance has been made for the usual under-publication. To what extent net profits will be benefited is a more obscure feature than ever. The companies have certainly had to pay higher wages in many directions for at least a portion of the half-year, and the prices of coal and some other important materials have advanced. On the other hand the companies' efforts in the direction of more economical working in every possible direction have certainly not been relaxed, and the advantages of co-operation have been extended wherever possible. Making a most conservative allowance for the adverse features of the half-year, it is to be expected that the dividends of the leading companies will at least be maintained, and on the average a small increase may be looked for. There will certainly be no attempt to strain after high dividends, and the conservatism so conspicuous in recent years is more likely to be emphasised than otherwise. The prospects for the New Year will depend very largely on the success of the efforts which will be made by the companies to recoup themselves by increased fares, etc., for the heavier burdens of working expenditure, and particularly wages. Difficulties which would under ordinary circumstances confront the companies in any attempt to raise the charges to the public will be considerably lessened by the knowledge that they have the active assistance of the Government, and certainly the sympathy both of the railwaymen and a large section of the public. It is becoming increasingly evident that the

opponents in Parliament and elsewhere of fair treatment to the railways are really opposing the interests of railway servants in general, and the more this fact is appreciated on all sides the easier will the task of the companies become. Excellent trade prospects may be marred by adverse labour developments outside the railway world—the mining world for instance—but otherwise it may be stated with confidence that the present basis of market prices for Home Rails is a tempting one for the investor, for not only is the return an exceptionally liberal one, but the prospects of a recovery in market values are bright.

THE CHANGE IN RAILWAY POLICY.

There is no doubt that the railway situation offers exceptional opportunities at the present time for the exercise of a high degree of business capacity on the part of those in positions of authority. Circumstances have so altered within the past few years that a direct reversal of policy in at least one important particular has been necessary. Competition between the various companies only a few years ago was almost the chief item in the policy of more than one board, and to success in this direction many other considerations were subordinated. How great the loss this policy often inflicted on the shareholders does not need to be emphasised. Year after year the waste was continued, in spite of the warnings of not a few directors and financiers. Gradually criticism became more urgent, and as the pressure of increasing expenses grew year by year the keenness of competition was somewhat mitigated. Then came the final overthrow of the policy, and friendly working agreements were successfully negotiated. The advantages of these arrangements are now recognised. They have proved of great value to the companies concerned, and they have also benefited the public. The old hostility to co-operation on the part of the latter is disappearing as the economic waste of unrestrained competition is better appreciated. Such agreements as those between the Great Central, the Great Eastern, and the Great Northern Railways, the Great Western and the South Western Railways, and the North Western and Midland, have convinced the people that they have nothing to fear from any reasonable policy of co-operation. None of the evil effects that were foretold have been realised, while there is no denying the increased convenience that the public has obtained by the new arrangements. As regards the employees, the advantage has been demonstrated only recently by increases of pay and other concessions. Had the old policy of internecine warfare been relentlessly pursued, the companies could not have given these benefits to the employees, although it is not so long since some of those prominent in the labour movement strongly opposed in the House of Commons the efforts of certain railway companies to effect closer working agreements. Indeed, but for fear of legislative opposition, it is probable that certain plans now in various initiatory stages would already have taken more determinate form. Happily, there is reason to anticipate that a more intelligent view will be taken by the supporters of labour in the future, and that instead of opposing the plans of the companies they will be ready to assist them to secure the advantage of working with common ends in view. If public sentiment can be made still more favourable to unification of railway interests, the way will be opened for really great advances in this direction; and it is for this reason that we say that the railway field offers scope for business men of the highest type. If such men could be given the opportunity to remould the railway interests of this country on the broadest principles of economy and public utility, there is little doubt that incalculable good could be done. An object lesson in miniature has been provided in London by the unification of the underground system. Only a few years ago Parlia-

ment set its face against any combination and consequently a number of distinct companies had to be created, entailing a waste of capital and much confusion and inefficiency in the working out of plans for underground locomotion. Gradually, the earlier opposition has given way, and under the capable and enterprising direction of those financially concerned, amalgamation has been effected with the result that London and district are now provided with a local transport system which is vastly better than that of any other city in the world. Not only have the public benefited, but the shareholders' position has been greatly improved, while the employees appear to be more contented than those of any other railway in the country. It is not too much to say that this result is due to the executive ability of a few able financiers who have succeeded in the face of no little opposition in giving effect to their beneficent ideas. What has been done in London could be paralleled in the greater railway systems of the country. Geographical position offers lines of cleavage and combination, and private enterprise suitably checked by Governmental supervision can be left to adjust the details of inter-relation between units.

THE PROPOSED LONDON COMBINE.

Despite the rumour current on the London Stock Exchange on Thursday that an agreement had at length been reached in the negotiations for a fusion of interests between the Metropolitan District and the London Electric Railway Companies on the one hand and the London General Omnibus Company on the other, inquiries in official quarters concerned showed that the matter is still under the consideration of the various boards of directors. No further announcement, we were authoritatively assured, could at present be made. It appears, however, that there is likely to be further delay, because the directors of the omnibus company are not unanimous, and this may involve seeking the opinion of a general meeting of the shareholders of that company. The substance of the tentative scheme, it will be remembered, is that a new company should be formed to take over the ordinary stock of the three companies and to control the combination. The ordinary shareholders of the omnibus company would get debenture or preference stock in exchange, bearing 6 per cent. interest. The amount of this stock is £1,200,000. Ordinary stock of the railway companies would also be changed into 6 per cent. preference stock to the amount of £4,800,000.

Weekly Traffic Summary.

The traffic receipts for the week ended December 17, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,136,354, which was earned on 21,521 miles, being at the rate of £99 5s. 4d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,052,533, with 21,467 miles open, or £95 12s. 3d. per mile. There was thus an increase of £83,821 in the receipts, an increase of 54 in the mileage, and an increase of £3 13s. 1d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £14,731 (or 12s. 2d. per mile) in the passenger receipts, and an increase of £64,247 (or £2 18s. 4d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-four railways for twenty-four weeks in the passenger receipts has been £308,856, while the aggregate increase in the goods traffic was £600,861. The aggregate receipts of the fifty-two railways for twenty-four weeks (July 2 to December 17) amounted to £56,069,653, in comparison with £55,174,467 in the corresponding period of last year—an increase of £895,186.

The Bank Return this week shows the usual outflow of coin into the provinces for Christmas expenditure, the active note circulation at the same time expanded by £595,000, and £147,000 was exported. The Reserve was thus reduced to the extent of £2,409,000, bringing it down to £23,304,000, but this is over £600,000 above the level which obtained on December 21, 1910, and the directors of the Bank saw no reason to make any change in the official minimum rate of interest. The pressure for money was seen in the increase of Other Deposits by £3,281,000 to £40,840,000, and applications to the Bank were plentiful, as was reflected by the advance of £6,419,000 in Other Securities. Government Securities were but slightly altered, but Public Deposits rose £717,000. The ratio of Reserve to liabilities fell to 41½ per cent., a fall of nearly 5 points, and compares now with 46.35 per cent. for December 21, 1910.

If one of the weekly features of this paper were a financial cartoon, we might on this occasion represent the market price of Home rails under the symbol of a feather in process of being blown up, or allowed to drop, according to the breath of a large man beneath representing labour. For some time now prices on the market have reflected little else than the variation or supposed variations in the spirit of discontent which seems to beset the country. There is hardly a single trade of importance that has escaped disturbance, and it is natural to ask, at the time when thought begins to turn to the prospects of a new year, how long the condition of things which provokes and keeps alive this spirit of unrest is likely to last. The prime cause appears to be that the prices of commodities have been rising for some time without a concomitant rise in wages, so that employees of every class find increasing

difficulty in making ends meet. It thus becomes necessary to ask why have not wages risen at the same time as prices, according to the usual experience of such fluctuations in the past? The answer must be that on this occasion, exceptionally, there has been a relative decline in the quantity of capital employed in the country. Excessive taxation and growing extravagance of every kind are producing their inevitable effect, and capital having become scarce relatively to labour, prices become high relatively to wages. These factors must continue to make themselves felt for some time, because the causes on which they rest are of a kind not easily altered or removed. Consequently it is difficult to see any immediate grounds for expecting a diminution of the disaffection which is at present diffused through the labour world. Meanwhile it is well to bear in mind that when price corresponds so closely to labour conditions, it is a sure sign that the investing public is not greatly concerned in the markets.

Last Saturday business was very small, and few significant changes of price occurred. In Home rails the tendencies of the previous day were continued in a mild degree, and some fractional falls were recorded, while American and foreign rails, Mexicans excepted, were if anything rather better. Before business opened on Monday, sundry expressions of labour opinion had been reported in the Press which re-awakened some of the alarm the events of the past week had quieted down, so that the markets in domestic securities were depressed, and the decline in Home rails continued. The probable result of meetings between coal masters and miners was much discussed, and conclusions were not very favourable to the issue. The next day, however, opinion swung round to the opposite view. The arrangement made by the Coal Conciliation Board received a hopeful interpretation, and prices tended upwards again. Home rails rose with one accord, and though the individual increments to prices were not large, the falls of the day before were fully made up. On Wednesday opinion changed again. This time the acting cause was supposed to be the strike at Dundee, supplemented by the report that the coal miners would ballot upon the question of a general strike. Prices in Home Rails relapsed again, the excellent traffic returns published having no power to stem the decline in prices. Foreign rails were not active, but Americans rose buoyantly on business done on the other side.

Thursday was a day of stagnation. Prices were again depressed by rumours of labour trouble, this time in the cotton trade. Foreign Rails, like many other sections of the market list, were neglected. Americans declined. Consols, after an opening fall, recovered to some extent. The most satisfactory feature of the day was the firmness of international stocks. An incident which attracted much attention was a rise in Underground electric shares from 2½-2 to 2½-¾. This movement was based on renewed reports of an agreement between the London General Omnibus Company and the Underground railways to work in harmony and at higher fares. A rise of 8 took place in Underground Electric Income bonds, and District stock rose 1½. Home Rails generally were lower, but the falls were not very heavy.

The movements of the week are set forth in the following table:—

Name of Stock.	Rise.	Fall.	Name of Stock.	Rise.	Fall.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

It has been decided, commencing with the January statement, to include in future monthly revenue statements the balance of "income from rentals, outside operations, and hire of equipment," the balance of revenue from these sources having been previously shown in the half-yearly account but not included in the monthly revenue statements.

The following statement of the gross receipts, working expenses, net traffic receipts, balance of income from rentals, etc., and net profit for five months ended 31st May, 1911, has been issued.

	Grand Trunk.	Canada Atlantic.	Grand Trunk Western.	Detroit, Grand Haven, & Milwaukee
JANUARY.				
Gross Receipts	£ 514,200	£ 32,600	£ 113,200	£ 34,750

DIVIDEND ANNOUNCEMENTS.

CHICAGO JUNCTION RAILWAYS AND UNION STOCK YARDS.—The directors have declared a dividend of 2 per cent. on the common stock for the three months ending December 31.

BRAZIL RAILWAY.—The directors have declared a dividend of 1½ per cent. for the quarter ending December 31 on the preferred shares.

WHITE PASS AND YUKON RAILWAY.—The directors announce a final dividend of 2s. per share for half-year (after adding £18,800 to the sinking fund), making 1 per cent. for the year, carrying forward £8,800.

WINNIPEG ELECTRIC RAILWAY.—The directors have declared a quarterly dividend at the rate of 12 per cent. per annum, payable on January 2. A year ago the dividend was at the rate of 10 per

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, December 20, compared with that for the previous week, shows the following changes:—

Inspection of New Station Works.—Major Pringle, Inspector for Railways under the Board of Trade, has inspected the new station works and signalling arrangements at Arbroath. Major Pringle made a careful inspection of the signalling arrangements in connection with the two new signal cabins. In addition to the reconstruction of the station at a cost of over £60,000, the permanent way for a considerable distance north and south has been reconstructed and extended.

A Petrol Transport Danger.—The Public Control Committee of the London County Council on Tuesday last reported the occurrence of a petroleum spirit fire and explosion at the Willow Walk goods station of the London, Brighton and South Coast Railway. A van-boy was handling an empty petroleum spirit barrel when a violent explosion occurred, and the boy was so seriously injured that he died. The deceased admitted removing the screw-plug from the barrel, but denied that he was smoking or that he struck a light, and no evidence of the presence of a light near the barrel could be produced. The Committee have given instruction for a communication to be sent to the railway company with a view to steps being taken to prevent, if possible, similar accidents in future.

Improvements at New Street Station, Birmingham.—The London and North Western Railway Company has decided upon important improvements at New Street Station, Birmingham, and an extension of the Queen's Hotel adjoining, involving an outlay of £100,000. The work will be commenced early in the New Year, and it is expected that it will form part of a scheme which is not yet fully matured. The booking-hall is to be enlarged, and a handsome entrance hall provided. Two broad staircases will lead to the bridge, and the present inconvenient gangways will be dispensed with. High pressure gas and electricity will be used for lighting the premises. The hotel is to be extended to the corner of Navigation Street, and additions made which will have the effect of nearly doubling the accommodation. It is twenty years since the company last extended the station, which is one of the largest and busiest in the provinces.

THE LATE SIR JAMES INGLIS.

It is with deep regret that we record the death of Sir James Charles Inglis, general manager and consulting engineer of the Great Western Railway Company, which took place at Rottingdean on Tuesday night. Death was caused by pneumonia. His decease has brought to a premature close the career of one of the most remarkable men associated with the British railway service, and his loss will be felt not only by the great railway company with which he was associated, but by engineering circles all over the country, and one might indeed say all over the world.

Like many eminent Scotchmen, Sir James Inglis was a native of Aberdeen. He was born in 1851 and educated at the Grammar School of that city. He afterwards studied for three years at the University, and was a prizeman in natural science and mathematics. It has sometimes been said that in past generations in this country the only engineers were millwrights, and this association between the two occupations is exemplified by the fact that, during the intervals between the University sessions, Mr. Inglis worked in the shop of a village millwright and mastered the elements of the business. On leaving the

The Late Sir James Charles Inglis.

University in 1870, he entered the shops of Messrs. Norman, Cepland and Company, engineers and millwrights, Glasgow. Here he had experience in the construction of heavy industrial plant, largely for steel works. After two years, on the advice of the late Alexander Kirk, M.Inst.C.E., Glasgow, he became apprenticed for three years to the late James Abernethy, past President of the Institution of Civil Engineers. During his apprenticeship he was entirely engaged on dock and harbour work, and among the constructional undertakings on which he was employed was the Alexandra Railways and Dock, Newport. In 1875 he joined the South Devon Railway under the late P. J. Margary, M.Inst.C.E., who was chief engineer of that line and of the Cornwall Railway. In 1876 Mr. Inglis was elected an associate member of the Institution of Civil Engineers. He began work in Plymouth on the construction of the deep water quays and works at Millbay, and afterwards carried out the doubling of lines and other works on the South Devon and Cornwall Railways. These lines were absorbed in 1878 by the Great Western Company, and Mr. Inglis passed over to the staff of that system. He did not remain there long, however, but started in private practice at Plymouth. During this period he held various public posts, and carried out a great variety of engineering works. He at once became engineer of the Cattewater Harbour Commissioners, and he

built the Mount Batten breakwater, Plymouth, and extensive quays, involving submarine rock excavation. As engineer to the Sutton Harbour Company, Plymouth, he designed and carried out the large fishmarket there. In 1881 he was appointed engineer to the Corporation of Gifford Local Board, for which body he carried out extensive sewerage schemes. In the same year the Princetown Railway and the Newlyn Harbour, Penzance, were executed. The Bodmin Railway came next in 1884, and it was in this year also that Mr. Inglis became a member of the Institution of Civil Engineers. Mr. Inglis was engaged in the Torquay harbour works under Mr. Abernethy when, in June, 1892, the directors of the Great Western Railway induced him to join that company as assistant engineer at Paddington. He had just carried out the Boscombe extension and the reconstruction of the South Devon viaducts. In view of such an extended experience it is not surprising that in four months after his arrival at Paddington he was appointed chief engineer to the company. This was in October, 1892. His appointment as general manager and consulting engineer dates from the death of Sir J. L. Wilkinson in 1903.

Since Sir James Inglis took the reins at Paddington, the enormous amount of engineering work and of traffic development on the Great Western Railway have borne testimony to the strenuous life which he led and to his brilliant talents. The average amount spent annually by the company on new works and maintenance between 1893 and 1902 inclusive amounted to about £2,000,000. In the year 1903 the total receipts of the company were £11,945,210; in 1910 they had grown to £14,132,809. In the former year the expenses were £7,345,783, and in the latter £8,830,758.

The last notable public event in his career was the conferring on him by the King of the honour of Knighthood in January last.

Among appointments held by Sir James, in addition to his railway work, were: Member of the Council of the Institution of Civil Engineers since April, 1897; President of the Institution, 1908 and 1909; arbitrator for the Federated Malay States in the matter of the purchase of the Tanjong Pagar Docks, Singapore, in 1905; member of the Royal Commission of Canals and Inland Navigation; member of the Engineering Standards Committee; Lieutenant-Colonel of the Railway Staff Corps. He was also the holder of insignia of Prussian and Italian Orders.

Sir James took a special interest in the Institution of which he was so prominent a member. In his presidential addresses he showed that combination of high engineering ability with commercial and business knowledge and skill which made him one of the most eminent men in his profession. He had the honour of laying the foundation stone on October 25, 1910, of the new building for the Institution, but he has not lived to see the completion of the structure. On the occasion of the ceremony, Mr. Alexander Siemens spoke of Sir James Inglis as one who combined his technical knowledge with the talent of organisation, the influence of which was felt from London to Land's End.

It was this union of technical skill and business ability in a very high degree, coupled with indomitable energy and perseverance, to which must be ascribed the high position which Sir James Inglis attained and so worthily held in the domains of civil engineering and railway management. He brought to his work on the Great Western Railway an extraordinary amount of varied experience, and with this and his devotion to duty and special talents, the undertaking advanced in magnitude and prosperity by leaps and bounds. Many eminent men from Brunel downwards have been associated with the Great Western Railway, but none will be remembered with more pride and gratitude than Sir James Inglis.

The Webb Orphanage at Crewe.—Mr G. H. Cloughton, chairman of the London and North Western Railway, on Monday opened the orphanage in Victoria Avenue, Crewe, which has been built and endowed from the legacy left by Mr. F. W. Webb, who was for many years the chief mechanical engineer of the L. and N.W. Railway Company. Mr. Webb, who was a bachelor, left a fortune of nearly a quarter of a million sterling, and after many bequests to relatives and friends and educational and philanthropic institutions, left the residue of his estate for the building and endowment of an orphanage for the children of deceased employees of the L. and N.W. Railway Company. The building has cost about £20,000, and it is estimated that the endowment will amount to about £50,000. The orphanage will receive at present 40 orphans—20 boys and 20 girls, who will be educated, clothed and trained. A view and description of the buildings appeared in our issue dated November 4.

OIL-BURNING LOCOMOTIVES ON THE TEHUANTEPEC NATIONAL RAILROAD, MEXICO.*

By MR. R. GODFREY ASTON.

The object of this paper is to give an account of liquid-fuel burning in the locomotives of the Tehuantepec National Railway, showing some of its advantages over coal, and giving a general description of facilities for handling and storing this fuel-oil, the methods of burning it, and a few results gained which are taken from the monthly performance of locomotives.

The Tehuantepec Railway is a trans-continental line of standard gauge (4ft. 8½in.), 304 km. (189 miles) long, running across the Mexican Isthmus of Tehuantepec from the port of Puerto Mexico (Coatzacoalcas) on the Atlantic, to the port of Salina Cruz on the Pacific, with grades varying from level to 2.15 per cent., and abounding in curves up to 11deg. 28sec., or 100.10 metres radius, and where the speed of trains is limited to 24 km. (15 miles) per hour.

STORAGE FACILITIES.—All fuel oil for the company is received at the terminal of Puerto Mexico, where the main storage-tanks are situated; these comprise three cylindrical steel tanks, each composed of six tiers of steel plates riveted together and a light steel roof, with three manholes, and a ventilator in the middle through which gases arising from the oil can escape. Two of these

and 37 feet 6 inches deep, of 46,996 barrels capacity. The capacity of all these storage-tanks has been calculated out in U.S. barrels of 42 gallons for every 6 inches of depth, allowance being made for all internal stays, supports, etc. The fuel-oil is shipped from Puerto Mexico to the other fuel-stations in specially constructed double-truck steel-frame tank-cars of 6,600 U.S. gallons capacity, the gallons per inch of depth of these cars being known, so that the exact amount contained in each car can be credited to the station to which it is shipped.

FUEL-OIL.—The fuel-oil used by this company is purchased from the Texas Company of Port Arthur, Texas, at about 97½ cents gold per barrel of 42 U.S. gallons delivered at Puerto Mexico and pumped into the railway company's tanks by the delivering vessel. This fuel-oil is generally delivered in tank-steamers, sometimes towing barges, which come right up alongside the railway company's wharf; the coupling between the vessel and the company's land pipe-line is made with a flexible rubber or steel hose, which is supplied by the vessel.

This fuel-oil is quite thin and flows readily through pipes of any diameter; it is sometimes nearly black in colour, and sometimes a dark brown with a green fluorescence. The railway company stipulates in its contracts with the Texas Company that the flash-point (closed) shall not be under 110 deg. F., as a lower flash-point than this is liable to be dangerous on account of the volatile gases and fumes which arise from the oil at comparatively low temperatures, and the author has

Fig. 1.—Front-end Oil-fuel Burner arranged in Locomotive Fire-box.

Fig. 2.
Locomotive Oil-Burner
or Atomizer.

tanks are 95 feet diameter and 37 feet 6 inches deep, each with a capacity of 46,996 barrels of 42 United States gallons (35 British gallons) (a). The third tank is 92 feet diameter and 27 feet 9 inches deep, and has a capacity of 35,138 U.S. barrels.

These tanks are all enclosed in separate earthen embankments and are connected together by an 8-inch pipe-line, which enters the tank 1 foot 6 inches from the bottom, this space being required for water, etc., settling out of the oil and which can be drawn off through a 3-in. valve at the bottom of the tank. The pipe-line runs down to the wharf, where it is fitted with an 8-in. check-valve, and it is from here that vessels delivering cargoes of oil can pump straight into any tank, the two largest tanks being about 2 km. (1½ miles) from the wharf. At convenient places in the pipe-line near to the round-house are stand-columns for filling engine-tanks, tank-cars, etc., and near the round-house is also a supply tank of 28,000 U.S. gallons capacity, erected upon a structural steel frame, also used for giving oil to engines, etc.

The terminal of Salina Cruz is laid out in the same manner, except that there are only two storage-tanks, 95 feet diameter

seen the oil catch fire from a torch which was some 10 ft. to 12 ft. away from it. Some oils may be used in the crude state as fuel, while others have to be passed through the refinery; after the lighter oils, etc., have been taken off, the by-product or residuum is used in a satisfactory manner as fuel, and as such has been and is used in Mexico. Fuel-oil contains no power of spontaneous combustion, and unlike coal does not deteriorate if stored in tanks or reservoirs.

The specific gravity of this oil varies from 0.790 to about 0.942 and its weight per U.S. gallon from 6.4 lb. to 7.75 lb. The British Thermal Units vary from 17,000 to 20,000, the average being from 19,500 to 19,800, and between this and the best steam-coal there is a very great difference. The analysis of two samples of the oil as used by this company for fuel is as follows:—

Specific Gravity at 60° F. ..	0.931	0.881
Baume " at " ..	20.5°	29°
Flash-Point (closed) ..	130° F.	135° F.
" (open) ..	160° F.	160° F.
Fire Test: ..	220° F.	224° F.
Setting Point ..	3° F.	20° F.
Viscosity at 100° F. ..	200 seconds (Redwood)	78 seconds (Redwood)
Sulphur ..	0.77 per cent.	0.26 per cent.
Caloric Value ..	10,688 calories	11,000 calories
Colour ..	Dark brown	Dark brown +
Water and Dirt ..	1 per cent.	0.25 per cent.

* Paper read at the Institution of Mechanical Engineers, December 15, 1911.
(a) 1 U.S. gallon = 231 cubic inches. 1 British gallon = 277.27 cubic inches. U.S. gallon = British Imperial gallon. The value of the Mexican dollar is assumed throughout this Paper to be 25.

The standard temperature for the measurement of fuel-oil is 60 degs. F., and expansion is allowed for at the rate of 1 per cent. for every 20 degs. F. increase in temperature above 60 degs. F., and contraction at the same rate for decrease in temperature below 60 degs. F.

Locomotives. The locomotives in use on this road are of the Baldwin consolidation type, the main dimensions of which are:—Cylinders, 20 in. by 26 in.; wheels (drivers), 53 in. diameter on tread; fire-box, length inside, 108 in.; width inside, 33½ in.; flues, 230 of 2 in. outside diameter; grate area, 24.04 sq. ft.; heating surface, fire-box, 147; flues, 1,700; total, 1,847 sq. ft.; boiler pressure, 170 lb. per in.

The oil-tank is fitted into the coal space of the tender, and its contents calculated for every half-inch of depth; most oil-tanks have a capacity of 2,000 gallons, and the oil is fed from the tank to the burner or atomiser through suitable connections and flexible brass bull-joints.

FIRE BOX ARRANGEMENT.—The company's practice, after trying various types of burners and atomisers, is to use what is called a front-end burner, Fig. 1, that is, the burner mouth points towards the back of the fire-box or fire-box door-plate; the burner is placed in a 9-foot fire-box, 4 feet 2 inches from the flue-sheet, the flame playing against a brick wall built up to the level of the fire-box door opening. Between this brick wall and the fire-box back-plate is a 4-inch air space extending the whole width of the fire-box and right up to the top of the brick wall. Brick walls are built up on each side of the fire-box from the height of the brick wall at the back, gradually

an angle, so that it strikes the brick wall in the middle, instead of shooting out from the burner parallel with the bottom of the ash-pan. This burner may be called an outside atomiser, and although it is in general use it has its drawbacks; but it has been found to be more efficient than any other they have used.

The most essential points about a burner or atomiser are:—

- (1) Its atomising capacity. All fuel-oil is heavy, and will burn in the form of a vapour or spray only when mixed with air. The object should be to fill the fire-box with a soft and voluminous flame, and not to impinge it in any one place.
- (2) Its facility for keeping clean and free from clogging.
- (3) Its adjustability in giving the right direction to the flame or spray, and regulating the proper proportion of oil and the agent, either steam or air, used for atomising.

A burner which will vaporise or atomise the oil at the point of expansion of the agent used for that purpose, and which is easily huddled, and which will atomise the greatest amount of fuel with the least possible energy, is the highest and most efficient that can be designed. On this railway, steam is used as the atomising agent, because, after various experiments, it was found to be superior to air.

LIGHTING UP AN OIL-BURNING ENGINE.—In each round-house of this Company is a stationary boiler, always in steam, used for the washout and other pumps, as well as for lighting up dead engines. From this boiler is laid a 2-in. steam-line to points between each engine road or stall. From there a connection can be made to a locomotive through a 3-way cock, or T piece in

Fig. 3 Diagram showing cost of Oil Fuel and distance run per barrel from January, 1907 to August, 1911.

sloping downwards; the floor of the grate or ash-pan is laid all over with fire-brick. No brick-arch or baffle-plate is used. As mentioned in the preceding paragraph, the burner is placed 4 feet 2 inches from the flue-sheet, and midway between the sides of the fire-box, so that both in front and behind the burner or atomiser there is a flat bricked-over area of fire-grate; and as the burner is placed parallel to the lower grate, there is a 4-inch space between the front and back grates, this 4-inch space being left open to admit air, extending from one side of the fire-box to the other.

BRICKWORK.—This should be of the very best material and workmanship, as it is subject to a much greater heat than from a coal fire; if this is not done, the walls will not stand, and engine failures will occur, moreover the failure of only one brick will perhaps necessitate new-brickwork throughout, thus needlessly running up expenses. There is no reason why the brickwork should not stand from four to six months, and perhaps longer, if due care be taken from the start.

BURNER OR ATOMISER.—After a trial of various types of hydrocarbon burners, including the "Baldwin" and "Best" burners, this Company are using with considerable success a burner which is made in their own shops, and which is really an inverted "Best" burner, Fig. 2. It is a simple device which allows the oil to fall from an orifice 3 in. wide by ⅞ in. deep over the top of a flat steam-jet 3 in. wide and 1-32 in. deep, the steam picking up the oil and sending it into the fire-box in the form of a spray; the underneath jet of steam delivers the spray of oil at

the steam-pipe leading from the steam stand on top of the fire-box to the burner; by use of this steam the burner can be started and kept going until the boiler has generated enough steam to keep the burner going itself. A piece of oily waste is lighted and thrown into the fire-box just in front of the burner from which the spray ignites. Connections can be made to any other engine all ready in steam should the stationary boiler not be available for any reason.

FIRING AND CLEANING FLUES ON ROAD.—With an oil-burning engine there is always a fire of equal intensity and one which never gets dirty, so that good steaming is practically ensured. It is a popular idea that it is a very easy matter to fire an oil-burning engine, but this is not the case, as both skill and care are required, so that the author thinks it best to lay down a few of the most important rules: See that the oil-tank is full, and if heaters are used, that they are in operation, and that the temperature of the oil is as it should be. See that the sand-box on the foot-plate is full, and that the scoop is in its place. Before starting the fire, see if the temperature of the fire-box is below igniting point, which is a dull red, and if so, open dampers (if used), start the blower, and open the atomiser-valve fairly hard; then put a piece of saturated oily waste on the bottom of the grate after setting it alight, close the dampers (if used) and fire-box door, and turn on the oil very light. When the oil has ignited, reduce the blower and atomiser to a light feed, also the oil until the chimney is quite clear of smoke. See that the fire is burning brightly, and that there is no oil on

The bottom of the pan, also that the brickwork is in good condition, and that no bricks or any other obstructions are on the bottom of the grate or pan so as to obstruct the flame or jet on its way from the burner to the brick wall. As regards cleaning flues on road, it is best to sand frequently if the engine is being worked hard, say every 15 or 20 km. (9 or 12½ miles), but if the engine is being worked light, every 50 or 60 km. (31 or 37 miles) will be sufficient. Having attained a fair rate of speed, fill the scoop with about a quart of sand, close dampers (if used) and put reverse-lever near full stroke, then open regulator wide, insert the end of the scoop in the round hole in the fire-box door, and allow the sand to be drawn out of the scoop through the fire-box and flues and out of the chimney; sanding is best done when the engine is working hard up a grade. Black smoke shows incomplete combustion, and should never be allowed to be emitted from the chimney, as it only fills up the flues with carbon, besides being a non-conductor of heat, and it is also a great waste of fuel. If a bluish-coloured smoke or fumes are seen coming from the chimney, it is a sign that the burner is cut down too fine. When putting out the fire, the oil-valve should always be closed first, then the atomiser-valve (in their case, steam), then the blower. The oil-valve is always the last to be turned on, and the first to be turned off. Never go near an open tank with a lighted lamp or torch, as at any time an explosion may occur, especially if the oil used has a low flash-point.

ROUND HOUSE OR SHED WORK.—An oil-burning engine has a great many advantages over a coal-burner, but this is specially noticed in the round-house or shed when squaring up an engine after a day's run; there are no fires to be raked out, no flues or smoke-box to be cleaned (the smoke-box door of an oil-burning engine need be opened only once every three or four months for cleaning purposes); there is no coal to be sacked, weighed, or otherwise handled, and oil-burning engines do not carry fire-rakes, prickers, flue-brushes, shovels or picks, so that all these things, besides other minor details, represent a great saving in engine equipment.

Among other advantages are the rapidity with which steam can be raised, and the facility with which the boiler can be forced when greater calls are made; the author has in a special case of necessity raised steam in a dead engine to a pressure of 130 lb. per square inch in fifty minutes from cold water, without any serious effects on the boiler, whereas in a coal-burner from two to three and a-half hours is needed to raise steam if no jet from a live engine is used. Another very great advantage is in switching, or shunting, or standing pilot, when engines frequently have to stand in steam for hours at a time. The burner can then be cut down or extinguished, thus effecting a great saving in fuel, as an engine will always retain a sufficient amount of steam to start the burner or atomiser again, and any danger of the fire-box or crown-sheet being injured through the water getting too low is entirely obviated. The heat lost while standing is the same whether coal-fired or oil-fired.

EFFECTS OF OIL-BURNING ON FIRE-BOX, FLUES, ETC.—Oil burning is no more injurious to a fire-box or flues, etc., if ordinary care be used, than coal burning; in fact, from the author's experience it is not so hard on a fire-box as coal burning, for it is quite noticeable in the fire-boxes of coal-burning engines that stay-heads, plate edges, flue-ends, and crown bolt-heads show signs of wear, corrosion or burning, but in their oldest oil-burning engine not any of these signs are noticeable, everything being clean and in good condition.

This company uses steel boxes with wrought-iron tubes and copper ferrules. A set of tubes will last and remain perfectly tight from two-and-a-half to three-and-a-half years, when they may have to be taken out to be re-ended; some of the engines are working to-day with tubes over four years old, many of which are as tight as the day they were put in. Some of the wrought-iron tubes are being replaced by mild steel, because, after the holes in the tube-sheet get worn, tubes of steel stand the expanding better; but at present those that are in service have not been in use long enough for one to form an opinion of them as compared with wrought-iron.

ENGINE PERFORMANCE.—Although the engine tonnage has practically doubled since 1908, the author gives the following statistics from January, 1907, to August, 1911:—

- (1) Cost of fuel-oil per barrel of 42 gallons (Mexican currency).
 - (2) Cost per kilometre for fuel (Mexican currency); and
 - (3) Kilometres run per barrel of oil,
- but it must be understood that since about the middle of 1900 all engines are loaded down to their capacity, single trains averaging 7,750 to 800 tons behind the drawbar. As the road-bed is by no means level, helper engines are used over certain sections where the grades are long and heavy, so that this will

explain the decrease in kilometres run per barrel of oil between 1908, 1909, 1910, 1911, as the tonnage per engine has been increased to the maximum.

Oil-Fuel, Monthly Averages.

During	Cost of Oil per barrel.		Cost for Fuel.		Distance run per barrel.	
	Dollars (Mexican).	Shillings.	Cents per km.	Pence per mile.	Km.	Miles.
1907	2.585	5.17	28.476	10.99	9.546	5.928
1908	2.957	5.91	27.151	10.48	11.04	6.855
1909	2.502	5.01	25.79	9.73	9.999	6.209
1910	2.356	4.71	25.02	9.66	9.41	5.843
1911 (8 months)	1.990	3.98	22.23	8.58	8.89	5.520

The cost of fuel-oil per barrel of 42 U.S. gallons (231 cubic inches) as charged out every month is made up of the following items, and also depends upon whether there is any shortage or overage when the inventory is taken at midnight on the last day of each month; this accounts for the variation in prices:—

- (1) Price of oil per barrel f.o.b. in ships' tanks at delivering port (Puerto Mexico);
 - (2) commission to purchasing agents in United States;
 - (3) consular invoices;
 - (4) inspection fees for inspecting cargo in ships' tanks at shipping port;
 - (5) stamps.
- Items 2, 3, and 4 only refer to oil purchased out of Mexico.

Based on tests which have been made, the company reckons three-and-a-half barrels, or 147 U.S. gallons, of oil as being equal to 1 ton of coal or 1,000 kilograms, or 2,204 lbs., or three-and-a-half barrels of oil equal one unit of fuel.

The author is unable at this time to give any reliable data of fuel consumption on a tonnage basis, as no records are kept of company freight hauled over the road, which is considerable, but the average loaded passenger and freight cars hauled one kilometre per unit of fuel from January 1 to December 31, 1910, was 330.89, and from January 1 to June 30, 1911, was 333.60. The average loading weight of freight cars is approximately 30 tons.

In August this year (1911) the company received the first cargo of a native or Mexican fuel-oil under a contract with the "Campania Mexicana de Petroleo," El Aguila, S.A., at a price of \$1.75 (Mexican) (3s. 6d.) per barrel of 42 U.S. gallons delivered into railway company's tanks at Puerto Mexico. This oil, which is used in its crude state as fuel, is jet black in colour, thick, and has a heavy asphalt base, and although the Company has not used it sufficiently long to be able to compare it with the Texas oil, it may be of interest to state a few of the difficulties met with when first they began to use it.

As this oil is thicker than Texas oil, heaters have to be used in the engine-tanks, but it has been found that if this oil is heated up to about 150 deg. F. (which can be done with Texas oil), great difficulty is experienced in getting the burner spray to light, and that the oil settled very thickly at the bottom of the tank; it would not run through the pipes to the burner, and could only be burnt effectively by mixing a fresh supply of oil with it. In order to burn this Mexican native oil successfully, it requires to be only just warmed. When using this, a large piece of carbon or cokelike substance is formed in the fire-box, and grows up from the bottom of the pan or grate directly under the burner-mouth. This may vary from 6 in. by 4 in. by 4 in. to 12 in. by 10 in. by 8 in. in size, growing up in such a manner as almost to smother the burner-mouth. The analysis of this substance is as follows:—

Ash	...	...	...	1.25 per cent.
Sulphur	...	...	...	7.89 "
Carbon	...	...	...	90.86 "
Asphalt	...	...	...	Nil

It shows to a certain extent that there is incomplete combustion, which can be remedied by admitting more air; but this cannot very well be done without affecting the steaming qualities of the engines. However, by raising the burner slightly these lumps of carbon have decreased in size, and it is hoped eventually to adjust things in such a manner as to prevent their forming at all.

The analysis of two cargoes of this Mexican crude fuel-oil is as follows:—

	No. 1.	No. 2.
Specific Gravity at 60° F.	0.944	0.942
Baume " at "	18.4	18.8
Flash-Point (closed) "	78° F.	102° F.
" " (open) "	104° F.	120° F.
Fire Test "	165° F.	180° F.
Viscosity at 100° F.	1,080 seconds (Redwood)	920 seconds (Redwood)
Sulphur	3.44 per cent.	3.35 per cent.
Caloric Value	10,971 calories	10,610 calories
Colour	Black	Black
Water	nil.	0.5 per cent.
Asphalt	—	37
Carbon (coke)	—	12

PERMANENT WAY INSTITUTION.

INDIAN RAILWAY REMINISCENCES.

At the last meeting of the London section, Mr. Ernest Benedict, M.Inst.C.E., an Associate Fellow, delivered an extempore address on some Indian Railway Reminiscences. This appeared to give much pleasure to a very crowded audience, and a wish has been expressed that Mr. Benedict will give a continuation of his varied experiences in India.

We regret we have not room for more than a few excerpts chosen more or less at random from the address.

"Railway matters were," said the speaker, "in rather an elementary state in India half a century ago, and railway men were looked upon as rather a queer sort of wild fowl by the old 'qui-his,' whose even tenour of their ways we rudely disturbed. So-called consulting engineers—military men—were appointed to keep us in order in each province, and their doings and sayings afforded us some amusement. One inspecting officer who was shown over a line in construction by an assistant engineer complained that the earthwork was thrown up in a very untidy manner. The assistant told him that they could not trim off the banks, as they had not yet been furnished with formation levels. The gallant Colonel in his report complained bitterly of this, and said it showed great remissness on

doing this 'tight-rope' work, because I was accustomed to it, but Lord Mayo followed me along the girder quite unconcerned and quite alone—none of his suite ventured to attempt the acrobatic performance. There are several things I can tell you about the men who were working on this job. I had a lot of swell carpenters up from Calcutta, which was about 100 miles away, and they had all kinds of demands. They wanted this, that, and the other. I gave them all that I reasonably thought I could, but at last they came along and said they could not eat their meals in peace, because the jackals came and looked at them. I told them I really could not prevent that, and asked them to walk into a room with a half door. I put a sentry over them, and told him to get everybody who passed to look inside at these swell carpenters who could not eat because the jackals looked at them. They soon tired of being chaffed, and begged to be allowed to come out to work.

"On another occasion they came to me and said that the assistant engineer had killed a coolie. 'That is very serious,' I said, and I went out and found this coolie lying on the ground on his side with a great ring of natives round him. I lifted up his eyelids, and they drooped again. Oh, thought I, this gentleman is not so dead as he looks. So I sent for a pail of water and I poured the water into his ear, but he did not move. They then fetched me a chair, and I poured the water into his

Fig. 1.—A 1000ft. Gap on the Eastern Bengal Railway, 1871.

the part of the Stores Department, as there should have been no difficulty in procuring these tools even if they had not got them in stock."

As an example of the depth of the alluvium in the Gangetic Delta, Mr. Benedict related the following experience:—

"I had two cylinders, 40 ft. long and 14 ft. in diameter, which I planted on a sandy shore in the dry season. A cyclone came on and flooded the place, and they both fell over one night and lay down flat. That was due to the rising waters, and we could not get at them, so we passed a rope through each with a buoy at each end. We got our pontoons over one of them when the water had risen sufficiently, and we lifted it, but the other one we found was filled with sand, and the rope broke. We decided to leave it till the water went down, but when this happened we could not find it. This 40 ft. long and 14 ft. diameter cylinder had completely disappeared, and we had to sink another cylinder in the place of it. That will show you what the alluvium is like."

A curious experience was then related:—

"The Gorai Bridge on the Goalundo extension of the Eastern Bengal Railway was opened by Lord Mayo, who followed me along a 3 ft. girder, which was 50 ft. above the water, and was studded with rivet heads. Lord Mayo had no fear, and that was why he was assassinated, because he would not have any guards. I thought nothing of

car from a greater height; still he moved not. I then sent for a drawing stool and stood on that, and poured another pail of water into his ear. Presently his hand went up and covered his ear-hole, and the crowd burst into a homeric fit of laughter; the man jumped up and ran away as hard as he could tear. That was the end of that dead man."

The next quotation relates to flood damage:—

"There was a bridge of three spans about 210 ft. long—a shallow girder bridge—but the screw piles had been taken down 70 ft. When the flood came it swept these right away, and scoured a punch-bowl shaped gap in the solid ground about 1,000 ft. in diameter and 90 ft. deep. That shows what the alluvium is like. At that time I lived in my saloon, which was simply an empty carriage, for six weeks, and the only dry land was the ballast; my servants cooked and slept on it."

A view of this gap is given in Fig. 1. This shows the measures that were being taken to span the breach—first by a timber viaduct, of which the piles were driven by an ordinary travelling crane—these may be seen sticking up at the further end of the breach. Secondly, by a bridge of boats, of which the first one is seen in position. Trucks were hand-shunted over this until the water went down sufficiently to allow a diversion to be run round the edge of the bowl, while a new bridge and its approaches were constructed.

Mr. Benedict described the "Greaves" cast-iron pot sleepers

which he found on both the railways of which he became chief engineer, first the Eastern Bengal Railway in 1871, and afterwards the Scinde, Punjab and Delhi Railway in 1882. "I have been taught that the ideal support for a rail is a knife-edge, for the reason that there is no tendency to rock as the rail rests on one point only. These 'pots' are the nearest approach to

cushion. In the Punjab I found these same pots; they had been in the open line for twenty years, and the breakages, including those by accident, amounted to 1 per cent. per annum, the same as in Bengal." Fig. 2 shows these sleepers very clearly. They are packed with wooden beaters at first, and finished with podger-bars through the holes on top.

Fig. 3.—Bridge made of Railway Metals on the Firospur Branch of the S.P. and D. Railway, 1883.

that that I know. There is no rocking on these, and very fine things they were. When packed with what I call poor brick earth they stood well. The breakages were about 1 per cent. per annum. I read a paper subsequently on my experience with these before the Institution of Engineers and Shipbuilders in

"While on the S.P. and D. Railway," said Mr. Benedict, "we were renewing the road most extensively, and the beautiful old iron rails were used for every mortal thing; mile-posts, fence-posts, gradient posts, gates, platform roofs, girders for bridges. I made some screw-piles by clamping two or three rails together and attaching cast-iron screws to them; the

Fig. 2.—Side Elevation.

SECTION ON LINE A A
Fig. 2.—Plan.

Scotland, and I mentioned also that although these pots were very good I still had a hankering after the wooden sleepers, because if by chance the pots broke there was nothing left; they do not hold up the rail at all, whereas, with wooden sleepers, as long as there is any fibre left, they do act as a

superstructure was all of old rails, and it lasted until they put a permanent line down. At Karachi a wharf was constructed with piles made of bunches of old rails." Fig. 3 is an example of a long bridge on screw piles, entirely constructed of old iron rails.

NEW THIRTY-TON PLATFORM TROLLEY WITH BOLSTERS.

The illustration on this page is of a flat-topped trolley, fitted with four removable bolsters, and intended principally for the conveyance of long, rough timber, but it is also capable of carrying other long and bulky loads, the carrying capacity being thirty tons. The loading space of the platform is 45 ft. long and 8 ft. wide. The outer bolsters are 34 ft. apart and the inner ones 11 ft. 4 ins. apart. The width between the bolster stanchions can be adjusted from 7 ft. 3 ins. to 4 ft. 6 ins. Thirty tons can be carried on the four bolsters, but not more

as may signify in writing to the Midland Company their acceptance of any arrangement made with them individually) will become officers, clerks and servants of the Midland Company. The Midland Company will have power to grant such pensions or to make such compensation as may be deemed expedient to any director of the Tilbury Company and to any officer, clerk or servant or any other person regularly employed by the Tilbury Company. The railways of the Tilbury Company will for the purposes of maximum rates and charges for merchandise traffic (including perishable merchandise by passenger train) be part of the railway of the Midland Company as if the same had

Thirty-Ton Platform Trolley with Bolsters (London and North Western Railway).

than fifteen tons on the two inner ones only. The height from the rail level to the platform top is 4 ft. 1 $\frac{3}{4}$ ins., and that from the rail level to the tops of the bolsters 5 ft. 1 $\frac{3}{4}$ ins. The trolley is constructed of high-class steel sections and plates, trussed, braced and stiffened, and has free swivelling bogies which enable it to pass round extremely sharp curves. It is provided with a screw brake which acts on one wheel on each axle. Bearings of ample size have been provided to allow for contingencies in loading. The total tare weight of the trolley, bolsters and binding chains is a little over seventeen tons. The trolley is for use on the London and North Western Railway.

THE MIDLAND AND TILBURY FUSION.

The Bill to be promoted in next session of Parliament by the Midland Railway Company for the purchase of the undertaking of the London, Tilbury and Southend Railway Company has now been deposited. It provides that as and from January 1st, 1912, the Tilbury undertaking shall be transferred to and vested in the Midland Company, the Tilbury Company being thereafter wound up. The Tilbury Company will manage their undertaking up to the date of the passing of the Bill. Any balance remaining after paying dividends down to June 30, 1912, will belong to the Midland Company. The Bill will create such amounts of Midland 2 $\frac{1}{2}$ per cent. preference stock and 2 $\frac{1}{2}$ per cent. debenture stock as may be necessary. The Midland Company will issue to the holders of the debenture, preference and ordinary stocks of the Tilbury Company certificates for the under-mentioned amounts of Midland stock in exchange for the stock now held by the holders.

To the holders of 4 per cent. debenture stock of the Tilbury Company certificates for such an amount of Midland Railway 2 $\frac{1}{2}$ per cent. debenture stock as will yield to such holders respectively an amount of interest equal to that produced by the stock in exchange for which such certificates are issued;

To the holders of 4 per cent. consolidated preference stock and of 4 per cent. preference stock (1904) of the Tilbury Company certificates for such an amount of Midland Railway 2 $\frac{1}{2}$ per cent. consolidated perpetual preference stock as will yield to such holders respectively an amount of dividend equal to that produced by the stock in exchange for which such certificates are issued;

To the holders of ordinary stock of the Tilbury Company certificates for £240 of Midland Railway 2 $\frac{1}{2}$ per cent. consolidated perpetual preference stock in exchange for each £100 nominal value of ordinary stock in exchange for which such certificates are issued and so in proportion for any greater or less sum than one hundred pounds.

All officers, clerks and servants of the Tilbury Company in the permanent employment of that company (except such of them

been part of the Midland Railway at the date of the passing of the Midland Railway Company (Rates and Charges) Order Confirmation Act 1891 and will for all other purposes be part of the undertaking of the Midland Company as authorised by the Midland Railway Consolidation Act 1844 but the provisions of the Acts of the Tilbury Company relating to passenger fares will continue to apply to the railways of the Tilbury Company.

LATEST ADDITIONS TO THE P. AND O. FLEET.

The new twin-screw steamer "Maloja," belonging to the Peninsular and Oriental Steam Navigation Company, has a gross tonnage of 12,431 and horse power of 16,000, which render her the most powerful vessel in the company's fleet. Including four vessels now building, the fleet numbers sixty-four units, apart from auxiliary ships, tugs, tenders, etc. In point of tonnage two of the vessels now on the stocks—"Ballarat" and "Beltana"—will rank third on the list, their gross figures being 11,100 each. The other two will each be of

P. and O. Company's new S.S. "Maloja."

7,000 tons. A picture of the ship herewith illustrated forms the frontispiece of 1912 edition of the company's diary and almanac. In addition to the list of P. and O. agents, fleet, services, pleasure cruises, branch service, and mail table, which render the little volume indispensable in many railway and other business offices, the publication gives many items of information and interest.

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Jan. 2 (Tues.).—Great Eastern Railway (Laing's Mortgage Holders), Liverpool Street Station, E.C., at 12.
 Jan. 10 (Wed.).—London and Greenwich Railway (Half-yearly), Winchester House, E.C., at 1.
 Jan. 15 (Mon.).—North and South Western Junction Railway (Half-yearly), Euston Station, N.W., at 12.

(Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. Telephone 2948 Gerrard. Telegraphic address, Altimetry, London).

ARGENTINE TRANSANDINE RAILWAY.

The 24th annual general meeting was held on Tuesday last at Winchester House, Old Broad Street, E.C., the Hon. Arthur Stanley, M.P. (chairman of the company), presiding.

The SECRETARY (Mr. A. Rimmer) read the notice convening the meeting and the auditors' report.

The CHAIRMAN, in moving the adoption of the report, said that he thought he might be allowed to congratulate the company upon the improvement in its prospects which had taken place during the past year. There had been an increase in the receipts of over 60 per cent., and although he had not got the last figures before him, he believed there was a satisfactory increase already even over the figures of last year. As far as he could see—and he only returned last Saturday from visiting the line—everything was in a most satisfactory condition. Their line was, he thought, in a very good state; it was being well and efficiently worked by the Pacific Company; their buildings were all in good condition, and, generally, everything spoke for the future prosperity of the line. (Applause.) There was only one danger or difficulty he foresaw and that was on the other side. The Chilian Transandine, which practically formed part of this company's system, had very much greater difficulties to contend with; their line had to follow a much more difficult course, and he was afraid that a good deal more snow shedding and other buildings would be required before that line could be put into a thoroughly satisfactory condition. He said this because he did not wish to raise hopes too high as to the coming year, because he foresaw that there might be a good deal of difficulty in keeping the line continuously open for traffic during the whole of the winter. He thought it might interest the proprietors to know that Mr. Rimmer and himself, about a month ago, were on the line, where they met the officials, Mr. Calthorp (the general manager) and the chief engineer of the Buenos Ayres and Pacific Railway. Mr. Rimmer and himself went over from the Chilian side and met those officials at the hotel on this railway. They went very carefully into all points of difference in existence between the companies and also all requests made for various works along the line. Most of those points they were at once able to settle satisfactorily, but some of them were deferred till they could inspect the parts of the line to which they referred. That was done on the following day, and, as a result, he thought he might say that everything was satisfactorily settled between the two companies at the present moment. He thought probably it would not be unpleasant to the shareholders to know they had not had to spend as much money as they originally thought they would have to do. He thought now that, with the works which were recommended, the line was as far as possible reasonably safe; the rolling stock was in good condition, and the only other question of real importance which they had to decide was that of dealing with the supply of water. Although they ran along the river for the greater part of the way, the water from the river was unsatisfactory and did a great deal of damage to the boilers. They therefore obtained it from the springs in the neighbourhood, and they were making certain recommendations which, if carried out, would enable them, he thought, to look upon the question of water supply as having been satisfactorily settled once and for all. He did not think he had anything more to say with regard to his visit; there was always little to tell when everything was satisfactory. He had the pleasure of seeing a former director of the board, Dr. de la Plaza, in Buenos Ayres, the Vice-President of the Argentine Republic, and he was glad to be able to say that his duties did not prevent him from taking a very lively interest in the line. There was one point in the report which he thought he would like to refer to and that was with reference to the amount of dividend which the board recommended on the preference shares. They had recommended a dividend of 3 per cent. The published figures would, of course, warrant 4 per cent. if they divided up to the hilt, but he thought everybody would agree that in

managing lines, especially with the difficulties and complexities they had to meet, the directors would feel that if they did not build up an adequate reserve fund and have an adequate carry forward they would not be wise. He did not like to prophesy how far they would be able to improve on the 3 per cent., but it would be their wish to distribute as much as possible owing to the many years the shareholders had gone without dividends. He also ventured to hope that the shareholders would not disapprove of what they had thought it right and reasonable to do in that regard in the interests of the company. (Applause.) He could only congratulate the shareholders upon the improved conditions and prospects of the line. He then formally moved: "That the report of the directors and statement of accounts for the year ended June 30, 1911, now submitted be received and adopted."

This was seconded by Mr. Vivian H. Smith.

A shareholder asked whether, in view of the greatly improved prospects of the company, on which he offered his congratulations to the board, they might hope that the directors would see their way to declare an interim dividend in the early spring?

In reply, the CHAIRMAN said the board would be very glad, if possible, to adopt the suggestion, but if the shareholder had been out there he would realise that a dividend was not actually earned until it was in their pockets. He should be very sorry to prophesy as to an interim dividend.—The resolution was then put to the meeting and carried unanimously.

The CHAIRMAN then moved: "That a dividend at 3 per cent., less income-tax, be and the same is hereby declared on the preferred shares of the company on account of the dividend accrued for the year to June 30, 1907."—This was seconded by Mr. T. E. Preston, and carried unanimously.

The re-election of the retiring director, Mr. T. E. Preston, was then proposed by the chairman, seconded by Señor Don Emilio N. Casares, and carried unanimously.

Mr. Titley proposed the re-election of the auditors for the ensuing year.—In seconding this, Mr. Gandy said he was glad to know that they were now out of the wood. He was one of the original shareholders, and he had always stuck on in the hope that there would be a dividend some day. He was glad that this had proved true, and that they would that year get 3 per cent., but he would be better pleased, of course, when they received more.

The resolution was then carried unanimously.

Mr. Gould, in moving a vote of thanks to the chairman and board of directors, said that he agreed with the wisdom of the board in not paying up to the hilt.

The motion was seconded by Mr. Gandy, and carried unanimously.

The CHAIRMAN briefly replied, and the proceedings then terminated.

BARSI LIGHT RAILWAY.

The 17th ordinary meeting was held in Winchester House, Old Broad Street, E.C., on Tuesday, Mr. F. M. Halliday presiding. The CHAIRMAN, in moving the adoption of the report, said that during the past year they had opened two extensions, one to the Hyderabad frontier and the other and longer one from the frontier to Latur. This brought the total system up to 116 miles, but the revenue account for the past year only related to the 79 miles previously open. Although the past year had not been so favourable as the previous one, its results were far from unsatisfactory. They showed, after deducting the interest on the 4 per cent. debenture stock, a net return of 10 per cent. on the share capital of £200,000. Taking one half-year with another, the gross earnings showed comparatively little variation, a fact which gave every reason to hope that in the future the income would be much more steady and reliable than it was in the earlier years of the company's existence. The working expenses amounted to 42.45 of the gross receipts, as against 41.19 per cent. in the previous year. The total available profit was £24,354, and out of this the directors had transferred to reserve account £5,000. The total reserve now stood at £15,337. The directors now recommended the payment of a final dividend of 3 per cent., making 6 per cent. for the year, leaving a balance of £6,884 to be carried forward. Regarding the Latur extension, from July 1 the net earnings came into the general revenue account and the approximate gross earnings to date showed not only that the traffic on the whole was keeping up very well, but that the Latur extension had a beneficial effect on the rest of the line, and was helping the earnings. The outlook for the coming half-year had greatly improved. The chairman subsequently gave particulars as to the formation of a provident fund.—Mr. G. A. ANDERSON, deputy-chairman, seconded the motion, which was agreed to.

MIDLAND RAILWAY OF WESTERN AUSTRALIA.

The ordinary general meeting was held on Thursday, 21st inst., at Winchester House, Old Broad Street, Mr. W. Capel Slaughter (chairman of the company) presiding.

In moving the adoption of the report and balance sheet, which have already appeared in this journal,

The CHAIRMAN stated that the period, June 30, 1910, to June 30, 1911, covered by the accounts, included the period both prior and subsequent to the scheme of re-adjustment of the share capital, and for this reason the accounts for the year were, perhaps, a little complicated.

It would be remembered the scheme was divided into two sections. On the one hand the scheme for the reduction of the capital could not have been proceeded with unless they had first cleared the guaranteed debentures out of the way and paid off the old, the 6 per cent. cumulative income debenture stock and the prior lien debenture stock. The second scheme was to get the authority to issue the new £600,000 4 per cent. second mortgage cumulative income debenture stock and the £519,781 unified ordinary stock, so as to satisfy the old 6 per cent. £973,720 6 per cent. cumulative debenture stocks, to which the shareholders gave their consent. This authority was given and the Court sanctioned such reduction of capital. Immediately after the holders of the old 6 per cent. debenture stock and the shareholders had given the authority an issue was made of the 4 per cent. second debenture stock on April 2, 1911, and out of the proceeds of that issue they paid off the old guaranteed stock at par, the old prior lien stock at £115, and the 5 per cent. cumulative debenture stock at 5 per cent. premium. The new debenture stock was issued at the price of £95 and was fully allotted.

The expenditure of £61,187 in relation to the reorganisation of the capital and the issue of the new 4 per cent. first mortgage debenture stock was dealt with as follows:—£43,540 was provided by (a) transferring from land sales account an amount equivalent to the rents, pastoral licences, interest and sundry receipts of former years, which had previously been credited to that account, and (b) £1,307 profit on redemption of 4 per cent. first mortgage debenture stock, leaving £16,249 which had been written off out of the year's revenue.

With reference to the receipts he was glad to say that there was an increase in passengers of £8,470, and increase in live-stock of 60,513 head. In the year 1907-8 they carried 49,774 passengers, and last year 62,486. In the former year the tonnage of goods was 55,052, last year it was 65,075 tons. Live-stock 164,541 head, this year 259,262 head. The local traffic showed an increase of 41.15 per cent., the through traffic 69.12, and the traffic from Government line to Government line an increase of 11.50. To keep up with the coasting traffic they had ordered five new locomotives at prices below those which were now ruling, and of these three would be shipped to Australia in the early days of March, and the remaining two in May. It was right to say that the wheat traffic this year was likely to be adversely affected by the rain, but this was likely to be compensated for by increases in other sources of traffic. In addition to the six new engines, which would suffice for some time to come, they were having six new lavatory cars, and 100 new wagons were purchased last year. The more progressive land policy of the company, whereby ready-made farms would be offered to intending settlers, was being actively proceeded with, and a large amount of work had been done in that respect. Notwithstanding the fact that unfavourable climatic conditions had delayed their completion, Mr. Gardiner had no doubt as to the soundness of the policy. In 1911 the State Parliament passed an Act authorising the extension of the Wongan Hills Railway, which line practically paralleled that of this company. The Bill was opposed by the company because if the line were constructed it would unduly deprive the company of valuable traffic which it at present carried. The objections were overruled, and authority to construct the line was granted. ("Shame.") With the objects of avoiding hardship to the company, to fully protect the public interest, and save the public money, the directors proposed to the late Government that spur or loop lines from the Midland should be built to serve the lands suitable for settlement, but the proposal was not accepted by the Government then in office. Since then another Government was in power, and fresh overtures had been made to them.

After numerous questions had been put, and replied to by the chairman, the resolution was formally moved by the chairman. It was seconded by Mr. A. WILLIAMSON, and carried unanimously.

The resolution for re-election of auditors was agreed to.

The CHAIRMAN then moved that: "The new Articles contained in the printed document submitted to the meeting, and for the purpose of identification subscribed by the Chairman thereof, be

and they are hereby approved, and that such new Articles be and they are hereby adopted as the Articles of the Company, to the exclusion of and in substitution for all the existing Articles thereof." This was carried unanimously.

COLOMBIAN NATIONAL RAILWAY.

Mr. R. H. McCarthy, presiding at a general meeting on Thursday in Winchester House, E.C., said that the condition of the line had been greatly improved, but even yet an expenditure of from £100,000 to £105,000 was necessary on the permanent way, as well as for rolling stock. The gross receipts for the year were £61,672, while the expenditure was £61,354, the latter being mainly caused by the condition of the line and equipment. He thought that with proper management the company could be got into a very satisfactory position within a few years. The work during 1910 was carried on under circumstances of serious difficulty. For three months traffic could only be carried on intermittently owing to frequent landslips. This entailed heavy cost in repairing the line and making the permanent way safe for traffic. Since then matters had improved, and landslips had been few. Their relationship with the Government consisted of a series of agreements, but the company was not altogether satisfied with the position, and representations were still being made on various subjects to the Government. The condition of the line had been greatly improved, but even yet large expenditure was necessary on the permanent way, as well as the rolling stock.

In reply to a question from a shareholder, he said that the opening of the Panama Canal would not benefit their railway at first, but undoubtedly in the future would bring considerable additional traffic to the line. The chairman hinted, in reply to a question, that there was a possibility of the nationalisation of the railway in the future.

Mr. B. S. Cuno, who had visited the railway, said that the condition of the permanent way was very good, except on the older lines, where improvements were being made from time to time. The manager had estimated that £140,000 would be wanted to complete the necessary improvements in the permanent way and rolling stock.

The report was adopted.

PERUVIAN CORPORATION.

Mr. G. Acton Davis, presiding at the annual meeting in the Great Eastern Railway Hotel, E.C., on Thursday, said that the total revenue had increased by just over £142,000, and this had permitted the board to deal with the depreciation of their investments and the loss on their interest in the Chira Canal. At the time of making the investments alluded to, no one could have foreseen the serious decline that had since occurred in British credit. As to the company's interests in the Chira Canal, this had been disposed of at a loss of £37,847, which sum had been written off in their books. Their revenue from guano had increased, as had also that from the railway.

Replying to a shareholder, the chairman said the question of funding or otherwise dealing with arrears of dividend would have to be postponed until the improvement which was taking place in the company's finances had gone still further.

Burma Railways.—Presiding at the annual meeting in Gresham House, E.C., on Tuesday, Lieut.-Col. A. G. Begbie said that great progress had been made in the doubling of the line, and the new Rangoon station had been half completed. The most important work they had in front of them was the erection of the new carriage and wagon shops. Their earnings for the period under review had been very satisfactory. They exceeded those of the previous year by 5 lakhs. Their working expenses on the main line were considerably higher, owing to the additional train mileage, necessitated by the increased traffic, and by the outlay on improvements which the expansion of business since they took over the line had rendered necessary.

Landslip on the Great Western Railway. On Thursday a landslip occurred on the main line of the Great Western to Birmingham and the North in a deep cutting between Beaconsfield and Gerrard's Cross. The 9.10 express from Paddington to Birkenhead was delayed half an hour, and other trains suffered proportionately up to noon, as all traffic had to be diverted to one set of metals. A gang from the engineer's department cleared the obstruction.

L. and S.W. Developments at Southampton.—The *Southern Daily Echo* announces that the negotiations which have been pending between the South-Western Railway Company and Mr. Tankerville Chamberlain have been concluded, and that the company have purchased the foreshore facing Southampton Docks, and a strip of land for a railway to join the Netley branch. The purchase of further foreshore and land will shortly be completed. Important developments on the Woolston side of Southampton Water may be expected in the near future.

GENERAL NEWS.

U.S. RAILWAY SECURITIES COMMISSION.

The report of the Railway Securities Commission, which was appointed by Mr. Taft, under the authorisation of the United States Congress, while advocating the surrender of State charters for Federal charters as an ultimate end, finds present-day conditions unripe for such a change. The report recommends enforced publicity for all railway financing as the best safeguard against the "watering" of stocks. The Commission takes the ground that constitutional questions involving the scope and extent of Federal authority are unsettled, and will remain so for some time. It considers that to superimpose Federal regulations upon State regulation while such conditions exist would add to present conflicts and complexities, which, in the public interest, it says, should rather diminish than increase.

IMPORTANT APPEAL BY THE G.W.R.

On December 11, in the High Court, before the Railway and Canal Commissioners—Mr. Justice A. T. Lawrence, the Hon. A. E. Gathorne Hardy, and Sir J. Woodhouse—the matter of the General Electric Company, of Birmingham, v. the Great Western Railway Company was heard. Mr. Disturnal and Mr. Tangye appeared for the plaintiffs, and Mr. Macassie for the railway company.

Mr. Macassie said this, the appeal, was from an order of the Registrar ordering them to give discovery of transactions at their Birmingham station over a long period. The appeal raised a question of principle. Applicants' complaint was that they were not charged in respect of their machinery the same rates as were charged to a firm called Belliss and Morcom, who were manufacturers of vertical steam engines. These engines, being of exceptional weight, were charged for not on a rate, but a reasonable sum under Part 4 of the Rates and Charges Order as agricultural engines. Applicants merely made the vague general allegation of undue preference to Belliss and Morcom, and then asked for discovery on that vague allegation.

Mr. Disturnal said he wanted to prove that this had been an habitual practice extending over several years. He did not see why the Great Western Railway should not do what the Midland and London and North Western Railway had done.

Mr. Justice Lawrence said that was only done by consent. He could not order a hostile railway company to do it. At present the Court thought the order was too wide and too oppressive, and it must, therefore, be discharged, but without prejudice to any further application by the applicants after they had given particulars.

ELECTRIC TRACTION ON A MAIN LINE RAILWAY.

With the above title Messrs. Dick, Kerr and Co., Ltd., have issued a very handsome illustrated book dealing with the electrified lines of the Lancashire and Yorkshire Railway. It is now seven years since electric traction was inaugurated on the line from Liverpool to Southport, and since then the electric equipment has been carried further and extended to several branches. After such a period of time it is fitting that there should be a record of work that has been done and of the experience which has been gained. The whole of the electric installation (which was carried out by Dick, Kerr and Co.) has given the utmost satisfaction, and the lapse of time seems to lead only to still greater efficiency and economy. This is the more gratifying when it is remembered that the Liverpool-Southport line was the first main line railway to be electrified in this country. The first part of the book gives a concise statement of the advantages to be derived from the use of electric traction for heavy traffic. Then comes a description, with numerous beautifully-executed illustrations of the railway, rolling stock and electric equipment, power station, sub-stations, and so forth, along with some account of the train services. The length of line electrified now amounts to 83 miles measured as single track. Diagrams show the great increase in the present train services as compared with the steam train schedule of 1903, and tables set out further facts, including the great increase in average train speeds. In the latter part of the book it is shown how fully the advantages of electrification have been realised on the Lancashire and Yorkshire system. These include, among other things, greater carrying capacity, higher economy of operation and reduced cost of equipment maintenance. Rolling stock men will find of special interest two tables which give separately for each half-year since 1906 the mileage

between overhaul of bogies, wheels, armatures, brushes, brakes, etc., and the maintenance cost of the motive power portion of the electric rolling stock, the figures being set out separately as totals, per motor mile, and per motor car. Railway officials who are now investigating the problems of electrification will find this book of much interest and value as a record of results already achieved.

CHRISTMAS RAILWAY ARRANGEMENTS.

The Great Western Railway Co. inaugurated their Christmas passenger traffic with excursions to Ireland on Thursday, December 21. On the following day there were excursions to various towns in the West country, and a special supper car train left Paddington for Exeter and other places in Devon and Cornwall at 7.5 p.m. On Saturday, December 23, cheap bookings are extended to Chester, Oxford, Birmingham, and other Midland towns; Manchester, Liverpool, Wales, Herefordshire, Wiltshire, and the Channel Islands. On Sunday (Christmas Eve) trips will be made to Devizes, Swindon, Bath, Bristol, Weston-super-Mare, Oxford, Gloucester, Cheltenham, etc. On Tuesday, December 26, day and half-day trips will be run to Reading, and there will be bookings for one, two, or five days to South Wales stations, and for one, two, three, or five days to Leamington, Warwick, Birmingham, Wolverhampton, etc. In addition to the facilities offered from Paddington for travel to the West Country and the Cornish Riviera, for the benefit of those persons residing in the suburbs, from which Paddington is less conveniently accessible, arrangements have been made to run a through supper-car excursion from Clapham Junction and Kensington (Addison Road) to Exeter and principal stations in Devon and Cornwall this (Friday) evening.

GREAT EASTERN.

In addition to tourist, fortnightly, and week-end tickets, special excursion bookings on the Great Eastern will be issued from Liverpool Street and the suburban stations on December 23 to the East Coast, the Broads, and other districts in the Eastern Counties, as well as to Manchester, Leeds, York, Scarborough, Bradford, Durham, and the North. On December 22 and 29 there will be cheap bookings to Darlington, Newcastle, Edinburgh, Glasgow, and other stations in Scotland. Midnight trains will be despatched from Liverpool Street on December 23 for Yarmouth, Ipswich, Lowestoft, Ely, Norwich, Fakenham, Wells, Bishop's Stortford, Audley End, Cambridge, and Bury St. Edmunds.

Exceptional facilities are offered by the Great Eastern Railway Company's British Royal Mail Harwich-Hook of Holland route for visiting Holland or Germany during the holidays.

THE AGREEMENT WITH THE UNIONS.

The members of the Joint Executives of the railway trade unions are to be congratulated upon the sturdy defence of their agreement with the railway companies which they made on Sunday last when faced with many hostile auditors at meetings held in provincial centres.

At Nottingham, Mr. J. H. Thomas, M.P., assistant secretary of the A.S.R.S., was greeted with cries of "Who sold the men?" He said he believed that when the agreement was carefully examined it would be found to constitute one of the greatest triumphs in the history of labour troubles in this country. Nobody would have suggested twelve months ago that it would have been possible to have brought four railway organisations together on the same platform. The last strike had demonstrated that sectionalism had been damned for all time, and in regard to railways, it had been shown that within a few years their ownership must pass from private into the State's hands. Interrupted by cries, "What about the result of the ballot?" Mr. Thomas said that he had the result of the ballot in his pocket, but he was not going to give it to them. (A voice: "Why don't you publish it?") Having come to an agreement, it would be simply madness to declare the result of the ballot at this stage, and it would never be done with his sanction. The agreement wiped away entirely the process of petitioning, it being made obligatory before the company could effect any alteration in a clause that a month's notice must be given to the staff, so that matters might be discussed by the Conciliation Board. If the Midland Company interfered with the trip rate of any one man, he could immediately appeal not to the directors or superintendent, but to his trade union officially to settle the matter, and if they decided in his favour, not only had the terms to be amended, but he was to be paid back money from the time the alteration took place. Mr. Thomas also claimed that, by the arrangement which had been made respecting casual labour, an inducement in favour of employing casual

labour as against regular men had been removed. A Voice: "How many companies will do it?" The Great Central, North Western, Midland, and London and South Western Companies had already pledged themselves to this, and they had also their written statement that they would induce the whole of the railway companies to do the same.

A resolution inviting the men to censure their leaders and to refuse to accept the agreement was defeated by the meeting by an overwhelming majority.

A meeting at Birmingham condemned the leaders for accepting terms while the ballot was in progress, and demanded that the result of the voting should be made known. Rotherham and Sheffield men called upon the leaders to resign immediately, and Sheffield unionists resolved to refuse to take any steps in putting in operation the scheme of Conciliation Boards. The A.S.R.S. members on the North Staffordshire system have heartily accepted the agreement.

It is stated that a sub-committee will probably sit at the end of the present month to consider the advisability of immediately declaring the result of the ballot.

Advances in wages were announced this week on the Caledonian and Glasgow and South Western Railways.

PERSONAL.

Mr. T. H. Carter has resigned his position in the G.N.R. accountant's office to fill the appointment of Clerk to the Treasurer of the Duchy of Cornwall, Buckingham Palace.

Mr. John Conacher, of Westbourne Terrace, Hyde Park, for several years general manager of the North British Railway Company, has left £30,192 gross and £28,843 net.

Mr. Ed. Thompson, of Gateshead, has been appointed by the Great Northern Railway to the position of carriage and wagon superintendent at the Doncaster Works, in succession to Mr. H. N. Gresley, who recently succeeded Mr. H. A. Ivatt as chief locomotive engineer on the latter's resignation. Mr. Thompson has been in the service of the North-Eastern Railway at Gateshead.

Mr. Russell Willmott has resigned his position as manager of the Stratford-upon-Avon and Midland Junction Railway. The resignation will take effect on December 31, when Mr. Willmott will take up the appointment of secretary and general manager of the Isle of Wight Central Railway Company. Mr. A. E. Diggins, secretary of the Stratford-upon-Avon and Midland Junction Railway Company, will assume the duties of traffic manager, in addition to those of secretary, from January 1 next.

Mr. P. W. Beatty, who has been appointed the South American representative and manager of the Edison and Swan Electric Light Co., has already had several years' experience in South America, having acted as resident electrical engineer to the South American Light and Power Co., an undertaking in which the Buenos Ayres and Pacific Railway Co. are the largest shareholders. Mr. Beatty recently superintended, under the direction of Mr. Snell, of Messrs. Preece, Cardew and Snell, the re-modelling of the lighting company's plant, the erecting of a large generating station for the Buenos Ayres and Pacific Railway Co., and the electrification of the Bahia Blanca Tramway. Mr. Beatty was also responsible, under the same direction, for several large lighting and motor installations for the railway company at their docks, workshops and sheds.

Mr. W. Strang, district traffic superintendent of the Fife district of the North British Railway, has been promoted to the position of assistant superintendent of the line. On December 16th, he was presented with a roll-top writing desk, chair, a scarf-pin, and a gold watch and chain for Mrs. Strang, from the members of the Fife staff. The presentation was made by Mr. J. Thomson, assistant district superintendent. Sir William Robertson, who presided, bore testimony to the uniform courtesy, kindness, and attention which had always characterised Mr. Strang in his relations with the public. Mr. H. W. Hutchison, Eastbank, Kirkcaldy, on behalf of the traders of Fife, presented Mr. Strang with a case of cutlery and a cheque for £100. In acknowledging the gifts Mr. Strang referred to the valuable assistance which he had received from the staff under him.

Royal Recognition of G.C.R. Crew's Gallantry.—On the return of the King from India, his Majesty will present the Board of Trade silver medal for gallantry in saving life at sea to second officer T. P. Horsfall, seamen Lenygon, Shepherd, Johnson and Allington, and firemen Baker and Bolton, of the s.s. *Wrexham*, belonging to the Great Central Railway Company, in recognition of their services in assisting to save the lives of the crew of a British ship which was wrecked on the coast of Holland on October 1. They have also been awarded £3 each, and Mr. W. G. Wood, the captain, has received binocular glasses.

UNDERGROUND

THE NEW WIDENED LINES OF THE DISTRICT RAILWAY.

Readers of the daily papers will, maybe, have noticed how, year by year, the District Railway has been accumulating increases on its traffic. Particularly has this been the case with the service to the popular western suburbs, and it became essential to continued prosperity of the railway to augment the number of its trains.

West of Hammersmith, the District Railway formed a junction with the London and South Western Railway, and by arrangement with that Company the trains passed over its lines until just beyond Turnham Green they diverged at another junction, the District lines running to Ealing and beyond, the South Western lines to Richmond. The two existing tracks had, therefore, to accommodate not only the District train service, but services of steam trains belonging to the London and South Western and Great Western and Metropolitan Joint Railways. These services were added to, and the situation developed until it was not possible for more trains to be got through.

By a new arrangement with the London and South Western Railway the tracks have now been doubled, and under it the District Railway will have two tracks of its own to Ealing and beyond, entirely independent of the two tracks to Richmond of the London and South Western Railway.

It is now possible not only to work both pairs of tracks independently, but to pass trains in one direction from one pair of tracks to the other without in any way disturbing the trains in the other direction.

With this reconstruction of the Railways has gone the reconstruction of the stations at Ravenscourt Park and Turnham Green. A new station is being built at Stamford Brook, midway between the other two and fronting on the Goldhawk Road.

IMPROVEMENTS IN TRAIN SERVICE TO EALING AND HOUNSLOW.

On Sunday, December 3rd, the widened lines were brought into use, and a week later occasion was taken to make those additions to the train service for which their construction was originally undertaken.

From a ten-minute service to Ealing, with such odd extras as could be squeezed in, the service becomes a six minute interval, and, with occasional vagaries of a minute, trains leave Ealing at the hour and at 6, 11, 18, 24, 30, 36, 41, 48 and 54 minutes past the hour. With this liberal service there are still extras during the busy hours. Every Ealing train, except one, stops at Hammersmith. Throughout the day the non-stop service will be maintained.

With the Ealing service goes a corresponding betterment of the Hounslow service. While the ten minute local service between Acton Town and Hounslow Barracks, connecting with the Ealing main line trains, is maintained all day, an addition has been made of four through trains to the City during the busy hours.

With the Hounslow service goes a corresponding betterment of the Harrow and Uxbridge service. Again maintaining the existing all day service to Harrow every twenty minutes, additions have been made, bringing the number of trains up to seven, eight, and even nine during the busy hours. Particular provision has been made for the proposed garden suburb at Ruislip, and a through train from Uxbridge, leaving Ruislip at 8.46 a.m., arrives at Charing Cross at 9.30 a.m., in about three-quarters of an hour.

A few summary statistics will serve to focus the attention upon the growth which the notable improvements outlined above means. Figures are given for the number of trains passing in one direction over various sections of railway throughout a single working day, before and after the eleventh of December.

	Before 11th Dec.	After 11th Dec.	Increase Per Cent.
South Harrow—Acton Town	68	96	41
Hounslow—Acton Town	121	144	19
Ealing—Acton Town	119	168	66
Turnham Green—Hammersmith	200	302	51
South Kensington—Mansion House	501	559	11

Yet another feature of the new service deserves notice, and that is the lengthening of the day by earlier and later trains. The earlier train will leave Ealing Common at 4.24 a.m. The later train will leave Mansion House at 1.0 a.m. and run to Ealing. A connecting train will leave Acton Town for South Ealing, Northfields, and Heston Hounslow only, arriving at Heston Hounslow at 1.39 a.m.—one of the quickest trains of the day.

We do not claim that the train service is yet perfect, but with this last effort we shall have achieved a far closer correspondence between demand and supply than ever before, and we have by proxy expended a not inconsiderable sum of £250,000 to secure the result.

SOUTH AUSTRALIAN RAILWAYS.

The annual report of Mr. Alex. B. Morcreeff, Commissioner of South Australian Railways, for the year 1910-11 states that the total capital of the open lines, excluding two which were transferred to the Commonwealth, is £12,676,240, the length being 1,457½ miles, and the average cost per mile £8,697. The total receipts amounted to £2,015,182, being an increase of £174,783 over the previous year. The working expenses were £1,222,439, an increase of £153,299. The interest charges on the total capital outlay were £477,032, so that the surplus, after meeting both working expenses and interest, was £315,111. The net revenue, before meeting interest, was equal to 5.81 per cent. on the capital expenditure on the average miles open. The balance to the debit of profit and loss, which in 1888 was £1,770,062, has now been reduced to £400,011. The passenger journeys increased from 15,282,104 to 16,610,953. The receipts per mile open amounted to £1,202, against £972, and per train mile 82.50d., compared with 81.48d. The working expenses per mile open were £729, against £505, and the cost per train mile was 50.1d., against 47.34d. The percentage of working expenses to revenue was 60.66, against 58.09. The increased cost of working was due to an augmented wages bill and extraordinary expenditure relating to rolling stock, buildings, permanent way, etc.

South Australia is cursed with two gauges, and the traditional battle is being repeated there. The Commission states that a war council, consisting of military and railway officers of the various States, has been formed, and met for the first time during the year, when, among other matters, the question of unification of the gauges was discussed. This question is bound to be of vital importance, and the Commissioner takes the opportunity of emphatically stating his opinion that unless it is decided to unify the gauge right through from Brisbane to Perth, the proposal of the Federal authorities to construct the Port Augusta-Kalgoorlie Railway on the 4ft. 8½in. gauge, which would introduce a third gauge into Australia, should be strongly resisted. The principal gauge in South Australia is 3ft. 6in., of which there are 1,313 miles, but there are 622 miles of the 5ft. 3in. The report contains 50 pages (13½in. by 8½in.) of text, and is accompanied by a map on a scale of 30 miles to the inch, showing all South Australian railways, graphs showing mileage passengers, train mileage, revenues and expenses for the last ten years, and several interesting illustrations.

RAILWAY NOTES.

Aberdeen Station.—The Joint Passenger Station Committee have decided to put in hand the work in connection with the new station.

Demurrage on Coal Wagons.—An agreement has been reached between the Scotch coalowners and railways respecting the claims of the latter for demurrage on loaded coal wagons. The owners will pay £80,000 to the railway companies in settlement, and other traders will now make payment.

L. and N.W.R. Strike Precautions.—Until last week the London and North Western Railway Company at Bangor were reported to be signing on retired engine-drivers and stokers in view of the possibility of a strike, and were preparing sleeping and feeding accommodation for them on the railway premises.

Prizes for Midland Gardens.—In the annual competition on the Midland Railway for the prettiest and best kept platform gardens and stations, the first prize has been secured to Five Ways (Birmingham), with 85 marks. Next in order are Morecambe, Alcester, and Malvern Wells, with 75 marks each.

Proposed New Dock at Grimsby.—Mr. Sam Fay, general manager, Great Central Railway, recently visited Grimsby, and inspected Campbell's Bank, a site east of the existing docks, and plans are being prepared for the construction of a new fish dock upon that area to provide greater accommodation.

Railwaymen and the Insurance Act.—Certain railway companies having recommended their employees to get their pension funds registered under the Insurance Act, Mr. Williams (the general secretary of the Amalgamated Society of Railway Servants) has issued a circular urging the men not to declare themselves in favour of any society just now.

Locomotive and Rolling Stock Contracts have been placed as appended:—North British Locomotive Company, 25 engines and tenders for the Indian State Railways; Blake Boiler and Engineering Co., 50 bogie 20-ton wagons for the Antofagasta and Bolivia Railway, 70 19-ton steel wagons for the Nigerian Railways, and wheels and axles for Ceylon, Madras, and Malay Railways.

Grand Trunk Pacific Construction.—Two Grand Trunk Pacific Bills were passed through the Dominion House of Commons

and Senate and given Royal Assent before the adjournment. They respectively extend the charter and contract of the company, giving it till December 1, 1912, to finish the prairie section and till December 1, 1914, to finish the mountain section. The Government, however, retains the power to limit further the period for the completion by Order in Council.

A Railway Athletic Gazette.—The London Athletic Club of the London and North Western Railway Company has issued an excellent first number of the "Premier Railway Athletic Gazette," which has come into existence owing to the phenomenal growth of the social and recreative side of the company's London staff. The club affords the army of young fellows at Euston and elsewhere opportunities for becoming athletes instead of indolent onlookers. It is to be hoped that the railwaymen will note the example of Mr. H. A. Walker, as set forth in an appreciation of his work by one of the three editors. It was work and not play that secured for the assistant manager his promotion to be manager of the South Western Railway, an appointment upon which he enters next month. Sound advice is contained in the remarks made by the chairman of the company at a recent meeting of the clerical staff. An excellent photograph is given of Mr. Frank Ree, the general manager, whose career affords corroboration of the truth of Mr. Cloughton's observations.

Paddington Station, London.

The British Standard Brake Block

NOW UNIVERSALLY ADOPTED BY THE LEADING RAILWAY COMPANIES.

WHY?

Because we cut down your present cost 40% to 60%.

THEREFORE

Shift the responsibility on to us.

Our Brake Shoes last $2\frac{1}{2}$ times the life of the ordinary cast iron Block, with equal braking effect, and slightly less wear on the wheel tyres.

By our new design and blending of metals the Shoe can be completely worn out without danger.

One Shoe only, interchangeable and reversible for all classes of Carriages, Wagons, Vans, etc.

Don't theorise: get the facts from the list of Railways we now supply.

Our Representatives, with suitable samples for trial, are at your command.

The National Rail & Tramway Appliances Co. Ltd.,
12-18, TAYLOR STREET, LIVERPOOL.

Telephone: 1198 Royal.

Telegrams: "Brakeblock Liverpool."

London, E.C.
27th December, 1911.

TENDERS INVITED.

Midland Railway Company.

TO CONTRACTORS AND BUILDERS.

OFFICES.

THE Directors of the Midland Railway Company are prepared to receive Tenders for the Erection of Additional Offices for Telegraph Superintendent at Derby.

Plans and Specifications may be seen, Quantities and particulars obtained, on application at the Engineer's Office, Derby Station, on and after Thursday, 28th inst.

Sealed Tenders to be forwarded by post to the Secretary of the Way and Works Committee, Midland Railway, Derby, not later than 9 a.m. on Thursday, 4th prox.

The Directors do not bind themselves to accept the lowest or any Tender, nor to pay any expenses attending the same.

ALEXIS L. CHARLES,

Secretary.

Derby, December 18th, 1911.

The Great Indian Peninsula Railway
Company.

RAILS, ETC.

THE Directors are prepared to receive Tenders for the Supply of the following Stores, namely:—

Rails and Fishplates.
Fishbolts and Nuts.
Cast Iron Chairs.
Helical and Volute Springs.
Laminated Springs.
Wheels and Axles.
Locks, etc.
Metals.
Station Bells, Bib Cocks, etc.
Ropes, Twines, etc.
Plate Glass, etc.
Plumbago Crucibles.

Specifications and forms of Tender may be obtained at this office on payment of the fee for the specification, which payment will not be returned.

Tenders must be delivered in sealed envelopes, addressed to the undersigned, marked "Tender for Rails and Fishplates," or as the case may be, not later than 11 o'clock a.m. on Thursday, the 4th January, 1912.

The Directors do not bind themselves to accept the lowest or any Tender.

THE RAILWAY YEAR.

The year which is now closing has been a momentous one in the British railway field and its annals are of surpassing interest. Though there were, of course, other matters of consequence, the attention both of those concerned in the railways and of the general public has for the second half of the year been concentrated on the labour troubles. Last winter and spring the prospects were clear enough, but as the summer advanced the clouds gathered. After a long-drawn-out period of turmoil the year closes with a more peaceful outlook in the railway field, at least, than has been seen for a long time. But let us first look briefly to a few other matters in which there is undoubted reason for gratification. The twelve months have happily passed without any such succession of accidents causing serious loss of life as marred the records of 1910. The only casualty of really bad eminence was the collision between a passenger and a mineral train at Pontypridd on January 23, by which twelve lives were lost. The unremitting efforts of the railway companies and of the Board of Trade to make railway travelling as safe as possible have in recent times eliminated the great bulk of accidents except those arising from failure of the human element. That, too, is being more and more guarded against by the discovery and application of automatic checks and safeguards. The growing policy of railway companies to enter into working agreements and co-operation and to reduce useless competition received a notable impetus by the report issued in May of a Departmental Committee appointed by the Government. That report was entirely in favour of extended co-operation, not merely for the good of the companies but also of the public. The full development of that policy has not yet been reached, but it is advancing. Besides the direct benefit to the companies by reducing expenditure, and possibly by increasing revenue, the general application of working agreements may prove a tower of strength should the mischievous political agitation for the nationalisation of the railways become strong enough to require serious treatment. The development of electric traction on railways has not progressed much during the year, though it is admitted on almost all hands that electrification is highly desirable for busy city and suburban lines. The electric equipment of the Brighton line from Victoria (London) to the Crystal Palace was, however, completed, and the electrical working since its inauguration on June 1 has, like that of the South London line, been a great success. The other event in this field was the announcement by the London and North Western Railway board of their extended scheme, under which they will not only have an electric railway from Watford to Euston, but will equip electrically the North London and other local lines, and obtain a connection with the Baker Street and Waterloo Railway, thus joining up with all the underground electric railways in London. With the abolition on Monday next of second-class on the London and North Western and some other railways, second-class carriages and fares will, with slight exceptions, be things of the past in this country. The outstanding feature of the year, from a railway point of view, was, of course, the

strike. It effectually began in Liverpool on August 12, and spread rapidly over the country, causing great inconvenience and immense loss and the calling out of the military. It was closed on August 19 by the appointment by the Government of a Royal Commission to inquire into the working of the agreement of 1907. While the Commission was sitting an abortive railway strike took place in Ireland. The Commission reported on October 20. Then followed the repudiation by the men's unions of their obligation to abide by the report of the Commission, the threat of another strike, the conference between the parties brought about by the Government, and the final agreement (on December 11) for carrying out the Commission's report. While these things were going on most of the railway companies made substantial concessions in the matter of wages. There is now a fair prospect for the working of the Conciliation Boards by the amended method put forward by the Commission. The strikers learned the valuable lesson that no British Government will allow the railway service to be paralysed and that force will be met by force. What the industries of the country lost by the strike cannot be exactly known. The railway companies lost about half a million sterling in receipts. So remarkably good, however, has the traffic been that the half year closes not merely with the loss wiped out but with an increase of receipts compared with the second half of 1910 of about a million. The dividends for the first half of the year in many cases showed increases as against the first six months of 1910, and despite the strike and increases of wages there should be a fair showing when the rates of distribution come to be announced a few weeks hence. The year closes, nevertheless, with railway interests still under a cloud, and it is impossible to speak of the future with any certainty. The serious menace of the trouble in the cotton trade, the threatened strike of the miners, and the indifference with which railway employees have received the by no means inconsiderable concessions made to them by the companies all indicate a fresh period of unrest in the labour world which must react on the prosperity of the companies. The companies may, however, congratulate themselves that they have succeeded in effecting a settlement with their own employees which, for the present at least, makes a recrudescence of overt trouble among their own workers improbable.

LONDON UNDERGROUND RAILWAY REVIVAL.

No more striking testimony to the beneficial results of efficient and enterprising management, coupled with able financing, has, we believe, ever been provided than that now being displayed in connection with the "Underground" Electric, or what we may term the Speyer group. This group, we may recall, comprises the parent company, the Underground Electric Railways Company of London, and also the District and the London Electric Railways, the latter comprising the Great Northern, Brompton and Piccadilly, the Charing Cross, Euston and Hampstead, and the Baker Street and Waterloo. We can imagine no railway undertaking which has had greater difficulties to contend with at every stage. Early estimates of the probable profits of such undertakings were belied by new developments in road competition, and particularly the motor omnibus, and local taxation has been growing in such a way as to suggest that in the opinion of our public authorities, tubes and other transport facilities ought to be taxed out of existence, instead of being encouraged in every possible way. The "Underground" group has indeed had to fight its own battles, not merely without the support of the local authorities and the public, but in face of deliberate opposition to its interests. In spite of all obstacles, the system of tubes, etc., has been developed so energetically and efficiently, that it has become an

essential part of the life of the community. The growth of the population, and the urgent demand on all hands for frequent and rapid means of transport, have proved that the tube system supplies a necessity of modern life in London, but adequate recognition has certainly never been extended to those financiers and administrators who had the ability, courage and foresight to provide for this demand. The public, having been impressed by the remarkable recovery in the profits and in the price of London General Omnibus Stock, has lately turned its attention to the various securities of the Underground Electric group, and it is not surprising to find that this examination has led to purchases in influential quarters, with marked effect upon quotations. As examples of the recovery in prices of various securities in this group during the present year, we set out below the lowest prices of 1911, and the present prices:—

Stock.	Lowest Price 1911.	Present Price.	Advance.
Metro. Dist. 4½ % 1st Pref ..	84	92	8
Metro. Dist. Ord. ..	23½	36	12½
Lond. Elec. Rly. 4 % Deb. Stock ..	92½	99	6½
Do. 4 % Pref. Stock ..	80	85	5
Underground Electric Railway 4½ % Bonds ..	93½	101	6½
Do 6 % Income Bonds ..	39	79½	40½
Do. £10 Shares ..	1½	3½	2½

The recovery this year, as shown above, has been striking, but it must be kept in view that quotations last year were even lower. The actual results of these undertakings certainly justify the appreciation in quotations. The District Company, for example, has achieved a position of not merely earning the full 4½ per cent. on its First Preference stock, but something on the Second Preference stock, and there are prophets bold enough to suggest that next year the full 5 per cent. will be earned on this security. In the case of the London Electric Railways a dividend of 1 per cent. was last paid upon the Ordinary stock, and the working statements show that the improvement continues. The Underground Electric Railways Company of London has been able to reduce its liabilities in quite a remarkable way by realising part of its assets on favourable terms. It has repaid a million of 5 per cent. Prior Lien Bonds and a million of 4 per cent. Power House Debentures. Arrangements have also been made for repaying £1,088,000 of the 4½ per cent. Bonds, so that, in all, the liabilities of the undertaking will have been reduced during the last few months by over three million sterling, and a large saving in interest effected. As the value of the securities held by the company continues to grow, opportunity will be afforded for further realisation, which cannot fail to increase the reversionary value of the outstanding securities. In particular, the 6 per cent. Income Bonds of the Underground Electric Railways have appreciated on the realisation of the fact that the present market value of the assets of the undertaking justify a much higher valuation even at present, and it is suggested that at no distant date the company may exercise its option to repay these bonds at par. No official information is at present available regarding the contemplated agreement with the London General Omnibus Company, but if this is consummated, on reasonable terms to all parties, there can be no question that great advantage will result. In the last day or two attention has been directed to other London railway undertakings outside the Speyer group, such as Metropolitan and Central London. The same influences which are favourably affecting the Speyer group of stocks must justify an improvement in the position of other similar securities, and the merits of Metropolitan Ordinary in particular seem to have been overlooked.

THE RAILWAYS AND THE PUBLIC.

The railway industry, so far at least as it relates to Great Britain, has passed through few more noteworthy periods than the year whose closing days are now upon us. Notwithstanding the immediate outlook, we believe that with the close of 1911 there terminates also a long chapter in railway history that has proved a dreary record to the majority of those connected with the industry. The story which the future will tell will, we think, for the most part be one of greater progress and greater prosperity. To one outstanding feature, certainly, many factors point—that a very much more searching light will fall upon railway enterprise in this country than hitherto. More interference and more potent criticism may be anticipated. The industry will be very much in the public eye, and must adapt itself to changing conditions. Yet so intrinsically sound is the position of our railways that they may welcome investigation. Indeed, it is upon this very scrutiny and this enhanced attention that we base our prediction of greater progress and prosperity. If, however, the greatest benefit is to be secured from what to a less sound industry must prove a highly prejudicial factor, our railways will do well to cultivate a little more assiduously one important essential. Unfortunately it is an essential which the companies up to the present have employed with caution—almost with dislike. It is the element of publicity. We do not think there was ever a time when it was so necessary as at present that the case for the railways should be vigorously and persistently presented. There is more than one influence working antagonistically to our railways. As things at present stand reticence may positively injure interests which it was never well calculated to promote. Whether the problems involved relate to labour disputes, to falling prices in the stock market, or to the agitation for, and as some think, the approach of nationalisation, they are influences which must now be actively encountered if the railways are to secure a happy issue out of all their troubles. Happily, the companies have already at their disposal suitable means for securing a not unimportant measure of publicity that is so desirable and necessary. In this connection, we may perhaps be pardoned for pointing out that for three-quarters of a century, practically since the inception of a railway system, THE RAILWAY TIMES has consistently advocated railway interests. Having carefully followed the trend of recent events, this journal will with increased efficiency continue to put before the public the services which the railways are performing in no unworthy manner, and the claims which their shareholders have upon the public for fair and even generous treatment. The need for the regular and systematic dissemination of information in regard to the aims and the methods of the railway companies cannot be exaggerated, and all means for accomplishing this object ought to, and we are sure will, receive the cordial support of the companies. Whether this be the case or not, we shall, in the coming year, spare no effort to make THE RAILWAY TIMES a stronger link of communication between directors and proprietors, and to assist more vigorously than ever in presenting fully and fairly the case for railway enterprise. If the possibilities are not turned to the best account, the responsibility shall not, at any rate, be ours.

Mexican National Railways.—The report for the last fiscal year is regarded as unexpectedly satisfactory. Up to the revolution the railways had earned in seven months four per cent. on first preferred stock and between three and four per cent. on second. The revolution so paralysed business that, although the net earnings had shown an increase of 2,662,000 dollars (Mexican) during the first seven months, the year closed with a decrease of over two millions. Nevertheless, there was a net surplus of 123,345 dollars for this year, after the payment of four per cent. on first preferred stock.

The Bank return this week shows an extraordinary demand for money throughout the country, as might have been expected, owing to the great activity in trade which now obtains. The internal circulation of coin expanded by £1,462,000, and the note circulation by £93,000, while, on balance, £240,000 was sent abroad. Thus the Reserve declined by £1,609,000. The most remarkable evidence of need for money is seen in the addition of £6,695,000 to Other Securities, raising this item to £41,914,000, which compares with £36,633,000 for last year, when the return was made up on a date which was one day nearer the turn of the year. What will be the maximum figure which the indebtedness of the market to the Bank will reach on this occasion must remain a matter of conjecture, and, fortunately, it does not really very much matter. The transfers of credit which give rise to these large figures at the end of each year are based, for the most part, on dividend payments, the outcome of sound legitimate business, and, for purposes of this kind, whatever money is necessary can always be safely created, because its existence is short-lived and leads to no inflation. This year the requirements of the market have been aggravated by the fact that the Government is keeping in hand a large sum of money to meet the payments necessary to effect the transfer of the business of the National Telephone Company. This, in conjunction with the larger Treasury balances that necessarily accompany the higher scale on which taxation is now imposed on the country, have raised Public Deposits to £16,331,000, which compares with £11,707,000 last year. The advance for the week in this case is £1,124,000, so that Other Deposits are not more than £3,952,000 higher,

in spite of a large sum borrowed from the Bank. There was no alteration in Government Securities. As the result of all changes the ratio of Reserve to the liabilities of the Bank is six points lower at 35.48 per cent., which compares with 37.86 per cent. last year. The official minimum rate of interest remains at 4 per cent., but the Bank has done a large business in advances for a week at $4\frac{1}{4}$ and $4\frac{1}{2}$ per cent. Discounts are, on the whole, rather lower than they were a week ago, and point to easier money for the early part of next year, though the requirements of Argentina for gold, and the extent to which the ear-marking of the metal for India will be resorted to, cannot yet be gauged.

On the Stock Exchange the holidays have prevented much business being accomplished. The account which has just ended was not very auspicious. Home Rails were, with few exceptions, made up at lower prices. Canadian railways failed to hold their own, and Americans showed irregular changes. The best feature of the alterations in prices effected during the account was the steady advance in foreign bonds; and the several improvements in foreign rails indicate that discriminating investors are still active. Argentine North Easterns were 5 up on the account, and United Havana $1\frac{3}{4}$. Contangoes were naturally heavy, about 6 per cent. being charged on Home Rails, rather more on Americans, and $5\frac{1}{4}$ to $5\frac{3}{4}$ on International securities.

The events of the week have not been numerous or particularly encouraging. The lock-out in Lancashire is a depressing influence on Home Rails, which the excellent traffic receipts that continue to come in do little to counteract. Attention has been chiefly directed to the companies concerned in London traffic, all of which were greatly benefited by the efforts that are being made towards amalgamations or working agreements or understandings for harmonious arrangements of traffic, concerning which, however, very little actual information has been vouchsafed as yet. Last Friday little business was done except in these stocks. Metropolitan Districts rose $\frac{3}{4}$, and London General Omnibus 5. In other departments the tone was dull. The markets did not open again until Wednesday, when Metropolitan Districts rose $2\frac{1}{4}$, Metropolitan Consols the same amount, and London General Omnibus 7. Home Rails declined. Mexicans were better on the surrender of General Reyes. Guayaquil and Quito fell 3 on the death of President Estrada. Americans were irregular, but Canadian railways continued firm. The next day speculation in the shares of London traffic organisations developed strongly. London General Omnibus rose 9 to 207 $\frac{1}{2}$, Metropolitan Consols advanced another $1\frac{3}{4}$, Home Rails again fell, Americans generally declined, but Canadians remained firm. Mexicans were higher, and United Havana rose 1 to 89-90.

On Friday the gamble in 'Bus stock continued as actively as before. Underground Electric Income bonds rose 2, and Central London Ordinary and Deferred 1. In Metropolitan and District, however, prices were not maintained. Home Rails, apart from the above, received little attention, and quotations fell by small fractions in many instances. Americans were depressed, but Canadas at 240 ex rights were unchanged. Trunks declined on a disappointing traffic statement. Mexicans rose. An improvement occurred in Leopoldina. Much interest was exhibited in shipping stocks, and a rise took place in Chinese bonds owing to the satisfactory election of the new president.

The movements since Thursday, December 21, are set forth in the following table:—

Weekly Traffic Summary.

The traffic receipts for the week ended December 24, as officially published by the fifty-two principal railways of the United Kingdom, amounted to £2,389,872, which was earned on 21,521 miles, being at the rate of £111 os. 11d. per mile of line open. For the corresponding week of 1910 the receipts of the same lines amounted to £2,278,796, with 21,467 miles open, or £106 3s. per mile. There was thus an increase of £111,076 in the receipts, an increase of 54 in the mileage, and an increase of £4 17s. 11d. in the receipts per mile. Thirty-four of the returns distinguish between the receipts from passenger and goods traffic, and these show an increase of £53,174 (or £2 8s. 2d. per mile) in the passenger receipts, and an increase of £53,015 (or £2 7s. 9d. per mile) in the receipts from goods traffic. The aggregate increase of the thirty-four railways for twenty-five weeks in the passenger receipts has been £362,030, while the aggregate increase in the goods traffic was £653,876. The aggregate receipts of the fifty-two railways for twenty-five weeks (July 2 to December 24) amounted to £58,459,525, in comparison with £57,453,263 in the corresponding period of last year—an increase of £1,006,262.

DIVIDEND ANNOUNCEMENTS.

LOUISVILLE AND NASHVILLE RAILROAD.—The directors have declared a semi-annual cash dividend of $3\frac{1}{2}$ per cent. on the capital stock.

TORONTO RAILWAY COMPANY.—The directors have declared a quarterly dividend at the rate of 8 per cent. per annum.

A Sheffield Improvement.—The Sheffield City Council have decided to proceed with the construction of a new approach to the Sheffield Victoria Station by making a 70 feet wide road from the centre of the city, at a cost of £110,000. The scheme entails the demolition of the Alexandra Theatre.

ELECTRIC LOCOMOTIVES FOR SHUNTING SERVICE.

South of the city of New Haven, Conn., the New York, New Haven and Hartford Railroad has the Westchester Branch, owned by the Manufacturing Company of Providence. One of the engines running on this branch is one of the electric shunting locomotives, which is shown in the illustration below. It is one of the electric shunting locomotives, which are being constructed by the New York, New Haven and Hartford Railroad.

These electric shunting locomotives are of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts. The motor is connected to a remote unit switch control through a transformer, and is controlled by the locomotive driver. The locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

The electrical equipment consists of a motor, a transformer, a switch control, a compressed air system, and a control panel. The control panel is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts. The locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

Each locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts. The locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

An operating equipment is provided for the locomotive, which is placed at the rear of the cab. The operating equipment is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts. The locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

Locomotives of this type are capable of running on the main line, and are used for shunting service. They are of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts. The locomotive is of the standard type, with a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

The principle of the electric shunting locomotive is to use a phase alternating current system, 11,000 volts, and a motor of 110,000 watts.

Heavy Electric Locomotive for Shunting.

The first electric locomotive furnished to the New York, New Haven and Hartford Railroad has been in use for about twenty hours per day in the yards at Stamford, Conn., and up to November 1, 1911, it had run 13,000 miles.

PROGRESS OF THE COVENTRY LOOP LINE.

Messrs. Holmes and Kuge, of Liverpool, anticipate that the loop line, which is 6 miles in length, which they are constructing for the L. & N.W. Railway Company round the corner of the Coventry Loop, will be completed by the summer of 1913. The line is to be constructed, six over streets, and one under. The line is to be of special girder type, and is to be of reinforced concrete. There is no provision for its removal and tipping back. The main object of the loop is to save coal trains from the North and Birmingham going through Coventry to the south of the city, while a further purpose is to save the considerable passenger traffic along the north-east of Coventry. The line will also serve large engineering and other works. The line will also serve a good deal of the traffic in the city. With regard to the original intention of the line, it will be used for some time for the transport of goods. It would be of great benefit to the city, and it would be of great benefit to the city, and it would be of great benefit to the city.

A Sunderland Traffic Disappointment.—The proposal for the construction of a new bridge over the North Eastern Railway and the new Alexandra Bridge to Southwick, Sunderland, and W. Shropshire is discussed by the Sunderland Chamber of Commerce. Mr. Philip Burtt, the chairman of the railway company, has agreed to consider the proposal. Mr. Burtt is of the opinion that it was important they should have been consulted before going to the Sunderland Chamber of Commerce. Mr. Burtt is of the opinion that they were not getting enough credit for the new bridge, for he believed that the bridge was a good one, and in fact, everybody were disappointed with the results of the bridge.

End View of Heavy Electric Locomotive for Shunting.

ing. With all types of electric locomotives, the large expenses of stand-by losses is entirely eliminated. These losses consist of fuel used in keeping up steam while the engine is standing idle, in starting fires preparatory to taking on a train, and fuel lost in the fire box at the end of a run.

These locomotives were designed to traverse a road of

AN EXTRAORDINARY DEMONSTRATION TRAIN.

Thirty years is a long time in the life of a railway, even in this country, and during such a period great changes and improvements are made in rolling stock, permanent way, and general equipment. In America thirty years is a still longer time in the case of most railways. Development there has been more rapid, partly because the original track and equipment were often of inferior and sometimes of makeshift character, thus leaving more room for improvement, and partly because the conditions in America allow of and, indeed, call for developments, some of which at least are unnecessary or impossible here. One is forcibly reminded of American railroad developments by an extraordinary train which is being used by the Atchison, Topeka and Santa Fé Railway Company for the purpose of demonstrating to an admiring public the progress which has been made on this railway since the year 1881. This train is hauled about over the company's system, and at suitable points it is shown to the public—an admirable method of advertising. The accompanying illustration shows the train; it is not a heterogeneous collection of old cars, but really a historic and comparative exhibit. It is made up of two locomotives and 16 cars, representing the rolling stock which was in common use in 1881 and that which is in use to-day. The following figures give a comparison as to weight, carrying capacity, and cost between the old and the new equipment:—

	Old	New
Locomotive	133,000	850,000
Relative weight, pounds—	Equipm't	Equipm't.
Flat car	10,200	32,100
Coal car	22,000	30,500
Stock car	26,000	45,200
Box car	22,600	40,900
Way car	23,800	38,000
Smoker	49,400	119,100
Coach	50,300	123,100
Relative capacity—		
Locomotive, drawbar pull	14,000	110,000
Flat car	40,000	80,000
Coal car	50,000	80,000
Stock car	40,000	80,000
Box car	40,000	80,000
Smoker, passengers	28	86
Coach, passengers	48	75
Relative cost—		
Locomotive	\$7,740	\$43,880
Flat car	300	943
Coal car	338	1,036
Stock car	450	1,402
Box car	475	1,265
Way car	620	1,282
Smoker	3,000	12,124
Coach	3,605	12,820

The locomotive which hauls the train is a reconstructed Mallet compound of the 2-10-10-2 type, and it is claimed to be the largest in the world. It was built in the shops of the railway company at Topeka, Kansas, and it weighs 850,000 lbs. (379½ tons). It is 120 ft. 7 in. long, the cylinders are 28 in. and 38 in. by 32 in., and the steam pressure in the boiler is 225 lbs. per sq. in. Oil fuel is used, and the tanks carry 4,000 gallons of fuel oil and 12,000 gallons of water. The engine can develop a draw-bar pull of 110,000 lbs., and can haul a train of 10,000 tons on the level. It is fitted with a reheater and a superheater, as well as with air-operated reversing gear, bell-ringer, and cylinder cocks.

The train also carries samples of smaller equipment of the old and new types, including couplers, brakes, cylinders, etc., and a complete automatic signal apparatus in comparison with the old style of signal.

Another comparison is afforded by a section of "dirt" track with a 50 lbs. rail fastened to soft wood sleepers with hand-driven spikes, and a section of rock-ballasted track with a 90 lbs. rail fastened to hard wood sleepers with screw spikes put in by machine.

The Society of Engineers.—Mr. T. J. Gueritte has been awarded the Clark Premium by the Society of Engineers (Incorporated) for his paper on "The Mechanical Installation and Upkeep of Permanent Way on Railways." The Bessemer Premium has been awarded to Mr. R. W. A. Brewer for his paper on "Two-stroke Cycle Engines." Mr. J. Kennedy has been elected president for 1912.

Taff Vale Railway Appeal Dismissed.—In the Court of Appeal, on December 19, the Master of the Rolls and other Judges dismissed, with costs, the appeal of the defendants in the case of Newport Docks Co. v. Taff Vale Railway Co. from a judgment of Mr. Justice Hamilton without a jury. The case related to the high coal and coke traffic over several lines to the docks, and the judgment was in favour of the plaintiffs.

A "Demonstration Train" on the Atchison, Topeka and Santa Fé Railway, including Specimen Rolling Stock of 1881 and 1911.

THE ELIMINATION OF THE HUMAN ELEMENT IN RAILWAY SIGNALLING.

It is so, but it is so in America, too. The same thing has been found in several other American cities. I don't know, for instance, that any serious effort has been made by the Commerce Commission to get the big business houses to put out a signal being ignored. The other thing is that the same thing is going on everywhere, and in this summer there has been a deluge of letters against the trails of the automobile. But I don't think that the above title in *The Towns Edition*, Sunday, December 20 little was said in it. But I don't think so. The R. M. Wilson, in the following issue, that was sent to me on the Wednesday last, has a long article on the subject.

I regret, writes Mr. Wilson, the apparent stagnation of all signalling safeguards in the United States. But, the real problem herein lies a commitment to a rule of law. Do you get the respect for rule, the sense of obligation that is characteristic of that is found so necessary in the interests of the United States where the law for taking care of the interests of the American in nearly every walk of life is daily getting a new impetus into trouble.

We must give credit to Antony for two of the applications we have been adapted to use as a death railway. These are the "dead-man's handle" and the "dead-man's train." The latter in the article is called a stop signal, which is not in correct form, as while it may be a stop it is not a signal. But I am not adding that there has, as yet, been no need to install the thing. I do, although exactly the same conditions as are considered necessary for its use on American roads are to be found here.

But have British railways done anything as to the climatology of the human element? Too lacking of conflicting points and signals and the aspect of the black system gone within that category, and are purely British ideas, but perhaps they are outside consideration here as being so ancient. But the control of the outdoor signals by the black is uncertain and the control of the latter by the trains is not so, and we may claim this.

The article in *The Times* of December 26 also refers to the signalman not being able to put his lever fully back until a train has passed and all signals, and so conflicting points and signals remain locked. But Mr. Sykes did this thirty or forty years ago in his iron-plate 2-4-2s, the levers with the black instruments.

Track circuits are mentioned. These are generally assumed to be an American invention, but a subdivision of sections of the line by means of insulated joints was anticipated by William Bull's British patent, No. 2,961 (1876). We were also recently told at the Institute of Civil Engineers (*Proceedings*, Vol. CLXXXV., p. 186) that Mr. Sykes used a track-circuit in 1865. But it was not until 1871 that Franklin L. Pope put one in on the Boston and Lowell Railroad. It is not without interest, too, that while the earliest automatic signals, as set off by Thomas Hall, in 1857—were American, there was admittedly (*Bulletin of International Railway Congresses*, Vol. XI., p. 141) incorporated in the method of operation the idea contained in Mr. Tye's patent, No. 52,118 (1854).

The article then comes to another point where the human agent has been controlled, i.e., a signal being raised to the "danger" position by a train independently of the signaller. But this was done by Stokes, Fyer, H. Lyson, and others in the seventies.

One item is, how far, not mechanical, and that is loco motive cab signals. There we have the Americans beaten. Since June, 1900, the Interstate Commerce Commission has been inviting and investigating designs for automatic train control and cab signals. But, as yet, no cab signal, and only one system of train control for steam trains, is under trial to any extent. On our Great Western Railway and North Eastern Railway, however, cab signals have long since passed the trial stage, and are in regular operation. Incidentally it may be remarked that I find that in 1852 Mr. Tyler took out a patent, No. 13,600, in which, by electrical means, he warned a station of the approach of a train, and gave "stop" and "all right" indications on the engine.

The fact is we have little to learn from American railways, either in signalling or methods of operation. The two countries are altogether dissimilar. I know everything that has been and is being done in signalling in America, and I can state with confidence that the automatic signalling installation on the electrically worked railways of London and the power operation of points and signals there, as also on Great Ouse and elsewhere, are greatly superior to any to be found in America. There are many appliances in use in the United States that call for praise as being ingenious, but their use is often open to grave danger,

BOARD OF TRADE REPORT ON THE LONDON AND NORTH WESTERN
BOAT TRAIN ACCIDENT.

Col. York says that as the train was speeded up on the main line from Easter to Liverpool, it was approaching Orwich Station on the down fast line, from which it was to pass the local passenger train from Wasdale. So close had it passed the down slow line signals, a dog ran out, and after running through the junction between the slow and fast lines, it failed to come to a stand or was moving very slowly when the collision took place at the east end of the station. The result of the collision was that two passengers had their legs broken and four others received slight injuries. The American train was drawn by two express passenger engines, and was composed of 12 bogie corridor carriages. The local train consisted of a six-wheeled engine and six vehicles.

The front engine of the express was seriously damaged, but little or no damage was done to the second engine or vehicles of the express. The two rear vehicles of the local train were badly smashed.

DESCRIPTION

The general direction of the lines through Colwich Station is east and west. Approaching it from the east, that is from the direction of London, there are four running lines—viz., the down slow, down fast, up fast, and up slow lines. At the east end of Colwich Station the down slow and down fast lines converge into one down main line, and through the station itself there are three lines—viz., the down main, the up fast, and the up slow lines. The signal-box is situated at the west end of the station, and the point of the junction between the down slow and down fast lines is 100 yards from the signal-box, while the joining point between these lines is 350 yards from the box. At the west end of the place there are junctions between all three lines and the North Staffordshire line at Stoke.

There are two sets of down home signals. The signalling and interlocking are quite correct, and so long as the down fast home signal was "off" the down slow home signal was locked in "danger."

The local train from Walsley joined the main line at Rugeley, and was there turned on to the down slow line which is alongside of and parallel to the down fast line between Rugeley and Clwyth.

CONCLUSIONS

The report records the evidence given at the inquiry, and Col. York proceeds to say that evidence makes the causes of this collision perfectly clear. The local train left Rugby on the down slow line at 7.40 a.m., being 12 minutes late. At Bishopton, which is between Rugby and Colwich, all the signals were off for the main line, and when it reached Colwich at about 7.45 both the home and starting signals were at danger. Driver Jakeman admits that he saw both these signals at danger, but that he also saw the down slow home signal "off." This should have been a clear indication to him that he had got to

at the down slow home signal. When he applied the brake, just before reaching the signal, it was too late, and he ran through the junction, bursting the points, and finally came to a stand on the down main line at the east end of Colwich Station.

The only explanation that driver Jakeman can give for running past the home signal is that he had got it into his mind that the signalman thought that the local train was travelling on the down fast line, and had therefore pulled off the signal pertaining to that line by mistake. But even if this thought passed through Jakeman's mind, it was no excuse at all for his having failed to obey the signal which pertained to the line upon which he was travelling. It is more likely that he had sufficient acquaintance with the block rules to know that the signalman at Colwich had no right to accept trains from Bishton on both the down slow and down fast lines at the same time, and that as he found all the signals off for him at Bishton, he may have assumed that any train on the fast line would be stopped at that place until his own train had cleared the main line at Colwich and got upon the North Staffordshire line. Whatever he may have thought, nothing can justify his having failed to obey the signal which he admits was at danger from the time he first saw it.

Signalman G. Compton, who was on duty at Colwich Station signal-box, says that he accepted the local train from Bishton on the down slow line at 2.10, and received "Train entering section" at the same time. Immediately afterward he received from Bishton the "Is line clear?" message for the express, but he did not accept that train because he had already accepted the local train, and he thought that the latter would reach Colwich and come to a stand before the express was offered to him again. At 2.14 the American express was offered to Compton a second time. He then had some conversation on the telephone with signalman Thornton, at Bishton, regarding the whereabouts of the local train. He was told by Thornton that it had passed him, and Compton then accepted the express, and lowered the down fast signals for it. He says that before doing so he looked up and saw what he thought was the local train standing at his home signal, and that he thought he was therefore entitled to give "Line clear" for the express. He now admits that he did not actually see the local train at the home signal, but he saw some steam and smoke, which he thought came from the train, but which in fact emanated from an engine in the up sidings. Shortly after this he looked out of the window for the express, and then he saw the local train had run past the down slow home signal and was standing on the down main line with its engine near the east end of the platform. He immediately threw the down fast signals to danger, in the hope of stopping the express, and made endeavours to get the driver of the local train to move forward out of the way on to the North Stafford line, the points leading to which he pulled over. But he failed to get the driver's attention, and there was no time for him to do anything more before the express ran into the rear of the local train.

From the above statements it will be seen that Compton committed a breach of the Block Rules in accepting the express while the local train was approaching the junction between the down slow and down fast lines. The story that he thought that the local train had come to a stand at his home signal, because he saw some smoke and steam blowing about the place, cannot be accepted, and is probably an afterthought. Moreover, the fact that he had a conversation on the telephone with Thornton as to the position of the local train is in contradiction to his statement that he saw the local train at the down slow home signal before he accepted the express. It is probable that, making allowance for the difference of speed between the two trains, he thought that there was sufficient margin of time between them for the express to pass Colwich before the local train arrived. Even if this were not the case, he doubtless relied upon the driver of the local train stopping at the down slow home signal, which was at danger, and he therefore took upon himself the grave responsibility of accepting the two trains on converging lines at the same time.

In acting as he did Compton committed a deliberate breach of the rules for block telegraph working at a converging junction. Having accepted the local train, only one course was rightly open to him—viz., to refuse to accept the express, and cause it to be held back at Bishton until he had satisfied himself beyond all doubt that the local train had come to a stand at its home signal, or had been got out of the way on to the North Stafford line.

APPORTIONING THE BLAME.

From the above narrative it will be seen (Col. Yorke continues) that driver Jakeman and signalman Compton both committed the most serious offences possible in their respective

spheres of duty. Jakeman in having failed to obey the signals, and Compton in disregarding the explicit regulations concerning junction working. If either of these men had done the right thing, even though the other had erred, no accident would have happened. But the fact that each of them did wrong in no way mitigates the offence of the other. Both these men had long service, Jakeman having been a driver for 30 years, and Compton a signalman for 23 years, and it is very disappointing to find men of such long experience guilty of grave lapses from their duty. Jakeman had been on duty about two hours, and Compton about a quarter of an hour, at the time of the accident.

Turning now to what happened on the express: Driver George Simms, who was on the leading engine, says that on approaching Colwich the distant signal was "off"; he was therefore entitled to assume that he had a clear road through Colwich Station. But when he was between the distant and home signals, and about 500 yards from the latter, he saw that it was at danger. He immediately shut off steam, applied his brake with full force, and reversed his engine. After passing under the road overbridge, which is 175 yards from the home signals, he saw the local train on the main line in front of him, but, though he had already made every effort to stop, he was unable to do so before colliding with the rear of the train in front. The speed of the express was reduced to about 15 or 20 miles an hour when the collision occurred.

The drivers of the two engines of the express were evidently on the alert, and deserve credit for the promptitude with which they acted as soon as they saw the home signal of the down fast line at danger, and so averted what would otherwise have been a much more serious disaster.

In order to prevent a repetition of an accident of this nature, it would, in Col. Yorke's opinion, be desirable to provide safety points in the down slow line at its junction with the down fast, which could be done by inserting a connection between the down slow line and the siding adjacent to it, with facing points on the down slow line. This would not ensure absolute safety, as in the event of a driver running past the down slow home signal at danger (as in this case) a collision might occur in the siding. But such a contingency would be a far less serious matter than the fouling of the fast line in front of an express train.

CONCRETE SLEEPERS FOR RAILWAYS.

In order to give a thorough working test to the possibility of substituting concrete ties for the wooden ones now in use, the Pennsylvania Railroad has built a spur on its line in west Philadelphia, using concrete ties exclusively. The rails are fixed in place by a patch of concrete when the metal has been secured to the ties. This patch, placed either side of the rail,

Concrete Sleepers under Test on the Pennsylvania Railroad.

seals it when the concrete dries. It is alleged that the ties are practically indestructible, and that rails constructed in this way are fixed immovably. Probably this will, however, prove a greatly exaggerated estimate. The concrete will become chipped and broken and the rails will rapidly work loose. No doubt the method is much cheaper than the wooden tie, which has to be replaced frequently. Whether or not the concrete tie is superior to the wooden one from other points of view is certainly open to question. When the metal expands with the heat or contracts with the cold arc, for instance, matters that the present experiment is intended to decide.

AMERICAN RAILROAD SECURITIES.

THE RAILROAD SECURITIES.

In view of the large holdings in American securities by British investors, and the fact that the same American lines were built largely with British capital, the British attaches in this country have taken an active part in the work of the Commission recently rendered by the Interstate Commerce Commission, and have transmitted the report to Congress in December, 1910, with a letter recommending that the Commission's recommendation should be taken into consideration by Congress.

The Commission was appointed by the President in April, 1910, and since then it has conducted an extensive investigation into the question of the issue of railroad stocks and bonds. A great number of witnesses have been heard, including railroad officials, members of State Railroad Commissions, financiers, business men, bankers, lawyers, etc. The chairman of the Commission was Mr. A. E. H. Hall, President of Yale University. Put in briefs form, the chief recommendations of the Commission are that the present system of Federal regulation of issues of securities by the several States would be preferable; that Federal and State regulations should be harmonised as much as possible; that a Federal Incorporation Act should be passed, giving the provisions of the future; and that for the present, complete uniformity regarding stock and bond issues, under the supervision of the Interstate Commerce Commission, will surround those securities with all the safeguards that it is possible to give by law, under the conditions that present exist.

From the mass of interesting matter in the report we select the following:—

TO SECURE INVESTORS.

Investors and shippers, and through them the general public, have come to feel that State legislation has provided inadequate security for their interests in this matter. The question is therefore asked with increasing frequency whether the United States Government should not undertake to regulate the issues of securities by the roads engaged in interstate commerce as a necessary means to its effective control. This question naturally divides itself into two parts: First, what immediate action by Congress will best meet the existing situation; and second, what general principles should guide the Federal Government in its future legislation on this subject.

As far as concerns the immediate action of Congress, we believe that stringent provision regarding publicity of stock and bond issues, which will show how far the laws are obeyed, and will enable the Federal Government to hold the railroad officials responsible for the consequences of not obeying them, will be more salutary and more effective than any new statutory demands. But we also believe that the time is near when the difficulties of the present system of dual control, and the conflict of State laws, will become so manifest that further legislation on the subject will be imperative. Unless the constitutional power of Congress to regulate the securities of railroads engaged in interstate commerce is definitely established as being, to the extent that Congress acts upon the subject, exclusive of State control, one of two things seems likely to happen: Either the Federal Government and the Governments of the several States will come to a common understanding as to the principles to be adopted in the control of securities issues, or the railroad system will be given the opportunity to exchange their State charters for Federal ones.

Regarding the advisability of a Federal law requiring full payment of all stock issues, the report states that it was also subject to evasion. Even if it were practically in force, it is urged by many that enforced uniformity under Federal law would discriminate against the independent railroad projects that are oftentimes essential to the development of a section of the country. Under such circumstances the idea of the assertion of exclusive Federal jurisdiction under one general railroad law appears unwise.

PROPOSED STATUTORY PROVISION.

In place of such requirements, the Commission recommends that any railroad doing interstate business which issues bonds or stocks should be required by statute to furnish the Interstate Commerce Commission, at the time of the issue, with a full statement of the details of the issue, the amount of the proceeds, and the purposes for which the proceeds are to be used, followed in due time by an accounting for such proceeds, as more fully hereinafter set forth. An Act of this kind does not limit the freedom of the several States to make such kind of laws as they please regarding their own securities. But the companies must indicate precisely what they are doing. They must not attract the bondholders' money by representing that there has been a payment of 100 cents when there has been a

payment of 90 cents. This does not mean, of course, direct payment of 100 cents, but it means that the company must not mislead the public by representing that it has paid 100 cents when it has paid 90 cents. The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act.

The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act. The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act.

The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act. The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act. The Commission also recommends that the Interstate Commerce Commission should be empowered to issue orders requiring the companies to issue securities in accordance with the provisions of the Act.

STOCKS WITH NO PAR VALUE.

Regarding future issues, the Commissioners do not believe that the introduction of the principle of dollar stock, or any other dollar stock, upon the face of the shares, is of essential importance. We are more deeply concerned that the law should require the companies whose shares have no par value, and permit existing companies to change their stock into shares with a par value, wherever their convenience requires it. After such conversion any new shares could be sold at such prices as was deemed desirable by the board of directors, with the requirement of publicity as to the proceeds of the sale of such shares, and as to the disposition thereof, giving to the old shareholders, except in some cases of reorganisation, no less than the amount of their holdings.

As between the two alternatives of permitting the issue of stock of no par value, or of requiring the creation of shares without par value, the latter seems to the Commission the preferable one. It is not that it will be easier to introduce than the other, because it is less in accord with existing business habits and usages, but that the rational basis of an issue of stock is not the face value of the shares, but the value of the property which the shares represent.

The last part of the report consists of an interesting discussion of what may be expected from full Federal regulation of issues of securities. It says that most of those who advocate legislation have for their basis the fact that the law should be such as to remove obstacles which the laws and the provisions have placed in the way. The object of the regulation is to protect the shipper from the loss of value of securities issued by the companies which are otherwise insuperable. The attempt to make the face value of securities issued the determining factor in rates would result in putting a premium on roads which had been speculative, and to so dishonestly, built or managed, by allowing them to charge higher rates on a count of the inflated capital thus produced. And, while a part from any such speculation, the fact that the value of stock capital and bonded debt, even if paid for in part, is a very inaccurate and incomplete measure of the value of the property devoted to its ownership, is pointed out.

THE NEED FOR ENCOURAGING CONFIDENCE.

We have not declared our ideas of railroad management as they now have developed, but as of railroad management. The railroad companies have been, as a result of misunderstanding, discouraged and discouraged, and it is now endangered by the confidence of the public in the purchase of new issues of railroad securities in the markets required. This reluctance is likely to continue until the American public understands the essential

community of interest between shipper and investor and the folly of attempting to protect the one by taking away the rewards of good management from the other.

It is quite possible that the building of additional railroad mileage will be far less rapid in the future than it has been in the past, but the capital needed for the development and the improvement of the mileage already existing is enormous, even if we built no new mileage at all. The outstanding stock and debt of the railways in the United States average less than \$800,000 a mile of line. This figure is bound to be greatly increased in the immediate future. As our population grows denser we shall need more and more to approximate European standards of construction by the increased amount of double track, the abolition of grade crossings, the development of station facilities both for passengers and for freight, and many other improvements scarcely less fundamental. While our railroads are perhaps even better equipped than those of Europe for the economical handling of large masses of long distance freight, they are far from being adequately provided with appliances to secure the convenience of the public or the safety of passengers and employees. The cost of all these things is very great. The average capitalisation per mile of railroads in Germany is \$100,000, in France \$137,000, in Belgium \$177,000, in Great Britain \$265,000; and, contrary to the commonly received opinion, much of this excess of cost, as compared with American roads, is due to other causes than the price of real estate—an item in which our companies have had a great advantage. The cost of European roads has been largely due to improvements which we have not yet made and many of which we must make in the future as population grows denser. The thousands of millions of dollars needed for these purposes must be raised by the sale of securities.

Neither the rate of return actually received on the par value of American railroad bonds and stocks to-day, nor the security which can be offered for additional railroad investments in the future, will make it easy to raise the needed amount of capital.

Nor can the security which most of our railroads offer be regarded as exceptional. Most of the new capital must come either from bonds which will not be a first lien for many years or from new issues of capital stock. The investors in these securities take risks which cannot be accurately forecast. The substitution of electricity for steam is but a type of the many changes which railroads may be compelled to make, any one of which might involve large additions to their cost without the assurance of corresponding additions to their return.

We hear much about a reasonable return on capital. A reasonable return is one which, under honest accounting and responsible management, will attract the amount of investors' money needed for the development of our railroad facilities. More than this is an unnecessary public burden. Less than this means a check to railroad construction and to the development of traffic. Where the investment is secure, a reasonable return is a rate which approximates the rate of interest which prevails in other lines of industry. Where the future is uncertain the investor demands, and is justified in demanding, a chance of added profit to compensate for his risk. We cannot secure the immense amount of capital needed unless we make profits and risks commensurate. If rates are going to be reduced whenever dividends exceed current rates of interest, investors will seek other fields, where the hazard is less or the opportunity greater. In no event can we expect railroads to be developed merely to pay their owners such a return as they could have obtained by the purchase of investment securities which do not involve the hazards of construction or the risks of operation.

Railway Calendars.—The publicity department of the London and North Western Railway Company are to be complimented upon their attractively designed stiff board calendar for 1912. Its most conspicuous feature is a view in colours of a favourite resort in North Wales. It will be welcomed as a wall ornament, and will serve to effectively advertise the facilities offered by this railway in the four divisions of the United Kingdom. A serviceable almanac, giving an impression of the switchboard at Lots Road power-station, has been issued by the Underground Railways of London.

G.C.R. Company's Liability in the Loss of the "Blackburn."—On the application of the Great Central Railway Company the Admiralty Court have limited the company's liability in respect of loss or damage to ships and merchandise by the loss of the "Blackburn" in collision with a London steamship to £11,210 17s. 6d., being the aggregate of £8 per ton on the tonnage of the "Blackburn," the accident happening without the actual fault or privity of the railway company. The money was ordered to be paid into court with interest from December 8, 1910, the date of the collision. It was stated there was only one life claim, which had been settled.

NEW RAILWAY BOOKS.

LAW OF RAILWAY COMPANIES.*

Some years have elapsed since the publication of the third edition of this well-known standard work, and all interested in the law of railway companies will gladly welcome the new edition, which must have entailed an enormous amount of work upon the present editors, Mr. Balfour Browne, K.C., and Mr. Hamilton Conacher. The statutes applicable to railways which are included in this edition number 120. The editors have conferred a boon upon the public in inserting in the Appendix the by-laws regulating the use of railways by the public which have been approved by the Board of Trade. Some useful precedents of forms of special contracts of carriage under Section 7 of the Railway and Canal Traffic Act of 1854 are also given. The work at the present time is so complete that it is difficult to find any matter in connection with railways which the editors have not dealt with. The editors state that the notes upon the Railway and Canal Traffic Acts 1854 and 1888, with reference to facilities, undue preference, and through rates have been re-written, enlarged by new decisions, and completely rearranged. Those who have occasion to refer to these matters will find their labour considerably lightened by the care that has been spent upon them.

Since the third edition of this work has been published a considerable number of important decisions have been given. These have been embodied in the book, and include the Scottish and Irish authorities. We have referred to the very full table of cases—pp. xv.-lxxxvi.—and can find nothing omitted. The decisions of 1910 have been carefully cited, and we note that the case of *Arnold v. Morgan*, which was not reported in the Law Reports till July, 1911, is duly referred to by the learned editors.

The aim of the editors, as stated by them, has been to make the book a complete work on the law of railways by treating all the questions likely to arise with reference to railways with as concise a statement of law as circumstances admit. Thus, it includes the law relating to proceedings on private Bills in Parliament, the constitution and powers of a railway company, the taking of lands and the construction of works, with the law of compensation relating thereto, the State regulations of the exercise of companies' statutory powers, rating law as it affects railways, and the law exercised by the Court of the Railway and Canal Commission.

The index, to which every student of a text-book in search of information turns, is very full and comprehensive, and adds materially to the value of this edition. Messrs. Balfour Browne and Hamilton Conacher may well be congratulated on this part of their laborious work. As a matter of criticism, we should like in some cases to have seen additional references to contemporary law reports. Where a case is cited, it is convenient sometimes to find all available references given. This is, of course, a mere detail. We can cordially recommend this new edition, which no doubt will, like its predecessors, be found indispensable to all engaged in railway work or interested in railway traffic. The book contains 1,285 pages, is printed in clear type, and reflects the greatest credit on the publishers, Messrs. Stevens and Sons, Ltd., Chancery Lane, London.

[* Browne and Theobald's "Law of Railway Companies" (4th edition), by J. H. Balfour Browne, K.C., and Hamilton Conacher, B.A., LL.B., Barrister-at-Law. Stevens and Sons, Limited, London.]

THE RAILWAY CONQUEST OF THE WORLD.

Mr. Heinemann's series, the "Conquests of Science," have received a notable addition in the shape of a fascinating book on railways by Mr. Frederick A. Talbot.† The photographs are all very good, and, being reproduced on thick art paper, show every minute detail most clearly. The text is also excellent, and, as it is printed on light paper, the weight of the volume is delightfully small. The author sets out with the purpose of telling the romantic story of railways in a popular manner. While confining himself mostly to facts, he succeeds in exciting the imagination to an uncommon degree—a province of romance telling. He also succeeds in describing those great railway undertakings in all parts of the world which are truly representative. But it is to be hoped that he will favour those who take an interest in these matters with another volume, in which he might include the Forth Bridge, the first Tay Bridge, the Gwaii Bridge, the East London Railway, the Douro Bridge, the Severn Tunnel, some notable ferro-concrete structures, besides some of the tubes in London and in the United States, together with the overhead railways both there, in England and on the Continent. In fact, the list might be extended almost indefinitely, and, considering the pains at which Mr. Taylor has evidently been to get all his information at first hand, it is perhaps expecting too much to ask him to devote

MEETINGS AND REPORTS.

FORTHCOMING MEETINGS.

- Jan. 2 (Tues.).—Great Eastern Railway (Laing's Mortgage Holders), Liverpool Street Station, E.C., at 12.
 Jan. 4 (Thurs.).—Rio Claro Sao Paulo Railway (Extra ordinary), Winchester House, E.C., at 12.
 Jan. 10 (Wed.).—London and Greenwich Railway (Half-yearly), Winchester House, E.C., at 1.
 Jan. 15 (Mon.).—North and South Western Junction Railway (Half-yearly), Euston Station, N.W., at 12.

(Reports, Traffic Returns, Prospectuses, and all other items of financial intelligence should be sent as early as possible to the Editor of THE RAILWAY TIMES, 12, Norfolk Street, London, W.C. Telephone 2948 Gerrard. Telegraphic address, Altimetry, London).

RHODESIA RAILWAYS TRUST.

The fifth ordinary general meeting was held on December 19 in Salisbury House, London Wall, E.C., Mr. Rochfort Maguire presiding. The CHAIRMAN, in moving the adoption of the report, said that the company was now practically the sole shareholder of the Rhodesia Railways, Limited, and the Mashonaland Railway Company, Limited. The board wished on that occasion, when they were for the first time masters in their own house, to bring the shareholders and the community, whose wants they served and on whose prosperity they relied, face to face. The increasing prosperity of the Rhodesian system had brought out on the shareholders' side an inquiry as to the prospect of dividends, and on the side of the Rhodesian community inquiries as to the company's policy in the reduction of rates. The board did not consider that shareholders should wait for dividends or the public for reductions of rates until the past losses shown in the balance-sheets were provided for out of revenue. On the other hand, it was in the shareholders' interest and the interest of the people of Rhodesia that these companies should make full provision for depreciation. The company's aim was to assist so far as they could in making Rhodesia a country cheap to live in. They wanted to carry large traffics at moderate rates rather than small traffics at high rates; but to secure that end reductions, to be beneficial, should be effective—that was, should result in lower prices to the consumer and larger traffics. Therefore they thought it better to proceed, not by class reductions, which being wholesale would be indiscriminating, but by careful study of the individual article. In any such review, articles of common consumption affecting daily expenditure naturally required special attention. He had a list of the reductions made in the last four years. These ranged over traffics of all kinds, but perhaps the farming community had benefited to the greatest extent; for reductions had been made on a large number of agricultural products. Their general manager was constantly studying the question. Scarcely a week passed that some reduction or other was not recommended by him, but these recommendations were based on the principles he had named, and, while giving advantage to the consumer, tended to increase their traffics. Sir CHARLES MERCURER seconded the motion, which was adopted.

BEIRA RAILWAY.

The annual general meeting was held in London on December 22. Mr. ROCHFORD MAGUIRE, who presided and moved the adoption of the report, said that the net revenue of the joint line from Beira to Salisbury was £293,488 in 1910 and £367,939 in 1911, the percentage of expenditure to receipts being almost identical—32.7 and 32.4. The Beira Junction Railway had, with the assistance of the British South Africa Company, raised fresh capital, and had entered into a contract for the construction of the new wharf at Beira. In consideration of the extra capital that the Beira Junction Railway were putting into the business that company was now credited with a larger proportion in the division of traffics under the working agreement. By that modification their company would during the rest of the period of the working agreement receive 45.16 per cent. of the net receipts instead of 45.82 per cent. as previously. Further to facilitate the financial arrangements of the Beira Junction Railway their company had agreed to the funding of the interest due on the 5 per cent. debentures of the Beira Junction Railway outstanding at September 30, 1911, accepting 5 per cent. second debentures at par in settlement. Regarding the financial results of the year, they would note that the last arrears of debenture interest were paid off on November 1, and they expected in the future to pay their interest as it fell due.

They would also see that since that time last year they had paid off four coupons in arrear besides the two current coupons, and that in addition to the year 1910 interest at the rate of 6 per cent. on the income debenture stock had been earned in full. Those facts should give shareholders confidence in the future of their undertaking. The position of their company was that it had to its credit for the year ended September 30, 1911, approximately £75,296. It had an accumulated debit balance up to September 30, 1910, of £676,034, besides considerable unascertained loss on sale of narrow-gauge permanent way and the necessity of providing for depreciation. Moreover, he was advised that the debit balance on profit and loss account was an obstacle to the payment of dividends on shares, and while there was no legal liability to write down the other items out of profit, it was important that they should not remain as permanent features in the balance-sheet. With those figures before them they would see that, satisfactory as was the earning power of the company, some of the forecasts which had appeared in the press as to the immediate possibility of payment of dividends were premature. He did not, however, think that, should the present favourable conditions continue, the position which he had pointed out in the balance-sheet was without remedy. Their directors would, in his opinion, have to consider some rearrangement of capital which would render dividends possible earlier than would otherwise be the case. The report was unanimously adopted.

The report of the directors on the business of the company to date and the accounts for two years from October 1, 1908, to September 30, 1910, have been issued. The report states that the analysis of traffic for the two years shows the gross and net earnings of the Beira-Salisbury section to be as follows: 1908-9, gross revenue £314,222; expenditure, £129,322; net revenue to Beira and Mashonaland Railways, £184,899; percentage of expenditure to receipts, 41.1. 1909-10, gross revenue, £436,295; expenditure, £142,807; net revenue to Beira and Mashonaland Railways, £293,488; percentage of expenditure to receipts, 32.7. The general goods traffic continues to show a steady increase—viz., 47,826 tons yielding £220,416 in 1908-9, and 68,750 tons, yielding £312,240 in 1909-10. Construction material for the northern extension was carried during this period, and amounted in 1908-9 to 28,617 tons, yielding £43,599, and in 1909-10 to 37,500 tons, yielding £58,985. Mineral traffic shows an increase of 21,547 tons in 1908-9 over that for 1907-8, and of 14,525 tons in 1909-10 over that for 1908-9. The traffic returns for the joint railways, subject to audit, for the year ended September 30, 1911, are as follows:—Gross revenue, £544,104; expenditure, £176,255; net revenue, £367,939. The arrears of interest on the 4½ per cent. debentures are now cleared off. The position of the income debenture stockholders as regards payment of interest for the year ended September 30, 1910, is now under consideration. In consideration of the Beira Junction Railway, Limited, constructing the new wharf at Beira, the Mashonaland Railway Company and this company have agreed that the Beira Junction Company shall be credited with an additional share of operating profit. This arrangement supercedes Clause 12 of the agreement of June 1, 1904, and the net receipts of the Beira-Salisbury section will from October 1, 1911, be divided as follows:—Mashonaland Railway Company, Limited, 42.37 per cent.; Beira Railway Company, Limited, 45.16 per cent.; Beira Junction Railway, Limited, 12.47 per cent. The contract for the wharf has been let to the British Construction Company, and the work is now well in hand.

POSITION OF RIO CLARO SAO PAULO RAILWAY.

The directors have issued a circular to the shareholders which states that at the general meeting convened for November 20 last they informed those shareholders who were present that a petition had been presented by certain shareholders to the High Court of Justice praying that the company might be wound up compulsorily. The directors hoped that some scheme might be devised satisfactory to all parties, and arranged for an adjournment of the petition until the first petition day in January next, to see whether any such scheme satisfactory to the petitioners could be prepared, or, alternatively, whether the shareholders would pass a resolution for winding up voluntarily. The petitioners now decline to entertain any scheme, and insist upon voluntary liquidation, or invoking the decision of the Court as to whether they are or are not entitled to an order for compulsory liquidation. The directors have therefore convened an extraordinary general meeting, to be held on January 4 next, to consider the position. At the same time the directors understand that the committee are in favour of steps being taken, by means of a modified scheme, for facilitating the carrying on of the business of the company, and possibly a resolution may be moved at the meeting for an adjournment with a view to the

submission in the interval of some such proposal. The directors realise that liquidation, whether voluntary or compulsory, would precipitate a conflict as to the amount for which the debenture stock holders should rank as creditors, and would necessitate a realisation, by sale or distribution, of the Paulista bonds and other assets of the company; but they believe that if liquidation be desired, voluntary liquidation would on many grounds be preferable to compulsory liquidation, and they think that the shareholders must now decide whether they will resolve to resist compulsory liquidation, to direct the preparation of a scheme to wind up voluntarily, or to take the risk of such order as the Court may think fit to make upon the adjourned hearing of the petition, when the result of the meeting now convened is put in evidence.

The directors advise the shareholders to send in their proxies in favour of: (a) Resisting the compulsory liquidation of the company; (b) supporting the shareholders' committee in the formulation of some scheme; (c) but, if no such scheme can be arrived at, of supporting voluntary liquidation.

MASHONALAND RAILWAY.

The report states that the balance-sheet and statement of accounts to September 30, 1910, having been completed, the directors deem it expedient to call a meeting for the approval of these accounts rather than hold them back for presentation at the annual meeting next year, when accounts for the year ended September 30, 1911, will be submitted. Approximate working results have recently been received for the year ended September 30, 1911, and show the following results:—Beira-Salisbury section—Gross revenue, £544,194; increase, £107,808. Working expenditure, £176,255; increase, £33,448. Net earnings, £367,939; increase, £74,450. The rise in working expenditure is due partly to the additional traffic and partly to increased cost of maintenance. In the accounts for the year ended September 30, 1910, a reserve of £10,000 is provided to cover betterments now being made that would have been commenced earlier if larger funds had been available. Kalomo-Broken Hill extension—Gross revenue, £90,004; increase, £30,028. Working expenditure, £30,002; decrease, £893. Net earnings, £57,062; increase, £30,921. Lomagundi and Eldorado branches—Gross revenue, £20,073; decrease, £1,047. Working expenditure, £14,349; increase, £1,763. Net earnings, £6,424; decrease, £2,810. In consideration of the additional capital expenditure to be provided by the Beira Junction Railway Company for the construction of the new deep-water wharf at Beira, the directors have agreed to a modification of the working agreement of June 1, 1904, which regulates the division of the net earnings of the Beira-Salisbury line, and the proportion received by the company, as from October 1, 1911, is fixed at 42.37 per cent., instead of 43 per cent. Under the agreement of November 10, 1910, the British South Africa Company transferred to the Rhodesia Railways Trust, Limited, the debt of £501,804 due to it from this company on August 15, 1911.

Emu Bay and Mount Bischoff Railway.—The directors have issued a circular to the shareholders stating that, with regard to the sale of this company's railway to the Tasmanian Government at the price of £130,000 cash and £100,000 in 3½ per cent. inscribed stock, the following cablegram has been received:—"Assembly passed Bill, but (Legislative) Council rejected. Confident complete approval next session."

The Egyptian Delta Light Railways.—The directors have issued a circular informing the shareholders that the company's traffic receipts, both passenger and goods, showed a satisfactory improvement for the half-year ended September 30, 1911, as compared with the corresponding period of the previous year. Since that date, however, these increases have been considerably diminished. This diminution is mainly attributable to the lateness of the cotton crop, and the fact that the agriculturists are holding back their crops in anticipation of better prices. In view of this, and of the disturbed financial conditions in Egypt, the directors consider it prudent to continue the policy adopted by them last year, and not to distribute an interim dividend on the preference shares, but to carry forward the revenue balance available for that purpose until the close of the company's financial year.

White Pass and Yukon Railway.—Mr. C. C. Macrae, presiding at the fourteenth ordinary meeting in Cannon Street Hotel, E.C., on December 10, referred to the irreparable loss that the company had sustained in the death of Mr. Graves, president of the local companies, who had undertaken the formidable task of raising the capital for the construction of the railways which now formed the White Pass and Yukon route. Regarding the accounts the year 1910 had been a bad

one for the local companies. The dividends were £8,000 less than for the previous year. The sinking fund was raised by the instalments paid to it in the course of the year, and now stood at £183,000 odd as against £157,000. The amount shown as net profit was £40,871. Deducting from that the amount required for the sinking fund, £18,285, and the 1 per cent. which was proposed to be paid as dividend on the ordinary shares of this company, which would absorb £13,750, there was left a balance of £8,836 to be carried forward. The report was adopted, and Mr. O. L. Dickson, the new manager of the local companies, afterwards addressed the meeting and said that he took a hopefully confident view of the future of the enterprise. He gave some account of the various mining and other developments in progress.

Beira Junction Railway. At the ordinary meeting held in London on Thursday, Mr. C. Conybeare, who presided, said that the main feature in their position since the last accounts were completed was the increase in the nominal capital by the creation of 500,000 preference shares of 5s. each. Of that number 98,488 had already been issued to the British South Africa Company against cash required for payments under their wharf contract, and further shares up to the value of £125,000 would be taken up by the British South Africa Company as and when the cash was required. The figures to hand for the year ended September 30 last indicated that the earnings of the company would suffice to pay current interest on the debentures and two back coupons, thus leaving only about £78,000 to be satisfied by second debentures to be issued to the Beira Railway Company, while the debt due to the Mashonaland Railway Company was now about £58,000. Their proportion of the profits on the joint working of the line for 1909 was £18,867; for 1910 it was £30,139, and the estimated amount for 1911 was £38,000, which, he thought, showed a very steady increase in the amount of traffic carried. With regard to the board, he observed that since the report was issued the company had received notice from the British South Africa Company of its intention to propose the appointment and election of two additional directors. The gentlemen proposed were Mr. Otto Beit and Mr. Rochfort Maguire, two directors of the British South Africa Company. He moved the adoption of the report, which was agreed to, and the two additional directors were unanimously elected.

HOW A GREAT AMERICAN RAILWAY CO-OPERATES WITH THE PRESS.

Reiterating its policy of giving immediate publicity to details of all accidents on its lines, the Pennsylvania Railroad recently issued a notice to the American press "relative to method of making public details of accidents." The first edition of this notice was sent to newspapers in May, 1909. The company says in the notice that "It is the policy of the Pennsylvania Railroad System to give to the public, through the newspapers, prompt and accurate information concerning any accidents which may occur on its lines." But the notice calls attention to the impracticability of miscellaneous employees giving out information. After saying that "whenever an accident happens, a statement giving all essential facts will be made public by the company," it is pointed out that miscellaneous employees have specific duties to perform in caring for the passengers and in re-opening the line to traffic. As their duties are concerned only with certain features of the situation, they are not in position to know the full facts. They are required, however, to report to their superior officers all the facts which may come under their immediate observation. All the information is then assembled and reported to the company immediately and by the company made public. The management of the company realises that upon occasions of accident it is of the greatest importance that the number and names of any who may be injured should be made known immediately, and the company make public such information as it can obtain at once. As regards the cause of accidents the company observe that there are many phases of accidents, especially regarding their causes, the facts of which cannot be ascertained even by the railroad officers until after considerable investigation and inquiry. The company will, however, give prompt publicity to all known facts, and the co-operation of the newspapers is invited in order to secure accuracy in the published reports of accidents. The end to be achieved is so eminently desirable, from the points of view of the public, the press, and the company, that it believes the newspapers may be relied upon to instruct their representatives to print only well authenticated facts. The aim of the company is certainly admirable, and its effort to secure the careful reporting of railway matters should prove of real value to the public.

GENERAL NEWS.

WAGES ON NORTH EASTERN RAILWAY.

On Thursday the North Eastern Railway Company directors issued particulars of concessions which they have decided to grant as the result of negotiations at the company's conciliation conference. A large number of the employees of the lower grades are affected. The principal advances include 1s. a week to signalmen on the Tyneside electrified lines; 6d. per week to assistant signalmen for special responsibility; rolleymen at several large stations, including York, Leeds, Darlington, Middlesbrough, and Hartlepool, an advance of 1s. a week. The minimum wage of casual porters at all goods stations is fixed at 20s. a week. Maintenance platelayers' wages have been reclassified, giving an advance in wages to 1,143 men out of a total of 3,362.

L.B. AND S.C. RAILWAY ENTERPRISE.

Improved work on the part of the Publicity Department of the London, Brighton, and South Coast Railway has been

noticeable of late. As an example of this in poster design we reproduce one that attracted attention some weeks prior to Christmas. Hastings and St. Leonards, the eastern terminus of the system, will be grateful for the increased attention given to their claims on other posters, and particularly for the quotation from a medical authority that assisted to give the ancient Cinque port its fame as a winter health resort.

THE INCREASES IN SEASON AND EXCURSION FARES.

In order not to inconvenience passengers at Christmas the principal railway companies decided not to institute the increased charges for certain tickets until January 8. Both the Northern and Southern companies will increase their season tickets from towns 10 miles out from the terminus by 5 per cent.; their five, eight, 10, or 15 days' excursions by 6d. (and possibly those of 20s. and upwards by 1s.); special parties and functions will have to pay a single fare and a third for the double journey instead of, as hitherto, a single fare and a quarter. This is a 6-2-3 per cent. increase. Anglers', golfers', and market tickets are included in this provision. The rebates allowed to traders for season tickets will be reduced by 10 per cent.—i.e., to from 5 to 15 per cent. for traffic given between the values of £250 and £1,000. The Northern companies only will advance the following cheap fares by 5 per cent., with a minimum of 3d.: Day and half-day excursions, week-end tickets, tourist tickets, race excursions.

SIRHOWY VALLEY COMMUNICATION.

The Barry Railway Company, in the Bill which they will promote in next session of Parliament, propose, among other things, to abandon the construction of a railway authorised in 1907, which the preamble states "was designed solely for the purpose of affording, with certain other of the railways authorised in 1907, a new means of communication between the Western Valleys and the Sirhowy Valley on the one hand, and the port of Newport on the other hand, by way of the Brecon and Merthyr Tydfil Junction and the railway of the Alexandra (Newport and South Wales) Docks and Railway Company." It is further stated that the railways authorised last session by the Alexandra Docks and Railway Act "render unnecessary the provision of the means of communication between the Sirhowy Valley and Newport, which would have been available by the construction of the railway" now proposed to be abandoned. In connection with this abandonment, power is also sought to cancel an agreement with the Brecon Company, under which the Barry Company "bound themselves to construct the railway" and to open it for traffic simultaneously with the other railways authorised in 1907.

PERSONAL.

Mr. T. M. Berrange's appointment as Secretary of the Board of the South African Railways has been confirmed.

Mr. F. Frith has been appointed horticulturist to the South African Railways, with headquarters at Canada Junction.

Lord Furness has been elected deputy-chairman of the Metropolitan Railway Company in succession to the late Sir William Birt. Mr. Paul Speak, Bradford, was appointed an additional director.

Mr. Cresswell Clark, the chief officer of the South African Railways at Johannesburg, has been granted extended leave. During his absence Mr. W. H. Barrett, the assistant general manager, will take duty at Johannesburg.

Mr. William Whittam, district goods manager at Stoke-on-Trent for the London and North Western Railway, has been appointed general manager of the Shropshire Union Railways and Canal Company in succession to Mr. Thomas Hales.

Mr. R. Rowland, of the general superintendent's department of the Midland Railway, has been appointed superintendent of the passenger service, in succession to Mr. J. Bagwell, recently appointed general manager of the Great Northern (Ireland) Railway.

Mr. Peter Drummond, locomotive superintendent of the Highland Railway, has been appointed locomotive superintendent of the Glasgow and South Western Railway, in succession to Mr. Manson, retired. Mr. Drummond held his appointment with the Highland Railway for 15 years, and prior to that he was works manager to the Caledonian Railway for 14 years. He greatly improved the type of Highland Railway engines, and was most successful in dealing with the old trouble of snow blocks on that line.

Mr. Thomas Philip was last Saturday, at the Bush Hotel, Carlisle, presented by traders and railwaymen with a silver tea and coffee service and smoker's cabinet. Mr. Philip who has been district superintendent of the southern division of the North British Railway, is taking up his new duties as district superintendent of the eastern division with headquarters at Edinburgh. The Mayor of Carlisle made the presentation, and the gathering subsequently extended a cordial welcome to Mr. Philip's successor, Mr. W. Brown.

Mr. William Brown and Mr. Alex. Strachan, the former lately superintendent of South Leith Station of the North British Railway, and now superintendent at Carlisle, and the latter lately assistant superintendent at South Leith and now superintendent at Granton, have received presentations from the railwaymen and traders of Leith. Mr. Brown received a purse of gold and an illuminated address, and Mr. Strachan a purse of gold and a silver salver. Provost Malcolm Smith spoke in terms of high praise of the way in which both gentlemen carried out their duties.

The Late Mr. James Pinion.—The death is announced, at Belfast, on Tuesday, of Mr. James Pinion, who was manager at Liverpool from 1904 to 1910 for the Cheshire Lines Committee. He was previously manager of the County Down Railway for 14 years.

Canadian Northern Railway Steamships.—The Canadian Northern Railway Company propose that when their railway extension to the West is completed they will run a fast service of steamships between Vancouver and Australian ports.

FUNERAL OF SIR JAMES INGLIS.

The funeral of Sir James Inglis, late general manager of the Great Western Railway, took place last Saturday. The first part of the service was held at St. James's Church, Paddington, to which the remains were conveyed on a barge, covered with choice wreaths and other floral tokens from relatives and from the representatives of various railway companies in London, as well as from the Institute of Civil Engineers and other engineering organisations, with which Sir James had been specially associated. Lady Inglis, Miss Inglis, Dr. J. Inglis, and Mr. H. Henderson were the chief mourners at the service in the church, and the chief representatives of the Great Western Railway Company present included Viscount Churchill (chairman of the Great Western Railway), Mr. S. E. Palmer (deputy-chairman), Colonel the Hon. C. E. Edgumbe and Mr. John G. Griffiths (directors), Mr. A. E. Bolton (secretary), Mr. F. Potter, Mr. G. J. Whitelaw (accountant), Mr. Charles Abington (superintendent of the line), Mr. T. H. Rendell (chief goods manager), Mr. A. G. Hubbard (assistant solicitor). Others present in addition to representatives of the various railway companies were Lord Southwark, Lieut.-Colonel Yorke (Board of Trade), Sir William Matthews, Sir Thomas Matthews, Sir Ernest Clarke, Sir J. Wolfe-Barry, Sir J. Anderson, Sir H. Donaldson, Mr. Lambert Gibson, Mr. G. Miles, Mr. W. J. H. Willis, Mr. R. R. Nelson, Mr. F. Sparks, Mr. Mounsey, Mr. G. H. Jobb, Mr. F. Robertson, and Mr. Neil Forsyth. At the conclusion of the service the body was removed to Hanwell Cemetery for interment, and special arrangements were made for the conveyance from Paddington of a large number of railway representatives and others attending the funeral.

RAILWAY NOTES.

The Grand Trunk Pacific Railway Company has let a contract for a new elevator at Fort William, to cost \$500,000, and having a storage capacity of 5,750,000 bushels.

Shopping Tickets for Ladies.—The Central London Railway Company have made a new departure by issuing shopping season tickets for the after-Christmas period of sales. The tickets will be available over the railway during January, and the cost works out at 2d. a day.

An American Combine.—The New York Central Railroad Company has acquired control of the New York and Ontario Railroad embracing about 566 miles of track. The change has been brought about by an arrangement with the New York, New Haven and Hartford Company, which has for some years controlled the Ontario line.

Canadian Northern Development.—Plans for the entrance of the Canadian Northern Railway into Montreal are officially published. They involve an expenditure of £5,000,000. Five thousand acres will be purchased (says a Reuter's telegram of Thursday's date) for the establishment of a model city for the railway employees, carshops, and freight yards. Thence the line will pass through a tunnel under the mountain into the

heart of Montreal, where a hot and station will be built. An elevated line will be constructed along the harbour front. All traffic within the city limits will be operated electrically.

The Holiday Traffic.—Reports from all the railway companies show that in a number of instances the Christmas traffic, both passenger and parcel, was considerably in excess of the returns for the previous Christmas. The Great Eastern showed an increase of 7,241 passengers, and a larger number than usual crossed to the Continent by this route. A feature of the traffic on the South Eastern and Chatham, and London, Brighton and South Coast, and South Western lines was the rush to Switzerland for the snow and ice sports. On December 22 twenty-one trains left the London termini of the South Eastern and Chatham Company with Continental passengers.

BANK RETURN.

The return of the Bank of England for the week ended Wednesday, December 27, compared with that for the previous week, shows the following changes:—

RAILWAY BENEVOLENT INSTITUTION

(ESTABLISHED 1858.)

UNDER THE PATRONAGE OF
HIS MAJESTY THE KING, HER MAJESTY THE QUEEN,
AND HER MAJESTY QUEEN ALEXANDRA.

HIS MAJESTY the KING when DUKE OF YORK, in publicly advocating the objects of this Institution said:—

"It is for these men that I plead. It is due to their watchfulness and care—night and day, in all weathers—that we travel with almost perfect safety and security, and the least we can do in return is to assist them in their hour of need"

NEW YEAR'S COLLECTION FOR CASUALTY FUND FOR WIDOWS, ORPHANS, AND DISABLED RAILWAY OFFICERS & SERVANTS 1912.

The usual Annual Appeal is now made by the Railway Benevolent Institution on behalf of the Casualty Fund established to alleviate distress amongst Railway Servants, arising from injury or early or sudden death by accident or otherwise.

All Classes of Railway Servants are invited to contribute one shilling to entitle them to participate in this Fund, and the donations of the Public are earnestly solicited to augment the subscriptions of the men and thereby increase the amount available for the assistance of subscribers and their widows during the year 1912.

Full particulars of the Institution may be obtained of, and any sums, however small, will be thankfully received by, the *Chief Clerks of the Railway Stations*, or

A. E. MILLS,

General Secretary of the Institution.

133, Seymour Street, Euston Square, London, N.W.

The following Summary shows that 6,642 persons were assisted out of the Fund collected on New Year's Day, 1911.

Year.	Number of Railway Servants who subscribed.	Killed by Accident.	Injured by Accident.	Died from Illness.	TOTAL RELIEVED.
1911	127,654	106	6,036	500	6,642
